*B6. Construction History (continued):

The following list of known alterations to the buildings was compiled through archival research and during the course of the intensive survey:

- Unknown date – Replacement door, south elevation
- Unknown date – Replacement windows, all elevations
- Unknown date – Plywood window surrounds, south, and east elevations
- Unknown date – Metal security bars, south elevation
- Circa 1968 – Addition to the north and south elevations (NETR 2022)
- Circa 1980 – Addition to the southwest corner with hipped roof projection (NETR 2022)
- Circa 2005 -- Reroofing of hipped roof projection at the southwest corner with red clay tiles (NETR 2022)
- Circa 2014 – Alteration to south elevation (NETR 2022)

*B10. Significance (continued):

Historical Overview of the City of Highland

The City of Highland's settlement began in 1856 when John Henry Cram and six of his eight sons established a settlement known as Cramville, located in the northeast section of modern-day subdivision The Village Lakes at 5th Street and Orange Street. Cram and his family were the first known white settlers in the area. Cram and fellow settler Frederick Van Leuven constructed a ditch in 1858 to bring water from the Santa Ana River to their lands in East Highland. The ditch ran from City Creek into the present site of the City of Highland. In 1857, Henry Rabel, a German immigrant, purchased 40 acres along what is now Base Line Street, west of Victoria Avenue. Rabel purchased 80 additional acres in 1859, which became Rabel Springs, so named for the large pond and natural thermal wells located on the land. Rabel capitalized on the medicinal quality of the springs and constructed bathhouses and an 11-room hotel for tourists. The area became popular as a recreation spot and in 1887, Harlem Springs was developed east of Victoria Avenue. Harlem Springs included a swimming pool, bathhouses, an entertainment hall, and picnic grounds. This led to multiple civic improvements, including the area's first County road in 1860, Santa Ana Canyon Road (now West 5th Street) (Beattie 1994, 2004; San Bernardino Public Library 2022).

The area that became the City of Highland was developed as separate settlements. This included Messina in 1873 at Base Line Avenue and Palm Avenue. Messina's location was approximately the midpoint of the emerging towns and as a result, it became the commercial center. Buildings were constructed for private businesses, soon followed by a post office and grocery store. The first school district was formed in Cramville in 1869 and with its rising population, Messina formed a district named Highland soon after. This was the first formal use of the name Highland. Before this, the whole area was referred to as the Highlands because of the altitude and proximity to the foothills of the San Bernardino Mountains. In 1885, the Santa Fe Railroad (California Southern Railway) constructed a new line through the Cajon Pass, connecting San Bernardino to the rest of the state. Rail line expansion began soon after, with prominent people in Redlands raising $42,750 to purchase rights-of-way and depot grounds connecting San Bernardino to Redlands, which was soon expanded to Mentone. Local railroad officials thought a loop from Mentone back to San Bernardino would be most efficient by way of the present-day City of Highland. Although the community was not yet officially incorporated as a city, the name "Highland" was used for the train depot and became the preferred identifier for the community. In January

1892, the loop of the "Kite Shaped Track" was finished as a 158-mile-long figure 8 from the Santa Fe yards in Los Angeles east to Mentone and back. The line offered both freight and passenger services and opened San Bernardino County for more land development and settlement (Beattie 1994, 2004).

The presence of the railroad not only brought more people to the area but new industries and commercial opportunities as well. By the early 1880s, agricultural development was increasing with the planting of citrus orchards throughout Highland and San Bernardino County. Citrus was considered a high-value crop and required well-drained upland soils. This led to the construction of the North Fork Ditch in 1881, which diverged from the Cram–Van Leuven Ditch and ran west along the mountains. The dependable water supply stimulated agricultural development and production. Citrus groves were present in the area starting in 1857, but it was not until the Washington navel orange was introduced in 1873 that citrus farming became the leading industry. Between 1881 and 1892, over a thousand acres of citrus were planted in Highland. The railroad also brought the fruit packing and lumber industries to the area; meanwhile, the area remained dependent on the citrus industry (McAvoy 2000, p. 2).

At the turn of the twentieth century, Highland's growth had accelerated with the construction of a library, community hall, packing houses, a new business building on Palm Avenue, and many new residences. Highland and downtown San Bernardino were connected in 1903 with the establishment of the Bernardino Valley Traction Company's electric railway line. The local economy, still dependent on the citrus industry, fluctuated based on how well the industry did. In 1913, a freeze hit Southern California, killing many citrus trees and resulting in an economic depression that lasted several years (McAvoy 2000, p. 4).

The 1920s brought multiple changes to the town, including the construction of more packing houses and the Zimmerman Addition, which added the area north of the Santa Fe right-of-way to Highland's territory. A series of disasters hit the area in the 1930s, including multiple fires that destroyed packing houses and the Highland Orange Association building. By this time Highland's identity as a closely knit citrus community began to change due to outside influences. The popularity of the automobile led to fewer people using the railroads for passenger travel. In July 1936, Pacific Electric discontinued passenger service on the Highland branch line (McAvoy 2000, pp. 4–5).

The 1940s brought a period of change to the area, including suburbanization, with citrus groves replaced by housing tracts. As the United States entered World War II, the U.S. Army Air Corps established a training center just south of the present-day City in 1941. Following the attack on Pearl Harbor, the training center's role shifted and it became a fighter plane mobilization point to defend the City of Los Angeles in the event of an attack. In 1942, the training center was named San Bernardino Army Airfield. After the war, in 1950, it was renamed Norton Air Force Base (Beattie 1994, 2004; McAvoy 2000, p. 5).

After World War II, a postwar population boom affected not only Highland but much of the Los Angeles Basin, resulting in citrus packing houses closing because of losing their supporting orchards to suburban development. Packing houses were converted to light industrial uses as housing tracts continued to replace the citrus groves. The Pacific Electrical Railway discontinued service in 1953, resulting in the removal of its tracks. The Santa Fe Railroad eventually followed suit, abandoning its Highland line in the early 1980s (Beattie 1994, 2004; McAvoy 2000, p. 5).

In the 1980s the Highland Chamber of Commerce pushed for the formation of the City of

Highland, which was incorporated on November 24, 1987. The City area included 32,300 acres, with a population of approximately 34,439 in 1990. In 1994, San Bernardino Army Airfield closed and was redeveloped into the San Bernardino International Airport. By 2000, Highland had been transformed from a small agricultural town to a city surrounded by a large urban area. The City's population in 2010 was recorded at 53,104, a 19% increase from 2000. The City is generally divided into two regions by State Route (SR) 210, East Highland, and Highland (Beattie 1994, 2004; McAvoy 2000, p. 5).

History of the Site

The site is located in the City of Highland to the west of SR-210 in a neighborhood called Cypress. In the first available aerial photographs of the site, from 1930 and 1938, the surrounding area along Victoria Avenue and 3rd Street is dominated by widely dispersed residential properties, undeveloped land, and agricultural land. The site appears predominantly as open, undeveloped land with a natural watercourse to the southeast. The agricultural use throughout Highland remained relatively unchanged until the 1950s, which brought a period of suburbanization as citrus groves were replaced by housing tracts to the north of the site. Approximately 0.3 miles south of the site, south of 3rd Street, was the development of San Bernardino International Airport. By the late 1970s, the majority of the open lots and agricultural land were redeveloped with residential housing tracts (Exhibit 1). The site has remained largely open, with residences that line 3rd Street, open land to the east and west, and a water tower and development of industrial warehouses located south of 3rd Street (NETR 2022; UCSB 2022).

26530 3rd Street

There is a single-family residence currently on 26530 3rd Street (APN 1192-551-04). According to the San Bernardino County Assessor, the residence was constructed in 1948. The property has been used for residential to commercial uses since its construction. The earliest available newspaper article for the property is from 1958 and advertises it as Lambert's Cleaners laundry service. Archival research yielded little information regarding Lambert's Cleaners. By 1968, historic aerials show an addition to the north and south elevations of the building. By 1974, the property appeared to be a residence, as corroborated by a local newspaper article that indicates Daniel Seasholtz resided there. By 1980, historic aerial images indicate an addition was made to the southwest corner of the building, with a hipped roof projection. The property changed use from the Seasholtz residence to a commercial business in 1983. It was advertised in local newspapers as Parker's Air Conditioning and Heating. Historic newspaper research yielded no additional information regarding Parker's Air Conditioning and Heating. The building underwent multiple alterations and additions over the years. By 2005, historic aerial images indicate the hipped roof projection at the southwest corner of the building had been reroofed with red clay tiles. By 2009, the building's footprint had expanded along the east elevation. By 2014, an alteration had taken place on the south elevation of the building (SBCS 1958, p. 3; 1974, p. 8; 1983, p. 19; NETR 2022; UCSB 2022).

Mr. Seasholtz was the first known resident of the building. He resided at the property in 1974. Before 1974, and between 1974 and 1994, the owner and residents of the property are unknown. The next known owners of the property were Jack and Fern Patrick, who purchased the property in 1994. In 1998, Stanton and Joyce Weber purchased the property and remained owners until 2003, when Kimberley Zilke and Patrick Grove took ownership. In 2005, Hanhsing Li bought the property and remained the sole owner until 2022, when Patriot USICVI 5th Street LLC took ownership of the property. Archival research yielded no substantial information regarding Mr. Seasholtz, Mr. and Ms. Patrick, Mr. and Ms. Weber, Ms. Zilke, Mr. Grove, or Hanhsing Li. The property's use has changed from commercial to residential

over the years. (San Bernardino County Assessor 2022a; SBCS 1958, p. 3; 1974, p. 8; NETR 2022; UCSB 2022).

26530 3rd Street (APN 1192-551-04): NRHP/CRHR Evaluation of Significance

The property at 26530 3rd Street (APN 1192-551-04) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of the property at 26530 3rd Street (APN 1192-551-04) did not find any associations with events that have made a significant contribution to the broad patterns of history. The property was completed in 1948, during a time when Highland was expanding in size and the economy was based on agriculture, primarily dependent on the citrus industry. Despite the property reflecting Highland's growth west of SR-210 during the 1940s, there is no indication that the construction of this specific building marked a pivotal point in the history of the neighborhood or the City. In 1958, the property was advertised in local newspapers as a laundry cleaning business, Lambert's Cleaners. By 1974, the property appears to have changed in use from a commercial building to a residence. Then in 1983, the property appears to have been changed back to commercial uses as Parker's Air Conditioning and Heating. After 1983, the property's function changed again to a residence. The property was never associated with an important aspect of commercial business in the area. In addition, the property was neither the first nor the last single-family residence in the area, as it changed function and followed a continuous pattern of residential development that continued through the 1990s. The property is close to the San Bernardino Airport; however, there is no indication that the property was historically related to the airport or its development. The property is not known to be directly associated with other events that have made a significant contribution to the history of Highland; therefore, the property does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2, the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research failed to indicate any such direct association between individuals that are known to be historic figures at the national, state, or local level and the 26530 3rd Street (APN 1192-551-04) property. The earliest ownership information identified indicated that Daniel Seasholtz owned the property by 1974. Archival research yielded no information regarding Mr. Seasholtz. Before 1974, and between 1974 and 1994, the owner of the property was unknown. Other known owners based on information available from the San Bernardino County Recorder-Clerk's office include Jack and Fern Patrick, Stanton and Joyce Weber, Kimberley Zilke, Patrick Grove, and Hanhsing Li. Research did not reveal any reason to believe that any individuals associated with the property are persons of historic significance. Due to a lack of identified significant associations with important persons in history, the property does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The 26530 3rd Street (APN 1192-551-04) property contains one historic-age building, a single-family residence built in 1948. The 1948 residence does not reflect an architectural style, type, period, or method of construction. The building is substantially altered due to large-scale additions and material alterations to the doors, windows, and roofing. The building no longer can be said to "embody the distinctive characteristics of a type, period, or method of construction." Archival research did not uncover that the building was the work of a master architect or builder. The building also does not possess high artistic value and is not representative of a significant and distinguishable entity whose components may lack individual distinction. Because the building at 26530 3rd Street (APN 1192-551-04) lacks architectural merit due to numerous alterations and additions, the property does not appear eligible for the NRHP under Criterion C or CRHR under Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archaeological resources. The buildings on 26530 3rd Street (APN 1192-551-04) are not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information, nor do they appear likely to yield important information about historic construction methods, materials or technologies.

Integrity Discussion

The 26530 3rd Street (APN 1192-551-04) property contains one building, which has not been moved or relocated, therefore, the property maintains integrity of location. The property does not maintain integrity of setting, as the surrounding neighborhood and streetscape have been altered significantly since the 1948 building was constructed. At the time of its construction, the surrounding area was agricultural with sparse, small homesteads. By the 1970s, the majority of these agricultural properties and small residences were replaced with tracts of single-family residential housing; therefore, the property no longer retains integrity of setting. Significant alterations and additions to the building on have substantially impacted integrity of design, materials, and workmanship. The property no longer retains integrity of feeling due to numerous alterations to the building on the property, changes in use, and the loss of its original agricultural setting. can no longer convey its historic sense of a particular period. Finally, the property does not have any historical associations with people or events and therefore it does not have integrity of association. Therefore, the 26530 3rd Street (APN 1192 551-04) property does not retain integrity.

City of Highland Statement of Significance

26530 3rd Street (APN 1192-551-04) property does not meet any of the criteria for listing by the City of Highland, as demonstrated below.

A It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history.

As discussed in NRHP/CRHR Criterion A/1, archival research did not discover that the property was related to historical events significant to the City of Highland and does not reflect special elements of the City's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history.

B It is identified with persons or events significant in local, state, or national

history.

As discussed in NRHP/CRHR Criterion B/2, archival research did not discover that the property was the location of any significant historical events or associated with an important person in the City of Highland, California, or United States.

C It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship.

As discussed in NRHP/CRHR Criterion C/3, the building identified on the property does not exemplify a particular architectural style, type, or period of construction important to the City. The historic-age building has been significantly altered and there are better, more intact examples of buildings from the late 1940s throughout the City. Additionally, due to the date of construction of the building on the property (1948), it is unlikely to be a valuable example of the use of indigenous materials or craftmanship.

D It is representative of the work of a notable builder, designer, or architect.

As discussed in NRHP/CRHR Criterion C/3, archival research did not uncover that the building on the property was identified with a builder, designer, or architect whose work could be considered notable within the City of Highland.

E It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development.

The property does not contribute to the significance of a historic area nor is it thematically related to a group of properties that contribute to each other and are unified aesthetically. The area surrounding has been altered significantly since the construction of the 1948 building. At the time of its construction, the surrounding area was agricultural with small, widely dispersed homesteads. By the 1970s, the majority of these agricultural properties and small residences were replaced with tracts of single-family residential housing. The historic area that the property originally was a part of is no longer extant.

F It has a unique location or singular physical characteristics or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city of Highland.

The building does not present a unique location or singular physical characteristics, nor is the property a view or vista representing an established and familiar visual feature of a neighborhood, community, or the City of Highland. The building on the property has been heavily altered and therefore does not possess unique characteristics. Additionally, the property does not display a view or vista establishing a familiar visual feature due to multiple changes in use, alterations, and new additions to the building on the property.

G It embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation.

As discussed in NRHP/CRHR Criterion C/3, the building has substantial material alterations and additions, and no longer embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation.

H It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif.

The property does not possess similar characteristics to properties, sites, areas, or objects based on a historic, cultural, or architectural motif. Due to multiple large-scale alterations and additions to the building on the property since its construction, there are no distinctive characteristics that can relate it to other properties within the City of Highland.

I It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning.

The building does not reflect significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning. Due to multiple large-scale alterations and additions to the building on the property since its construction, it can no longer be associated with different eras of settlement and growth in the City of Highland.

J It is one of the few remaining examples in the city, region, state, or nation possessing distinguishing characteristics of an architectural or historical type of specimen.

The property does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural historical type of specimen. The building on the property has undergone multiple large-scale alterations and additions, and therefore no longer possesses distinctive characteristics of such a type.

***P3a. Description**: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The building, Las Potrillas Bar/Cantina and Nightclub, is L-shaped in plan and one story in height. The building is utilitarian, with no architectural style, with a flat roof at the south half and a shed roof at the north half of the building. The building's exterior walls are clad in stucco. The building's main (south) elevation displays a raised, flat parapet lined with red clay tiles. The building lacks window fenestration openings. The east elevation displays a replacement door under an addition of a shingled awning.

*B6. Construction History (continued):

The following list of known alterations to the nightclub was compiled through archival research and during the course of the intensive survey:

- Unknown date – Replacement door, east elevation
- Unknown date – Reroofing of north half of building
- Unknown date – Shingled awning added, west elevation
- Circa 1968 – Addition to north elevation (NETR 2022)
- Circa 1980 – Addition to north and west elevations (NETR 2022)
- Circa 2005 – Reroofing with red clay tiles (NETR 2022)
- Circa 2009 – Alteration to roof (NETR 2022)

*B10. Significance (continued):

Historical Overview of the City of Highland

The City of Highland's settlement began in 1856 when John Henry Cram and six of his eight sons established a settlement known as Cramville, located in the northeast section of modern-day subdivision The Village Lakes at 5th Street and Orange Street. Cram and his family were the first known white settlers in the area. Cram and fellow settler Frederick Van Leuven constructed a ditch in 1858 to bring water from the Santa Ana River to their lands in East Highland. The ditch ran from City Creek into the present site of the City of Highland. In 1857, Henry Rabel, a German immigrant, purchased 40 acres along what is now Base Line Street, west of Victoria Avenue. Rabel purchased 80 additional acres in 1859, which became Rabel Springs, so named for the large pond and natural thermal wells located on the land. Rabel capitalized on the medicinal quality of the springs and constructed bathhouses and an 11-room hotel for tourists. The area became popular as a recreation spot and in 1887, Harlem Springs was developed east of Victoria Avenue. Harlem Springs included a swimming pool, bathhouses, an entertainment hall, and picnic grounds. This led to multiple civic improvements, including the area's first County road in 1860, Santa Ana Canyon Road (now West 5th Street) (Beattie 1994, 2004; San Bernardino Public Library 2022).

The area that became the City of Highland was developed as separate settlements. This included Messina in 1873 at Base Line Avenue and Palm Avenue. Messina's location was approximately the midpoint of the emerging towns and as a result, it became the commercial center. Buildings were constructed for private businesses, soon followed by a post office and grocery store. The first school district was formed in Cramville in 1869 and with its rising population, Messina formed a district named Highland soon after. This was the first formal use of the name Highland. Before this, the whole area was referred to as the Highlands because of the altitude and proximity to the foothills of the San Bernardino Mountains. In 1885, the Santa Fe Railroad (California Southern Railway) constructed a new line through the Cajon Pass, connecting San Bernardino to the rest of the state. Rail line expansion began soon after, with prominent people in Redlands raising $42,750 to purchase rights-of-way and depot grounds connecting San Bernardino to Redlands, which was soon expanded to Mentone. Local railroad officials thought a loop from Mentone back to San Bernardino would be most efficient by way of the present-day City of Highland. Although the community was not yet officially incorporated as a city, the name "Highland" was used for the train depot and became the preferred identifier for the community. In January 1892, the loop of the "Kite Shaped Track" was finished as a 158-mile-long figure 8 from

the Santa Fe yards in Los Angeles east to Mentone and back. The line offered both freight and passenger services and opened San Bernardino County for more land development and settlement (Beattie 1994, 2004).

The presence of the railroad not only brought more people to the area but new industries and commercial opportunities as well. By the early 1880s, agricultural development was increasing with the planting of citrus orchards throughout Highland and San Bernardino County. Citrus was considered a high-value crop and required well-drained upland soils. This led to the construction of the North Fork Ditch in 1881, which diverged from the Cram–Van Leuven Ditch and ran west along the mountains. The dependable water supply stimulated agricultural development and production. Citrus groves were present in the area starting in 1857, but it was not until the Washington navel orange was introduced in 1873 that citrus farming became the leading industry. Between 1881 and 1892, over a thousand acres of citrus were planted in Highland. The railroad also brought the fruit packing and lumber industries to the area; meanwhile, the area remained dependent on the citrus industry (McAvoy 2000, p. 2).

At the turn of the twentieth century, Highland's growth had accelerated with the construction of a library, community hall, packing houses, a new business building on Palm Avenue, and many new residences. Highland and downtown San Bernardino were connected in 1903 with the establishment of the Bernardino Valley Traction Company's electric railway line. The local economy, still dependent on the citrus industry, fluctuated based on how well the industry did. In 1913, a freeze hit Southern California, killing many citrus trees and resulting in an economic depression that lasted several years (McAvoy 2000, p. 4).

The 1920s brought multiple changes to the town, including the construction of more packing houses and the Zimmerman Addition, which added the area north of the Santa Fe right-of-way to Highland's territory. A series of disasters hit the area in the 1930s, including multiple fires that destroyed packing houses and the Highland Orange Association building. By this time Highland's identity as a closely knit citrus community began to change due to outside influences. The popularity of the automobile led to fewer people using the railroads for passenger travel. In July 1936, Pacific Electric discontinued passenger service on the Highland branch line (McAvoy 2000, pp. 4–5).

The 1940s brought a period of change to the area, including suburbanization, with citrus groves replaced by housing tracts. As the United States entered World War II, the U.S. Army Air Corps established a training center just south of the present-day City in 1941. Following the attack on Pearl Harbor, the training center's role shifted and it became a fighter plane mobilization point to defend the City of Los Angeles in the event of an attack. In 1942, the training center was named San Bernardino Army Airfield. After the war, in 1950, it was renamed Norton Air Force Base (Beattie 1994, 2004; McAvoy 2000, p. 5).

After World War II, a postwar population boom affected not only Highland but much of the Los Angeles Basin, resulting in citrus packing houses closing because of losing their supporting orchards to suburban development. Packing houses were converted to light industrial uses as housing tracts continued to replace the citrus groves. The Pacific Electrical Railway discontinued service in 1953, resulting in the removal of its tracks. The Santa Fe Railroad eventually followed suit, abandoning its Highland line in the early 1980s (Beattie 1994, 2004; McAvoy 2000, p. 5).

In the 1980s the Highland Chamber of Commerce pushed for the formation of the City of

Highland, which was incorporated on November 24, 1987. The City area included 32,300 acres, with a population of approximately 34,439 in 1990. In 1994, San Bernardino Army Airfield closed and was redeveloped into the San Bernardino International Airport. By 2000, Highland had been transformed from a small agricultural town to a city surrounded by a large urban area. The City's population in 2010 was recorded at 53,104, a 19% increase from 2000. The City is generally divided into two regions by State Route (SR) 210, East Highland, and Highland (Beattie 1994, 2004; McAvoy 2000, p. 5).

History of the Site

The site is located in the City of Highland to the west of SR-210 in a neighborhood called Cypress. In the first available aerial photographs of the site, from 1930 and 1938, the surrounding area along Victoria Avenue and 3rd Street is dominated by widely dispersed residential properties, undeveloped land, and agricultural land. The site appears predominantly as open, undeveloped land with a natural watercourse to the southeast. The agricultural use throughout Highland remained relatively unchanged until the 1950s, which brought a period of suburbanization as citrus groves were replaced by housing tracts to the north of the site. Approximately 0.3 miles south of the site, south of 3rd Street, was the development of San Bernardino International Airport. By the late 1970s, the majority of the open lots and agricultural land were redeveloped with residential housing tracts (Exhibit 1). The site has remained largely open, with residences that line 3rd Street, open land to the east and west, and a water tower and development of industrial warehouses located south of 3rd Street (NETR 2022; UCSB 2022).

26540 3rd Street

There is one commercial building currently on 26540 3rd Street (APN 1192-551-05), which was built in 1948 according to the San Bernardino County Assessor and confirmed in historic aerial photographs from 1938 and 1959. The 1968 historic aerial image shows an addition to the north elevation of the building. In 1980, an addition had taken place to the north and west elevations. In 2005, the building had been reroofed with red clay tiles. In 2009, further alterations to the roof had taken place (NETR 2022; UCSB 2022).

Archival research revealed no information regarding the original owners of the property. In 1957, the property was advertised in local newspapers as a café for lease, a "restaurant ready for operation" (SBCS 1957, p. 20). In 1976, Sherry Lane Jackson had a fictitious business at 26540 3rd Street called "Rollin' Guitars" (SBCS 1976, p. 27). Historic newspaper research revealed no information about Ms. Jackson. In 1977, the property was advertised as "Sarge's" and was sold to George E. Gibson and Josephine P. Gibson to run their business, "Gibson's Innlocated" (SBCS 1977, p. 26; 1978, p. 38). Archival research yielded no information regarding Sarge's or Gibson's Innlocated. In 1978, Bonnie B. Thomas purchased the property from the Gibsons. No information regarding Bonnie. B. Thomas was found. In 1988, the property was advertised again as "Sarge's," with an advertisement looking for a bartender for the restaurant (SBCS 1988, p. 37). After 1988, the property became Las Potrillas Bar/Cantina and Nightclub. The owner of the property between 1978 and 1991 is unknown. Magdalena Mitchelle purchased the property in 1991. Historic newspaper research yielded no substantial information regarding Ms. Mitchelle. Additionally, historic research yielded no substantial information regarding any of the following owners of the property between 1999 and 2022: Mr. and Mrs. Haro, Ms. Galicia, Ms. Lopez, Mr. Kaminski, Ms. Kaminski, Ms. Gaitan-Hahn, Morley Family Trust, Jeffrey A. Abraham Living Trust, or Hanhsing Li (San Bernardino County Assessor 2022b; SBCS 1978, p. 38; NETR 2022; UCSB 2022).

26540 3rd Street (APN 1192-551-05-00): NRHP/CRHR Evaluation of Significance

The property at 26540 3rd Street (APN 1192-551-04) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of the property at 26540 3rd Street (APN 1192-551-05) did not find any associations with events that have made a significant contribution to the broad patterns of history. The property was completed in 1948, during a time when Highland was expanding in size and the economy was based on agriculture, primarily dependent on the citrus industry. Despite the property reflecting Highland's growth west of SR-210 during the 1940s, there is no indication that the construction of this specific building marked a pivotal point in the history of the neighborhood or city. In the 1950s, the property was advertised in local newspapers as a café for lease. After the 1950s, the property was used as Sarge's restaurant. In 1977, the property was advertised as "Sarge's," and was sold to George E. Gibson and Josephine P. Gibson to run their business, "Gibson's Innlocated." Then at an unknown date after 1988, the property became Las Potrillas Bar/Cantina and Nightclub. The property was neither the first nor the last commercial building in the area and followed a continuous pattern of development. The property is located close to the San Bernardino Airport; however, there is no indication that the property was historically related to the airport or its development. The property is not known to be directly associated with any other events that have made a significant contribution to the history of Highland; therefore, the property does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2, the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research failed to indicate any such direct association between individuals that are known to be historic figures at the national, state, or local level and the 26540 3rd Street (APN 1192-551-05) property. The earliest ownership information identified indicated that Sherry Lane Jackson owned the property by 1976. Archival research yielded no information regarding Ms. Jackson. The following year, in 1977, the property was sold to George E. Gibson and Josephine P. Gibson. The Gibsons sold the property to Bonnie B. Thomas in 1978. No historic information regarding Mr. or Mrs. Gibson or Ms. Thomas was found. The property's owners between 1978 and 1991 are unknown. Other known owners based on information available from the San Bernardino County Recorder-Clerk's office include Magdalena Mitchelle, Jose and Israel A. Haro, Arcelia Galicia, Maria E. Lopez, Greg Kaminski, Susan Kaminski, Patricia Gaitan-Hahn, Morley Family Trust, Jeffrey A. Abraham Living Trust, Agustin J. Dorado, and Hanhsing Li. Research did not reveal any reason to believe that any individuals associated with the property are persons of historic significance. Due to a lack of identified significant associations with important persons in history, the property does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may

lack individual distinction.

The property at 26540 3rd Street (APN 1192-551-05) property contains one historic-age building, a commercial building built in 1948. The 1948 building does not possess the character-defining features of an architectural style. The building is substantially altered due to large-scale additions and material alterations to the doors and roofing. The building no longer can be said to "embody the distinctive characteristics of a type, period, or method of construction." Archival research did not uncover that the building was the work of a master architect or builder. The building also does not possess high artistic value and is not representative of a significant and distinguishable entity whose components may lack individual distinction. Because the building at 26540 3rd Street (APN 1192 551-05) lacks architectural merit due to numerous alterations, the property does not appear eligible for the NRHP under Criterion C or the CRHR under Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archaeological resources. The building on 26540 3rd Street (APN 1192-551-05) is not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information nor does it appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

The 26540 3rd Street (APN 1192-551-05) property contains one building, which has not been moved or relocated; therefore, the property maintains integrity of location. The property does not maintain integrity of setting, as the surrounding neighborhood and streetscape have been altered significantly since the 1948 building was constructed. At the time of its construction, the surrounding area was agricultural, with small, widely dispersed homesteads. By the 1970s, the majority of these agricultural properties and small residences were replaced with tracts of single-family residential housing; therefore, the property no longer retains integrity of setting. Significant alterations to the building on the property have substantially impacted integrity of design, materials, and workmanship. The property no longer retains integrity of feeling due to numerous alterations to the building on the property and the loss of its original agricultural setting. The property can no longer convey its historic sense of a particular period. Finally, the property does not have any historical associations with people or events; therefore, it does not have integrity of association. Therefore, the 26540 3rd Street (APN 1192-551-05) property does not retain integrity.

City of Highland Statement of Significance

The 26540 3rd Street (APN 1192-551-05) property does not meet any of the criteria for listing by the City of Highland, as demonstrated below.

A It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history.

As discussed in NRHP/CRHR Criterion A/1, archival research did not discover that the property was related to historical events significant to the City of Highland and does not reflect special elements of the City's cultural, social, economic, political,

aesthetic, engineering, architectural, or natural history.

B It is identified with persons or events significant in local, state, or national history.

As discussed in NRHP/CRHR Criterion B/2, archival research did not discover that the property was the location of any significant historical events or associated with an important person in the City of Highland, California, or United States.

C It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship.

As discussed in NRHP/CRHR Criterion C/3, the building identified on the property does not exemplify a particular architectural style, type, or period of construction important to the City. The historic-age building is significantly altered and there are better, more intact examples of buildings from the late 1940s throughout the City. Additionally, due to the date of construction of the building on the property (1948), it is unlikely to be a valuable example of the use of indigenous materials or craftsmanship.

D It is representative of the work of a notable builder, designer, or architect.

As discussed in NRHP/CRHR Criterion C/3, archival research did not uncover that the building on the property was identified with a builder, designer, or architect whose work could be considered notable within the City of Highland.

E It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development.

The property does not contribute to the significance of a historic area nor is it thematically related to a group of properties that contribute to each other and are unified aesthetically. The area surrounding the property has been altered significantly since the construction of the 1948 commercial building. At the time of its construction, the surrounding area was agriculturally based with small, widely dispersed homesteads. By the 1970s, the majority of these agricultural properties were replaced with tracts of single-family residential housing. The historic area that originally was a part of is no longer extant.

F It has a unique location or singular physical characteristics or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city of Highland.

The building does not present a unique location or singular physical characteristics, nor is the property a view or vista representing an established and familiar visual feature of a neighborhood, community, or the City of Highland. The building on the property has been altered and therefore does not possess unique characteristics. Additionally, the property does not display a view or vista establishing a familiar visual feature due to new additions to the building on the property.

G It embodies elements of architectural design, detail, materials, or craftsmanship

that represent a significant structural or architectural achievement or innovation.
As discussed in NRHP/CRHR Criterion C/3, the property has substantial additions and material alterations and no longer embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation.

H It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif.

The property does not possess similar characteristics to other properties, sites, areas, or objects based on a historic, cultural, or architectural motif. Due to large-scale additions and alterations to the building on the property since its construction, there are no distinctive characteristics that can relate it to other properties within the City of Highland.

I It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning.

The building does not reflect significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning. Due to large-scale additions and alterations to the building on the property since its construction, it can no longer be associated with different eras of settlement and growth in the City of Highland.

J It is one of the few remaining examples in the city, region, state, or nation possessing distinguishing characteristics of an architectural or historical type of specimen.

The property does not represent one of the few remaining examples in the city, region, state, or nation possessing distinctive characteristics of an architectural historical type of specimen. The building on the property has undergone large-scale alterations and additions, and therefore no longer possesses distinctive characteristics of such a type.

The Project site's eastern end (Parcel 3) contains a one-story residence, a one-story utilitarian garage, and a one-story utilitarian shed that has been partially destroyed by fire. The residence has an irregular plan with a side-gabled roof and exterior walls clad in stucco. The residence is utilitarian, with no architectural style. Fenestration includes an irregular arrangement of aluminum sliding windows on all elevations and replacement doors on the primary and rear elevations. An addition of a metal awning extends out from the side (west) elevation. *See continuation sheet.*

***P3a. Description (continued):**

East of the residence is a partially destroyed garage with a hipped roof and stucco cladding. The building has a square plan and an irregular arrangement of two garage door openings and one window opening on the primary (south) elevation. Fenestration openings are covered with plywood. East of the garage is a front-gabled, partially destroyed shed with corrugated metal cladding and no fenestration openings present; only structural beams are visible. The shed appears to have been partially destroyed by fire. East of the shed, a rectangular concrete foundation and corrugated metal pieces appear to be remnants of buildings destroyed by fire in 2022 (Exhibit 1).

***B6. Construction History (continued):**

The following list of known alterations to the buildings was compiled through archival research and during the course of the intensive survey:

- Unknown date – Replacement doors, south and north elevation
- Unknown date – Replacement windows, all elevations
- Unknown date – Metal awning addition, west elevation
- Unknown date – Reroofing of the residence
- Circa 1980 – Addition to east elevation of garage (NETR 2022)
- Circa 2010 – Alteration to east elevation of garage (NETR 2022)
- Circa 2022 – Fire damage to two ancillary buildings, with one ancillary building destroyed by fire per visual analysis

***B10. Significance (continued):**

Historical Overview of the City of Highland

The City of Highland's settlement began in 1856 when John Henry Cram and six of his eight sons established a settlement known as Cramville, located in the northeast section of modern-day subdivision The Village Lakes at 5th Street and Orange Street. Cram and his family were the first known white settlers in the area. Cram and fellow settler Frederick Van Leuven constructed a ditch in 1858 to bring water from the Santa Ana River to their lands in East Highland. The ditch ran from City Creek into the present site of the City of Highland. In 1857, Henry Rabel, a German immigrant, purchased 40 acres along what is now Base Line Street, west of Victoria Avenue. Rabel purchased 80 additional acres in 1859, which became Rabel Springs, so named for the large pond and natural thermal wells located on the land. Rabel capitalized on the medicinal quality of the springs and constructed bathhouses and an 11-room hotel for tourists. The area became popular as a recreation spot and in 1887, Harlem Springs was developed east of Victoria Avenue. Harlem Springs included a swimming pool, bathhouses, an entertainment hall, and picnic grounds. This led to multiple civic improvements, including the area's first County road in 1860, Santa Ana Canyon Road (now West 5th Street) (Beattie 1994, 2004; San Bernardino Public Library 2022).

The area that became the City of Highland was developed as separate settlements. This included Messina in 1873 at Base Line Avenue and Palm Avenue. Messina's location was approximately the midpoint of the emerging towns and as a result, it became the commercial center. Buildings were constructed for private businesses, soon followed by a post office and grocery store. The first school district was formed in Cramville in 1869 and with its rising population, Messina formed a district named Highland soon after. This was the first

formal use of the name Highland. Before this, the whole area was referred to as the Highlands because of the altitude and proximity to the foothills of the San Bernardino Mountains. In 1885, the Santa Fe Railroad (California Southern Railway) constructed a new line through the Cajon Pass, connecting San Bernardino to the rest of the state. Rail line expansion began soon after, with prominent people in Redlands raising $42,750 to purchase rights-of-way and depot grounds connecting San Bernardino to Redlands, which was soon expanded to Mentone. Local railroad officials thought a loop from Mentone back to San Bernardino would be most efficient by way of the present-day City of Highland. Although the community was not yet officially incorporated as a city, the name "Highland" was used for the train depot and became the preferred identifier for the community. In January 1892, the loop of the "Kite Shaped Track" was finished as a 158-mile-long figure 8 from the Santa Fe yards in Los Angeles east to Mentone and back. The line offered both freight and passenger services and opened San Bernardino County for more land development and settlement (Beattie 1994, 2004).

The presence of the railroad not only brought more people to the area but new industries and commercial opportunities as well. By the early 1880s, agricultural development was increasing with the planting of citrus orchards throughout Highland and San Bernardino County. Citrus was considered a high-value crop and required well-drained upland soils. This led to the construction of the North Fork Ditch in 1881, which diverged from the Cram–Van Leuven Ditch and ran west along the mountains. The dependable water supply stimulated agricultural development and production. Citrus groves were present in the area starting in 1857, but it was not until the Washington navel orange was introduced in 1873 that citrus farming became the leading industry. Between 1881 and 1892, over a thousand acres of citrus were planted in Highland. The railroad also brought the fruit packing and lumber industries to the area; meanwhile, the area remained dependent on the citrus industry (McAvoy 2000, p. 2).

At the turn of the twentieth century, Highland's growth had accelerated with the construction of a library, community hall, packing houses, a new business building on Palm Avenue, and many new residences. Highland and downtown San Bernardino were connected in 1903 with the establishment of the Bernardino Valley Traction Company's electric railway line. The local economy, still dependent on the citrus industry, fluctuated based on how well the industry did. In 1913, a freeze hit Southern California, killing many citrus trees and resulting in an economic depression that lasted several years (McAvoy 2000, p. 4).

The 1920s brought multiple changes to the town, including the construction of more packing houses and the Zimmerman Addition, which added the area north of the Santa Fe right-of-way to Highland's territory. A series of disasters hit the area in the 1930s, including multiple fires that destroyed packing houses and the Highland Orange Association building. By this time Highland's identity as a closely knit citrus community began to change due to outside influences. The popularity of the automobile led to fewer people using the railroads for passenger travel. In July 1936, Pacific Electric discontinued passenger service on the Highland branch line (McAvoy 2000, pp. 4–5).

The 1940s brought a period of change to the area, including suburbanization, with citrus groves replaced by housing tracts. As the United States entered World War II, the U.S. Army Air Corps established a training center just south of the present-day City in 1941. Following the attack on Pearl Harbor, the training center's role shifted and it became a fighter plane mobilization point to defend the City of Los Angeles in the event of an attack. In 1942, the training center was named San Bernardino Army Airfield. After the war, in 1950, it was renamed Norton Air Force Base (Beattie 1994, 2004; McAvoy 2000, p.

5).

After World War II, a postwar population boom affected not only Highland but much of the Los Angeles Basin, resulting in citrus packing houses closing because of losing their supporting orchards to suburban development. Packing houses were converted to light industrial uses as housing tracts continued to replace the citrus groves. The Pacific Electrical Railway discontinued service in 1953, resulting in the removal of its tracks. The Santa Fe Railroad eventually followed suit, abandoning its Highland line in the early 1980s (Beattie 1994, 2004; McAvoy 2000, p. 5).

In the 1980s the Highland Chamber of Commerce pushed for the formation of the City of Highland, which was incorporated on November 24, 1987. The City area included 32,300 acres, with a population of approximately 34,439 in 1990. In 1994, San Bernardino Army Airfield closed and was redeveloped into the San Bernardino International Airport. By 2000, Highland had been transformed from a small agricultural town to a city surrounded by a large urban area. The City's population in 2010 was recorded at 53,104, a 19% increase from 2000. The City is generally divided into two regions by State Route (SR) 210, East Highland, and Highland (Beattie 1994, 2004; McAvoy 2000, p. 5).

History of the Site

The site is located in the City of Highland to the west of SR-210 in a neighborhood called Cypress. In the first available aerial photographs of the site, from 1930 and 1938, the surrounding area along Victoria Avenue and 3rd Street is dominated by widely dispersed residential properties, undeveloped land, and agricultural land. The site appears predominantly as open, undeveloped land with a natural watercourse to the southeast. The agricultural use throughout Highland remained relatively unchanged until the 1950s, which brought a period of suburbanization as citrus groves were replaced by housing tracts to the north of the site. Approximately 0.3 miles south of the site, south of 3rd Street, was the development of San Bernardino International Airport. By the late 1970s, the majority of the open lots and agricultural land were redeveloped with residential housing tracts (Exhibit 1). The site has remained largely open, with residences that line 3rd Street, open land to the east and west, and a water tower and development of industrial warehouses located south of 3rd Street (NETR 2022; UCSB 2022).

26562 3rd Street

There is one house and two ancillary buildings currently on 26562 3rd Street (APN 1192-551-07), which was built in 1940 according to the San Bernardino County Assessor and confirmed in historic aerial photographs from 1938 and 1959. The 1980 historic aerial image shows an addition to the east elevation of one of the ancillary buildings. In 1980, an alteration had also taken place to the east elevation of that same building. Until 2022, the property included a residence and three ancillary buildings. However, in 2022, per visual analysis during the intensive-level survey, one of the ancillary buildings had been destroyed by fire, and the ancillary building west of that had experienced fire damage as well. The first known owners of the property were the Parker Family Trust in 1973. Historic newspaper research yielded no substantial information regarding the Parker Family Trust. According to the San Bernardino County Recorder-Clerk's office, the family owned the property until 2007. Historic research yielded no substantial information regarding the property owners from 2007 to 2022, Mr. Villarruel and Ms. Zacarias. Table 5 lists the ownership history information available from the San Bernardino County Recorder-Clerk's office between 1973 and 2022 (San Bernardino County Assessor 2022c; NETR 2022; UCSB 2022).

26562 3rd Street (APN 1192-551-07): NRHP/CRHR Evaluation of Significance

The property at 26562 3rd Street (APN 1192-551-07) does not meet any of the criteria for listing in the NRHP or CRHR, either individually or as part of an existing historic district, as demonstrated below.

Criterion A/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Archival research of the property at 26562 3rd Street (APN 1192-551-07) did not find any associations with events that have made a significant contribution to the broad patterns of history. The property was completed in 1940, when Highland was experiencing suburbanization, with agricultural land replaced with housing tracts, especially with the construction of the Norton Air Force Base located to the south of the property. Despite the property reflecting Highland's growth west of SR-210 in the 1940s, there is no indication that the construction of this specific residence marked a pivotal point in the history of the neighborhood or City. Although the property is located close to the San Bernardino Airport, there is no indication that the property was historically related to the airport or its development. Additionally, the property was neither the first nor the last constructed in the area, and was merely following a continuous pattern of residential development that continued through the 1990s. The property is not known to be directly associated with events that have made a significant contribution to the history of Highland, including the construction of the Air Force Base; therefore, the property does not appear eligible under NRHP Criterion A or CRHR Criterion 1.

Criterion B/2: That are associated with the lives of persons significant in our past.

To be found eligible under Criterion B/2, the property has to be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. Archival research failed to indicate any such direct association between individuals that are known to be historic figures at the national, state, or local level and the 26562 3rd Street (APN 1192-551-07) property. The earliest ownership information identified that indicated that the Parker Family Trust owned the property by 1973. According to the San Bernardino County Recorder-Clerk's office, the family trust owned the property until 2007. Research did not reveal any reason to believe that any individuals associated with the property are persons of historic significance. Other known owners between 2007 and 2022 based on information available from the San Bernardino County Recorder-Clerk's office include Daniel Villarruel and Aurora S. Zacarias. Due to a lack of identified significant associations with important persons in history, the property does not appear eligible under NRHP Criterion B or CRHR Criterion 2.

Criterion C/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The property at 26562 3rd Street (APN 1192-551-07) property contains one historic-age building, the single-family residence, and two ancillary buildings, built in 1940. The 1940 residence does not reflect character-defining features of an architectural style due to material alterations to the windows, door, and roofing as well as the addition of an awning to the west elevation. Because the original windows and doors have been replaced with modern materials and modern materials were added to the primary elevation, the

building no longer can be said to "embody the distinctive characteristics of a type, period, or method of construction." In addition, two of the ancillary buildings experienced fire damage circa 2022. Archival research did not uncover that the residence was the work of a master architect or builder. The building also does not possess high artistic value and is not representative of a significant or distinguishable entity whose components may lack individual distinction. Additionally, the ancillary buildings do not express character-defining features and distinctive characteristics of a specific architectural style and due to their lack of distinctive characteristics, they are unlikely the work of a master architect or builder. Therefore, 26562 3rd Street (APN 1192-551-07) lacks architectural merit due to numerous alterations and fire damage, and the property does not appear eligible for the NRHP under Criterion C or the CRHR under Criterion 3.

Criterion D/4: That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D was not considered in the evaluation, because it generally applies to archaeological resources. The buildings on 26562 3rd Street (APN 1192-551-07) are not significant under Criterion D of the NRHP or Criterion 4 of the CRHR as a source, or likely source, of important historical information, nor do they appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

The 26562 3rd Street (APN 1192-551-07) property contains three buildings, none of which are known to have been moved or relocated; therefore, the property maintains integrity of location. The property does not maintain integrity of setting, as the surrounding neighborhood and streetscape have been altered significantly since the 1940 buildings, the first at the property, were constructed. At the time of construction, the surrounding area was agricultural with widely dispersed small homesteads. By the 1970s, the majority of these agricultural properties and small residences were replaced with tracts of single-family residential housing; therefore, the property no longer retains integrity of setting. Significant alterations and fire damage to the majority of the buildings on the property have substantially impacted integrity of design, materials, and workmanship. The property no longer retains integrity of feeling due to the high number of alterations to the buildings on the property and the loss of its original agricultural setting. The property can no longer convey its historic sense of a particular period. Finally, the property does not have any historical associations with people or events and therefore it does not have integrity of association. Therefore, the 26562 3rd Street (APN 1192-551-07) property does not retain integrity.

City of Highland Statement of Significance

The 26562 3rd Street (APN 1192-551-07) property does not meet any of the criteria for listing by the City of Highland, as demonstrated below.

A It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history.

As discussed in NRHP/CRHR Criterion A/1, archival research did not discover that property was related to historical events significant to the City of Highland and does not reflect special elements of the City's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history.

B It is identified with persons or events significant in local, state, or national history.

As discussed in NRHP/CRHR Criterion B/2, archival research did not discover that the property was the location of any significant historical events or associated with an important person in the City of Highland, California, or the United States.

C It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship.

As discussed in NRHP/CRHR Criterion C/3, none of the three buildings identified on the property exemplifies a particular architectural style, type, or period of construction important to the City. The historic-age residence and ancillary buildings are significantly altered, and some experienced fire damage. There are more intact examples of buildings from the 1940s throughout the City. Additionally, due to the date of construction of the earliest building constructed on the property (1940), it is unlikely to be a valuable example of the use of indigenous materials or craftsmanship.

D It is representative of the work of a notable builder, designer, or architect.

As discussed in NRHP/CRHR Criterion C/3, archival research did not uncover that any of the buildings on the property were identified with a builder, designer, or architect whose work could be considered notable within the City of Highland.

E It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development.

The property does not contribute to the significance of an historic area, nor is it thematically related to a group of properties that contribute to each other and are unified aesthetically. The area surrounding the property has been altered significantly since its construction in 1940. At the time of its construction, the surrounding area was agriculturally based with widely dispersed small homesteads. By the 1970s, the majority of these agricultural properties and small residences were replaced with tracts of single-family residential housing. The historic area that the property originally was a part of is no longer extant.

F It has a unique location or singular physical characteristics or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city of Highland.

The buildings at the property do not present a unique location or singular physical characteristics, nor is the property a view or vista representing an established and familiar visual feature of a neighborhood, community, or the City of Highland. The majority of the buildings on the property have been heavily altered and fire damaged; therefore, they do not possess unique characteristics. Additionally, the property does not display a view or vista establishing a familiar visual feature due to multiple changes, new additions, and fire damage to the buildings on the property.

G It embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation.

As discussed in NRHP/CRHR Criterion C/3, the buildings at the property have substantial

material alterations and fire damage, and no longer embody elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation.

H It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif.

The property does not possess similar characteristics to properties, sites, areas, or objects based on a historic, cultural, or architectural motif. Due to multiple large-scale alterations and fire damage to the majority of the buildings on the property since their construction, there are no distinctive characteristics that can relate them to other properties within the City of Highland.

I It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning.

The buildings at the property do not reflect significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning. Due to multiple large-scale alterations and fire damage to the majority of the buildings on the property since their construction, they can no longer be associated with different eras of settlement and growth in the City of Highland.

J It is one of the few remaining examples in the city, region, state, or nation possessing distinguishing characteristics of an architectural or historical type of specimen.

The property does not represent one of the few remaining examples in the City, region, state, or nation possessing distinctive characteristics of an architectural historical type of specimen. The buildings on the property have undergone multiple large-scale alterations and fire damage, and therefore no longer possess distinctive characteristics of such a type.

Attn: Kevin Rice

RE: **Geotechnical Engineering Investigation** - Proposed Industrial Warehouse Development - Located at the Southeast Corner of Victoria Avenue and 5th Street, in the City of Highland, California

Dear Mr. Rice:

Pursuant to your request, this firm has performed a Geotechnical Engineering Investigation for the above referenced project in accordance with your approval of our proposal dated May 11, 2022. The purpose of this investigation is to evaluate the geotechnical conditions of the subject site and to provide recommendations for the construction of a proposed industrial warehouse development.

The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration and sampling; 3) laboratory testing; 4) soil infiltration testing; 5) engineering analysis of field and laboratory data; 6) preparation of a geotechnical engineering report. It is the opinion of this firm that the proposed development is feasible from a geotechnical standpoint provided that the recommendations presented in this report are followed in the design and construction of the project.

1.0 Project Description

It is proposed to construct an industrial warehouse development consisting of 152,391 square feet building on the subject site as shown on the attached Site Plan (figure 1). The proposed concrete tilt-up building will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping. It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

2.0 Site Description

The subject property is located at the southeast corner of Victoria Avenue and 5th Street, bordered by 3rd Street to the south in the City of Highland. The generally rectangular shaped parcel is elongated in an east to west direction and is relatively level. The southeast corner of the site is currently occupied by several single-story wood framed buildings with isolated areas of asphaltic parking. The remaining portion of the site is currently vacant and contains some light, natural vegetation.

3.0 Site Exploration

The investigation consisted of the placement of twelve (12) subsurface exploratory trenches by use of backhoe and hand operated equipment to depths of approximately 10 and 18 feet below current ground elevations. The trenches were placed at accessible locations throughout the property. The explorations were visually classified and logged by a field engineer with locations of the subsurface explorations shown on the attached plan.

The exploratory trenches revealed the existing earth materials to consist of fill and natural soil. Detailed descriptions of the subsurface conditions are listed on the boring logs in Appendix A. It should be noted that the transition from one soil type to another as shown on the trench logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

Fill: A fill soil classifying as a brown, fine to medium grained, silty SAND with gravel and rootlets was encountered across the site to depths ranging from 1 to 3 feet below ground surface, these soils were noted to loose and dry. Minor amounts of asphalt and brick were encountered in exploratory trenches T-7 and T8. Approximately 2 to 6 inches of pulverized asphalt was noted on the surface near exploratory borings B-1, B-2 and B-3.

Natural: A natural undisturbed soil classifying as a brown, fine to coarse grained slightly silty SAND with occasional cobbles (up to a maximum of 30 inches in diameter) was encountered beneath the upper fill soils. The native soils as encountered were observed to be medium dense and damp.

The overall engineering characteristics of the earth material were relatively uniform with each excavation. Groundwater was not encountered to the depth of our trenches and caving occurred in the deeper cohesionless soils. Historic high groundwater in the vicinity has been recorded greater than 65 feet below grade at a nearby well located less than 1,000 feet to the west of the subject site as given on the California Department of Water Recourses database http://www.water.ca.gov/waterdatalibrary/ (State well numbers 01S03W05N006S). Additionally, local groundwater maps (Carson & Matti 1982), record historic groundwater depths in excess of 250 feet.

4.0 Laboratory Tests

Relatively undisturbed samples of the subsurface soils were obtained to perform laboratory testing and analysis for direct shear, consolidation tests, and to determine in-place moisture/densities. These relatively undisturbed ring samples were obtained by driving a thin-walled steel sampler lined with one-inch-long brass rings with an inside diameter of 2.42 inches into the undisturbed soils. Bulk bag samples were obtained in the upper soils for expansion index tests and maximum density tests. All test results are included in Appendix B, unless otherwise noted.

4.1 **Field Moisture Content** (ASTM: D 2216) and the dry density of the ring samples were determined in the laboratory. This data is listed on the logs of explorations.

4.2 **Maximum Density tests** (ASTM: D 1557) were performed on typical samples of the upper soils. Results of these tests are shown on Table I.

4.3 **Expansion Index tests** (ASTM: D 4829) were performed on remolded samples of the upper soils to determine expansive characteristics. Results of these tests are provided on Table II.

4.4 **Corrosion tests** consisting of sulfate, pH, resistivity and chloride analysis to determine potential corrosive effects of soils on concrete and underground utilities. Test results are provided on Table III.

4.5 **R-Value test** per California Test Method 301 was performed on a representative sample, which may be anticipated to be near subgrade to determine pavement design. Results are provided within the pavement design section of the report.

4.6 **Direct Shear tests** (ASTM: D 3080) were performed on undisturbed and/or remolded samples of the subsurface soils. The test is performed under saturated conditions at loads of 1,000 lbs./sq.ft., 2,000 lbs./sq.ft., and 3,000 lbs./sq.ft. with results shown on Plate A to B.

4.7 **Consolidation tests** (ASTM: D 2435) were performed on undisturbed samples to determine the differential and total settlement which may be anticipated based upon the proposed loads. Water was added to the samples at a surcharge of one KSF and the settlement curves are plotted on Plates C to D.

5.0 Seismicity Evaluation

The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely. The San Andreas Fault (San Bernardino Segment) is located approximately 5 kilometers from the site and is capable of producing a Magnitude 7.4 earthquake. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults.

The seismic design acceleration parameters for the project site are provided on the following page based on the ASCE/SEI 7-22 American Society of Civil Engineers (ASCE) website, https://asce7hazardtool.online/. The ASCE/SEI 7-22 report is attached is Appendix C

Seismic Design Acceleration Parameters

Latitude	34.106
Longitude	-117.225
Site Class	D
Risk Category	II
Peak Ground Acceleration	$PGA_M = 0.8$
Adjusted Maximum Acceleration	$S_{MS} = 2.31$ $S_{M1} = 2.73$
Design Spectral Response Acceleration Parameters	$S_{DS} = 1.54$ $S_{D1} = 1.82$
Mapped Spectral Response Acceleration	$S_S = 2.38$ $S_1 = 0.93$

Use of these values is dependent on the latest requirements of the ASCE, 11-4.8, Exception 2 that requires the value of the seismic response coefficient C_s be determined by Equation 12.8.2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either 12.8-3 for $T_L \geq T \geq 1.5T_s$ or Equation 12.8-4 for $T > T_L$. Computations and verification of these conditions is referred to the structural engineer.

6.0 Liquefaction Evaluation

The site is expected to experience ground shaking and earthquake activity that is typical of the Southern California area. It is during severe shaking that loose, granular soils below the groundwater table can liquefy. Based on review of the *County of San Bernardino County Land Use Plan – General Plan – Geologic Hazard Overlays (2009)*, the site lies *outside* a zone of "Suspected Liquefaction Susceptibility". Based on review of local groundwater maps, the depth of groundwater is in excess of 100 feet (Carson & Matti 1982). Thus, the design of the proposed construction in conformance with the latest Building Code provisions for earthquake design is expected to provide mitigation of ground shaking hazards that are typical to Southern California.

7.0 Infiltration Characteristics

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. The infiltration tests consisted of the double ring infiltration test per ASTM Method D 3385 with test results given in Appendix D. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Boring/Test No.	Depth	Soil Classification	Field Infiltration Rate
T-1/TH-1	10'	Slightly Silty SAND	72.0 in/hr
T-2/TH-2	12'	Slightly Silty SAND	170.0 in/hr
T-3/TH-3	10'	Slightly Silty SAND	56.0 in/hr
T-4/TH-4	12'	Slightly Silty SAND	67.8 in/hr

Based on the results of our field testing, the subsurface soils encountered in the proposed on-site drainage disposal system shall utilize the design infiltration rates based on the safety factor required by the county standard. All systems must meet the latest city and/or county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements.

It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

8.0 Conclusions and Recommendations

Based upon our evaluations, the proposed development is acceptable from a geotechnical engineering standpoint. By following the recommendations and guidelines set forth in our report, the structures will be safe from excessive settlements under the anticipated design loadings and conditions. The proposed development shall meet all requirements of the City Building Ordinance and will not impose any adverse effect on existing adjacent structures.

The following recommendations are based upon soil conditions encountered in our field investigation; these near-surface soil conditions could vary across the site. Variations in the soil conditions may not become evident until the commencement of grading operations for the proposed development and revised recommendations from the soils engineer may be necessary based upon the conditions encountered.

It is recommended that site inspections be performed by a representative of this firm during all grading and construction of the development to verify the findings and recommendations documented in this report. Any unusual conditions which may be encountered in the course of the project development may require the need for additional study and revised recommendations.

8.1 Site Grading Recommendations

Any vegetation and/or demolition debris shall be removed and hauled from proposed grading areas prior to the start of grading operations. Existing vegetation shall not be mixed or disced into the soils. Any removed soils may be reutilized as compacted fill once any deleterious material or oversized materials (in excess of eight inches) is removed. Grading operations shall be performed in accordance with the attached *Specifications for Placement of Compacted Fill.*

8.1.1 Removal and Recompaction Recommendations

All disturbed soils and/or fill (about 1 to 3 feet below ground surface) shall be removed to competent native material, the exposed surface scarified to a depth of 12 inches, brought to within 2% of optimum moisture content and compacted to a minimum of 90% of the laboratory standard (ASTM: D-1557) prior to placement of any additional compacted fill soils, foundations, slabs-on-grade and pavement. The upper 12 inches of soils beneath building pad and concrete paving shall be compacted to a minimum of 95% of the laboratory standard. Grading shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

The site is underlain by alluvium generally composed of gravels, cobbles and boulders in a silty sand matrix. Oversized materials are anticipated to be encountered during grading operations. The proposed building pad shall be graded with cobbles up to 6-inch minus blended uniformly with soils in the upper one foot beneath pad grade and within planned utility/foundation areas. Rock size up to 12 inches blended uniformly with soils shall be placed below two feet of more below grade. All fill will be required to be placed in suitable lifts, moisture conditioned and compacted to a minimum of 90% of the laboratory standard.

It is possible that isolated areas of undiscovered fill not described in this report are present on site; if found, these areas should be treated as discussed earlier. A diligent search shall also be conducted during grading operations in an effort to uncover any underground structures, irrigation or utility lines. If encountered, these structures and lines shall be either removed or properly abandoned prior to the proposed construction.

Any imported fill material should be preferably soil similar to the upper soils encountered at the subject site. All soils shall be approved by this firm prior to importing at the site and will be subjected to additional laboratory testing to assure concurrence with the recommendations stated in this report.

If placement of slabs-on-grade and pavement is not completed immediately upon completion of grading operations, additional testing and grading of the areas may be necessary prior to continuation of construction operations. Likewise, if adverse weather conditions occur which may damage the subgrade soils, additional assessment by the soils engineer as to the suitability of the supporting soils may be needed.

Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase. Adequate drainage away from the structures, pavement and slopes should be provided at all times.

8.1.2 **Fill Blanket Recommendations**

Due to the potential for differential settlement of foundations placed on compacted fill and native materials, it is recommended that all foundations including floor slab areas be underlain by a uniform compacted fill blanket at least two feet in thickness. This fill blanket shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

8.2 **Shrinkage and Subsidence**

The site is underlain by alluvium generally composed of gravels, cobbles and boulders blended with a sand matrix. It is our experience that a loss of volume from oversize rock will be anticipated. Results of our in-place density tests reveal that the soil shrinkage of the matrix will be on the order of 5 to 10% due to excavation and recompaction, based upon the assumption that the fill is compacted to 92% of the maximum dry density per ASTM standards. Subsidence should be 0.2 feet due to earthwork operations.

The volume change does not include any allowance for vegetation or organic stripping, removal of subsurface improvements, or topographic approximations. Although these values are only approximate, they represent our best estimate of lost yardage, which will likely occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field testing the actual equipment and grading techniques should be conducted.

8.3 **Temporary Excavations**

Temporary *unsurcharged* excavations in the existing site materials may be made at vertical inclinations up to 4 feet in height unless cohesionless soils are encountered. In areas where soils with little or no binder are encountered, where adverse geological conditions are exposed, or where excavations are adjacent to existing structures, shoring or flatter excavations may be required. The temporary cut slope gradients given above do not preclude local raveling and sloughing.

All excavations shall be made in accordance with the requirements of the soils engineer, CAL-OSHA and other public agencies having jurisdiction. Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase.

8.4 Foundation Design

All foundations may be designed utilizing the following allowable bearing capacities for an embedded depth of 18 inches into approved engineered fill with the corresponding widths:

Allowable Bearing Capacity (psf)		
Width (feet)	Continuous Foundation	Isolated Foundation
1.5	2000	2500
2.0	2075	2575
4.0	2375	2875
6.0	2500	3000

The bearing value may be increased by 500 psf for each additional foot of depth in excess of the 18-inch minimum depth, up to a maximum of 4,000 psf. A one-third increase may be used when considering short-term loading and seismic forces.

Any foundations located along property line may utilize an allowable bearing capacity of 1,500 psf and embedded into competent native soils. A modulus of subgrade reaction (k) of 200 pci may be used for design of slabs placed on engineered fill soils supporting sustained concentrated loads. A representative of this firm shall inspect all foundation excavations prior to pouring concrete.

8.5 Settlement Analysis

Resultant pressure curves for the consolidation tests are shown on Plates B to C. Computations utilizing these curves and the recommended allowable soil bearing capacities reveal that the foundations will experience settlements on the order of ¾ inch and differential settlements of less than ¼ inch.

8.6 **Lateral Resistance**

The following values may be utilized in resisting lateral loads imposed on the structure. Requirements of the California Building Code should be adhered to when the coefficient of friction and passive pressures are combined.

Coefficient of Friction - 0.40

Equivalent Passive Fluid Pressure = 250 lbs./cu.ft.

Maximum Passive Pressure = 2,500 lbs./cu.ft.

The passive pressure recommendations are valid only for approved compacted fill soils or competent native materials.

8.7 **Retaining Wall Design Parameters**

Active earth pressures against retaining walls will be equal to the pressures developed by the following fluid densities. These values are for **granular backfill material** placed behind the walls at various ground slopes above the walls.

Surface Slope of Retained Materials (Horizontal to Vertical	Equivalent Fluid Density (lb./cu.ft.)
Level	30
5 to 1	35
4 to 1	38
3 to 1	40
2 to 1	45

Any applicable short-term construction surcharges and seismic forces should be added to the above lateral pressure values. An equivalent fluid pressure of 45 pcf may be utilized for the restrained wall condition with a level grade behind the wall.

The seismic-induced lateral soil pressure for walls greater than 6 feet may be computed using a triangular pressure distribution with the maximum value at the top of the wall. The maximum lateral pressure of (20 pcf) H where H is the height of the retained soils above the wall footing should be used in final design of retaining walls. Sliding resistance values and passive fluid pressure values may be increased by 1/3 during short-term wind and seismic loading conditions.

All walls shall be waterproofed as needed and protected from hydrostatic pressure by a reliable permanent subdrain system. The granular backfill to be utilized immediately adjacent to retaining walls shall consist of an approved select granular soil with a sand equivalency greater than 30. This backfill zone of free draining material shall consist of a wedge beginning a minimum of one horizontal foot from the base of the wall extending upward at an inclination of no less than ¾ to 1 (horizontal to vertical).

8.8 **Slab Design**

All concrete slabs shall be a minimum of six inches in thickness in the proposed warehouse areas and four inches in office and hardscape and placed on approved subgrade soils compacted to a minimum of 95% of the laboratory standard in the upper 12 inches. Additional reinforcement requirements and an increase in thickness of the slabs-on-grade may be necessary based upon soils expansion potential and proposed loading conditions in the structures and should be evaluated further by the project engineers and/or architect.

A vapor retarder (10-mil minimum thickness) should be utilized in areas which would be sensitive to the infiltration of moisture. This retarder shall meet requirements of ASTM E 96, *Water Vapor Transmission of Materials* and ASTM E 1745, *Standard Specification for Water Vapor Retarders used in Contact with Soil or Granular Fill Under Concrete Slabs.* The vapor retarder shall be installed in accordance with procedures stated in ASTM E 1643, *Standard practice for Installation of Water Vapor Retarders used in Contact with Earth or Granular Fill Under Concrete Slabs.*

The moisture retarder may be placed directly upon compacted subgrade soils conditioned to near optimum moisture levels, although one to two inches of sand beneath the membrane is desirable. The subgrade upon which the retarder is placed shall be smooth and free of rocks, gravel or other protrusions which may damage the retarder. Use of sand above the retarder is under the purview of the structural engineer; if sand is used over the retarder, it should be placed in a dry condition.

8.9 **Preliminary Pavement Section Design**

The table below provides a preliminary pavement design based upon an *estimated* R-Value of 65 for the subgrade soils for the proposed pavement areas. An updated pavement design may be provided upon completion of pending laboratory testing of the near surface soils. Final pavement design may need to be based on R-Value testing of the subgrade soils near the conclusion of site grading to assure that these soils are consistent with those assumed in this preliminary design. *The recommendations are based upon estimated traffic loads. Client should submit any other anticipated traffic loadings to the geotechnical engineer, if necessary, so that pavement sections may be reviewed to determine adequacy to support the proposed loadings.*

Type of Traffic	Traffic Index	Asphalt (in.)	Base Material (in.)
Automobile Parking Stalls	4.0	3.0	3.0
Light Vehicle Circulation Areas	5.5	3.5	5.5
Heavy Truck Access Areas	7.0	4.0	8.0

Any concrete slab-on-grade in pavement areas shall be a minimum of six inches in thickness and may be placed on approved subgrade soils.

All pavement areas shall have positive drainage toward an approved outlet from the site. Drain lines behind curbs and/or adjacent to landscape areas should be considered by client and the appropriate design engineers to prevent water from infiltrating beneath pavement. If such infiltration occurs, damage to pavement, curbs and flow lines, especially on sites with expansive soils, may occur during the life of the project.

Any approved base material shall consist of a Class II aggregate or equivalent and should be compacted to a minimum of 95% relative compaction. All pavement materials shall conform to the requirements set forth by the City of Fontana. The base material; and asphaltic concrete should be tested prior to delivery to the site and during placement to determine conformance with the project specifications. A pavement engineer shall designate the specific asphalt mix design to meet the required project specifications.

8.10 **Utility Trench and Excavation Backfill**

Trenches from installation of utility lines and other excavations may be backfilled with on-site soils or approved imported soils compacted to a minimum of 90% relative compaction. All utility lines shall be properly bedded with clean sand having a sand equivalency rating of 30 or more. This bedding material shall be thoroughly water jetted around the pipe structure prior to placement of compacted backfill soils.

8.11 **Corrosion Design Criteria**

Representative samples of the surficial soils, typical of the subgrade soils expected to be encountered within foundation excavations and underground utilities were tested for corrosion potential. The minimum resistivity value obtained for the samples tested is representative of an environment that may be severely corrosive to metals. The soil pH value was considered mildly alkaline and may not have a significant effect on soil corrosivity. Consideration should be given to corrosion protection systems for buried metal such as protective coatings, wrappings or the use of PVC where permitted by local building codes.

According to Table 4.3.1 of ACI 318 Building Code and Commentary, these contents revealed negligible sulfate concentrations. Therefore, a Type II cement according to latest CBC specifications may be utilized for building foundations at this time. It is recommended that additional sulfate tests be performed at the completion of site grading to assure that the as graded conditions are consistent with the recommendations stated in this design. Corrosion test results may be found on the attached Table IV.

8.12 **Expansive Soil**

On-site soils are very low in expansion potential (EI 0-20). When soils have an expansion index (EI) of 20 or more, special attention should be given to the project design and maintenance. The attached *Expansive Soil Guidelines* should be reviewed by the engineers, architects, owner, maintenance personnel and other interested parties and considered during the design of the project and future property maintenance. Expansion test results may be found on the attached Table II.

9.0 Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavations. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase. It is the responsibility of the owner to ensure that all information within this report is submitted to the Architect and appropriate Engineers for the project.

A preconstruction conference should be held between the developer, general contractor, grading contractor, city inspector, architect, and soil engineer to clarify any questions relating to the grading operations and subsequent construction. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,

SPECIFICATIONS FOR PLACEMENT OF COMPACTED FILL

Excavation

Any existing low-density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Geotechnical Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557).

In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

Material for Fill

The on-site soils or approved import soils may be utilized for the compacted fill provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Geotechnical Engineering firm a minimum of 72 hours prior to importation of site.

Placement of Compacted Fill Soils

The approved fill soils shall be placed in layers not excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2% of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Geotechnical Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every 2 feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Geotechnical Engineering firm.

Grading Observations

The controlling governmental agencies should be notified prior to commencement of any grading operations. This firm recommends that the grading operations be conducted under the observation of a Soils Engineering firm as deemed necessary. A 24-hour notice must be provided to this firm prior to the time of our initial inspection.

Observation shall include the clearing and grubbing operations to assure that all unsuitable materials have been properly removed; approve the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished grade and designate areas of overexcavation; and perform field compaction tests to determine relative compaction achieved during fill placement. In addition, all foundation excavations shall be observed by the Soils Engineering firm to confirm that appropriate bearing materials are present at the design grades and recommend any modifications to construct footings.

EXPANSIVE SOIL GUIDELINES

The following expansive soil guidelines are provided for your project. The intent of these guidelines is to inform you, the client, of the importance of proper design and maintenance of projects supported on expansive soils. ***You, as the owner or other interested party, should be warned that you have a duty to provide the information contained in the soil report including these guidelines to your design engineers, architects, landscapers and other design parties in order to enable them to provide a design that takes into consideration expansive soils.***

In addition, you should provide the soil report with these guidelines to any property manager, lessee, property purchaser or other interested party that will have or assume the responsibility of maintaining the development in the future.

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The amount of this swelling and contracting is subject to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. Expansive soils are divided into five categories ranging from "very low" to "very high". Expansion indices are assigned to each classification and are included in the laboratory testing section of this report. *If the expansion index of the soils on your site, as stated in this report, is 21 or higher, you have expansive soils.* The classifications of expansive soils are as follows:

Classification of Expansive Soil*

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low

91-130	High
Above 130	Very High

*From Table 18A-I-B of California Building Code (1988)

When expansive soils are compacted during site grading operations, care is taken to place the materials at or slightly above optimum moisture levels and perform proper compaction operations. Any subsequent excessive wetting and/or drying of expansive soils will cause the soil materials to expand and/or contract. These actions are likely to cause distress of foundations, structures, slabs-on-grade, sidewalks and pavement over the life of the structure. ***It is therefore imperative that even after construction of improvements, the moisture contents are maintained at relatively constant levels, allowing neither excessive wetting or drying of soils.***

Evidence of excessive wetting of expansive soils may be seen in concrete slabs, both interior and exterior. Slabs may lift at construction joints producing a trip hazard or may crack from the pressure of soil expansion. Wet clays in foundation areas may result in lifting of the structure causing difficulty in the opening and closing of doors and windows, as well as cracking in exterior and interior wall surfaces. In extreme wetting of soils to depth, settlement of the structure may eventually result. Excessive wetting of soils in landscape areas adjacent to concrete or asphaltic pavement areas may also result in expansion of soils beneath pavement and resultant distress to the pavement surface.

Excessive drying of expansive soils is initially evidenced by cracking in the surface of the soils due to contraction. Settlement of structures and on-grade slabs may also eventually result along with problems in the operation of doors and windows.

Projects located in areas of expansive clay soils will be subject to more movement and "hairline" cracking of walls and slabs than similar projects situated on non-expansive sandy soils. There are, however, measures that developers and property owners may take to reduce the amount of movement over the life the development. The following guidelines are provided to assist you in both design and maintenance of projects on expansive soils:

- Drainage away from structures and pavement is essential to prevent excessive wetting of expansive soils. Grades should be designed to the latest building code and maintained to allow flow of irrigation and rain water to approved drainage devices or to the street. Any "ponding" of water adjacent to buildings, slabs and pavement after rains is evidence of poor drainage; the installation of drainage devices or regrading of the area may be required to assure proper drainage. Installation of rain gutters is also recommended to control the introduction of moisture next to buildings. Gutters should discharge into a drainage device or onto pavement which drains to roadways.

- Irrigation should be strictly controlled around building foundations, slabs and pavement and may need to be adjusted depending upon season. This control is essential to maintain a relatively uniform moisture content in the expansive soils and to prevent swelling and contracting. Over-watering adjacent to improvements may result in damage to those improvements. NorCal Engineering makes no specific recommendations regarding landscape irrigation schedules.

- Planting schemes for landscaping around structures and pavement should be analyzed carefully. Plants (including sod) requiring high amounts of water may result in excessive wetting of soils. Trees and large shrubs may actually extract moisture from the expansive soils, thus causing contraction of the fine-grained soils.

- Thickened edges on exterior slabs will assist in keeping excessive moisture from entering directly beneath the concrete. A six-inch thick or greater deepened edge on slabs may be considered. Underlying interior and exterior slabs with 6 to 12 inches or more of non-expansive soils and providing presaturation of the underlying clayey soils as recommended in the soil report will improve the overall performance of on-grade slabs.

- Increase the amount of steel reinforcing in concrete slabs, foundations and other structures to resist the forces of expansive soils. The precise amount of reinforcing should be determined by the appropriate design engineers and/or architects.

- Recommendations of the soil report should always be followed in the development of the project. Any recommendations regarding presaturation of the upper subgrade soils in slab areas should be performed in the field and verified by the Soil Engineer.

COMPONENT PROPORTIONS

DESCRIPTIVE TERMS	RANGE OF PROPORTION
Trace	1 - 5%
Few	5 - 10%
Little	10 - 20%
Some	20 - 35%
And	35 - 50%

COMPONENT DEFINITIONS

COMPONENT	SIZE RANGE
Boulders	Larger than 12 in
Cobbles	3 in to 12 in
Gravel	3 in to No 4 (4.5mm)
Coarse gravel	3 in to 3/4 in
Fine gravel	3/4 in to No 4 (4.5mm)
Sand	No. 4 (4.5mm) to No. 200 (0.074mm)
Coarse sand	No. 4 (4.5 mm) to No. 10 (2.0 mm)
Medium sand	No. 10 (2.0 mm) to No. 40 (0.42 mm)
Fine sand	No. 40 (0.42 mm) to No. 200 (0.074 mm)
Silt and Clay	Smaller than No. 200 (0.074 mm)

MOISTURE CONTENT

DRY	Absence of moisture, dusty, dry to the touch.
DAMP	Some perceptible moisture; below optimum
MOIST	No visible water; near optimum moisture content
WET	Visible free water, usually soil is below water table.

Project Owner's Certification

Huitt-Zollars, Inc. The WQMP is intended to comply with the requirements of the City of Highland and the NPDES Areawide Stormwater Program requiring the preparation of a WQMP. The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with San Bernardino County's Municipal Storm Water Management Program and the intent of the NPDES Permit for San Bernardino County and the incorporated cities of San Bernardino County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors in interest and the city/county shall be notified of the transfer. The new owner will be informed of its responsibility under this WQMP. A copy of the approved WQMP shall be available on the subject site in perpetuity.

"I certify under a penalty of law that the provisions (implementation, operation, maintenance, and funding) of the WQMP have been accepted and that the plan will be transferred to future successors."

Section 1 Discretionary Permit(s)

Form 1-1 Project Information						
Project Name		5th at Victoria Industrial				
Project Owner Contact Name:		Kevin Rice, Principal				
Mailing Address:	12126 West Sunset Blvd. Los Angeles, CA 90049	E-mail Address:	kevin@patriotdevelopmentpartners.com		Telephone:	(858)-952-4134
Permit/Application Number(s):		CUP 022-012 WQP22-009		Tract/Parcel Map Number(s):	PM20621	
Additional Information/ Comments:		N/A				
Description of Project:		The project is a new development of a industrial warehouse facility located on the southeast corner of 5th Street at Victoria Avenue in the City of Highland, California. The site is currently undeveloped on the north of the site with scattered native brush. There is an existing trailer parking and storage facility on the southeast area of the project site. On the south side of the project site, there are residential structures. The proposed industrial warehouse building is approximately 176,066 square feet in size on approximately 7.23 net acres of land. However, the net area plus the new removal and replacement street area (mainly Victoria Ave and westerly strip on 5th Street) will be included in the overall infiltration treatment capacity. In addition, a separate treatment BMP using an ADS connector pipe screen is proposed to treat Victoria Ave. All on-site runoff will be collected by catch basins and conveyed to the on-site underground infiltration/ detention system on the west side of the project site for treatment. The underground system has been registered with the EPA as a Class V Injection Well (No. CA-20220929-JK-2610) and sized to treat the Design Capture Volume (DCV). Peak storm detention is not known to be required due to the existing public storm drain infrastructure. Once the infiltration chamber system reaches its capacity, the system will overflow via a 24-inch outlet that will discharge into an existing catch basin in Victoria Avenue. The treated overflow from the proposed project site will ultimately discharge to the City Creek Channel, Twin Creek Channel, Santa Ana River and finally enter to Prado Basin See WQMP site plan in Attachment A for drainage areas and facility locations.				
Provide summary of Conceptual WQMP conditions (if previously submitted and approved). Attach complete copy.		N/A				

Section 2 Project Description

2.1 Project Information

This section of the WQMP should provide the information listed below. The information provided for Conceptual/ Preliminary WQMP should give sufficient detail to identify the major proposed site design and LID BMPs and other anticipated water quality features that impact site planning. Final Project WQMP must specifically identify all BMP incorporated into the final site design and provide other detailed information as described herein.

The purpose of this information is to help determine the applicable development category, pollutants of concern, watershed description, and long-term maintenance responsibilities for the project, and any applicable water quality credits. This information will be used in conjunction with the information in Section 3, Site Description, to establish the performance criteria and to select the LID BMP or other BMP for the project or other alternative programs that the project will participate in, which are described in Section 4.

Form 2.1-1 Description of Proposed Project

1 Development Category (Select all that apply):

☐ Significant re-development involving the addition or replacement of 5,000 ft² or more of impervious surface on an already developed site	☒ New development involving the creation of 10,000 ft² or more of impervious surface collectively over entire site	☐ Automotive repair shops with standard industrial classification (SIC) codes 5013, 5014, 5541, 7532- 7534, 7536-7539	☐ Restaurants (with SIC code 5812) where the land area of development is 5,000 ft² or more
☐ Hillside developments of 5,000 ft² or more which are located on areas with known erosive soil conditions or where the natural slope is 25 percent or more	☐ Developments of 2,500 ft² of impervious surface or more adjacent to (within 200 ft) or discharging directly into environmentally sensitive areas or waterbodies listed on the CWA Section 303(d) list of impaired waters.	☒ Parking lots of 5,000 ft² or more exposed to storm water	☐ Retail gasoline outlets that are either 5,000 ft² or more, or have a projected average daily traffic of 100 or more vehicles per day

☐ Non-Priority / Non-Category Project *May require source control LID BMPs and other LIP requirements. Please consult with local jurisdiction on specific requirements*.

2 Project Area (ft2):	340,680 26,585 Victoria	**3** Number of Dwelling Units:	N/A	**4** SIC Code:	4225

5 Is Project going to be phased? Yes ☐ No ☒ *If yes, ensure that the WQMP evaluates each phase as a distinct DA, requiring LID BMPs to address runoff at time of completion.*

6 Does Project include roads? Yes ☐ No ☒ *If yes, ensure that applicable requirements for transportation projects are addressed (see Appendix A of TGD for WQMP)*

2.2 Property Ownership/Management

Describe the ownership/management of all portions of the project and site. State whether any infrastructure will transfer to public agencies (City, County, Caltrans, etc.) after project completion. State if a homeowners or property owners association will be formed and be responsible for the long-term maintenance of project stormwater facilities. Describe any lot-level stormwater features that will be the responsibility of individual property owners.

Form 2.2-1 Property Ownership/Management

Describe property ownership/management responsible for long-term maintenance of WQMP stormwater facilities:

This property is being developed and owned by Patriot Development Partners, who will be the entity responsible for long term maintenance of WQMP Storm Drain Water Facilities throughout the site.

Owner/ Developer Name: Patriot Development Partners

Address: 12126 W.Sunset Blvd. Los Angeles, CA 90049
Contact Person: Kevin Rice

Phone: 858-952-4134

2.3 Potential Stormwater Pollutants

Determine and describe expected stormwater pollutants of concern based on land uses and site activities (refer to Table 3-3 in the TGD for WQMP).

Form 2.3-1 Pollutants of Concern			
Pollutant	Please check: E=Expected, N=Not Expected		Additional Information and Comments
Pathogens (Bacterial / Virus)	E ☒	N ☐	Pathogens are typically caused by the transport of animal or human fecal wastes from the watershed.
Nutrients - Phosphorous	E ☒	N ☐	Primary sources of nutrients in urban runoff are fertilizers and eroded soils.
Nutrients - Nitrogen	E ☒	N ☐	Primary sources of nutrients in urban runoff are fertilizers and eroded soils.
Noxious Aquatic Plants	E ☐	N ☒	Noxious aquatic plants are typically from animals or vehicle transport that grow aggressively, multiply quickly without natural controls (native herbivores, soil chemistry, etc.), and adversely affect native habitats.
Sediment	E ☒	N ☐	Sediments are solid materials that are eroded from the land surface.
Metals	E ☒	N ☐	The primary source of metal pollution in stormwater is typically commercially available metals and metal products, as well as emissions from brake pad and tire tread wear associated with driving.
Oil and Grease	E ☒	N ☐	Primary sources of oil and grease are petroleum hydrocarbon products, motor products from leaking vehicles, esters, oils, fats, waxes, and high molecular-weight fatty acids.
Trash/Debris	E ☒	N ☐	Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic matter (such as leaves, grass cuttings, and food waste) are general waste from human or animals
Pesticides / Herbicides	E ☒	N ☐	Pesticides and herbicides can be washed off urban landscapes during storm events.
Organic Compounds	E ☒	N ☐	Sources of organic compounds may include waste handling areas and vehicle or landscape maintenance areas.
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	
Other:	E ☐	N ☐	

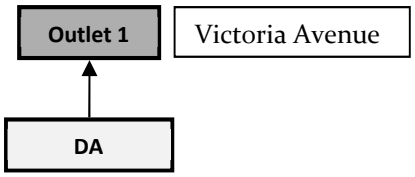
2.4 Water Quality Credits

A water quality credit program is applicable for certain types of development projects if it is not feasible to meet the requirements for on-site LID. Proponents for eligible projects, as described below, can apply for water quality credits that would reduce project obligations for selecting and sizing other treatment BMP or participating in other alternative compliance programs. Refer to Section 6.2 in the TGD for WQMP to determine if water quality credits are applicable for the project.

Form 2.4-1 Water Quality Credits

1 Project Types that Qualify for Water Quality Credits: *Select all that apply*			
☐ Redevelopment projects that reduce the overall impervious footprint of the project site. [Credit = % impervious reduced]	Higher density development projects ☐ Vertical density [20%] ☐ 7 units/ acre [5%]	☐ Mixed use development, (combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that demonstrate environmental benefits not realized through single use projects) [20%]	☐ Brownfield redevelopment (redevelop real property complicated by presence or potential of hazardous contaminants) [25%]
☐ Redevelopment projects in established historic district, historic preservation area, or similar significant core city center areas [10%]	☐ Transit-oriented developments (mixed use residential or commercial area designed to maximize access to public transportation) [20%]	☐ In-fill projects (conversion of empty lots & other underused spaces < 5 acres, substantially surrounded by urban land uses, into more beneficially used spaces, such as residential or commercial areas) [10%]	☐ Live-Work developments (variety of developments designed to support residential and vocational needs) [20%]
2 Total Credit % 0 *(Total all credit percentages up to a maximum allowable credit of 50 percent)*			
Description of Water Quality Credit Eligibility (if applicable)	N/A		

Section 3 Site and Watershed Description



Describe the project site conditions that will facilitate the selection of BMP through an analysis of the physical conditions and limitations of the site and its receiving waters. Identify distinct drainage areas (DA) that collect flow from a portion of the site and describe how runoff from each DA (and sub-watershed DMAs) is conveyed to the site outlet(s). Refer to Section 3.2 in the TGD for WQMP. The form below is provided as an example. Then complete Forms 3.2 and 3.3 for each DA on the project site. ***If the project has more than one drainage area for stormwater management, then complete additional versions of these forms for each DA / outlet.***

Form 3-1 Site Location and Hydrologic Features

Site coordinates *take GPS measurement at approximate center of site*	Latitude 34.1081	Longitude -117.2259	

1 San Bernardino County climatic region: ☒ Valley ☐ Mountain

2 Does the site have more than one drainage area (DA): Yes☐ No☒ *If no, proceed to Form 3-2. If yes, then use this form to show a conceptual schematic describing DMAs and hydrologic feature connecting DMAs to the site outlet(s). An example is provided below that can be modified for proposed project or a drawing clearly showing DMA and flow routing may be attached*

Conveyance	Briefly describe on-site drainage features to convey runoff that is not retained within a DMA
DA1 to Outlet 1	Runoff from the area DA 1 will be directed to a proposed underground infiltration/detention system on the west side of the project site. The design capture volume (DCV) will be treated through infiltration. Excess storm volume above the DCV will overflow via a 24-inch outlet that will discharge into an existing catch basin in Victoria Avenue. See the WQMP Site map in Attachment A.

Form 3-2 Existing Hydrologic Characteristics for Drainage Area 1

For Drainage Area 1's sub-watershed DMA, provide the following characteristics	DMA 1	DMA B	DMA C	DMA D
1 DMA drainage area (ft^2)	340,680	N/A	N/A	N/A
2 Existing site impervious area (ft^2)	56,108	N/A	N/A	N/A
3 Antecedent moisture condition *For desert areas, use http://www.sbcounty.gov/dpw/floodcontrol/pdf/20100412_map.pdf*	AMC III	N/A	N/A	N/A
4 Hydrologic soil group *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	A	N/A	N/A	N/A
5 Longest flowpath length (ft)	940	N/A	N/A	N/A
6 Longest flowpath slope (ft/ft)	0.007	N/A	N/A	N/A
7 Current land cover type(s) *Select from Fig C-3 of Hydrology Manual*	Barren/Some Structures	N/A	N/A	N/A
8 Pre-developed pervious area condition: *Based on the extent of wet season vegetated cover good >75%; Fair 50-75%; Poor <50% Attach photos of site to support rating*	Poor	N/A	N/A	N/A

Form 3-3 Watershed Description for Drainage Area

Receiving waters *Refer to Watershed Mapping Tool - http://permitrack.sbcounty.gov/wap/ See 'Drainage Facilities" link at this website*	City Creek Channel, Twin Creek Channel, Santa Ana Reach 5, Santa Ana Reach 4, Santa Ana Reach 3, Prado Control basin, Santa Ana Reach 2, Santa Ana Reach 1, and Pacific Ocean.
Applicable TMDLs *Refer to Local Implementation Plan*	Santa Ana River Reach 3: pathogens, nitrate.
303(d) listed impairments *Refer to Local Implementation Plan and Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/ and State Water Resources Control Board website – http://www.waterboards.ca.gov/santaana/water_issues/programs/tmdl/index.shtml*	Santa Ana Reach 2: bacteria indicator. Santa Ana Reach 3: copper, lead, pathogens. Santa Ana Reach 4: pathogens. Prado Control Basin: nutrients, pathogens, TSS.
Environmentally Sensitive Areas (ESA) *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	None
Unlined Downstream Water Bodies *Refer to Watershed Mapping Tool – http://permitrack.sbcounty.gov/wap/*	City Creek Twin Creek Channel Santa Ana River
Hydrologic Conditions of Concern	☐ Yes *Complete Hydrologic Conditions of Concern (HCOC) Assessment. Include Forms 4.2-2 through Form 4.2-5 and Hydromodification BMP Form 4.3-10 in submittal* ☒ No
Watershed–based BMP included in a RWQCB approved WAP	☐ Yes *Attach verification of regional BMP evaluation criteria in WAP* • *More Effective than On-site LID* • *Remaining Capacity for Project DCV* • *Upstream of any Water of the US* • *Operational at Project Completion* • *Long-Term Maintenance Plan* ☒ No

Section 4 Best Management Practices (BMP)

4.1 Source Control BMP

4.1.1 Pollution Prevention

Non-structural and structural source control BMP are required to be incorporated into all new development and significant redevelopment projects. Form 4.1-1 and 4.1-2 are used to describe specific source control BMPs used in the WQMP or to explain why a certain BMP is not applicable. Table 7-3 of the TGD for WQMP provides a list of applicable source control BMP for projects with specific types of potential pollutant sources or activities. The source control BMP in this table must be implemented for projects with these specific types of potential pollutant sources or activities.

The preparers of this WQMP have reviewed the source control BMP requirements for new development and significant redevelopment projects. The preparers have also reviewed the specific BMP required for project as specified in Forms 4.1-1 and 4.1-2. All applicable non-structural and structural source control BMP shall be implemented in the project.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N1	Education of Property Owners, Tenants and Occupants on Stormwater BMPs	☒	☐	Property owners shall review and become familiar with the site specific WQMP. Educational materials for day to day operations are contained in Attachment C. Additional materials can be obtained from the local water pollution prevention program. Education of property owners begin with the review/preparation of the site specific WQMP and continues through the review of additional educational material as it applies to their project.
N2	Activity Restrictions	☒	☐	Activity restriction shall be stated in the owners lease terms prior to occupancy; • Fuelling areas, air/water supply areas, maintenance bays, vehicle washing areas, outdoor material storage areas, outdoor work areas, outdoor processing areas, wash water from food preparation areas within the project site will not be allowed on the project site. • Storage of hazardous materials will not be allowed on the project site. • All pesticide applications shall be performed by a licensed contractor certified by the California Department of Pesticide Regulation. • All dumpster lids shall be kept closed at all times. • Blowing, Sweeping or hosing of debris (leaf, litter, grass clippings, trash or debris) into the streets, underground stormdrain facilities or other storm water conveyance areas shall be strictly prohibited
N3	Landscape Management BMPs	☒	☐	A landscape architect will provide design plans for the on-site landscaping and irrigation system. The design shall incorporate the use of native and drought tolerant trees and shrubs throughout the project site.
N4	BMP Maintenance	☒	☐	Property owners shall maintain the designated on-site BMP areas, see Section 5 for self inspection and maintenance form
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	Industrial purposed warehouse does not apply to Title 22 CCR (California Code of Regulations). CCR licensing in child care, residential and family child care.
N6	Local Water Quality Ordinances	☒	☐	Local Water Quality Ordinances will be addressed by implementation of this WQMP

Form 4.1-1 Non-Structural Source Control BMPs				
N7	Spill Contingency Plan	☒	☐	Industrial Warehouse buildings and truck dock areas have potential for spills and therefore each tenant shall be required to prepare a spill contingency plan and it shall be implemented in accordance with section 6.95 of the California Health and Safety Code. The spill contingency plan shall identify responsible persons in the event of a spill, an action item list identifying how the spill should be contained, cleaned up and who should be contacted in the event of a spill. Documentation of any spill event and cleanup process shall be kept on site in perpetuity.
N8	Underground Storage Tank Compliance	☐	☒	No underground storage tanks are proposed for this site
N9	Hazardous Materials Disclosure Compliance	☐	☒	No hazardous materials are planned to be stored on this site.

Form 4.1-1 Non-Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, if not applicable, state reason
		Included	Not Applicable	
N10	Uniform Fire Code Implementation	☒	☐	Underground fire protection service and fire sprinklers will be provided per the uniform fire code and the requirements of the County of San Bernardino Fire Department.
N11	Litter/Debris Control Program	☒	☐	Trash storage areas will be designed to have adjacent areas drain away from the trash storage areas. The trash storage areas shall be inspected and maintained on a monthly basis. Collection of trash from the trash storage areas shall occur on a regular basis to ensure that the trash receptacles are not overflowing. Documentation of such inspection/maintenance and trash collection shall be kept by the owner in perpetuity. See the WQMP site map in Attachment A for anticipated location of trash storage areas.
N12	Employee Training	☒	☐	The following shall be provided to the tentant by the onwer; an Employee Training/Education program shall be provided annually to help educate employees about storm water quality management and practices that help prevent storm water pollution. Documentation of such training/education program implementation shall be kept by the owner for a minimum of ten years. Sample education materials have been provided in Attachment C. Additional educational materials can be obtained from the County of San Bernardino storm water program.
N13	Housekeeping of Loading Docks	☒	☐	The project site will have truck docks. The truck docks shall be inspected on a weekly basis to help ensure that any trash and debris are collected prior to being washed into the underground storm drain system. All storm water runoff from the loading dock areas will be discharged into the underground infiltration system prior to conveyance to the public storm drain system. Documentation of such inspection/maintenance shall be kept by the owner in perpetuity.
N14	Catch Basin Inspection Program	☒	☐	The on-site catch basins shall be inspected on a quarterly basis. Inspection of the on-site catch basins shall consist of visual inspection of any sediment, trash or debris collected in the bottom of each catch basin. Any sediment, trash or debris found shall be removed from the catch basins and disposed of in a legal manner. Documentation of such inspection/maintenance shall be kept by the owner in perpetuity.

N15	Vacuum Sweeping of Private Streets and Parking Lots	☒	☐	The on-site parking lots, drive aisles, and loading dock areas shall be swept by sweeper truck on a monthly basis. Documentation of such sweeping shall be kept by the owner in perpetuity. Frequency of sweeping shall be adjusted as needed to maintain a clean site.
N16	Other Non-structural Measures for Public Agency Projects	☐	☒	None, not a public agency project.
N17	Comply with all other applicable NPDES permits	☒	☐	General construction permit "SWRCB Orders No. 2009-009-DWQ as amended by Order 2010-0014-DWQ"

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S1	Provide storm drain system stencilling and signage (CASQA New Development BMP Handbook SD-13)	☒	☐	The on-site storm drain catch basins shall be stenciled with the phrase "Drains to River" or other approved language. The signage shall be inspected on an annual basis. Missing or faded signage shall be replaced. Documentation of such inspection/maintenance shall be kept by the owner in perpetuity.
S2	Design and construct outdoor material storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-34)	☐	☒	No outdoor material storage areas are proposed for this site
S3	Design and construct trash and waste storage areas to reduce pollution introduction (CASQA New Development BMP Handbook SD-32)	☒	☐	Trash storage areas will be designed to have adjacent areas drain away from the trash storage areas. The trash storage areas shall be inspected and maintained on a weekly basis. Collection of trash from the trash storage areas shall occur on a regular basis to ensure that the trash receptacles are not overflowing. Documentation of such inspection/maintenance and trash collection shall be kept by the owner in perpetuity. See the WQMP site map in Attachment A for anticipated location of trash storage areas.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control (State-wide Model Landscape Ordinance; CASQA New Development BMP Handbook SD-12)	☒	☐	The landscape architect will follow CASQA SD-12 for design and provide design plans for the on-site irrigation system. The irrigation system shall be inspected on a monthly basis to ensure proper operation. Any broken sprinkler heads shall be repaired immediately to ensure that the system continues to operate efficiently. Documentation of such inspection/maintenance shall be kept by the owner in perpetuity.
S5	Finish grade of landscaped areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement	☒	☐	The landscape architect will provide design plans for the on-site landscaping and irrigation system. The design shall incorporate that finish grade of landsapced areas at a minimum of 1-2 inches below top of curb, sidewalk, or pavement throughout the project site.
S6	Protect slopes and channels and provide energy dissipation (CASQA New Development BMP Handbook SD-10)	☒	☐	All on-site slopes shall be designed with a minimum slope of 3 horizontal to 1 vertical to help ensure that erosion of the side slopes does not occur. The slopes will be landscaped appropriately to also help ensure that erosion of the slopes does not occur. Slopes will be inspected and maintained bi-annually. Documentation of such inspection/maintenance shall be kept by the owner in perpetuity.

S7	Covered dock areas (CASQA New Development BMP Handbook SD-31)	☐	☒	Docks are not covered
S8	Covered maintenance bays with spill containment plans (CASQA New Development BMP Handbook SD-31)	☐	☒	No maintenance bays are planned for this site.
S9	Vehicle wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No vehicle wash area are planned for this site.
S10	Covered outdoor processing areas (CASQA New Development BMP Handbook SD-36)	☐	☒	No outdoor processing areas are planned for this site.

Form 4.1-2 Structural Source Control BMPs

Identifier	Name	Check One		Describe BMP Implementation OR, If not applicable, state reason
		Included	Not Applicable	
S11	Equipment wash areas with spill containment plans (CASQA New Development BMP Handbook SD-33)	☐	☒	No equipment wash areas are planned for this site.
S12	Fueling areas (CASQA New Development BMP Handbook SD-30)	☐	☒	No fueling areas are planned for this site.
S13	Hillside landscaping (CASQA New Development BMP Handbook SD-10)	☐	☒	No hillside landscaping are planned in this site.
S14	Wash water control for food preparation areas	☐	☒	Food preparation areas are not planned for this site.
S15	Community car wash racks (CASQA New Development BMP Handbook SD-33)	☐	☒	No community car wash rack are planned for this site.

4.1.2 Preventative LID Site Design Practices

Site design practices associated with new LID requirements in the MS4 Permit should be considered in the earliest phases of a project. Preventative site design practices can result in smaller DCV for LID BMP and hydromodification control BMP by reducing runoff generation. Describe site design and drainage plan including:

- A narrative of site design practices utilized or rationale for not using practices
- A narrative of how site plan incorporates preventive site design practices
- Include an attached Site Plan layout which shows how preventative site design practices are included in WQMP

Refer to Section 5.2 of the TGD for WQMP for more details.

Form 4.1-3 Preventative LID Site Design Practices Checklist

Site Design Practices *If yes, explain how preventative site design practice is addressed in project site plan. If no, other LID BMPs must be selected to meet targets*
Minimize impervious areas: Yes ☐ No ☒ Explanation: The developer has provided the landscape percentage required by the City. The underground infiltration/detention system is sized to meet the BMP requirements.
Maximize natural infiltration capacity: Yes ☒ No ☐ Explanation: All on-site runoff direct to an underground infiltration/detention system to promote groundwater recharge.
Preserve existing drainage patterns and time of concentration: Yes ☒ No ☐ Explanation: Existing runoff sheet flows in a southwesterly direction and discharges to Victoria Avenue just north of 3rd Street. This drainage pattern will be maintained in the proposed condition. The proposed runoff will be collected and conveyed to an on-site underground infiltration/detention system, and the overflow will discharge to a proposed parkway culvert on Victoria Ave; the detention system will increase the time of concentration.
Disconnect impervious areas: Yes ☐ No ☒ Explanation: The building roof drains along the southerly side will be directly connected to the on-site storm drain system.
Protect existing vegetation and sensitive areas: Yes ☐ No ☒ Explanation: The site has no sensitive vegetation to protect. The planting of new vegetation will be occur throughout the site.
Re-vegetate disturbed areas: Yes ☒ No ☐ Explanation: All proposed landscape areas will be vegetated for stablization.
Minimize unnecessary compaction in stormwater retention/infiltration basin/trench areas: Yes ☒ No ☐ Explanation: The soils at the bottom of proposed infiltration/detention system will be leveled, but not compacted.
Utilize vegetated drainage swales in place of underground piping or imperviously lined swales: Yes ☐ No ☒ Explanation: Due to the site layout and designed grades, no vegetated drainage swales will be utilized in the proposed design.
Stake off areas that will be used for landscaping to minimize compaction during construction : Yes ☒ No ☐ Explanation: Landscaped areas will be staked off during grading operation throughout the project site.

4.2 Project Performance Criteria

The purpose of this section of the Project WQMP is to establish targets for post-development hydrology based on performance criteria specified in the MS4 Permit. These targets include runoff volume for water quality control (referred to as LID design capture volume), and runoff volume, time of concentration, and peak runoff for protection of any downstream waterbody segments with a HCOC. If the project has more than one outlet for stormwater runoff, then complete additional versions of these forms for each DA / outlet.

Methods applied in the following forms include:

- For LID BMP Design Capture Volume (DCV), the San Bernardino County Stormwater Program requires use of the P_6 method (MS4 Permit Section XI.D.6a.ii) – Form 4.2-1
- For HCOC pre- and post-development hydrologic calculation, the San Bernardino County Stormwater Program requires the use of the Rational Method (San Bernardino County Hydrology Manual Section D). Forms 4.2-2 through Form 4.2-5 calculate hydrologic variables including runoff volume, time of concentration, and peak runoff from the project site pre- and post-development using the Hydrology Manual Rational Method approach. For projects greater than 640 acres (1.0 mi^2), the Rational Method and these forms should not be used. For such projects, the Unit Hydrograph Method (San Bernardino County Hydrology Manual Section E) shall be applied for hydrologic calculations for HCOC performance criteria.

Refer to Section 4 in the TGD for WQMP for detailed guidance and instructions.

Form 4.2-1 LID BMP Performance Criteria for Design Capture Volume (DA 1)

1 Project area DA 1 (ft^2): 340,680	**2** Imperviousness after applying preventative site design practices (Imp%): 0.84	**3** Runoff Coefficient (Rc): 0.65 *$R_c = 0.858(Imp\%)^{\wedge 3}-0.78(Imp\%)^{\wedge 2}+0.774(Imp\%)+0.04$*
4 Determine 1-hour rainfall depth for a 2-year return period $P_{2yr\text{-}1hr}$ (in): 0.519 http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html		
5 Compute P_6, Mean 6-hr Precipitation (inches): 0.768 *P_6 = Item 4 *C_1, where C_1 is a function of site climatic region specified in Form 3-1 Item 1 (Valley = 1.4807; Mountain = 1.909; Desert = 1.2371)*		
6 Drawdown Rate *Use 48 hours as the default condition. Selection and use of the 24-hour drawdown time condition is subject to approval by the local jurisdiction. The necessary BMP footprint is a function of drawdown time. While shorter drawdown times reduce the performance criteria for LID BMP design capture volume, the depth of water that can be stored is also reduced.*		24-hrs ☐ 48-hrs ☒
7 Compute design capture volume, DCV (ft^3): 27,766 cf *DCV = 1/12 * [Item 1* Item 3 *Item 5 * C_2], where C_2 is a function of drawdown rate (24-hr = 1.582; 48-hr = 1.963)* *Compute separate DCV for each outlet from the project site per schematic drawn in Form 3-1 Item 2*

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

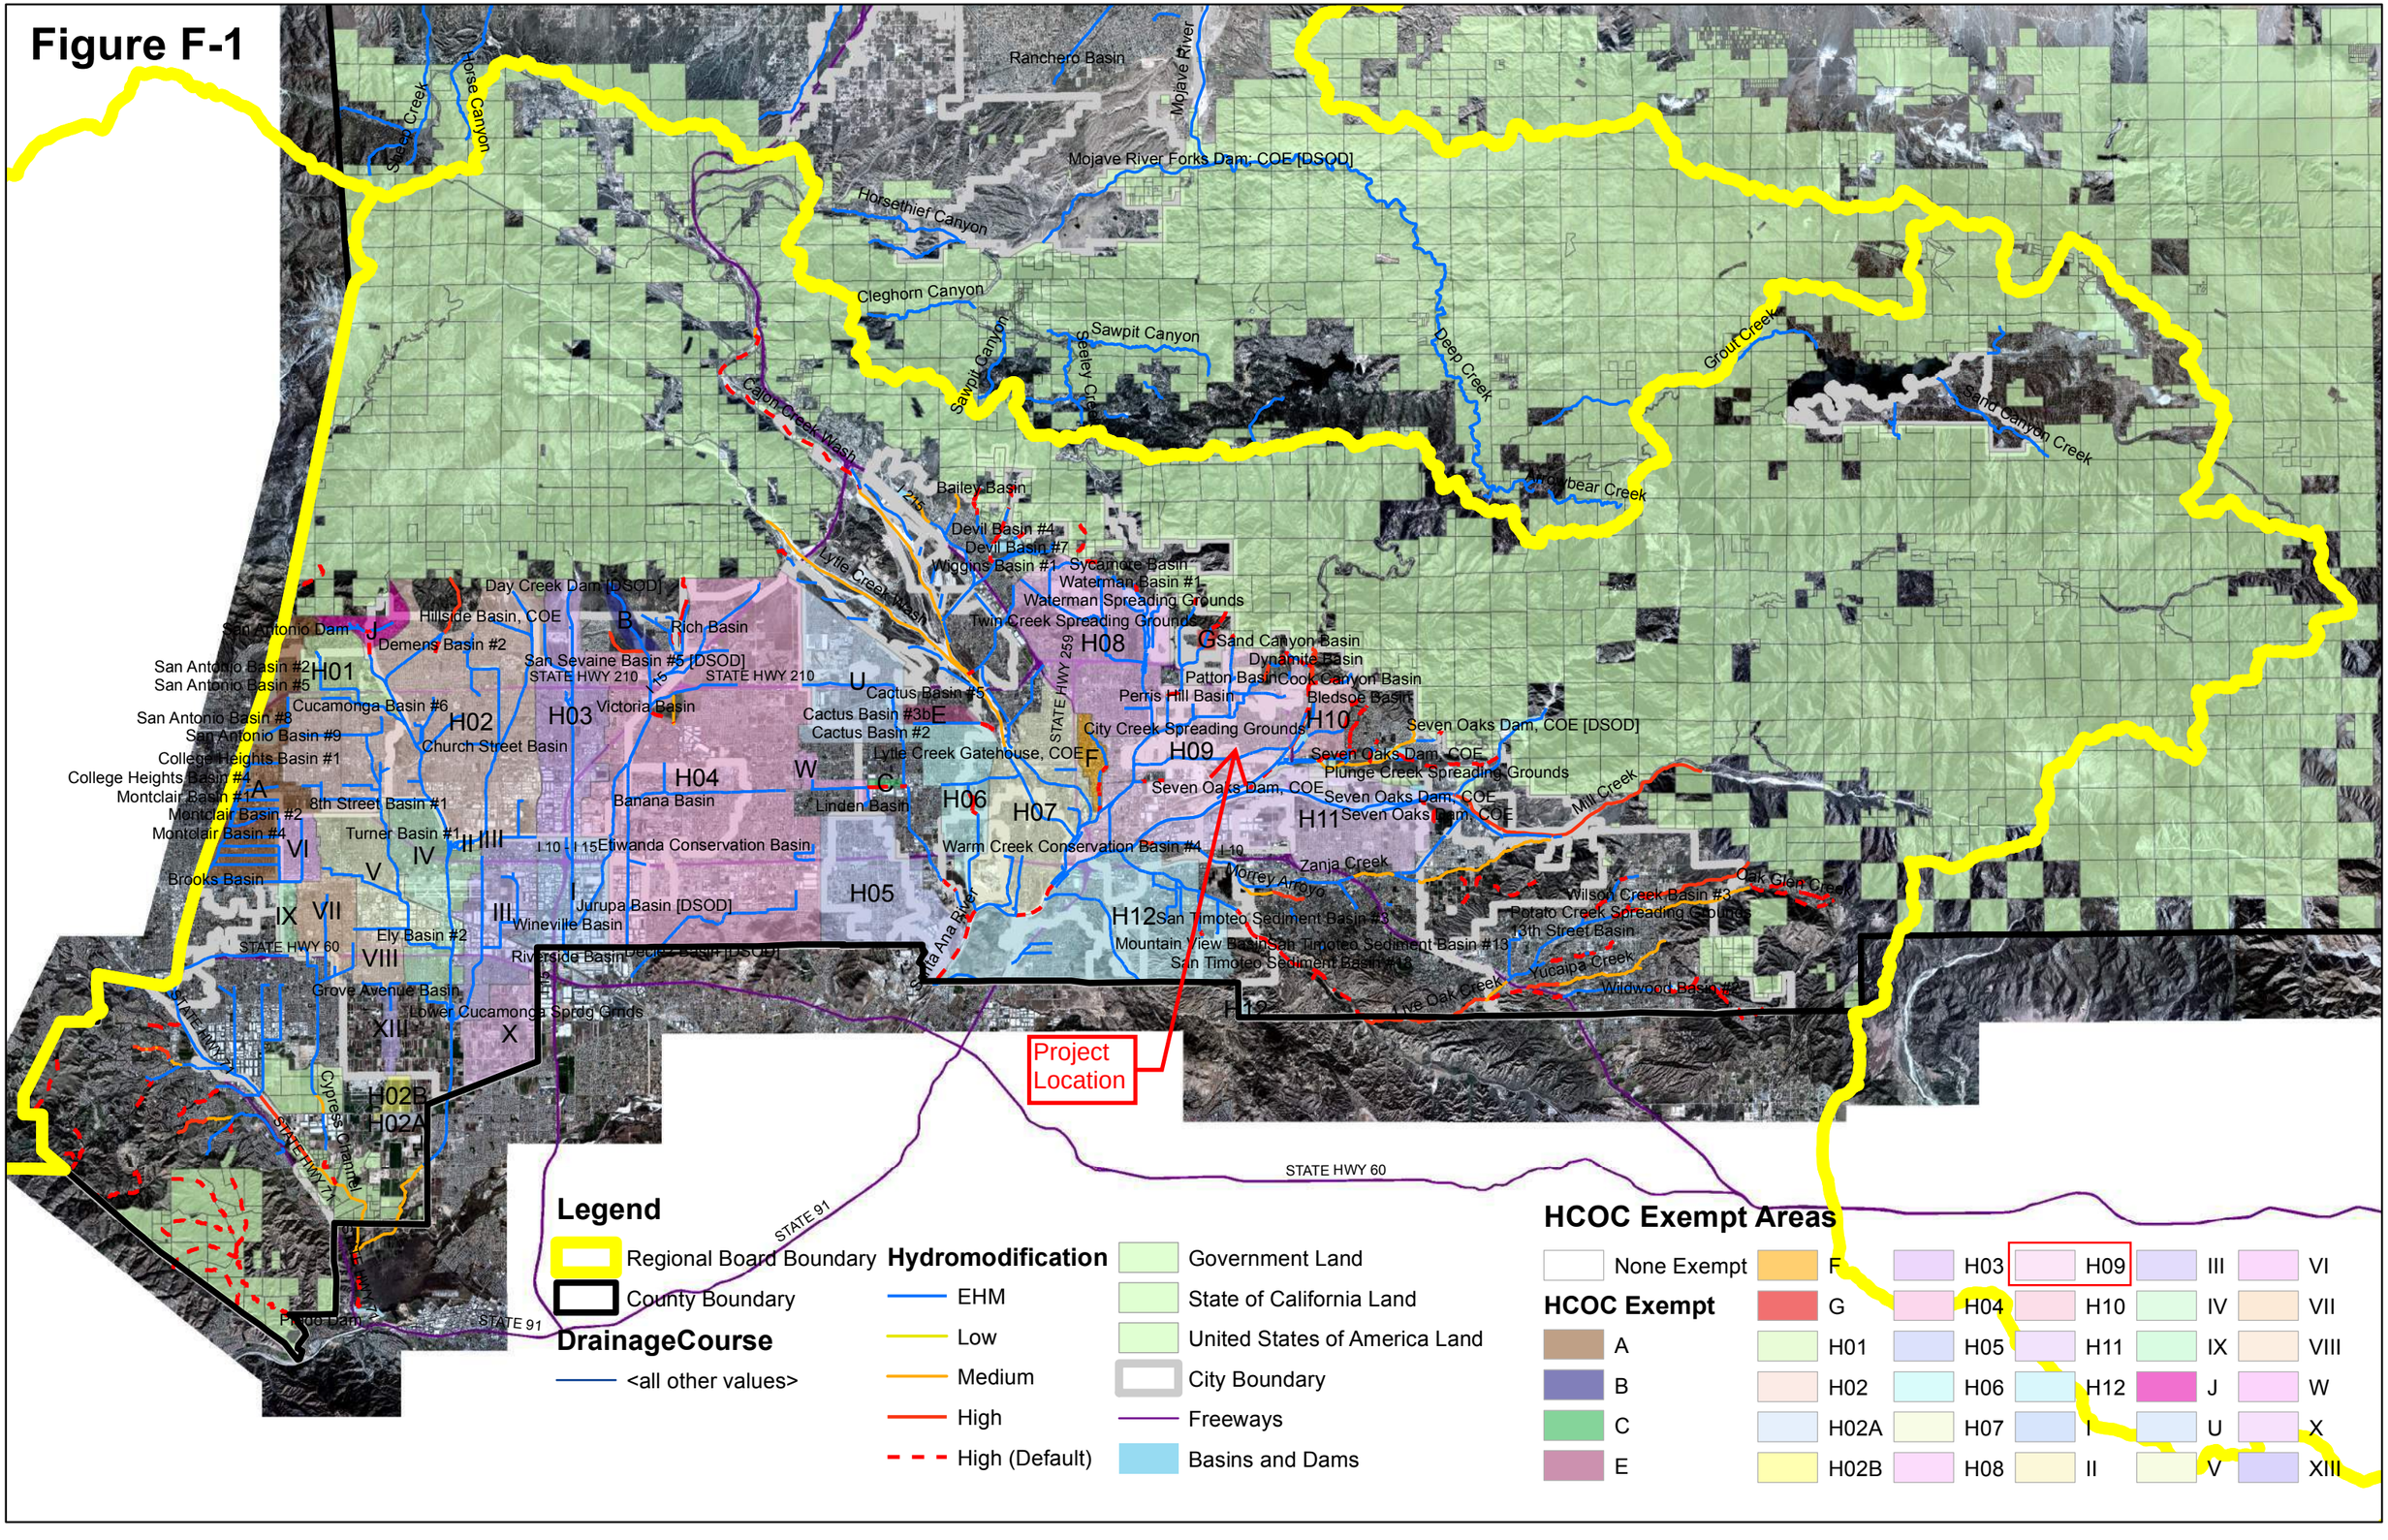
Form 4.2-2 Summary of HCOC Assessment (DA 1)

Does project have the potential to cause or contribute to an HCOC in a downstream channel: Yes ☐ No ☒

Go to: *http://permitrack.sbcounty.gov/wap/*



If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below

(Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft^3)	Time of Concentration (min)	Peak Runoff (cfs)
Pre-developed	**1** N/A *Form 4.2-3 Item 12*	**2** N/A *Form 4.2-4 Item 13*	**3** N/A *Form 4.2-5 Item 10*
Post-developed	**4** N/A *Form 4.2-3 Item 13*	**5** N/A *Form 4.2-4 Item 14*	**6** N/A *Form 4.2-5 Item 14*
Difference	**7** N/A *Item 4 – Item 1*	**8** N/A *Item 2 – Item 5*	**9** N/A *Item 6 – Item 3*
Difference (as % of pre-developed)	**10** N/A *%* *Item 7 / Item 1*	**11** N/A *%* *Item 8 / Item 2*	**12** N/A *%* *Item 9 / Item 3*

Hydromodification

A.1 Hydrologic Conditions of Concern (HCOC) Analysis

HCOC Exemption:

1. **Sump Condition:** All downstream conveyance channel to an adequate sump (for example, Prado Dam, Santa Ana River, or other Lake, Reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

2. **Pre = Post**: The runoff flow rate, volume and velocity for the post-development condition of the Priority Development Project do not exceed the pre-development (i.e, naturally occurring condition for the 2-year, 24-hour rainfall event utilizing latest San Bernardino County Hydrology Manual.

    a. Submit a substantiated hydrologic analysis to justify your request.

3. **Diversion to Storage Area**: The drainage areas that divert to water storage areas which are considered as control/release point and utilized for water conservation.

    a. See Appendix F for the HCOC Exemption Map and the on-line Watershed Geodatabase (http://sbcounty.permitrack.com/wap) for reference.

4. **Less than One Acre**: The Priority Development Project disturbs less than one acre. The Co-permittee has the discretion to require a Project Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The project disturbs less than one acre and is not part of a common plan of development.

5. **Built Out Area**: The contributing watershed area to which the project discharges has a developed area percentage greater than 90 percent.

    a. See Appendix F for the HCOC Exemption Map and the on-line Watershed Geodatabase (http://sbcounty.permitrack.com/wap) for reference.

Form 4.2-3 HCOC Assessment for Runoff Volume (DA 1) (N/A)

Weighted Curve Number Determination for: Pre-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1a Land Cover type	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
2a Hydrologic Soil Group (HSG)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
3a DMA Area, ft^2 *sum of areas of DMA should equal area of DA*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
4a Curve Number (CN) *use Items 1 and 2 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Weighted Curve Number Determination for: Post-developed DA	DMA A	DMA B	DMA C	DMA D	DMA E	DMA F	DMA G	DMA H
1b Land Cover type	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
2b Hydrologic Soil Group (HSG)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
3b DMA Area, ft^2 *sum of areas of DMA should equal area of DA*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
4b Curve Number (CN) *use Items 5 and 6 to select the appropriate CN from Appendix C-2 of the TGD for WQMP*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

5 Pre-Developed area-weighted CN: N/A	**7** Pre-developed soil storage capacity, S (in): N/A *S = (1000 / Item 5) - 10*	**9** Initial abstraction, I_a (in): N/A *I_a = 0.2 * Item 7*
6 Post-Developed area-weighted CN: N/A	**8** Post-developed soil storage capacity, S (in): N/A *S = (1000 / Item 6) - 10*	**10** Initial abstraction, I_a (in): N/A *I_a = 0.2 * Item 8*

11 Precipitation for 2 yr, 24 hr storm (in): N/A
Go to: http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html

12 Pre-developed Volume (ft^3): N/A
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 9)^2 / ((Item 11 – Item 9 + Item 7)*

13 Post-developed Volume (ft^3): N/A
*V_{pre} =(1 / 12) * (Item sum of Item 3) * [(Item 11 – Item 10)^2 / ((Item 11 – Item 10 + Item 8)*

14 Volume Reduction needed to meet HCOC Requirement, (ft^3): N/A
*V_{HCOC} = (Item 13 * 0.95) – Item 12*

Form 4.2-4 HCOC Assessment for Time of Concentration (DA 1) (N/A)

Compute time of concentration for pre and post developed conditions for each DA *(For projects using the Hydrology Manual complete the form below)*

Variables	Pre-developed DA1 *Use additional forms if there are more than 4 DMA*				Post-developed DA1 *Use additional forms if there are more than 4 DMA*			
	DMA A	DMA B	DMA C	DMA D	DMA A	DMA B	DMA C	DMA D
1 Length of flowpath (ft) *Use Form 3-2 Item 5 for pre-developed condition*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
2 Change in elevation (ft)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
3 Slope (ft/ft), *S_o = Item 2 / Item 1*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
4 Land cover	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
5 Initial DMA Time of Concentration (min) *Appendix C-1 of the TGD for WQMP*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
6 Length of conveyance from DMA outlet to project site outlet (ft) *May be zero if DMA outlet is at project site outlet*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
7 Cross-sectional area of channel (ft^2)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
8 Wetted perimeter of channel (ft)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
9 Manning's roughness of channel (n)	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
10 Channel flow velocity (ft/sec) *V_{fps} = (1.49 / Item 9) * (Item 7/Item 8)^0.67 * (Item 3)^0.5*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
11 Travel time to outlet (min) *T_t = Item 6 / (Item 10 * 60)*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
12 Total time of concentration (min) *T_c = Item 5 + Item 11*	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A

13 Pre-developed time of concentration (min): N/A *Minimum of Item 12 pre-developed DMA*

14 Post-developed time of concentration (min): N/A *Minimum of Item 12 post-developed DMA*

15 Additional time of concentration needed to meet HCOC requirement (min): N/A *$T_{C\text{-}HCOC}$ = (Item 13 * 0.95) – Item 14*

Form 4.2-5 HCOC Assessment for Peak Runoff (DA 1) (N/A)

Compute peak runoff for pre- and post-developed conditions

Variables		Pre-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*			Post-developed DA to Project Outlet (*Use additional forms if more than 3 DMA)*		
		DMA A	DMA B	DMA C	DMA A	DMA B	DMA C
1 Rainfall Intensity for storm duration equal to time of concentration *I_{peak} = 10^(LOG Form 4.2-1 Item 4 - 0.6 LOG Form 4.2-4 Item 5 /60)*		N/A	N/A	N/A	N/A	N/A	N/A
2 Drainage Area of each DMA (Acres) *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		N/A	N/A	N/A	N/A	N/A	N/A
3 Ratio of pervious area to total area *For DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		N/A	N/A	N/A	N/A	N/A	N/A
4 Pervious area infiltration rate (in/hr) *Use pervious area CN and antecedent moisture condition with Appendix C-3 of the TGD for WQMP*		N/A	N/A	N/A	N/A	N/A	N/A
5 Maximum loss rate (in/hr) *F_m = Item 3 * Item 4* *Use area-weighted F_m from DMA with outlet at project site outlet, include upstream DMA (Using example schematic in Form 3-1, DMA A will include drainage from DMA C)*		N/A	N/A	N/A	N/A	N/A	N/A
6 Peak Flow from DMA (cfs) *Q_p =Item 2 * 0.9 * (Item 1 - Item 5)*		N/A	N/A	N/A	N/A	N/A	N/A
7 Time of concentration adjustment factor for other DMA to site discharge point *Form 4.2-4 Item 12 DMA / Other DMA upstream of site discharge point (If ratio is greater than 1.0, then use maximum value of 1.0)*	DMA A	*n/a*	N/A	N/A	*n/a*	N/A	N/A
	DMA B	N/A	*n/a*	N/A	N/A	*n/a*	N/A
	DMA C	N/A	N/A	*n/a*	N/A	N/A	*n/a*

8 Pre-developed Q_p at T_c for DMA A: N/A *Q_p = Item 6_{DMAA} + [Item 6_{DMAB} * (Item 1_{DMAA} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAA/2}$] + [Item 6_{DMAC} * (Item 1_{DMAA} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAA/3}$]*	**9** Pre-developed Q_p at T_c for DMA B: N/A *Q_p = Item 6_{DMAB} + [Item 6_{DMAA} * (Item 1_{DMAB} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAB/1}$] + [Item 6_{DMAC} * (Item 1_{DMAB} - Item 5_{DMAC})/(Item 1_{DMAC} - Item 5_{DMAC})* Item $7_{DMAB/3}$]*	**10** Pre-developed Q_p at T_c for DMA C: N/A *Q_p = Item 6_{DMAC} + [Item 6_{DMAA} * (Item 1_{DMAC} - Item 5_{DMAA})/(Item 1_{DMAA} - Item 5_{DMAA})* Item $7_{DMAC/1}$] + [Item 6_{DMAB} * (Item 1_{DMAC} - Item 5_{DMAB})/(Item 1_{DMAB} - Item 5_{DMAB})* Item $7_{DMAC/2}$]*
10 Peak runoff from pre-developed condition confluence analysis (cfs): N/A *Maximum of Item 8, 9, and 10 (including additional forms as needed)*		
11 Post-developed Q_p at T_c for DMA A: N/A *Same as Item 8 for post-developed values*	**12** Post-developed Q_p at T_c for DMA B: N/A *Same as Item 9 for post-developed values*	**13** Post-developed Q_p at T_c for DMA C: N/A *Same as Item 10 for post-developed values*
14 Peak runoff from post-developed condition confluence analysis (cfs): N/A *Maximum of Item 11, 12, and 13 (including additional forms as needed)*		
15 Peak runoff reduction needed to meet HCOC Requirement (cfs): N/A *$Q_{p\text{-}HCOC}$ = (Item 14 * 0.95) – Item 10*		

4.3 Project Conformance Analysis

Complete the following forms for each project site DA to document that the proposed LID BMPs conform to the project DCV developed to meet performance criteria specified in the MS4 Permit (WQMP Template Section 4.2). For the LID DCV, the forms are ordered according to hierarchy of BMP selection as required by the MS4 Permit (see Section 5.3.1 in the TGD for WQMP). The forms compute the following for on-site LID BMP:

- Site Design and Hydrologic Source Controls (Form 4.3-2)
- Retention and Infiltration (Form 4.3-3)
- Harvested and Use (Form 4.3-4) or
- Biotreatment (Form 4.3-5).

At the end of each form, additional fields facilitate the determination of the extent of mitigation provided by the specific BMP category, allowing for use of the next category of BMP in the hierarchy, if necessary.

The first step in the analysis, using Section 5.3.2.1 of the TGD for WQMP, is to complete Forms 4.3-1 and 4.3-3) to determine if retention and infiltration BMPs are infeasible for the project. For each feasibility criterion in Form 4.3-1, if the answer is "Yes," provide all study findings that includes relevant calculations, maps, data sources, etc. used to make the determination of infeasibility.

Next, complete Forms 4.3-2 and 4.3-4 to determine the feasibility of applicable HSC and harvest and use BMPs, and, if their implementation is feasible, the extent of mitigation of the DCV.

If no site constraints exist that would limit the type of BMP to be implemented in a DA, evaluate the use of combinations of LID BMPs, including all applicable HSC BMPs to maximize on-site retention of the DCV. If no combination of BMP can mitigate the entire DCV, implement the single BMP type, or combination of BMP types, that maximizes on-site retention of the DCV within the minimum effective area.

If the combination of LID HSC, retention and infiltration, and harvest and use BMPs are unable to mitigate the entire DCV, then biotreatment BMPs may be implemented by the project proponent. If biotreatment BMPs are used, then they must be sized to provide sufficient capacity for effective treatment of the remainder of the volume-based performance criteria that cannot be achieved with LID BMPs (TGD for WQMP Section 5.4.4.2). **Under no circumstances shall any portion of the DCV be released from the site without effective mitigation and/or treatment**.

Form 4.3-1 Infiltration BMP Feasibility (DA 1)

Feasibility Criterion – Complete evaluation for each DA on the Project Site

[1] Would infiltration BMP pose significant risk for groundwater related concerns? Yes ☐ No ☒
Refer to Section 5.3.2.1 of the TGD for WQMP

If Yes, Provide basis: (attach)

[2] Would installation of infiltration BMP significantly increase the risk of geotechnical hazards? Yes ☐ No ☒
(Yes, if the answer to any of the following questions is yes, as established by a geotechnical expert):

- The location is less than 50 feet away from slopes steeper than 15 percent
- The location is less than eight feet from building foundations or an alternative setback.
- A study certified by a geotechnical professional or an available watershed study determines that stormwater infiltration would result in significantly increased risks of geotechnical hazards.

If Yes, Provide basis: (attach)

[3] Would infiltration of runoff on a Project site violate downstream water rights? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[4] Is proposed infiltration facility located on hydrologic soil group (HSG) D soils or does the site geotechnical investigation indicate presence of soil characteristics, which support categorization as D soils? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[5] Is the design infiltration rate, after accounting for safety factor of 2.0, below proposed facility less than 0.3 in/hr (accounting for soil amendments)? Yes ☐ No ☒

If Yes, Provide basis: (attach)

[6] Would on-site infiltration or reduction of runoff over pre-developed conditions be partially or fully inconsistent with watershed management strategies as defined in the WAP, or impair beneficial uses? Yes ☐ No ☒
See Section 3.5 of the TGD for WQMP and WAP

If Yes, Provide basis: (attach)

[7] Any answer from Item 1 through Item 3 is "Yes": Yes ☐ No ☒
If yes, infiltration of any volume is not feasible onsite. Proceed to Form 4.3-4, Harvest and Use BMP. If no, then proceed to Item 8 below.

[8] Any answer from Item 4 through Item 6 is "Yes": Yes ☐ No ☒
If yes, infiltration is permissible but is not required to be considered. Proceed to Form 4.3-2, Hydrologic Source Control BMP.
If no, then proceed to Item 9, below.

[9] All answers to Item 1 through Item 6 are "No":
Infiltration of the full DCV is potentially feasible, LID infiltration BMP must be designed to infiltrate the full DCV to the MEP.
Proceed to Form 4.3-2, Hydrologic Source Control BMP.

4.3.1 Site Design Hydrologic Source Control BMP

Section XI.E. of the Permit emphasizes the use of LID preventative measures; and the use of LID HSC BMPs reduces the portion of the DCV that must be addressed in downstream BMPs. Therefore, all applicable HSC shall be provided except where they are mutually exclusive with each other, or with other BMPs. Mutual exclusivity may result from overlapping BMP footprints such that either would be potentially feasible by itself, but both could not be implemented. Please note that while there are no numeric standards regarding the use of HSC, if a project cannot feasibly meet BMP sizing requirements or cannot fully address HCOCs, feasibility of all applicable HSC must be part of demonstrating that the BMP system has been designed to retain the maximum feasible portion of the DCV. Complete Form 4.3-2 to identify and calculate estimated retention volume from implementing site design HSC BMP. Refer to Section 5.4.1 in the TGD for more detailed guidance.

Form 4.3-2 Site Design Hydrologic Source Control BMPs (N/A)

1 Implementation of Impervious Area Dispersion BMP (i.e. routing runoff from impervious to pervious areas), excluding impervious areas planned for routing to on-lot infiltration BMP: Yes ☐ No ☒ *If yes, complete Items 2-5; If no, proceed to Item 6*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Total impervious area draining to pervious area (ft^2)			
3 Ratio of pervious area receiving runoff to impervious area			
4 Retention volume achieved from impervious area dispersion (ft^3) *V = Item2 * Item 3 * (0.5/12), assuming retention of 0.5 inches of runoff*			
5 Sum of retention volume achieved from impervious area dispersion (ft^3): 0 *$V_{retention}$ =Sum of Item 4 for all BMPs*			
6 Implementation of Localized On-lot Infiltration BMPs (e.g. on-lot rain gardens): Yes ☐ No ☒ *If yes, complete Items 7-13 for aggregate of all on-lot infiltration BMP in each DA; If no, proceed to Item 14*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
7 Ponding surface area (ft^2)			
8 Ponding depth (ft)			
9 Surface area of amended soil/gravel (ft^2)			
10 Average depth of amended soil/gravel (ft)			
11 Average porosity of amended soil/gravel			
12 Retention volume achieved from on-lot infiltration (ft^3) *$V_{retention}$ = (Item 7 *Item 8) + (Item 9 * Item 10 * Item 11)*			
13 Runoff volume retention from on-lot infiltration (ft^3): 0 *$V_{retention}$ =Sum of Item 12 for all BMPs*			

Form 4.3-2 cont. Site Design Hydrologic Source Control BMPs (DA 1)

14 Implementation of evapotranspiration BMP (green, brown, or blue roofs): Yes ☐ No ☒ *If yes, complete Items 15-20. If no, proceed to Item 21*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
15 Rooftop area planned for ET BMP (ft^2)			
16 Average wet season ET demand (in/day) *Use local values, typical ~ 0.1*			
17 Daily ET demand (ft^3/day) *Item 15 * (Item 16 / 12)*			
18 Drawdown time (hrs) *Copy Item 6 in Form 4.2-1*			
19 Retention Volume (ft^3) $V_{retention}$ *= Item 17 * (Item 18 / 24)*			
20 Runoff volume retention from evapotranspiration BMPs (ft^3): 0 $V_{retention}$ *=Sum of Item 19 for all BMPs*

29 Runoff volume retention from residential rain barrels/Cisterns (ft3): 0 $V_{retention}$ *=Sum of Item 28 for all BMPs*			
30 Total Retention Volume from Site Design Hydrologic Source Control BMPs: 0 *Sum of Items 5, 13, 20, 25 and 29*			

4.3.2 Infiltration BMPs

Use Form 4.3-3 to compute on-site retention of runoff from proposed retention and infiltration BMPs. Volume retention estimates are sensitive to the percolation rate used, which determines the amount of runoff that can be infiltrated within the specified drawdown time. The infiltration safety factor reduces field measured percolation to account for potential inaccuracy associated with field measurements, declining BMP performance over time, and compaction during construction. Appendix D of the TGD for WQMP provides guidance on estimating an appropriate safety factor to use in Form 4.3-3.

If site constraints limit the use of BMPs to a single type and implementation of retention and infiltration BMPs mitigate no more than 40% of the DCV, then they are considered infeasible and the Project Proponent may evaluate the effectiveness of BMPs lower in the LID hierarchy of use (Section 5.5.1 of the TGD for WQMP)

If implementation of infiltrations BMPs is feasible as determined using Form 4.3-1, then LID infiltration BMPs shall be implemented to the MEP (section 4.1 of the TGD for WQMP).

.

Form 4.3-3 Infiltration LID BMP - including underground BMPs (DA 1)

1 Remaining LID DCV not met by site design HSC BMP (ft^3): 27,766 *V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30*

12 Gravel porosity	N/A	-	-
13 Duration of storm as basin is filling (hrs) *Typical ~ 3hrs*	N/A	-	-
14 Above Ground Retention Volume (ft^3) *$V_{retention}$ = Item 8 * [Item7 + (Item 9 * Item 10) + (Item 11 * Item 12) + (Item 13 * (Item 4 / 12))]*	N/A	-	-
15 Underground Retention Volume (ft^3) *Volume determined using manufacturer's specifications and calculations*	33,573	-	-

16 Total Retention Volume from LID Infiltration BMPs: 33,573 *(Sum of Items 14 and 15 for all infiltration BMP included in plan)*

17 Fraction of DCV achieved with infiltration BMP: 120.9% *Retention% = Item 16 / Form 4.2-1 Item 7*

Note: System will drain within 40 hrs using a max infiltration of 2.4"/hr
Time to infiltrate entire system = (8ft x 12in/ft) /(2.4in/hr) = 40 hrs

18 Is full LID DCV retained onsite with combination of hydrologic source control and LID retention/infiltration BMPs? Yes ☒ No ☐

If yes, demonstrate conformance using Form 4.3-10; If no, then reduce Item 3, Factor of Safety to 2.0 and increase Item 8, Infiltrating Surface Area, such that the portion of the site area used for retention and infiltration BMPs equals or exceeds the minimum effective area thresholds (Table 5-7 of the TGD for WQMP) for the applicable category of development and repeat all above calculations.

4.3.3 Harvest and Use BMP (N/A)

Harvest and use BMP may be considered if the full LID DCV cannot be met by maximizing infiltration BMPs. Use Form 4.3-4 to compute on-site retention of runoff from proposed harvest and use BMPs.

Volume retention estimates for harvest and use BMPs are sensitive to the on-site demand for captured stormwater. Since irrigation water demand is low in the wet season, when most rainfall events occur in San Bernardino County, the volume of water that can be used within a specified drawdown period is relatively low. The bottom portion of Form 4.3-4 facilitates the necessary computations to show infeasibility if a minimum incremental benefit of 40 percent of the LID DCV would not be achievable with MEP implementation of on-site harvest and use of stormwater (Section 5.5.4 of the TGD for WQMP).

Form 4.3-4 Harvest and Use BMPs (DA 1) (N/A)

1 Remaining LID DCV not met by site design HSC or infiltration BMP (ft^3): 0
V_{unmet} = Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16

BMP Type(s) *Compute runoff volume retention from proposed harvest and use BMP (Select BMPs from Table 5-4 of the TGD for WQMP) - Use additional forms for more BMPs*	DA DMA BMP Type	DA DMA BMP Type	DA DMA BMP Type *(Use additional forms for more BMPs)*
2 Describe cistern or runoff detention facility			
3 Storage volume for proposed detention type (ft^3) *Volume of cistern*			
4 Landscaped area planned for use of harvested stormwater (ft^2)			
5 Average wet season daily irrigation demand (in/day) Use local values, typical ~ 0.1 in/day			
6 Daily water demand (ft^3/day) *Item 4 * (Item 5 / 12)*			
7 Drawdown time (hrs) *Copy Item 6 from Form 4.2-1*			
8 Retention Volume (ft^3) *$V_{retention}$ = Minimum of (Item 3) or (Item 6 * (Item 7 / 24))*			

9 Total Retention Volume (ft^3) from Harvest and Use BMP0 *Sum of Item 8 for all harvest and use BMP included in plan*

10 Is the full DCV retained with a combination of LID HSC, retention and infiltration, and harvest & use BMPs? Yes ☐ No ☐

If yes, demonstrate conformance using Form 4.3-10. If no, then re-evaluate combinations of all LID BMP and optimize their implementation such that the maximum portion of the DCV is retained on-site (using a single BMP type or combination of BMP types). If the full DCV cannot be mitigated after this optimization process, proceed to Section 4.3.4.

4.3.4 Biotreatment BMP (N/A)

Biotreatment BMPs may be considered if the full LID DCV cannot be met by maximizing retention and infiltration, and harvest and use BMPs. A key consideration when using biotreatment BMP is the effectiveness of the proposed BMP in addressing the pollutants of concern for the project (see Table 5-5 of the TGD for WQMP).

Use Form 4.3-5 to summarize the potential for volume based and/or flow based biotreatment options to biotreat the remaining unmet LID DCV w. Biotreatment computations are included as follows:

- Use Form 4.3-6 to compute biotreatment in small volume based biotreatment BMP (e.g. bioretention w/underdrains);
- Use Form 4.3-7 to compute biotreatment in large volume based biotreatment BMP (e.g. constructed wetlands);
- Use Form 4.3-8 to compute sizing criteria for flow-based biotreatment BMP (e.g. bioswales)

Form 4.3-5 Selection and Evaluation of Biotreatment BMP (DA 1) (N/A)

1 Remaining LID DCV not met by site design HSC, infiltration, or harvest and use BMP for potential biotreatment (ft^3): *Form 4.2-1 Item 7 - Form 4.3-2 Item 30 – Form 4.3-3 Item 16- Form 4.3-4 Item 9*	List pollutants of concern *Copy from Form 2.3-1.*	
2 Biotreatment BMP Selected *(Select biotreatment BMP(s) necessary to ensure all pollutants of concern are addressed through Unit Operations and Processes, described in Table 5-5 of the TGD for WQMP)*	Volume-based biotreatment *Use Forms 4.3-6 and 4.3-7 to compute treated volume*	Flow-based biotreatment *Use Form 4.3-8 to compute treated volume*
	☐ Bioretention with underdrain ☐ Planter box with underdrain ☐ Constructed wetlands ☐ Wet extended detention ☐ Dry extended detention	☐ Vegetated swale ☐ Vegetated filter strip ☐ Proprietary biotreatment
3 Volume biotreated in volume based biotreatment BMP (ft^3): *Form 4.3-6 Item 15 + Form 4.3-7 Item 13*	**4** Compute remaining LID DCV with implementation of volume based biotreatment BMP (ft^3): *Item 1 – Item 3*	**5** Remaining fraction of LID DCV for sizing flow based biotreatment BMP: % *Item 4 / Item 1*
6 Flow-based biotreatment BMP capacity provided (cfs): *Use Figure 5-2 of the TGD for WQMP to determine flow capacity required to provide biotreatment of remaining percentage of unmet LID DCV (Item 5), for the project's precipitation zone (Form 3-1 Item 1)*		
7 Metrics for MEP determination: • Provided a WQMP with the portion of site area used for suite of LID BMP equal to minimum thresholds in Table 5-7 of the TGD for WQMP for the proposed category of development: ☐ *If maximized on-site retention BMPs is feasible for partial capture, then LID BMP implementation must be optimized to retain and infiltrate the maximum portion of the DCV possible within the prescribed minimum effective area. The remaining portion of the DCV shall then be mitigated using biotreatment BMP.*

4.3.5 Conformance Summary

Complete Form 4.3-9 to demonstrate how on-site LID DCV is met with proposed site design hydrologic source control, infiltration, harvest and use, and/or biotreatment BMP. The bottom line of the form is used to describe the basis for infeasibility determination for on-site LID BMP to achieve full LID DCV, and provides methods for computing remaining volume to be addressed in an alternative compliance plan. If the project has more than one outlet, then complete additional versions of this form for each outlet.

Form 4.3-9 Conformance Summary and Alternative Compliance Volume Estimate (DA 1)

1 Total LID DCV for the Project DA-1 (ft^3): 27,766 *Copy Item 7 in Form 4.2-1*

2 On-site retention with site design hydrologic source control LID BMP (ft^3): 0 *Copy Item 30 in Form 4.3-2*

3 On-site retention with LID infiltration BMP (ft^3): **33,573** *Copy Item 16 in Form 4.3-3*

4 On-site retention with LID harvest and use BMP (ft^3): 0 *Copy Item 9 in Form 4.3-4*

5 On-site biotreatment with volume based biotreatment BMP (ft^3): 0 *Copy Item 3 in Form 4.3-5*

6 Flow capacity provided by flow based biotreatment BMP (cfs): 0 *Copy Item 6 in Form 4.3-5*

7 LID BMP performance criteria are achieved if answer to any of the following is "Yes":

- Full retention of LID DCV with site design HSC, infiltration, or harvest and use BMP: Yes ☒ No ☐
  If yes, sum of Items 2, 3, and 4 is greater than Item 1
- Combination of on-site retention BMPs for a portion of the LID DCV and volume-based biotreatment BMP that address all pollutants of concern for the remaining LID DCV: **N/A** Full retention provided Yes ☐ No ☐
  If yes, a) sum of Items 2, 3, 4, and 5 is greater than Item 1, and Items 2, 3 and 4 are maximized; or b) Item 6 is greater than Form 4.3--5 Item 6 and Items 2, 3 and 4 are maximized
- On-site retention and infiltration is determined to be infeasible and biotreatment BMP provide biotreatment for all pollutants of concern for full LID DCV: **N/A** Yes ☐ No ☐
  If yes, Form 4.3-1 Items 7 and 8 were both checked yes

8 If the LID DCV is not achieved by any of these means, then the project may be allowed to develop an alternative compliance plan. Check box that describes the scenario which caused the need for alternative compliance:

- Combination of HSC, retention and infiltration, harvest and use, and biotreatment BMPs provide less than full LID DCV capture: ☐
  Checked yes for Form 4.3-5 Item 7, Item 6 is zero, and sum of Items 2, 3, 4, and 5 is less than Item 1. If so, apply water quality credits and calculate volume for alternative compliance, V_{alt} *= (Item 1 – Item 2 – Item 3 – Item 4 – Item 5) * (100 - Form 2.4-1 Item 2)%*
- An approved Watershed Action Plan (WAP) demonstrates that water quality and hydrologic impacts of urbanization are more effective when managed in at an off-site facility: ☐
  Attach appropriate WAP section, including technical documentation, showing effectiveness comparisons for the project site and regional watershed

4.3.6 Hydromodification Control BMP

Use Form 4.3-10 to compute the remaining runoff volume retention, after LID BMP are implemented, needed to address HCOC, and the increase in time of concentration and decrease in peak runoff necessary to meet targets for protection of waterbodies with a potential HCOC. Describe hydromodification control BMP that address HCOC, which may include off-site BMP and/or in-stream controls. Section 5.6 of the TGD for WQMP provides additional details on selection and evaluation of hydromodification control BMP.

Form 4.3-10 Hydromodification Control BMPs (DA 1)

1 Volume reduction needed for HCOC performance criteria (ft^3): 0 *(Form 4.2-2 Item 4 * 0.95) – Form 4.2-2 Item 1*	**2** On-site retention with site design hydrologic source control, infiltration, and harvest and use LID BMP (ft^3): 27,776 *Sum of Form 4.3-9 Items 2, 3, and 4 Evaluate option to increase implementation of on-site retention in Forms 4.3-2, 4.3-3, and 4.3-4 in excess of LID DCV toward achieving HCOC volume reduction*
3 Remaining volume for HCOC volume capture (ft^3): 0 *Item 1 – Item 2*	**4** Volume capture provided by incorporating additional on-site or off-site retention BMPs (ft^3): 0 *Existing downstream BMP may be used to demonstrate additional volume capture (if so, attach to this WQMP a hydrologic analysis showing how the additional volume would be retained during a 2-yr storm event for the regional watershed)*

5 If Item 4 is less than Item 3, incorporate in-stream controls on downstream waterbody segment to prevent impacts due to hydromodification ☐ *Attach in-stream control BMP selection and evaluation to this WQMP*

6 Is Form 4.2-2 Item 11 less than or equal to 5%: **N/A** Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate increase in time of concentration achieved by proposed LID site design, LID BMP, and additional on-site or off-site retention BMP ☐
  BMP upstream of a waterbody segment with a potential HCOC may be used to demonstrate increased time of concentration through hydrograph attenuation (if so, show that the hydraulic residence time provided in BMP for a 2-year storm event is equal or greater than the addition time of concentration requirement in Form 4.2-4 Item 15)
- Increase time of concentration by preserving pre-developed flow path and/or increase travel time by reducing slope and increasing cross-sectional area and roughness for proposed on-site conveyance facilities ☐
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

7 Form 4.2-2 Item 12 less than or equal to 5%: **N/A** Yes ☐ No ☐

If yes, HCOC performance criteria is achieved. If no, select one or more mitigation options below:

- Demonstrate reduction in peak runoff achieved by proposed LID site design, LID BMPs, and additional on-site or off-site retention BMPs ☐
  BMPs upstream of a waterbody segment with a potential HCOC may be used to demonstrate additional peak runoff reduction through hydrograph attenuation (if so, attach to this WQMP, a hydrograph analysis showing how the peak runoff would be reduced during a 2-yr storm event)
- Incorporate appropriate in-stream controls for downstream waterbody segment to prevent impacts due to hydromodification, in a plan approved and signed by a licensed engineer in the State of California ☐

4.4 Alternative Compliance Plan (if applicable)

Describe an alternative compliance plan (if applicable) for projects not fully able to infiltrate, harvest and use, or biotreat the DCV via on-site LID practices. A project proponent must develop an alternative compliance plan to address the remainder of the LID DCV. Depending on project type some projects may qualify for water quality credits that can be applied to reduce the DCV that must be treated prior to development of an alternative compliance plan (see Form 2.4-1, Water Quality Credits). Form 4.3-9 Item 8 includes instructions on how to apply water quality credits when computing the DCV that must be met through alternative compliance. Alternative compliance plans may include one or more of the following elements:

- On-site structural treatment control BMP - All treatment control BMP should be located as close to possible to the pollutant sources and should not be located within receiving waters;
- Off-site structural treatment control BMP - Pollutant removal should occur prior to discharge of runoff to receiving waters;
- Urban runoff fund or In-lieu program, if available

Depending upon the proposed alternative compliance plan, approval by the executive officer may or may not be required (see Section 6 of the TGD for WQMP).

Section 5 Inspection and Maintenance Responsibility for Post Construction BMP

All BMP included as part of the project WQMP are required to be maintained through regular scheduled inspection and maintenance (refer to Section 8, Post Construction BMP Requirements, in the TGD for WQMP). Fully complete Form 5-1 summarizing all BMP included in the WQMP. Attach additional forms as needed. The WQMP shall also include a detailed Operation and Maintenance Plan for all BMP and may require a Maintenance Agreement (consult the jurisdiction's LIP). If a Maintenance Agreement is required, it must also be attached to the WQMP.

Form 5-1 BMP Inspection and Maintenance (use additional forms as necessary)

BMP	Reponsible Party(s)	Inspection/ Maintenance Activities Required	Minimum Frequency of Activities
UG Infilt./ deten. System	Owner	- Inspect system for standing water. If system has standing water, perform re-inspection within 48 hours. If system still has standing water then the system shall be pumped and removed debris shall be disposed of in a legal manner. - Maintain UG-Infiltration Basin System is easiest when there is no flow entering the syste. For this reason, maintenance should be scheduled during the dry weather (season). Accumulated sediment and trash can typically be evacuated through the manhole over the outlet orifice. Manhole cover should be securely seated following cleaning activities.	Quarterly and Prior to storm event and 48 hours after storm has passed
Loading Dock and Parking Lot Sweeping N15	Owner	Sweep loading dock and parking lot and truck courts.	Monthly / As needed.
Truck Dock N13	Owner	Inspect loading dock for trash debris and sediments. Inspect loading dock for evidence of spills and broken containers. Clean up spills and dispose of collected material in a legal manner.	Weekly
Planting N3	Owner	Inspect health of planting and erosion of landscape area. Trimming trees and bushes when needed.	Monthly

Efficient Irrigation S4	Owner	- Inspect irrigation system general operation and durations. - Repair damaged sprinkler and drip irrigation lines as needed. - Reduce durations during the winter season to prevent over irrigation.	Monthly
Storm drain system signage S1	Owner	Inspect Catch basin signage for faded or lost signs / repair or replace as needed.	Annualy
Trash Storage Areas and Litter Control (SD-32) N2	Owner	Inspect trash container, lids, screens and clean trash storage areas.	Weekly
Contech CDS Unit N17	Owner	Inspect system for sediment, floating trash and debris.	Quarterly and Prior to storm event and 48 hours after storm has passed
Employee Training / Education Program N12	Owner	Building tenants to provide BMP training and hand out educational materials.	Annually or upon hire

Section 6 WQMP Attachments

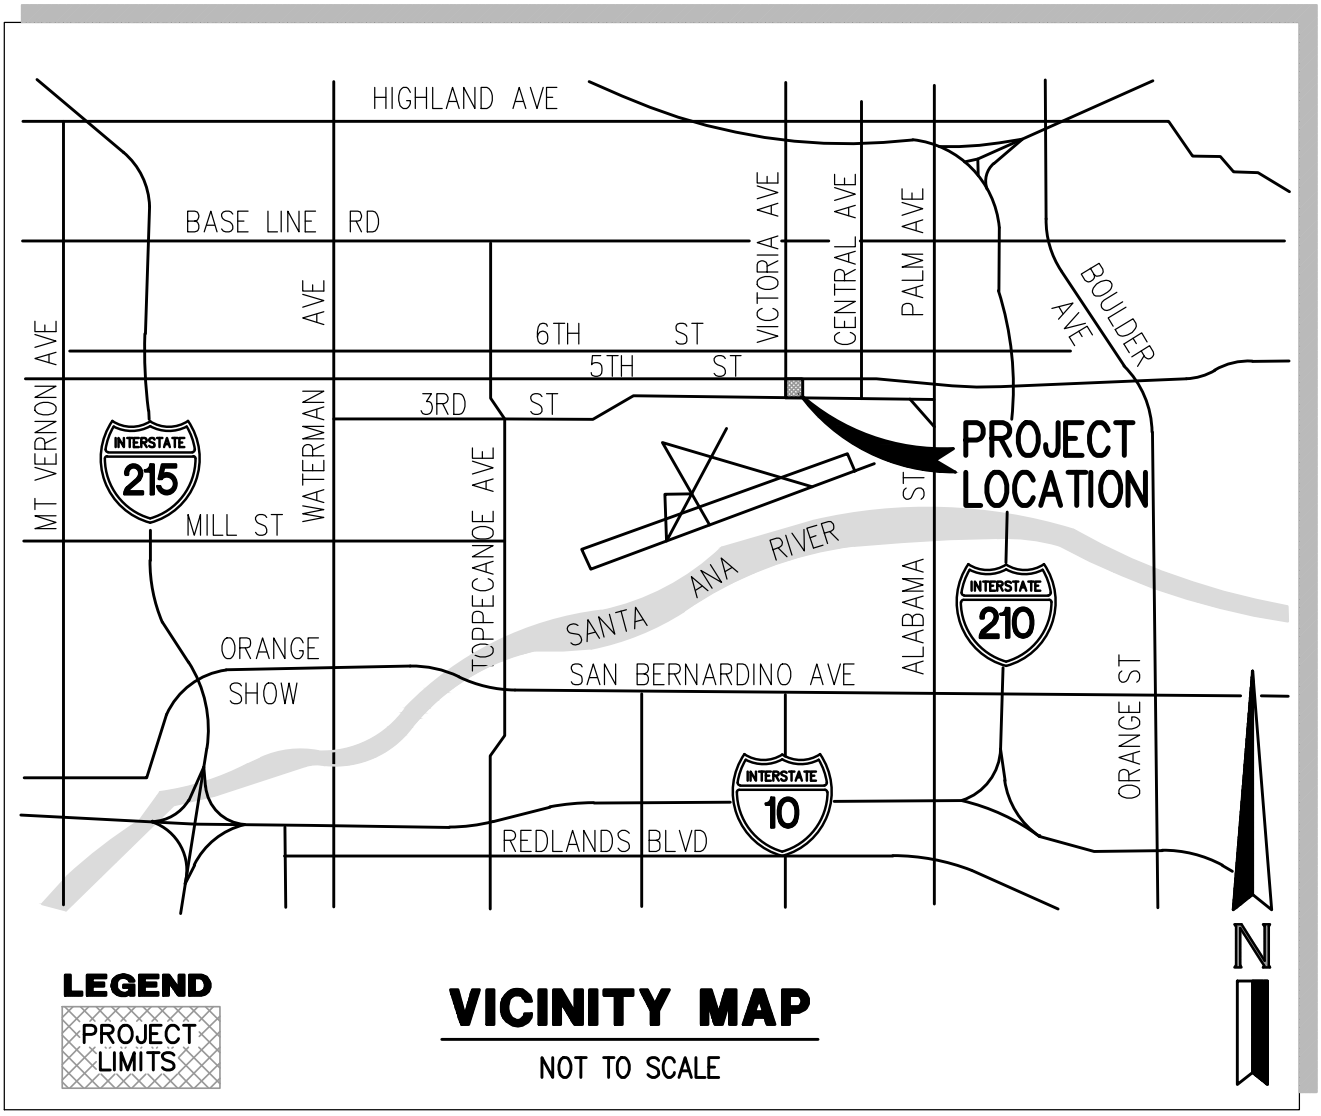
6.1. Site Plan and Drainage Plan

Include a site plan and drainage plan sheet set containing the following minimum information:

- Project location
- Site boundary
- Land uses and land covers, as applicable
- Suitability/feasibility constraints
- Structural Source Control BMP locations
- Site Design Hydrologic Source Control BMP locations
- LID BMP details
- Drainage delineations and flow information
- Drainage connections

6.2 Electronic Data Submittal

Minimum requirements include submittal of PDF exhibits in addition to hard copies. Format must not require specialized software to open. If the local jurisdiction requires specialized electronic document formats (as described in their (Local Implementation Plan), this section will describe the contents (e.g., layering, nomenclature, geo-referencing, etc.) of these documents so that they may be interpreted efficiently and accurately.



6.3 Post Construction

Attach all O&M Plans and Maintenance Agreements for BMP to the WQMP.

6.4 Other Supporting Documentation

- BMP Educational Materials
- Activity Restriction – C, C&R's & Lease Agreements

ROOF DRAINS

ROOF DRAINS WILL BE CONNECTED TO THE ONSITE STORM DRAIN SYSTEM AS REQUIRED BY THE CITY OF HIGHLAND. FINAL LOCATIONS HAVE NOT BEEN DETERMINED AND ARE NOT SHOWN ON THIS CWQMP MAP.

NOTES:
1. NO COMPACTION SHALL TAKE PLACE AT THE BOTTOM OF THE EXCAVATION OF THE PROPOSED UNDERGROUND INFILTRATION SYSTEM.
2. THE PROPOSED BMP LOCATIONS ARE NOT TO BE USED FOR STORAGE OF EQUIPMENTS, VECHICLES, OR MATERIALS DURING CONSTRUCTION. THE BMPS ARE TO BE PROTECTED FROM RUNOFF AND ARE NOT TO BE USED AS SEDIMENT TRAPS OR SEDIMENT BASINS DURING CONSTRUCTION.
3. CONTRACTOR MUST COORDINATE TWO DOUBLE RING INFILTRATION TESTS AT THE BOTTOM OF THE UNDERGROUND CHAMBER TRENCH TO CONFIRM THE INFILTRATION RATES PRIOR TO INSTALLATION OF THE CHAMBERS.

BIO CLEAN FULL CAPTURE FILTER WITH TROUGH SYSTEM FOR USE IN CURB INLETS

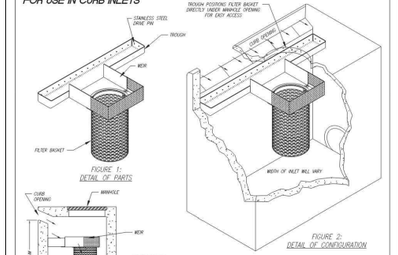

FIGURE 1: DETAIL OF PARTS
FIGURE 2: DETAIL OF CONFIGURATION
FIGURE 4: DETAIL OF PROFILE
FIGURE 3: DETAIL OF MOUNTING

NOTES:
1. TROUGH SYSTEM PROVIDES FOR ENTIRE COVERAGE OF THE CURB OPENING WHEN USED WITH BIO CLEAN FILTERS.
2. TROUGH SYSTEM MANUFACTURED FROM MARINE GRADE FIBERGLASS, GEL COATED FOR UV PROTECTION.
3. SYSTEM ATTACHED TO THE CATCH BASIN WITH NON-CORROSIVE HARDWARE.
4. TROUGH SYSTEM MADE OF 16GA STAINLESS STEEL.
5. FILTER MADE OF NON-CLOGGING SCREEN WITH 4.7 MM OPENINGS AND MEETS FULL CAPTURE REQUIREMENTS.
6. FILTER CAN BE FITTED WITH HYDROCARBON ABSORBENT BOOM
7. FILTER IS LOCATED DIRECTLY UNDER THE MANHOLE FOR EASY ACCESS AND MAINTENANCE.
8. LENGTH OF TROUGH CAN VARY FROM 2'-10".
9. OTHER STANDARD AND CUSTOM MODEL SIZES AVAILABLE – CONTACT BIO CLEAN FOR MORE INFORMATION.
10. CONSIDERS A SAFETY FACTOR OF 2.0
11. FLOW RATE IS BASED ON THE CAPACITY OF THE TROUGH SYSTEM AND IS EQUAL TO THE CAPACITY OF THE CURB OPENING
12. STORAGE CAPACITY BASED ON THE BASKET HALF FULL.
13. ADDITIONAL TREATMENT AND STORAGE CAPACITY CAN BE ACHIEVED BY UTILIZING MULTIPLE FILTER BASKETS.

MODEL NUMBER	TREATMENT FLOW (GPM)	SOLIDS STORAGE CAPACITY (lbs / ft3)
BC-CURB-FC-30	2.85	2.21
BC-CURB-FC-24	2.85	1.77
BC-CURB-FC-18	2.85	1.33
BC-CURB-FC-12	2.85	0.88

Detention/ Infiltration System Routing Study Summary

Stage Storage Table

#	Depth	Elevation	Area (sf)	Incremental volume (cf)	Total Volume (cf)	Total Volume (acre-ft)	Outflow Q	Notes
1	0.0	1,132.60	5,405	0	0	0		**Bottom of 96" CMP Infiltration/ Detention System**
2	0.5	1,133.10	5,405	1,081	1,081	0.025	1.19	**Invert of 96" CMP**
3	1.5	1,134.10	5,405	3,180	4,261	0.098	1.19	
4	2.5	1,135.10	5,405	3,903	8,164	0.187	1.19	
5	3.5	1,136.10	5,405	4,237	12,401	0.285	1.19	
6	4.5	1,137.10	5,405	4,385	16,786	0.385	1.19	
7	5.5	1,138.10	5,405	4,385	21,171	0.486	1.19	
8	6.5	1,139.10	5,405	4,237	25,408	0.583	1.19	
9	7.5	1,140.10	5,405	3,903	29,311	0.673	1.19	***Meets WQMP DCV @ 1,139.8**
10	8.5	1,141.10	5,405	3,180	32,492	0.746	1.19	**Soffit of 96" CMP Release overflow modeled at 1142.1 Center of 24" (1141.1 + 1)**
11	9.0	1,141.60	5,405	1,081	33,573	0.771	3.56	**Top of Infiltration/ Detention System**
12	11.00	1,143.60	5,405	0	33,573	0.771	19.72	
13	11.50	1,144.10	5,405	0	33,573	0.771	22.58	
14	12.50	1,145.10	5,405	0	33,573	0.771	27.39	

Infiltration rate per geotechnical report = 56"/hr, Factor of Safety =6.
Unit convert = (56"/hr)/6 x (1'/12") X (1hr/60min) X (1 min/60 sec) = 0.00022 ft/sec
Underground Basin open area is 235' x 23' = 5,405 sf
Therefore, Q out for basin = 5,405 X 0.00022 = 1.19 cfs

*WQMP Design Capture Volume is 27,766 CF

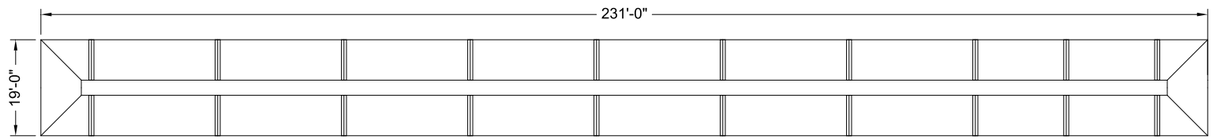
Q OutFlow = 24" Drain Pipe+ Basin Infiltration Q
= (CA x (2gh)^(1/2)) + Basin Infiltration Q
= (0.6A x (64.4xh)^(1/2)) + Basin Infiltration Q
A = 24" drain pipe area
h = Water Height Above half of pipe (12")

Example: WSE @ 1144.1
={0.6 x (3.14 x 1)^2)x [64.4 x (1144.1-1142.1)]^(1/2)} + 1.19
= 22.58 cfs

Basin Routing Summary Table

100 YEAR STORM	
Max. Q Out (CFS)	**21.5**
WSE	**1143.91**

Note: System will drain within 40 hrs using a max infiltration of 2.4"/hr
Time to infiltrate entire system = (8ft x 12in/ft) /(2.4in/hr) = 40 hrs



PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 468 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = N/A
- PIPE STORAGE VOLUME = 23,524 CF
- BACKFILL STORAGE VOLUME = 10,048 CF
- TOTAL STORAGE PROVIDED = 33,573 CF

PIPE DETAILS
- DIAMETER = 96"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 36"

BACKFILL DETAILS
- WIDTH AT ENDS = 24"
- ABOVE PIPE = 6"
- WIDTH AT SIDES = 24"
- BELOW PIPE = 6"

NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

ASSEMBLY
SCALE: 1" = 30'

The design and information shown on this drawing is provided as a service to the project owner, engineer and contractor by Contech Engineered Solutions LLC ("Contech"). Neither this drawing, nor any part thereof, may be used, reproduced or modified in any manner without the prior written consent of Contech. Failure to comply is done at the user's own risk and Contech expressly disclaims any liability or responsibility for such use.

If discrepancies between the supplied information upon which the drawing is based and actual field conditions are encountered as site work progresses, these discrepancies must be reported to Contech immediately for re-evaluation of the design. Contech accepts no liability for designs based on missing, incomplete or inaccurate information supplied by others.

C:\EXPORTS\TEMPLATES\CMP_V8.DWG 10/18/2019 10:02 AM

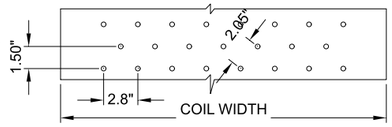
Infiltration Systems - CMP Infiltration & CMP Perforated Drainage Pipe			
Material Location	Description	Material Designation	Designation
8 Rigid or Flexible Pavement (if applicable)			
7 Road Base (if applicable			
A Geotextile Layer	Non-Woven Geotextile	CONTECH C-40 or C-45	Engineer Decision for consideration to prevent soil migration into varying soil types. Wrap the trench only.
6 Backfill	Infiltration pipe systems have a pipe perforation sized of 3/8" diameter. An open graded, free draining stone, with a particle size of ½" – 2 ½" diameter is recommended.	AASHTO M 145-A-1 or AASHTO M 43 - 3, 4	Material shall be worked into the pipe haunches by means of shovel-slicing, rodding, air-tamper, vibratory rod, or other effective methods. Compaction of all placed fill material is necessary and shall be considered adequate when no further yielding of the material is observed under the compactor, or under foot, and the Project Engineer or his representative is satisfied with the level of compaction"
3 Bedding Stone	Well graded granular bedding material w/maximum particle size of 3"	AASHTO M43 - 3,357,4,467, 5, 56, 57	For soil aggregates larger than 3/8" a dedicated bedding layer is not required for CMP. Pipe may be placed on the trench bottom comprised of native suitable well graded & granular material. For Arch pipes it is recommended to be shaped to a relatively flat bottom or fine-grade the foundation to a slight v-shape. Soil aggregates less than 3/8" and unsuitable material should be over-excavated and re-placed with a 4"-6" layer of well graded & granular stone per the material designation.
A Geotextile Layer	None	None	Contech does not recommend geotextiles be placed under the invert of Infiltration systems due to the propensity for geotextiles to clog over time.
* Note: The listed AASHTO designations are for gradation only. The stone must also be angular and clean.			

1 MINIMUM WIDTH DEPENDS ON SITE CONDITIONS AND ENGINEERING JUDGEMENT.

FOUNDATION/BEDDING PREPARATION

2 PRIOR TO PLACING THE BEDDING, THE FOUNDATION MUST BE CONSTRUCTED TO A UNIFORM AND STABLE GRADE. IN THE EVENT THAT UNSUITABLE FOUNDATION MATERIALS ARE ENCOUNTERED DURING EXCAVATION, THEY SHALL BE REMOVED AND BROUGHT BACK TO THE GRADE WITH A FILL MATERIAL AS APPROVED BY THE ENGINEER.

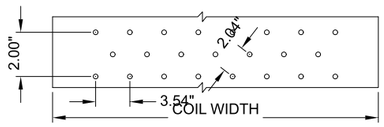
5 HAUNCH ZONE MATERIAL SHALL BE PLACED AND UNIFORMLY COMPACTED WITHOUT SOFT SPOTS.



BACKFILL

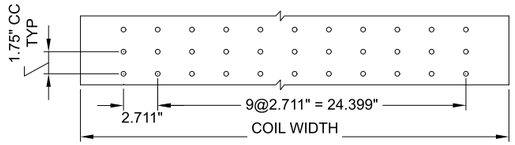
MATERIAL SHALL BE PLACED IN 8"-10" MAXIMUM LIFTS. INADEQUATE COMPACTION CAN LEAD TO EXCESSIVE DEFLECTIONS WITHIN THE SYSTEM AND SETTLEMENT OF THE SOILS OVER THE SYSTEM. BACKFILL SHALL BE PLACED SUCH THAT THERE IS NO MORE THAN A TWO-LIFT DIFFERENTIAL BETWEEN THE SIDES OF ANY PIPE IN THE SYSTEM AT ALL TIMES DURING THE BACKFILL PROCESS. BACKFILL SHALL BE ADVANCED ALONG THE LENGTH OF THE SYSTEM AT THE SAME RATE TO AVOID DIFFERENTIAL LOADING ON ANY PIPES IN THE SYSTEM.

EQUIPMENT USED TO PLACE AND COMPACT THE BACKFILL SHALL BE OF A SIZE AND TYPE SO AS NOT TO DISTORT, DAMAGE, OR DISPLACE THE PIPE. ATTENTION MUST BE GIVEN TO PROVIDING ADEQUATE MINIMUM COVER FOR SUCH EQUIPMENT. MAINTAIN BALANCED LOADING ON ALL PIPES IN THE SYSTEM DURING ALL SUCH OPERATIONS.



OTHER ALTERNATE BACKFILL MATERIAL MAY BE ALLOWED DEPENDING ON SITE SPECIFIC CONDITIONS. REFER TO TYPICAL BACKFILL DETAIL FOR MATERIAL REQUIRED.

2 2/3" x 1/2" CORRUGATION - STEEL AND ALUMINUM CMP EDGE SPACING EQUAL ON BOTH SIDES

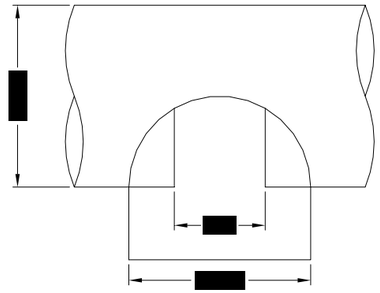


OPEN AREA = 3.76 SQ IN/SQ FT

3" x 1" CORRUGATION - STEEL AND ALUMINUM CMP (COIL PROVIDED FROM CONTECH LANTANA, FL PLANT)

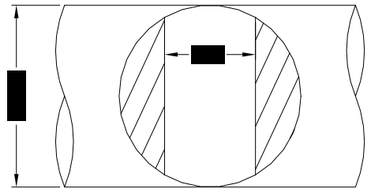
OPEN AREA = 4.16 SQ IN/SQ FT

5" x 1" CORRUGATION - STEEL ONLY
EDGE SPACING EQUAL ON BOTH SIDES



OPEN AREA = 3.33 SQ IN/SQ FT

NOTES:



1. PERFORATIONS MEET AASHTO AND ASTM SPECIFICATIONS.
2. PERFORATION OPEN AREA PER SQUARE FOOT OF PIPE IS BASED ON THE NOMINAL DIAMETER AND LENGTH OF PIPE.
3. ALL DIMENSIONS ARE SUBJECT TO MANUFACTURING TOLERANCES.
4. ALL HOLES ⌀3/8".

CONSTRUCTION LOADS

FOR TEMPORARY CONSTRUCTION VEHICLE LOADS, AN EXTRA AMOUNT OF COMPACTED COVER MAY BE REQUIRED OVER THE TOP OF THE PIPE. THE HEIGHT-OF-COVER SHALL MEET THE MINIMUM REQUIREMENTS SHOWN IN THE TABLE BELOW. THE USE OF HEAVY CONSTRUCTION EQUIPMENT NECESSITATES GREATER PROTECTION FOR THE PIPE THAN FINISHED GRADE COVER MINIMUMS FOR NORMAL HIGHWAY TRAFFIC.

PIPE SPAN, INCHES	AXLE LOADS (kips)			
	18-50	50-75	75-110	110-150
	MINIMUM COVER (FT)			
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5

*MINIMUM COVER MAY VARY, DEPENDING ON LOCAL CONDITIONS. THE CONTRACTOR MUST PROVIDE THE ADDITIONAL COVER REQUIRED TO AVOID DAMAGE TO THE PIPE. MINIMUM COVER IS MEASURED FROM THE TOP OF THE PIPE TO THE TOP OF THE MAINTAINED CONSTRUCTION ROADWAY SURFACE.

CONSTRUCTION LOADING DIAGRAM

SCALE: N.T.S.

SPECIFICATION FOR DESIGNED DETENTION SYSTEM:

SCOPE
THIS SPECIFICATION COVERS THE MANUFACTURE AND INSTALLATION OF THE DESIGNED DETENTION SYSTEM DETAILED IN THE PROJECT PLANS.

MATERIAL
THE MATERIAL SHALL CONFORM TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2 STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-274 OR ASTM A-92.

THE GALVANIZED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-218 OR ASTM A-929.

THE POLYMER COATED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-246 OR ASTM A-742.

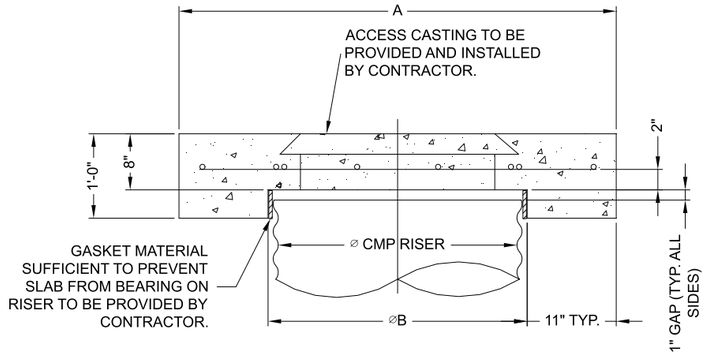
THE ALUMINUM COILS SHALL CONFORM TO THE APPLICABLE OF AASHTO M-197 OR ASTM B-744.

CONSTRUCTION LOADS
CONSTRUCTION LOADS MAY BE HIGHER THAN FINAL LOADS. FOLLOW THE MANUFACTURER'S OR NCSPA GUIDELINES.

PIPE
THE PIPE SHALL BE MANUFACTURED IN ACCORDANCE TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2: AASHTO M-36 OR ASTM A-760

GALVANIZED: AASHTO M-36 OR ASTM A-760

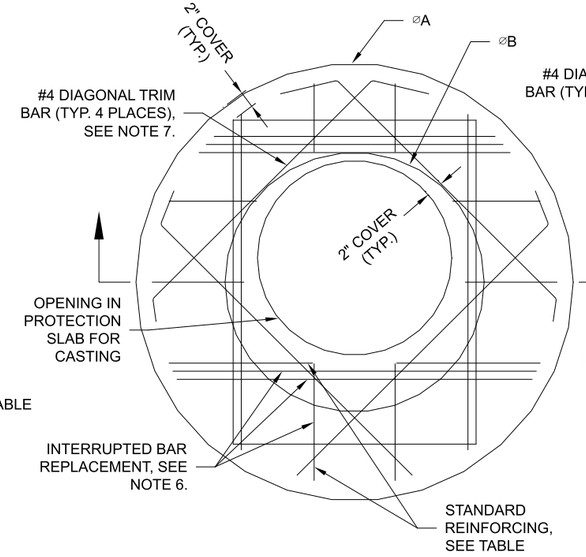


APPLICABLE POLYMER COATED: AASHTO M-245 OR ASTM A-762

ALUMINUM: AASHTO M-196 OR ASTM B-745

APPLICABLE
HANDLING AND ASSEMBLY
SHALL BE IN ACCORDANCE WITH NCSP'S (NATIONAL CORRUGATED STEEL PIPE ASSOCIATION) FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL. SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS FOR ALUMINUM PIPE.
REQUIREMENTS
INSTALLATION
SHALL BE IN ACCORDANCE WITH AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, SECTION 26, DIVISION II DIVISION II OR ASTM A-798 (FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL) OR ASTM B-788 (FOR ALUMINUM PIPE) AND IN CONFORMANCE WITH THE PROJECT PLANS AND SPECIFICATIONS. IF THERE ARE ANY INCONSISTENCIES OR CONFLICTS THE CONTRACTOR SHOULD DISCUSS AND RESOLVE WITH THE SITE ENGINEER.

IT IS ALWAYS THE RESPONSIBILITY OF THE CONTRACTOR TO FOLLOW OSHA GUIDELINES FOR SAFE PRACTICES.



NOTE:
THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

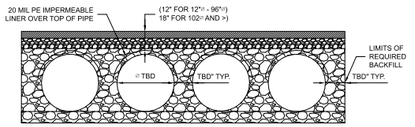
CMP DETENTION INSTALLATION GUIDE

PROPER INSTALLATION OF A FLEXIBLE UNDERGROUND DETENTION SYSTEM WILL ENSURE LONG-TERM PERFORMANCE. THE CONFIGURATION OF THESE SYSTEMS OFTEN REQUIRES SPECIAL CONSTRUCTION PRACTICES THAT DIFFER FROM CONVENTIONAL FLEXIBLE PIPE CONSTRUCTION. CONTECH ENGINEERED SOLUTIONS STRONGLY SUGGESTS SCHEDULING A PRE-CONSTRUCTION MEETING WITH YOUR LOCAL SALES ENGINEER TO DETERMINE IF ADDITIONAL MEASURES, NOT COVERED IN THIS GUIDE, ARE APPROPRIATE FOR YOUR SITE.

FOUNDATION

CONSTRUCT A FOUNDATION THAT CAN SUPPORT THE DESIGN LOADING APPLIED BY THE PIPE AND ADJACENT BACKFILL WEIGHT AS WELL AS MAINTAIN ITS INTEGRITY DURING CONSTRUCTION.

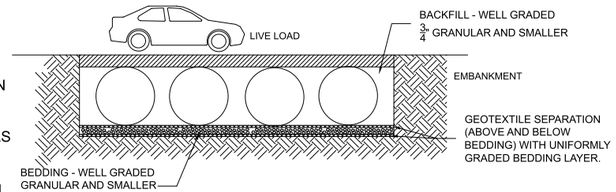
IF SOFT OR UNSUITABLE SOILS ARE ENCOUNTERED, REMOVE THE POOR SOILS DOWN TO A SUITABLE DEPTH AND THEN BUILD UP TO THE APPROPRIATE ELEVATION WITH A COMPETENT BACKFILL MATERIAL. THE STRUCTURAL FILL MATERIAL GRADATION SHOULD NOT ALLOW THE MIGRATION OF FINES, WHICH CAN CAUSE SETTLEMENT OF THE DETENTION SYSTEM OR PAVEMENT ABOVE. IF THE STRUCTURAL FILL MATERIAL IS NOT COMPATIBLE WITH THE UNDERLYING SOILS AN ENGINEERING FABRIC SHOULD BE USED AS A SEPARATOR. IN SOME CASES, USING A STIFF REINFORCING GEOGRID REDUCES OVER EXCAVATION AND REPLACEMENT FILL QUANTITIES.



GRADE THE FOUNDATION SUBGRADE TO A UNIFORM OR SLIGHTLY SLOPING GRADE. IF THE SUBGRADE IS CLAY OR RELATIVELY NON-POROUS AND THE CONSTRUCTION SEQUENCE WILL LAST FOR AN EXTENDED PERIOD OF TIME, IT IS BEST TO SLOPE THE GRADE TO ONE END OF THE SYSTEM. THIS WILL ALLOW EXCESS WATER TO DRAIN QUICKLY, PREVENTING SATURATION OF THE SUBGRADE.

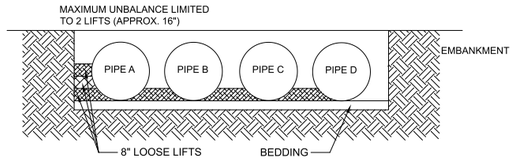
GEOMEMBRANE BARRIER

A SITE'S RESISTIVITY MAY CHANGE OVER TIME WHEN VARIOUS TYPES OF SALTING AGENTS ARE USED, SUCH AS ROAD SALTS FOR DEICING AGENTS. IF SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE, A GEOMEMBRANE BARRIER IS RECOMMENDED WITH THE SYSTEM. THE GEOMEMBRANE LINER IS INTENDED TO HELP PROTECT THE SYSTEM FROM THE POTENTIAL ADVERSE EFFECTS THAT MAY RESULT FROM THE USE OF SUCH AGENTS INCLUDING PREMATURE CORROSION AND REDUCED ACTUAL SERVICE LIFE.



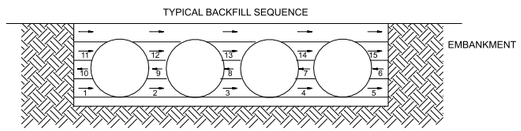
THE PROJECT'S ENGINEER OF RECORD IS TO EVALUATE WHETHER SALTING AGENTS WILL BE USED ON OR NEAR THE PROJECT SITE, AND USE HIS/HER BEST JUDGEMENT TO DETERMINE IF ANY ADDITIONAL PROTECTIVE MEASURES ARE REQUIRED. BELOW IS A TYPICAL DETAIL SHOWING THE PLACEMENT OF A GEOMEMBRANE BARRIER FOR PROJECTS WHERE SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE.

IN-SITU TRENCH WALL



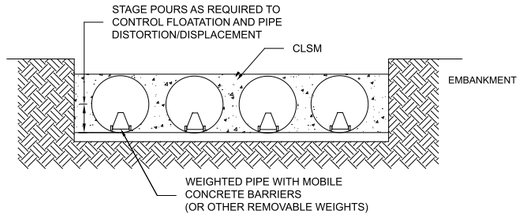
IF EXCAVATION IS REQUIRED, THE TRENCH WALL NEEDS TO BE CAPABLE OF SUPPORTING THE LOAD THAT THE PIPE SHEDS AS THE SYSTEM IS LOADED. IF SOILS ARE NOT CAPABLE OF SUPPORTING THESE LOADS, THE PIPE CAN DEFLECT. PERFORM A SIMPLE SOIL PRESSURE CHECK USING THE APPLIED LOADS TO DETERMINE THE LIMITS OF EXCAVATION BEYOND THE SPRING LINE OF THE OUTER MOST PIPES.

IN MOST CASES THE REQUIREMENTS FOR A SAFE WORK ENVIRONMENT AND PROPER BACKFILL PLACEMENT AND COMPACTION TAKE CARE OF THIS CONCERN.



BACKFILL PLACEMENT

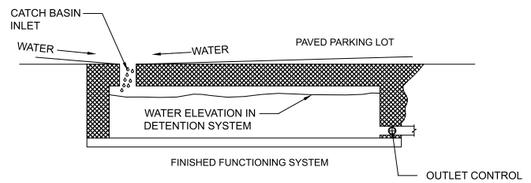
MATERIAL SHALL BE WORKED INTO THE PIPE HAUNCHES BY MEANS OF SHOVEL-SLICING, RODDING, AIR TAMPER, VIBRATORY ROD, OR OTHER EFFECTIVE METHODS.



IF AASHTO T99 PROCEDURES ARE DETERMINED INFEASIBLE BY THE GEOTECHNICAL ENGINEER OF RECORD, COMPACTION IS CONSIDERED ADEQUATE WHEN NO FURTHER YIELDING OF THE MATERIAL IS OBSERVED UNDER THE COMPACTOR, OR UNDER FOOT, AND THE GEOTECHNICAL ENGINEER OF RECORD (OR REPRESENTATIVE THEREOF) IS SATISFIED WITH THE LEVEL OF COMPACTION.

FOR LARGE SYSTEMS, CONVEYOR SYSTEMS, BACKHOES WITH LONG REACHES OR DRAGLINES WITH STONE BUCKETS MAY BE USED TO PLACE BACKFILL. ONCE MINIMUM COVER FOR CONSTRUCTION LOADING ACROSS THE ENTIRE WIDTH OF THE SYSTEM IS REACHED, ADVANCE THE EQUIPMENT TO THE END OF THE RECENTLY PLACED FILL, AND BEGIN THE SEQUENCE AGAIN UNTIL THE SYSTEM IS COMPLETELY BACKFILLED. THIS TYPE OF CONSTRUCTION SEQUENCE PROVIDES ROOM FOR STOCKPILED BACKFILL DIRECTLY BEHIND THE BACKHOE, AS WELL AS THE MOVEMENT OF CONSTRUCTION TRAFFIC. MATERIAL STOCKPILES ON TOP OF THE BACKFILLED DETENTION SYSTEM SHOULD BE LIMITED TO 8- TO 10-FEET HIGH AND MUST PROVIDE BALANCED LOADING ACROSS ALL BARRELS. TO DETERMINE THE PROPER COVER OVER THE PIPES TO ALLOW THE MOVEMENT OF CONSTRUCTION EQUIPMENT SEE TABLE 1, OR CONTACT YOUR LOCAL CONTECH SALES ENGINEER.

WHEN FLOWABLE FILL IS USED, YOU MUST PREVENT PIPE FLOATATION. TYPICALLY, SMALL LIFTS ARE PLACED BETWEEN THE PIPES AND THEN ALLOWED TO SET-UP PRIOR TO THE PLACEMENT OF THE NEXT LIFT. THE ALLOWABLE THICKNESS OF THE CLSM LIFT IS A FUNCTION OF A PROPER BALANCE BETWEEN THE UPLIFT FORCE OF THE CLSM, THE OPPOSING WEIGHT OF THE PIPE, AND THE EFFECT OF OTHER RESTRAINING MEASURES. THE PIPE CAN CARRY LIMITED FLUID PRESSURE WITHOUT PIPE DISTORTION OR DISPLACEMENT, WHICH ALSO AFFECTS THE CLSM LIFT THICKNESS. YOUR LOCAL CONTECH SALES ENGINEER CAN HELP DETERMINE THE PROPER LIFT THICKNESS.



CONSTRUCTION LOADING

TYPICALLY, THE MINIMUM COVER SPECIFIED FOR A PROJECT ASSUMES H-20 LIVE LOAD. BECAUSE CONSTRUCTION LOADS OFTEN EXCEED DESIGN LIVE LOADS, INCREASED TEMPORARY MINIMUM COVER REQUIREMENTS ARE NECESSARY. SINCE CONSTRUCTION EQUIPMENT VARIES FROM JOB TO JOB, IT IS BEST TO ADDRESS EQUIPMENT SPECIFIC MINIMUM COVER REQUIREMENTS WITH YOUR LOCAL CONTECH SALES ENGINEER DURING YOUR PRE-CONSTRUCTION MEETING.

ADDITIONAL CONSIDERATIONS

BECAUSE MOST SYSTEMS ARE CONSTRUCTED BELOW-GRADE, RAINFALL CAN RAPIDLY FILL THE EXCAVATION; POTENTIALLY CAUSING FLOATATION AND MOVEMENT OF THE PREVIOUSLY PLACED PIPES. TO HELP MITIGATE POTENTIAL PROBLEMS, IT IS BEST TO START THE INSTALLATION AT THE DOWNSTREAM END WITH THE OUTLET ALREADY CONSTRUCTED TO ALLOW A ROUTE FOR THE WATER TO ESCAPE. TEMPORARY DIVERSION MEASURES MAY BE REQUIRED FOR HIGH FLOWS DUE TO THE RESTRICTED NATURE OF THE OUTLET PIPE.

CMP DETENTION SYSTEM INSPECTION AND MAINTENANCE

UNDERGROUND STORMWATER DETENTION AND INFILTRATION SYSTEMS MUST BE INSPECTED AND MAINTAINED AT REGULAR INTERVALS FOR PURPOSES OF PERFORMANCE AND LONGEVITY.

INSPECTION

INSPECTION IS THE KEY TO EFFECTIVE MAINTENANCE OF CMP DETENTION SYSTEMS AND IS EASILY PERFORMED. CONTECH RECOMMENDS ONGOING, ANNUAL INSPECTIONS. SITES WITH HIGH TRASH LOAD OR SMALL OUTLET CONTROL ORIFICES MAY NEED MORE FREQUENT INSPECTIONS. THE RATE AT WHICH THE SYSTEM COLLECTS POLLUTANTS WILL DEPEND MORE ON SITE SPECIFIC ACTIVITIES RATHER THAN THE SIZE OR CONFIGURATION OF THE SYSTEM.

INSPECTIONS SHOULD BE PERFORMED MORE OFTEN IN EQUIPMENT WASHDOWN AREAS, IN CLIMATES WHERE SANDING AND/OR SALTING OPERATIONS TAKE PLACE, AND IN OTHER VARIOUS INSTANCES IN WHICH ONE WOULD EXPECT HIGHER ACCUMULATIONS OF SEDIMENT OR ABRASIVE/ CORROSIVE CONDITIONS. A RECORD OF EACH INSPECTION IS TO BE MAINTAINED FOR THE LIFE OF THE SYSTEM

MAINTENANCE

CMP DETENTION SYSTEMS SHOULD BE CLEANED WHEN AN INSPECTION REVEALS ACCUMULATED SEDIMENT OR TRASH IS CLOGGING THE DISCHARGE ORIFICE.

ACCUMULATED SEDIMENT AND TRASH CAN TYPICALLY BE EVACUATED THROUGH THE MANHOLE OVER THE OUTLET ORIFICE. IF MAINTENANCE IS NOT PERFORMED AS RECOMMENDED, SEDIMENT AND TRASH MAY ACCUMULATE IN FRONT OF THE OUTLET ORIFICE. MANHOLE COVERS SHOULD BE SECURELY SEATED FOLLOWING CLEANING ACTIVITIES. CONTECH SUGGESTS THAT ALL SYSTEMS BE DESIGNED WITH AN ACCESS/INSPECTION MANHOLE SITUATED AT OR NEAR THE INLET AND THE OUTLET ORIFICE. SHOULD IT BE NECESSARY TO GET INSIDE THE SYSTEM TO PERFORM MAINTENANCE ACTIVITIES, ALL APPROPRIATE PRECAUTIONS REGARDING CONFINED SPACE ENTRY AND OSHA REGULATIONS SHOULD BE FOLLOWED.

ANNUAL INSPECTIONS ARE BEST PRACTICE FOR ALL UNDERGROUND SYSTEMS. DURING THIS INSPECTION, IF EVIDENCE OF SALTING/DE-ICING AGENTS IS OBSERVED WITHIN THE SYSTEM, IT IS BEST PRACTICE FOR THE SYSTEM TO BE RINSED, INCLUDING ABOVE THE SPRING LINE SOON AFTER THE SPRING THAW AS PART OF THE MAINTENANCE PROGRAM FOR THE SYSTEM.

MAINTAINING AN UNDERGROUND DETENTION OR INFILTRATION SYSTEM IS EASIEST WHEN THERE IS NO FLOW ENTERING THE SYSTEM. FOR THIS REASON, IT IS A GOOD IDEA TO SCHEDULE THE CLEANOUT DURING DRY WEATHER.

THE FOREGOING INSPECTION AND MAINTENANCE EFFORTS HELP ENSURE UNDERGROUND PIPE SYSTEMS USED FOR STORMWATER STORAGE CONTINUE TO FUNCTION AS INTENDED BY IDENTIFYING RECOMMENDED REGULAR INSPECTION AND MAINTENANCE PRACTICES. INSPECTION AND MAINTENANCE RELATED TO THE STRUCTURAL INTEGRITY OF THE PIPE OR THE SOUNDNESS OF PIPE JOINT CONNECTIONS IS BEYOND THE SCOPE OF THIS GUIDE.

Durability Design Guide for Drainage Products

Proper design of culverts and storm sewers requires structural, hydraulic and durability considerations. While most designers are comfortable with structural and hydraulic design, the mechanics of evaluating abrasion, corrosion and water chemistry to perform a durability design are not commonly found in most civil engineering handbooks.

The durability and service life of a drainage pipe installation is directly related to the environmental conditions encountered at the site and the type of materials and coatings from which the culvert is fabricated. Two principle causes of early failure in drainage pipe materials are corrosion and abrasion.

Service life can be affected by the corrosive action of the backfill in contact with the outside of a drainage pipe or more commonly by the corrosive and abrasive action of the flow in the invert of the drainage pipe. The design life analysis should include a check for both the water side and soil side environments to determine which is more critical— or which governs service life.

The potential for metal loss in the invert of a drainage pipe due to abrasive flows is often overlooked by designers and its effects are often mistaken for corrosion. An estimate for potential abrasion is required at each pipe location in order to determine the appropriate material and gage.

This manual is intended to guide specifiers through the mechanics of selecting appropriate drainage products to meet service life requirements. The information contained in the following pages is a composite of several national guidelines.

Using the Design Guide

The choice of material, gage and product type can be extremely important to service life. The following steps describe the procedure for selecting the appropriate drainage product, material and gage to meet a specific service life requirement.

Design Sequence

1. Select pipe or structure based on hydraulic and clearance requirements. Use Tables 4 and 5 as reference for size limits and hydraulic properties of all drainage products.
2. Use Height of Cover tables for the chosen pipe or structure to determine the material gage required for the specific loading condition.
3. Use Table 1 to select the appropriate material for the site-specific environmental conditions. Whenever possible, existing installations of drainage structures along the same water course offer the most reliable estimate of long-term performance for specific environment conditions. In many cases, there will be more than one material that is appropriate for the project environmental conditions. Generally speaking, the metal material types increase in price as you move from top down on Table 1. Please contact your local CONTECH Sales Representative for pricing.
4. Use Table 2 to determine which abrasion level most accurately describes the typical storm event (2 year storm). The expected stream velocity and associated abrasion conditions should be based on a typical flow and not a 10 or 50-year design flood.
5. Use Table 3 to determine whether the structural gage for the selected material is sufficient for the design service life. If the structural gage is greater than or equal to the gage required for a particular abrasion condition and service life, use the structural gage. Conversely, if the structural gage is less than the gage required for a particular abrasion condition and service life, use the gage required by Table 3.

Note:

Both Contech round pipe and pipe-arch are available with either helical or annular corrugations. Contech HEL-COR® pipe (helical corrugations) is furnished with continuous lock seams and annular re-rolled ends. Contech riveted pipe is furnished with annular corrugations only. The height of cover tables in this guide are helical corrugations only. Consult your Contech representative for Height of Cover tables on riveted pipe.

Aluminum Alloy	16	16	16	16	14	14	14	14	14[5]	14[5]	14[5]	14[5]

1. *Based on Table 1 - Recommended Environments.*
2. *SmoothCor™ Steel Pipe combines a corrugated steel exterior shell with a hydraulically smooth interior liner.*
3. *Service life estimates for ULTRA FLO® and SmoothCor Pipe assume a storm sewer application. Storm sewers rarely achieve abrasion levels 3 or 4. For applications other than storm sewers or abrasion conditions above Abrasion Level 2, please contact your Contech Sales Representative for gage and coating recommendations.*
4. *Design service life for 8 gage galvanized is 97 years.*
5. *Invert protection to consist of velocity reduction structures.*
6. *Asphalt coated and paved invert or velocity reduction structures are needed.*
7. *Requires a field applied concrete paved invert with minimum thickness 1" above corrugation crests.*
8. *75 year service life for polymer coated is based on a pH range of 4-9 and resistivity greater than 750 ohm-cm.*
9. *100 year service life for polymer coated is based on a pH range of 5-9 and resistivity greater than 1500 ohm-cm.*

Table 4 - Product Dimensions

	Drainage Product	Common Uses	Size Limits* Minimum	Size Limits* Maximum	Manning's "n" Value
 Round Pipe	Corrugated Steel (1/2" deep corrugation)	Culverts, small bridges, storm water detention/ retention systems, conduits, tunnels, storm sewers.	12"	84"	0.011 - 0.021

* *These values are based on the AISI Flexibility Factor limit (0.0433 x 1.5) for pipe-arch.*

Heights of Cover Notes:

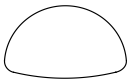
1. These tables are for lock-seam or welded-seam construction. They are not for riveted construction. Consult your Contech Sales Representative for Height of Cover tables on riveted pipe.
2. These values, where applicable, were calculated using a load factor of K=0.86 as adopted in the NCSPA CSP Design Manual, 2008.
3. The haunch areas of a pipe-arch are the most critical zone for backfilling. Extra care should be taken to provide good material and compaction to a point above the spring line.
4. E 80 minimum cover is measured from top of pipe to bottom of tie.
5. H 20 and H 25 minimum cover is measured from top of pipe to bottom of flexible pavement or top of rigid pavement.
6. The H 20 and H 25 pipe-arch tables are based on 2 tons per square foot corner bearing pressures.
7. The E 80 pipe-arch tables minimum and maximum covers are based on the corner bearing pressures shown. These values may increase or decrease with changes in allowable corner bearing pressures.
8. 0.052" is 18 gage.
   0.064" is 16 gage.
   0.079" is 14 gage.
   0.109" is 12 gage.
   0.138" is 10 gage.
   0.168" is 8 gage.
9. For construction loads, see Page 15.
10. 1-1/2" x 1/4" corrugation. H20, H25 and E80 loading.
11. SmoothCor has same Height of Cover properties as corrugated steel pipe. The exterior shell of SmoothCor is manufactured in either 2-2/3" x 1/2" or 3" x 1" corrugations; maximum exterior shell gage is 12.
12. Sewer gage (trench conditions) tables for corrugated steel pipe can be found in the AISI book "Modern Sewer Design," 4th Edition, 1999. These tables may reduce the minimum gage due to a higher flexibility factor allowed for a trench condition.

5" x 1" or 3" x 1" Height of Cover Limits for Corrugated Steel Pipe

H 20 and H 25 Live Loads

Diameter or Span, Inches	Minimum Cover Inches	Maximum Cover, Feet[2] Specified Thickness, Inches 0.064	0.079	0.109	0.138	0.168
54	12	56	70	98	127	155
60		50	63	88	114	139
66		46	57	80	103	127
72		42	52	74	95	116
78		39	48	68	87	107
84		36	45	63	81	99
90		33	42	59	76	93
96	12	31	39	55	71	87
102	18	29	37	52	67	82
108			35	49	63	77
114			32	45	58	72
120			30	42	54	66
126				39	50	61
132				36	46	58
138				33	43	53
144	18				39	49

Maximum cover heights shown are for 5" x 1".



To obtain maximum cover for 3" x 1", increase these values by 12%

E 80 Live Loads

Diameter or Span, Inches	Minimum Cover Inches	Maximum Cover, Feet[2] Specified Thickness, Inches 0.064	0.079	0.109	0.138	0.168
54	18	56	70	98	127	155
60		50	63	88	114	139
66		46	57	80	103	127
72	18	42	52	74	95	116

108	128 x 83	0.109	42	17
114	137 x 87	0.109	42	17
120	142 x 91	0.138	42	17

* *Some 3" x 1" and 5" x 1" minimum gages shown for pipe-arch are due to manufacturing limitations.*

Heights of Cover Notes:

1. These tables are for lock-seam or welded-seam construction. They are not for riveted construction. Consult your Contech Sales Representative for Height of Cover tables on riveted pipe.
2. These values, where applicable, were calculated using a load factor of K=0.86 as adopted in the NCSPA CSP Design Manual, 2008.
3. The span and rise shown in these tables are nominal. Typically the actual rise that forms is greater than the specified nominal. This actual rise is within the tolerances as allowed by the AASHTO & ASTM specifications. The minimum covers shown are more conservative than required by the AASHTO and ASTM specifications to account for this anticipated increase in rise. Less cover height may be tolerated depending upon actual rise of supplied pipe arch.
4. The haunch areas of a pipe-arch are the most critical zone for backfilling. Extra care should be taken to provide good material and compaction to a point above the spring line.
5. E 80 minimum cover is measured from top of pipe to bottom of tie.
6. H 20 and H 25 minimum cover is measured from top of pipe to bottom of flexible pavement or top of rigid pavement.
7. The H 20 and H 25 pipe-arch tables are based on 2 tons per square foot corner bearing pressures.
8. The E 80 pipe-arch tables minimum and maximum covers are based on the corner bearing pressures shown. These values may increase or decrease with changes in allowable corner bearing pressures.
9. 0.052" is 18 gage.0.064" is 16 gage.
   0.079" is 14 gage.0.109" is 12 gage.
   0.138" is 10 gage.0.168" is 8 gage.
10. For construction loads, see Page 15.
11. SmoothCor has same Height of Cover properties as corrugated steel pipe. The exterior shell of SmoothCor is manufactured in either 2-$^{2}/_{3}$" x $^{1}/_{2}$" or 3"x1" corrugations; maximum exterior shell gage is 12.
12. Sewer gage (trench conditions) tables for corrugated steel pipe can be found in the AISI book "Modern Sewer Design," 4th Edition, 1999. These tables may reduce the minimum gage due to a higher flexibility factor allowed for a trench condition.

3" x 1" Pipe-Arch Height of Cover Limits for Corrugated Steel Pipe-Arch

H 20 and H 25 Live Loads

Size		Minimum		Maximum[7]
Equivalent Pipe Diameter	Span x Rise Inches	Specified Thickness, Inches*	Minimum Cover Inches	Cover, Feet 2 Tons/Ft.² Corner Bearing Pressure

3″ x 1″ Height of Cover Limits for Corrugated Aluminum Pipe-Arch

HL 93 Live Load

Round Pipe Dia. (Inches)	Size, (In.) Span x Rise	Minimum Gage	Minimum[3] Cover (Inches)	Maximum Cover, (Ft.) Aluminum Pipe-Arch[2] 2 Tons/Ft.² for Corner Bearing Pressures
54	60x46	14	15	20
60	66x51	14	18	20
66	73x55	14	21	20
72	81x59	12	21	16
78[4]	87x63	12	24	16
84[4]	95x67	12	24	16
90[4]	103x71	10	24	16
96[4]	112x75	8[5]	24	16

Notes:

1. *Height-of-cover is measured to top of rigid pavement or to bottom of flexible pavement.*
2. *Maximum cover meets AASHTO LRFD design criteria.*
3. *Minimum cover meets ASTM B 790 design criteria.*
4. *Limited availability on these sizes.*
5. *8-gage pipe has limited availability.*
6. *For construction loads, see page 15.*

Notes:

1. The tables for Steel H 20 and H 25 loading are based on the NCSPA CSP Design Manual, 2008 and were calculated using a load factor of K=0.86. The tables for Steel E 80 loading are based on the AREMA Manual. The tables for Aluminum HL 93 loading are based on AAS-HTO LRFD Design Criteria.
2. The haunch areas of a pipe-arch are the most critical zone for backfilling. Extra care should be taken to provide good material and compaction to a point above the spring line.
3. E 80 minimum cover is measured from top of pipe to bottom of tie.
4. H 20, H 25 and HL 93 minimum cover is measured from top of pipe to bottom of flexible pavement or top of rigid pavement.
5. The H 20, H 25 and HL 93 pipe-arch tables are based on 2 tons per square foot corner bearing pressures.
6. The E 80 pipe-arch tables minimum and maximum covers are based on 3 tons per square foot corner bearing pressures shown.
7. Larger size pipe-arches may be available on special order.
8. M.L. (Heavier gage is required to prevent crimping at the haunches.)
9. For construction loads, see Page 15.
10. Sewer gage (trench conditions) tables for corrugated steel pipe can be found in the AISI book "Modern Sewer Design," 4th Edition, 1999. These tables may reduce the minimum gage due to a higher flexibility factor allowed for a trench condition.

ULTRA FLO can be manufactured from polymer coated steel for added durability.

11. All heights of cover are based on trench conditions. If embankment conditions exist, there may be restriction on gages for the large diameters. Your Contech Sales Representative can provide further guidance for a project in embankment conditions.
12. All steel ULTRA FLO is installed in accordance with ASTM A798 "Installing Factory-Made Corrugated Steel Pipe for Sewers and Other Applications."

* *These sizes and gage combinations are installed in accordance with ASTM A796 paragraphs 18.2.3 and ASTM A798. For aluminum ULTRA FLO refer to ASTM B790 and B788.*

** *Contact your local Contech representative for more specific information on Polymer Coated ULTRA FLO for gages 12 and 10.*

72			36	45
78				49
84				52

ULTRA FLO is available in long lengths. And, its light weight allows it to be unloaded and handled with small equipment.

Reduced excavation because of ULTRA FLO's smaller outside diameter.

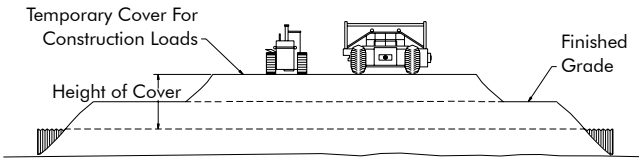
Installation Corrugated Metal Pipe

Overview
Satisfactory site preparation, trench excavation, bedding and backfill operations are essential to develop the strength of any flexible conduit. In order to obtain proper strength while preventing settlement, it is necessary that the soil envelope around the pipe be of good granular material, properly placed and carefully compacted.

Bedding
Bedding preparation is critical to both pipe performance and service life. The bed should be constructed to uniform line and grade to avoid distortions that may create undesirable stresses in the pipe and/or rapid deterioration of the roadway. The bed should be free of rock formations, protruding stones, frozen lumps, roots and other foreign matter that may cause unequal settlement.

Placing the pipe
Corrugated metal pipe weighs much less than other commonly used drainage structures. This is due to the efficient strength of the metal, further improved with carefully designed and formed corrugations. Even the heaviest sections of Contech pipe can be handled with relatively light equipment compared with equipment required for much heavier reinforced concrete pipe.

Backfill
Satisfactory backfill material, proper placement and compaction are key factors in obtaining maximum strength and stability. Backfill should be a well-graded granular material and should be free of large stones, frozen lumps and other debris.



Backfill materials should be placed in layers about six inches deep, deposited alternately on opposite sides of the pipe. Each layer should be compacted carefully. Select backfill is placed and compacted until minimum cover height is reached, at which point, standard road embankment backfill procedures are used.

Installation References
For more information, see AASHTO Bridge Construction Specification Section 26, the Installation Manual of the National Corrugated Steel Pipe Association, ASTM A798 for steel and ASTM B788 for aluminum ULTRA FLO.

Additional Considerations for ULTRA FLO Installations
Bedding and Backfill
Typical ULTRA FLO installation requirements are the same as for any other corrugated metal pipe installed in a trench. Bedding and backfill materials for ULTRA FLO follow the requirements of the CMP installation specifications mentioned above, and must be free from stones, frozen lumps or other debris. When ASTM A796 (steel) or B790 (aluminum) designs are to be followed for condition III requirements, indicated by asterisk (*) in the tables on page 13 and 14, use clean, easily compacted granular backfill materials.

Embankment Conditions
ULTRA FLO is a superior CMP storm sewer product that is normally installed in a trench condition. In those unusual embankment installation conditions, pipe sizes and gages may be restricted. Your Contech Sales Representative can provide you with further guidance.

Construction Loads
For temporary construction vehicle loads, an extra amount of compacted cover may be required over the top of the pipe. The Height of Cover shall meet minimum requirements shown in the table below. The use of heavy construction equipment necessitates greater protection for the pipe than finished grade cover minimums for normal highway traffic.

Min. Height of Cover Requirements for Construction Loads On Corrugated Steel Pipe*

Diameter/ Span, (Inches)	Minimum Cover (feet) for Indicated Axle Loads (kips)			
	18-50	50-75	75-110	110-150
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5

Min. Height of Cover Requirements for Construction Loads On Corrugated Aluminum Pipe*

Diameter/ Span (Inches)	Axle Load (Kips)			
	18-50	50-75	75-110	110-150
12-42	3.0′	3.5′	4.0′	4.0′
48-72	4.0′	4.0′	5.0′	5.5′
78-120	4.0′	5.0′	5.5′	5.5′

Min. Height of Cover Requirements for Construction Loads On ULTRA FLO Pipe*

Diameter/ Span (Inches)	Axle Load (Kips)			
	18-50	50-75	75-110	110-150
	Steel 3/4″ x 3/4″ x 7-1/2″			
15-42	2.0'	2.5'	3.0'	3.0'
48-72	3.0'	3.0'	3.5'	4.0'
78-108	3.0'	3.5'	4.0'	4.5'
	Aluminum 3/4″ x 3/4″ x 7-1/2″			
15-42	3.0'	3.5'	4.0'	4.0'

* Minimum cover may vary depending on local conditions. The contractor must provide the additional cover required to avoid damage to the pipe. Minimum cover is measured from the top of the pipe to the top of the maintained construction roadway surface.

SmoothCor™ Pipe

Excellent Hydraulics, Long Lengths and Easy Installation

Corrugated Steel Shell

SmoothCor pipe has a smooth interior steel liner that provides a Manning's "n" of 0.012. Its rugged, corrugated steel shell supplies the structural strength to outperform rigid pipe. SmoothCor pipe is both the economical and performance alternate to concrete.

Superior hydraulics

SmoothCor, with its smooth interior surface, is hydraulically superior to conventional corrugated steel pipe and with fewer joints and better interior surface, outperforms reinforced concrete pipe.

SmoothCor, with its long lengths, light weight and beam strength, is superior to concrete pipe in many difficult situations such as poor soils, poor subsurface drainage conditions, steep slopes and high fills. SmoothCor should be specified as an alternate under normal site conditions, and specified exclusively under very difficult situations that demand the strength of CSP with positive joints and a hydraulically efficient smooth liner.

Two Pipe Shapes

In addition to full-round pipe, SmoothCor comes in a pipe-arch shape for limited headroom conditions. The low, wide pipe-arch design distributes the flow area horizontally, enabling it to be installed with lower head room than a round pipe.

Reference specifications

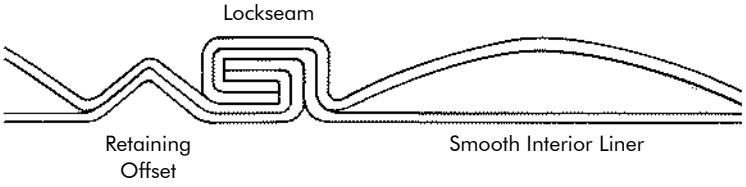
Material	Polymer Coated	ASTM A 929 AASHTO M246 ASTM A 742
Pipe	Polymer	AASHTO M245 ASTM A 762 & A 760
Design	Steel Pipe	AASHTO Section 12 ASTM A 796
Installation	Steel Pipe	AASHTO Section 26 ASTM A 798

Structural Design

SmoothCor is lined with either 18 or 20 gage steel. Contech has taken a conservative approach to the Height of Cover. The maximum heights-of-cover are based on the shell thickness with no additional structural allowance for the liner as provided for in the AASHTO and ASTM design specifications. Using this approach, the Height of Cover tables for 2 2/3" x 1/2" and 3"x1" steel corrugations can be used for SmoothCor.

Diameters

SmoothCor is available in diameters ranging from 18 inches to 66 inches in 2 2/3" x 1/2" corrugation. The 3" x 1" corrugation is available in diameters of 48 inches to 126 inches.



Pipe-arch sizes range from 21" x 15" through 77" x 52" for 2 2/3" x 1/2" corrugations, and 53" x 41" through 137" x 87" for 3"x1" corrugations.

Materials

SmoothCor is available with Dow's TRENCHCOAT® that allows the engineer to design for long service life. TRENCHCOAT is a tough, heavy-gage polymer film laminated to both sides of the steel coil, providing a barrier to corrosion and mild abrasion. TRENCHCOAT is particularly effective for protection in corrosive soils.

Fittings

SmoothCor can be fabricated into any type of structure including tees, elbows, laterals, catch basins, manifolds and reducers. Pre-fabricated fittings are more economical and have superior hydraulic characteristics when compared to concrete structures.

QUICK STAB® Joint

Save Time and Money With Faster Pipe Bell and Spigot Coupling

The Contech QUICK STAB Bell and Spigot joint speeds installation of corrugated metal pipe (CMP), reducing your costs. With the QUICK STAB coupling system, installation of CMP storm sewers and culverts has never been easier or faster.

The QUICK STAB joint creates a bell and spigot joining system with the bell only 1-1/2" larger than the pipe's O.D. Assembled at the factory, the QUICK STAB bell is shipped to the job site ready for installation. The only field operation is placing a special fluted gasket onto the spigot end of the pipe, applying lubricant and pushing it into the bell end of the preceding pipe. Without bands, bolts and wrenches to work and worry with, you can join pipe segments 50% to 90% faster—saving time, money and aggravation.

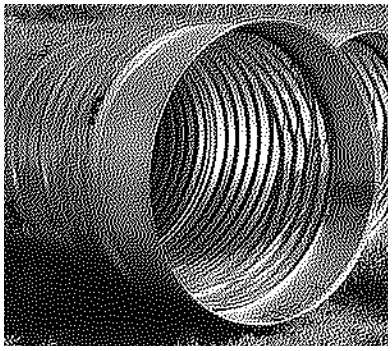
Soil Tight Joint

Contech's QUICK STAB joint provides the same soil tightness as conventional CMP bands. Each QUICK STAB joint uses a double sealing fluted gasket to seal the spigot against the bell. A flat gasket is installed at the plant between the pipe and the corrugated end of the bell. With the deep bell, you gain maximum soil tightness with minimal installation effort.

Wide Variety of Coatings and Materials

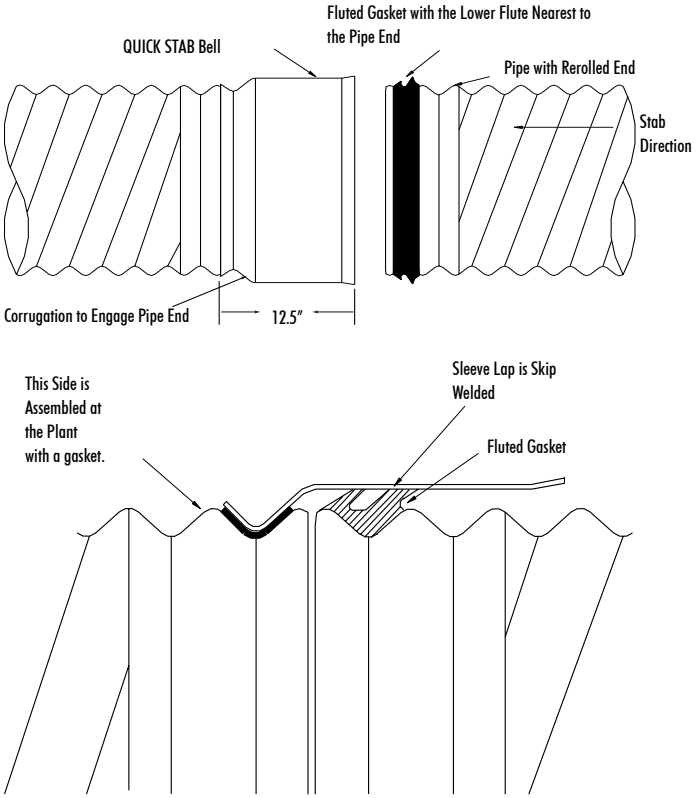
- Plain galvanized
- Aluminized Steel Type 2
- Aluminum
- Polymeric coated

Four Times Faster Installation Than Concrete



The QUICK STAB's bell and spigot joining system allows pipe segments to be joined quicker than reinforced concrete pipe. Next, add in Contech's corrugated metal pipe's length advantage—each segment is four times longer than standard concrete pipe lengths. That means fewer joints and faster installation—up to four times faster! Plus, with the bell only 1-1/2" larger than the pipe, trench excavation is considerably less compared with concrete—again, saving time and money.

Field Installation Instructions



The spigot and bell ends must be cleaned of any dirt or debris prior to assembly. The fluted gasket shall be placed in the first corrugation with the lower flute nearest the end of the pipe. The bell & gasket shall be thoroughly lubed just before stabbing in the bell. Do not place hands, fingers, or any other body parts between bell and spigot during assembly. If it is necessary to pull the joint apart, the bell, spigot and gasket shall be inspected and cleaned of any dirt or debris prior to re-stabbing.

Corrugated Metal Pipe Bell and Spigot Joint Specification

The joints shall be of such design and the ends of the corrugated metal pipe sections so formed that the pipe can be laid together to make a continuous line of pipe. The joint shall be made from the same material as the pipe and shall prevent infiltration of the fill material.

Bell and Spigot Coupling System for CMP

The Bell and Spigot joint is available on ULTRA FLO and 2-2/3" x 1/2" corrugation in 15" through 60" diameter.

End Sections

Easily installed, easily maintained culvert end treatments for corrugated metal pipe, reinforced concrete pipe and HDPE Pipe

Contech End Sections provide a practical, economical and hydraulically superior method of finishing a variety of culvert materials.

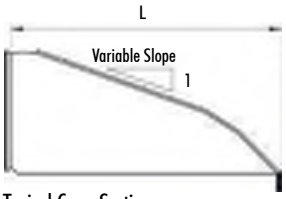
The lightweight, flexible metal construction of Contech End Sections creates an attractive, durable and erosion-preventing treatment for all sizes of culvert inlets and outlets. They can be used with corrugated metal pipe having either annular or helical corrugations, and both reinforced concrete and plastic pipes. End sections can be salvaged when lengthening or relocating the culvert.

Standard End Sections are fabricated from pregalvanized steel. For added corrosion resistance, Aluminized Type II or Aluminum End Sections are available in smaller sizes. Special End Sections for multiple pipe installations may be available on a specific inquiry basis.

Better hydraulics

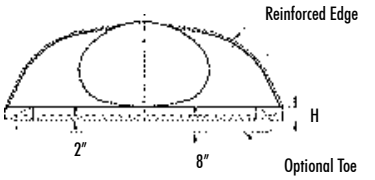
Flow characteristics are greatly improved by the exacting design of Contech End Sections. Scour and sedimentation conditions are improved, and headwater depth can be better controlled. Culverts aligned with the stream flow and finished with Contech End Sections generally require no additional hydraulic controls.

Improved appearance



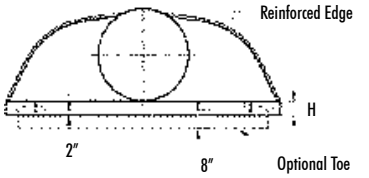
Contech End Sections blend well with the surroundings. The tapered sides of an End Section merge with slope design to improve roadside appearance. Unsightly weeds and debris collection at the culvert end are reduced.

Economical installation

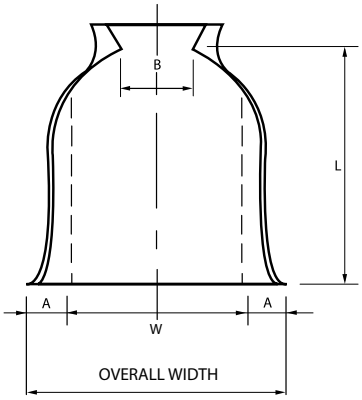


Lightweight equipment and simple crew instructions result in smooth and easy installation. Contech End Sections are easily joined to culvert barrels, forming a continuous, one-piece structure. For easiest installation, End Sections should be installed at the same time as the culvert. Installation is completed by tamping soil around the End Section.

Low maintenance



Contech End Sections reduce maintenance expense because their tapered design promotes easier mowing and snow removal. There is no obstruction to hamper weed cutting.



Typical Cross Section

Elevation

Elevation

Plan

Notes for all End Sections:

1. All three-piece bodies to have 12-gage sides and 10-gage center panels. Multiple panel bodies to have lap seams which are to be tightly joined by galvanized rivets or bolts.
2. For 60″ through 84″ sizes, reinforced edges are supplemented with stiffener angles. The angles are attached by galvanized nuts and bolts. For the 66″ and 72″ equivalent round pipe-arch sizes, reinforced edges are supplemented by angles. The angles are attached by galvanized nuts and bolts.
3. Angle reinforcements are placed under the center panel seams on the 66″ and 72″ equivalent round pipe-arch sizes.
4. Toe plate is available as an accessory, when specified on the order, and will be same gage as the End Section.
5. Stiffener angles, angle reinforcement, and toe plates are the same base metal as end section body.
6. **End sections with 6:1 and 4:1 slopes are available in 12″ through 24″ diameters.**
7. Actual dimensions may vary slightly.
8. During manufacturing, a slight invert slope may result along the length of the end section to be accommodated in the field.

End Sections for Round Pipe (2-2/3″ x 1/2″, 3″ x 1″ and 5″ x 1″)

Contech End Sections attach to corrugated metal pipe, reinforced concrete and plastic pipe.

Note: *The Type 3 connection is not illustrated. This connection is a one-foot length of pipe attached to the end section.*

End Section on Round CSP

End Sections are available for CSP Pipe-Arch

Contech End Sections are often used on concrete pipe. They can be used on both the bell and spigot end.

Low-slope End Sections—Contech manufactures 4:1 and 6:1 low-slope End Sections for corrugated metal pipe. This photo shows the optional field-attached safety bars.

Contech Engineered Solutions LLC is a leading provider of site solution products and services for the civil engineering industry. Contech's product portfolio includes bridges, drainage, retaining walls, sanitary sewer, stormwater, erosion control, soil stabilization and wastewater products.

For more information, call one of Contech's Regional Offices located in the following cities:

Ohio (Corporate Office) 513-645-7000
Colorado (Denver) 720-587-2700
Florida (Orlando) 321-348-3520
Maine (Scarborough) 207-885-9830
Maryland (Baltimore) 410-740-8490
Oregon (Portland) 503-258-3180
Texas (Dallas) 972-590-2000

CONTECH®
ENGINEERED SOLUTIONS

CDS®
Hydrodynamic Separator

The experts you need to solve your stormwater management challenges

Contech is the leader in stormwater management solutions, helping engineers, contractors and owners with infrastructure and land development projects throughout North America.

With our responsive team of stormwater experts, local regulatory expertise and flexible solutions, Contech is the trusted partner you can count on for stormwater management solutions.

Your Contech Team

STORMWATER CONSULTANT

It's my job to recommend the best solution to meet permitting requirements.

STORMWATER DESIGN ENGINEER

I work with consultants to design the best approved solution to meet your project's needs.

REGULATORY MANAGER

I understand the local stormwater regulations and what solutions will be approved.

SALES ENGINEER

I make sure our solutions meet the needs of the contractor during construction.

Contech is your partner in stormwater management solutions

Unique screening technology for stormwater runoff – CDS®

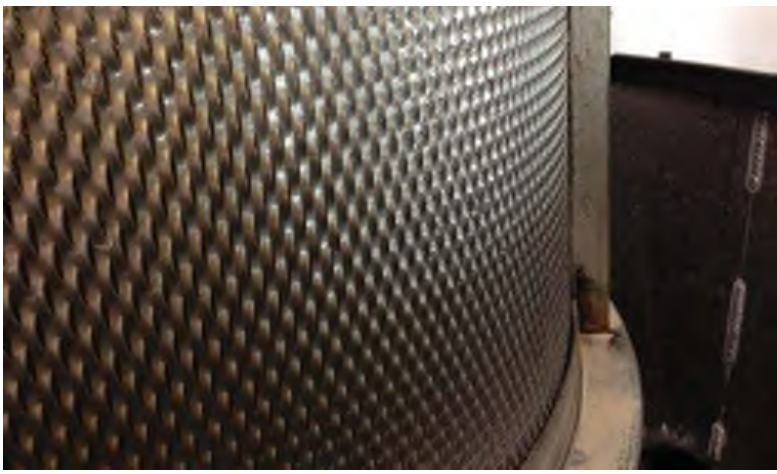
The CDS hydrodynamic separator uses swirl concentration and continuous deflective separation to screen, separate and trap trash, debris, sediment, and hydrocarbons from stormwater runoff.

At the heart of the CDS system is a unique screening technology used to capture and retain trash and debris. The screen face is louvered so that it is smooth in the downstream direction. The effect created is called “Continuous Deflective Separation.” The power of the incoming flow is harnessed to continually shear debris off the screen and to direct trash and sediment toward the center of the separation cylinder. This results in a screen that is self-cleaning and provides 100% removal of floatables and neutrally buoyant material debris 4.7 mm or larger, without blinding.

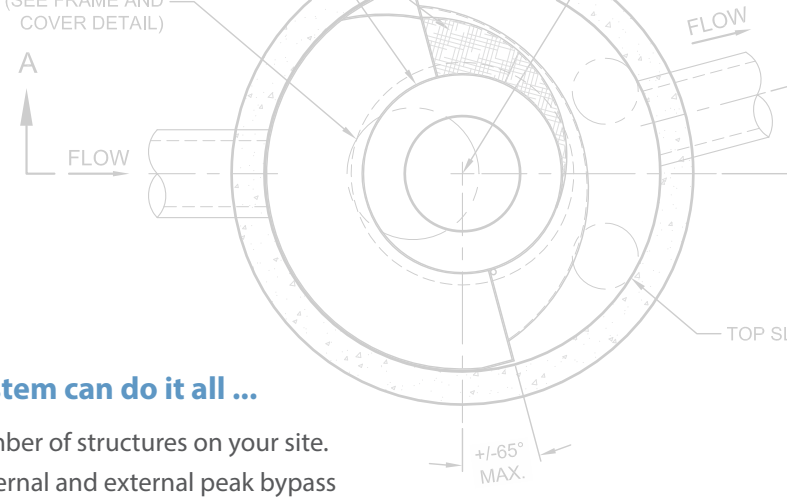
CDS is used to meet trash Total Maximum Daily Load (TMDL) requirements, for stormwater quality control, inlet and outlet pollution control, and as pretreatment for filtration, detention/infiltration, bioretention, rainwater harvesting systems, and a variety of green infrastructure practices.

CDS® Features and Benefits

FEATURE	BENEFIT
Captures and retains 100% of floatables and neutrally buoyant debris 4.7mm or larger	Superior pollutant removal
Self-cleaning screen	Ease of maintenance
Isolated storage sump eliminates scour potential	Excellent pollutant retention
Internal bypass	Eliminates the need for additional structures
Multiple pipe inlets and 90-180º angles	Design flexibility
Clear access to sump and stored pollutants	Fast, easy maintenance



APPLICATION TIPS

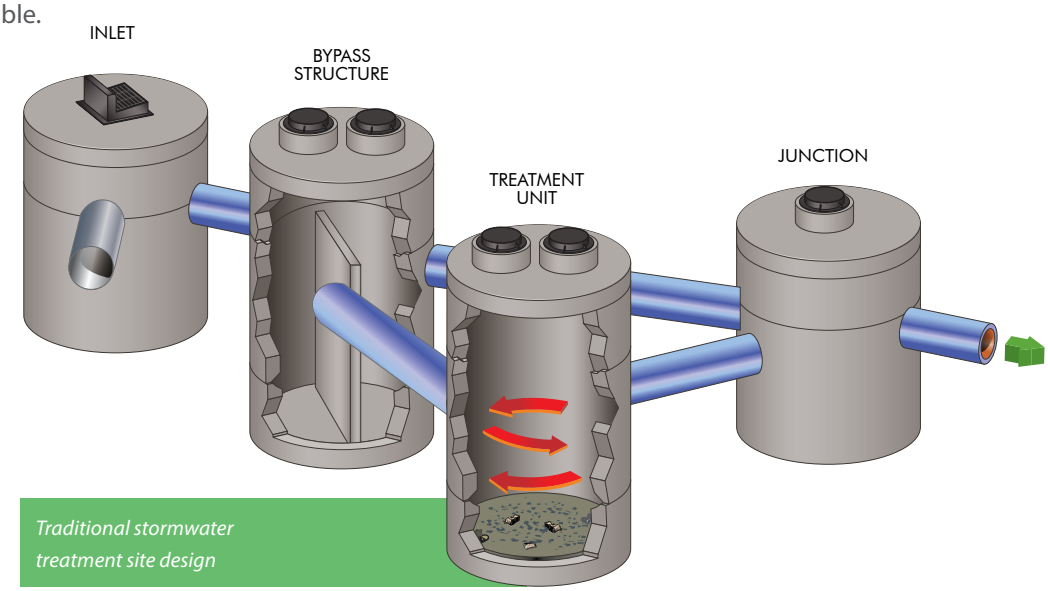


- Because of its internal peak bypass weirs, CDS systems can provide cost savings by eliminating the need for additional structures.
- Pretreating detention, infiltration, and green infrastructure practices with CDS can protect downstream structures and provide for easy maintenance.
- The CDS an ideal solution for retrofit applications due to its compact footprint and configuration flexibility.

The CDS® Screen

A fundamentally different approach to trash control ...

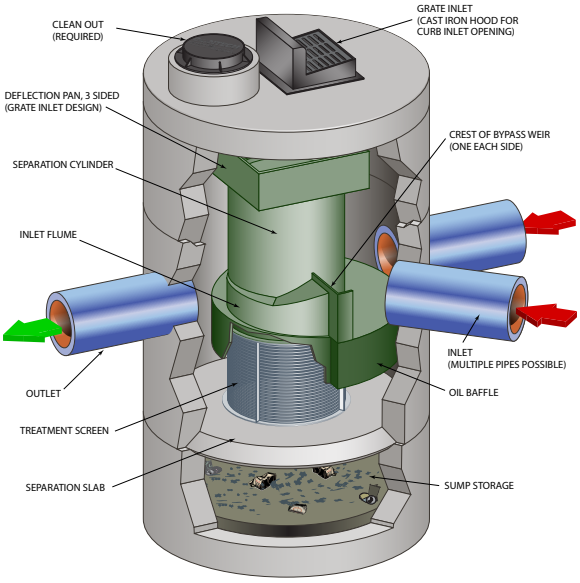
Traditional approaches to trash control typically involve "direct screening" that can easily become clogged, as trash is pinned to the screen as water passes through. Clogged screens can lead to flooding as water backs up. The design of the CDS screen is fundamentally different. Flow is introduced to the screen face which is louvered so that it is smooth in the downstream direction. The effect created is called "Continuous Deflective Separation." The power of the incoming flow is harnessed to continually shear debris off the screen and to direct trash and sediment toward the center of the separation cylinder.



CDS® Design Configuration

Why use traditional stormwater design when ONE system can do it all ...

The CDS effectively treats stormwater runoff while reducing the number of structures on your site. Inline, offline, grate inlet, and drop inlet configurations available. Internal and external peak bypass options also available.



Traditional stormwater treatment site design

A Traditional Stormwater Treatment Site Design would require several structures on your site. With CDS, one system can do it all!

CDS® Advantages

- Grate inlet option available
- Internal bypass weir
- Accepts multiple inlets at a variety of angles
- Advanced hydrodynamic separator
- Captures and retains 100% of floatables and neutrally buoyant debris 4.7 mm or larger
- Indirect screening capability keeps screen from clogging
- Retention of all captured pollutants, even at high flows
- Performance verified by NJCAT, WA Ecology, and ETV Canada

Learn More:
www.ContechES.com/cds

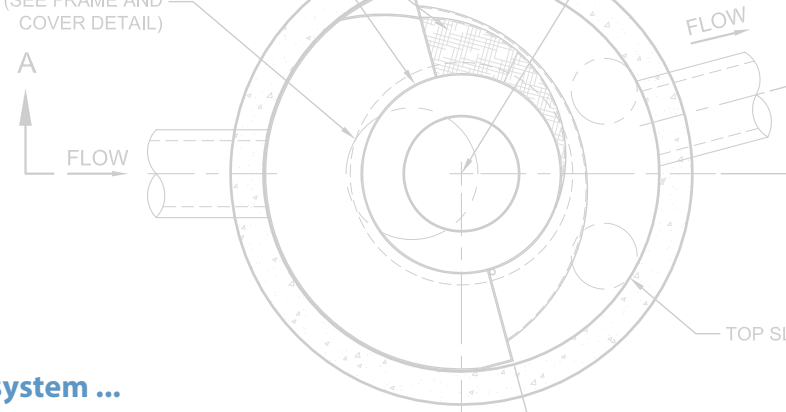
CDS® Applications

CDS is commonly used in the following stormwater applications:

- Stormwater quality control – trash, debris, sediment, and hydrocarbon removal
- Urban retrofit and redevelopment
- Inlet and outlet protection
- Pretreatment for filtration, detention/infiltration, bioretention, rainwater harvesting systems, and Low Impact Development designs

CDS® provides trash control

CDS® pretreats a bioswale



Select CDS® Certifications and Verifications

CDS has been verified by some of the most stringent stormwater technology evaluation organizations in North America, including:

- Washington State Department of Ecology (GULD) - Pretreatment
- New Jersey Department of Environmental Protection (NJ DEP)
- Canadian Environmental Technology Verification (ETV)
- California Statewide Trash Amendments Full Capture System Certified*

**The CDS System has been certified by the California State Water Resources Control Board as a Full Capture System provided that it is sized to treat the peak flow rate from the region specific 1-year, 1-hour design storm, or the peak flow capacity of the corresponding storm drain, whichever is less.*

Save time, space and money with CDS

CDS® Maintenance

Select a cost-effective and easy-to-access treatment system ...

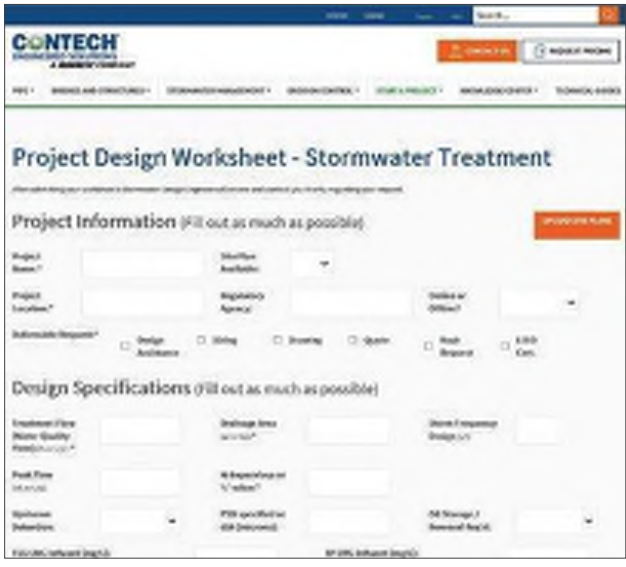
Systems vary in their maintenance needs, and the selection of a cost-effective and easy-to-access treatment system can mean a huge difference in maintenance expenses for years to come.

A CDS unit is designed to minimize maintenance and make it as easy and inexpensive as possible to keep our systems working properly.

INSPECTION

Inspection is the key to effective maintenance. Pollutant deposition and transport may vary from year to year and site to site. Semi-annual inspections will help ensure that the system is cleaned out at the appropriate time. Inspections should be performed more frequently where site conditions may cause rapid accumulation of pollutants.

Most CDS® units can easily be cleaned within thirty minutes.



RECOMMENDATIONS FOR CDS MAINTENANCE

The recommended cleanout of solids within the CDS unit's sump should occur at 75% of the sump capacity. Access to the CDS unit is typically achieved through two manhole access covers – one allows inspection and cleanout of the separation chamber and sump, and another allows inspection and cleanout of sediment captured and retained behind the screen. A vacuum truck is recommended for cleanout of the CDS unit and can be easily accomplished in less than 30 minutes for most installations.

HDS Product Design Worksheets

Our in-house team of engineers can support you through the entire permitting process - and the first step is sending us your project information by filling out one of the Project Design Worksheets. We will forward your information to an in-house engineer who will contact you with specific recommendations for your project.

After the Storm

A Citizen's Guide to Understanding Stormwater

WHEN IT RAINS IT DRAINS

What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

The effects of pollution

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.
- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.
- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

Stormwater Pollution Solutions

Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.

Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets

Auto care

Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

Pet waste

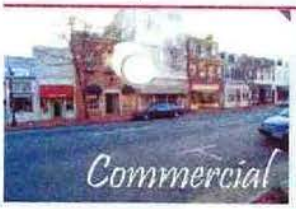
Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Education is essential to changing people's behavior. Signs and markers near storm drains warn residents that pollutants entering the drains will be carried untreated into a local waterbody.

Residential landscaping

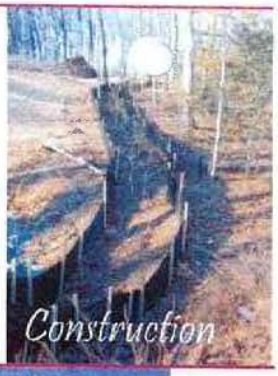
Permeable Pavement—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through, decreasing stormwater runoff.



Rain Barrels—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas.

Rain Gardens and Grassy Swales—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the ground. Rain from rooftop areas or paved areas can be diverted into these areas rather than into storm drains.

Vegetated Filter Strips—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

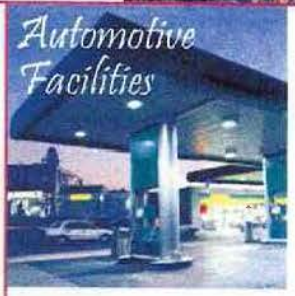


Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be washed into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.



Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways.
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution.

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies
- Install and maintain oil/water separators.

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

Help Protect Our Waterways!

Use these guidelines for Outdoor Cleaning Activities and Wash Water Disposal

Did you know that disposing of pollutants into the street, gutter, storm drain or body of water is *PROHIBITED* by law and can result in stiff penalties?

Best Management Practices

Waste wash water from Mechanics, Plumbers, Window/Power Washers, Carpet Cleaners, Car Washing and Mobile Detailing activities may contain significant quantities of motor oil, grease, chemicals, dirt, detergents, brake pad dust, litter and other materials.

Best Management Practices, or BMPs as they are known, are guides to prevent pollutants from entering the storm drains. *Each of us* can do our part to keep stormwater clean by using the suggested BMPs below:

Simple solutions for both light and heavy duty jobs:

Do...consider dry cleaning methods first such as a mop, broom, rag or wire brush. Always keep a spill response kit on site.

Do...prepare the work area before power cleaning by using sand bags, rubber mats, vacuum booms, containment pads or temporary berms to keep wash water away from the gutters and storm drains.

Do...use vacuums or other machines to remove and collect loose debris or litter before applying water.

Do...obtain the property owner's permission to dispose of ***small amounts*** of power washing waste water on to landscaped, gravel or unpaved surfaces.

Do...check your local sanitary sewer agency's policies on wash water disposal regulations before disposing of wash water into the sewer. (See list on reverse side)

Do...be aware that if discharging to landscape areas, soapy wash water may damage landscaping. Residual wash water may remain on paved surfaces to evaporate. Sweep up solid residuals and dispose of properly. Vacuum booms are another option for capturing and collecting wash water.

Do...check to see if local ordinances prevent certain activities.

Do not let...wash or waste water from sidewalk, plaza or building cleaning go into a street or storm drain.

Report illegal storm drain disposal
Call Toll Free
1-800-506-2555

Using Cleaning Agents

Try using biodegradable/phosphate-free products. They are easier on the environment, but don't confuse them with being toxic free. Soapy water entering the storm drain system can impact the delicate aquatic environment.

When cleaning surfaces with a ***high-pressure washer*** or ***steam cleaner***, additional precautions should be taken to prevent the discharge of pollutants into the storm drain system. These two methods of surface cleaning can loosen additional material that can contaminate local waterways.

Think Water Conservation

Minimize water use by using high pressure, low volume nozzles. Be sure to check all hoses for leaks. Water is a precious resource, don't let it flow freely and be sure to shut it off in between uses.

Screening Wash Water

Conduct thorough dry cleanup before washing exterior surfaces, such as buildings and decks ***with loose paint***, sidewalks or plaza areas. Keep debris from entering the storm drain after cleaning by first passing the wash water through a "20 mesh" or finer screen to catch the solid materials, then dispose of the mesh in a refuse container. Do not let the remaining wash water enter a street, gutter or storm drain.

Drain Inlet Protection & Collection of Wash Water

- Prior to any washing, block all storm drains with an impervious barrier such as sandbags or berms, or seal the storm drain with plugs or other appropriate materials.
- Create a containment area with berms and traps or take advantage of a low spot to keep wash water contained.
- Wash vehicles and equipment on grassy or gravel areas so that the wash water can seep into the ground.
- Pump or vacuum up all wash water in the contained area.

Concrete/Coring/Saw Cutting and Drilling Projects

Protect any down-gradient inlets by using dry activity techniques whenever possible. If water is used, minimize the amount of water used during the coring/drilling or saw cutting process. Place a barrier of sandbags and/or absorbent berms to protect the storm drain inlet or watercourse. Use a shovel or wet vacuum to remove the residue from the pavement. Do not wash residue or particulate matter into a storm drain inlet or watercourse.

Stormwater Pollution

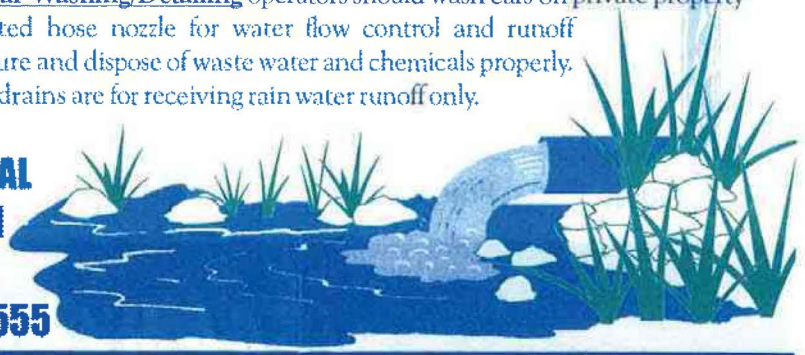
What you should know for...

Outdoor Cleaning Activities and Professional Mobile Service Providers

Storm drain pollution prevention information for:

- Car Washing / Mobile Detailers
- Window and Carpet Cleaners
- Power Washers
- Waterproofers / Street Sweepers
- Equipment cleaners or degreasers and all mobile service providers

Do you know where street flows actually go?



Storm drains are NOT connected to sanitary sewer systems and treatment plants!

The primary purpose of storm drains is to carry *rain* water away from developed areas to prevent flooding. Pollutants discharged to storm drains are transported directly into rivers, lakes and streams. Soaps, degreasers, automotive fluids, litter and a host of materials are washed off buildings, sidewalks, plazas and parking areas. Vehicles and equipment must be properly managed to prevent the pollution of local waterways.

Unintentional spills by mobile service operators can flow into storm drains and pollute our waterways. **Avoid mishaps.** *Always* have a **Spill Response Kit** on hand to clean up unintentional spills. Only emergency **Mechanical** repairs should be done in City streets, using drip pans for spills. **Plumbing** should be done on private property. Always store chemicals in a leak-proof container and keep covered when not in use. **Window/Power Washing** waste water shouldn't be released into the streets, but should be disposed of in a sanitary sewer, landscaped area or in the soil. Soiled **Carpet Cleaning** wash water should be filtered before being discharged into the sanitary sewer. Dispose of all filter debris properly. **Car Washing/Detailing** operators should wash cars on private property and use a regulated hose nozzle for water flow control and runoff prevention. Capture and dispose of waste water and chemicals properly. Remember, storm drains are for receiving rain water runoff only.

StormWater CleanWater
PROTECTION PROGRAM

Riverside County gratefully acknowledges the State Water Quality Control Board and the American Public Works Association, Storm Water Quality Task Force for the information provided in this brochure.

Did You Know . . .

Your Facility May Need A Storm Water Permit?

Many industrial facilities and manufacturing operations must obtain coverage under the Industrial Activities Storm Water General Permit

FIND OUT IF YOUR FACILITY MUST OBTAIN A PERMIT

StormWater Pollution . . . What you should know

Riverside County has two drainage systems - sanitary sewers and storm drains. The storm drain system is designed to help prevent flooding by carrying excess rainwater away from streets. Since the storm drain system does not provide for water treatment, it also serves the *unintended* function of transporting pollutants directly to our waterways.

Unlike sanitary sewers, storm drains are not connected to a treatment plant - they flow directly to our local streams, rivers and lakes.

In recent years, awareness of the need to protect water quality has increased. As a result, federal, state, and local programs have been established to reduce polluted stormwater discharges to our waterways. The emphasis of these programs is to prevent stormwater pollution since it's much easier, and less costly, than cleaning up "after the fact."

National Pollutant Discharge Elimination System (NPDES)

In 1987, the Federal Clean Water Act was amended to establish a framework for regulating industrial stormwater discharges under the NPDES permit program. In California, NPDES permits are issued by the State Water Resources Control Board (SWRCB) and the nine (9) Regional Water Quality Control Boards (RWQCB). In general, certain industrial facilities and manufacturing operations must obtain coverage under the Industrial Activities Storm Water General Permit if the type of facilities or operations falls into one of the several categories described in this brochure.

How Do I Know If I Need A Permit?

Following are ***general descriptions*** of the industry categories types that are regulated by the Industrial Activities Storm Water General Permit. Contact your local Region Water Quality Control Board to determine if your facility/operation requires coverage under the Permit.

➜ Facilities such as cement manufacturing; feedlots; fertilizer manufacturing; petroleum refining; phosphate manufacturing; steam electric power generation; coal mining; mineral mining and processing; ore mining and dressing; and asphalt emulsion;

➜ Facilities classified as lumber and wood products (except wood kitchen cabinets); pulp, paper, and paperboard mills; chemical producers (except some pharmaceutical and biological products); petroleum and coal products; leather production and products; stone, clay and glass products; primary metal industries; fabricated structural metal; ship and boat building and repairing;

➜ Active or inactive mining operations and oil and gas exploration, production, processing, or treatment operations;

➜ Hazardous waste treatment, storage, or disposal facilities;

➜ Landfills, land application sites and open dumps that receive or have received any industrial waste; unless there is a new overlying land use such as a golf course, park, etc., and there is no discharge associated with the landfill;

➜ Facilities involved in the recycling of materials, including metal scrap yards, battery reclaimers, salvage yards, and automobile junkyards;

➜ Steam electric power generating facilities, facilities that generate steam for electric power by combustion;

➜ Transportation facilities that have vehicle maintenance shops, fueling facilities, equipment cleaning operations, or airport deicing operations. This includes school bus maintenance facilities operated by a school district;

➜ Sewage treatment facilities;

➜ Facilities that have areas where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, by-products, or industrial machinery are exposed to storm water.

How do I obtain coverage under the Industrial Activities Storm Water General Permit?

Obtain a permit application package from your local Regional Water Quality Control Board listed on the back of this brochure or the State Water Resources Control Board (SWRCB). Submit a completed Notice of Intent (NOI) form, site map and the appropriate fee ($250 or $500) to the SWRCB. Facilities must submit an NOI thirty (30) days prior to beginning operation. Once you submit the NOI, the State Board will send you a letter acknowledging receipt of your NOI and will assign your facility a waste discharge identification number (WDID No.). You will also receive an annual fee billing. These billings should roughly coincide with the date the State Board processed your original NOI submittal.

What are the requirements of the Industrial Activities Storm Water General Permit?

The basic requirements of the Permit are:

1. The facility must eliminate any non-stormwater discharges or obtain a separate permit for such discharges.

2. The facility must develop and implement a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP must identify sources of pollutants that may be exposed to stormwater. Once the sources of pollutants have been identified, the facility operator must develop and implement Best Management Practices (BMPs) to minimize or prevent polluted runoff.

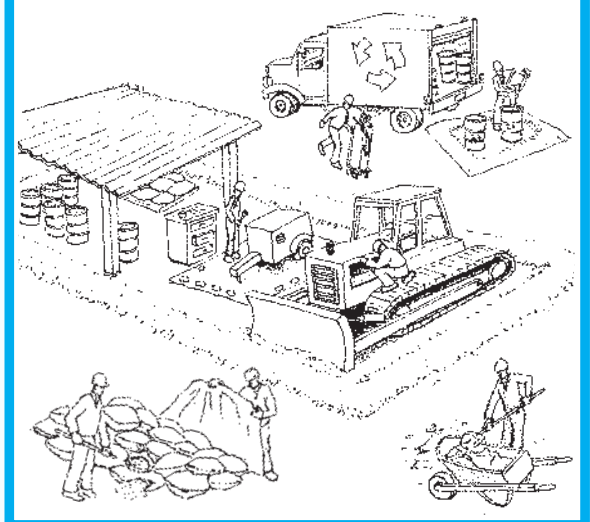
   Guidance in preparing a SWPPP is available from a document prepared by the California Storm Water Quality Task Force called the California Storm Water Best Management Practice Handbook.

3. The facility must develop and implement a Monitoring Program that includes conducting visual observations and collecting samples of the facility's storm water discharges associated with industrial activity. The General Permit requires that the analysis be conducted by a laboratory that is certified by the State of California.

4. The facility must submit to the Regional Board, every July 1, an annual report that includes the results of its monitoring program.

A Non-Storm Water Discharge is... *any discharge to a storm drain system that is not composed entirely of storm water. The following non-storm water discharges are authorized by the General Permit: fire hydrant flushing; potable water sources, including potable water related to the operation, maintenance, or testing of potable water systems; drinking fountain water; atmospheric condensates including refrigeration, air conditioning, and compressor condensate; irrigation drainage; landscape watering; springs; non-contaminated ground water; foundation or footing drainage; and sea water infiltration where the sea waters are discharged back into the sea water source.*

A BMP is . . . *a technique, process, activity, or structure used to reduce the pollutant content of a storm water discharge. BMPs may include simple, non-structural methods such as good housekeeping, staff training and preventive maintenance. Additionally, BMPs may include structural modifications such as the installation of berms, canopies or treatment control (e.g. setting basins, oil/water separators, etc.)*



WARNING*: There are significant penalties for non-compliance: a minimum fine of $5,000 for failing to obtain permit coverage, and, up to $10,000 per day, per violation plus $10 per gallon of discharge in excess of 1,000 gallons.*

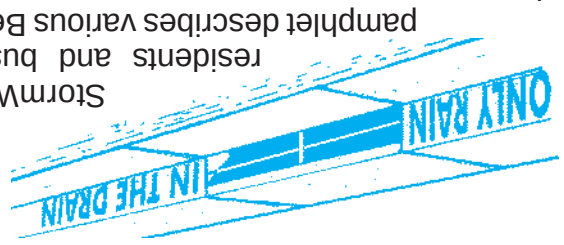
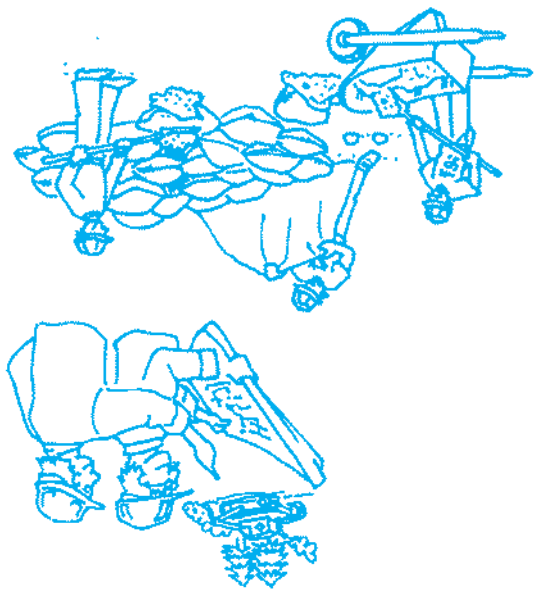
StormWater Pollution . . . What You Should Know



Riverside County has two drainage systems - sewers and storm drains. The storm drain system was designed to reduce flooding by carrying excess rainwater away from streets and developed areas. Since the storm drain system does not provide for water treatment, it also serves the *unintended* function of transporting pollutants directly to our local waterways.

Unlike sanitary sewers, storm drains are not connected to a wastewater treatment plant – they flow directly to our local streams, rivers and lakes.

Stormwater runoff is a part of the natural hydrologic process. However, land development and construction activities can significantly alter natural drainage processes and introduce pollutants into stormwater runoff. Polluted stormwater runoff from construction sites has been identified as a major source of water pollution in California. It jeopardizes the quality of our local waterways and can pose a serious threat to the health of our aquatic ecosystems.



The Cities and County of Riverside StormWater/CleanWater Protection Program

Because preventing pollution is much easier and less costly than cleaning up "after the fact," the Cities and County of Riverside StormWater/CleanWater Protection Program informs residents and businesses on pollution prevention activities. This pamphlet describes various Best Management Practices (BMPs) that construction site operators can use to prevent stormwater pollution.

In accordance with applicable federal and state law, the Cities and County of Riverside have adopted ordinances for stormwater management and discharge control that **prohibit** the discharge of pollutants into the storm drain system or local surface water. This includes discharges from construction sites containing sediment, concrete, mortar, paint, solvents, lubricants, vehicle fluids, fuel, pesticides, and construction debris.

PLEASE NOTE: The Federal, State and local regulations strictly prohibit the discharge of sediment and pollutants into the streets, the storm drain system or waterways. As an owner, operator or supervisor of a construction site, you may be held financially responsible for any environmental damage caused by your subcontractors or employees.

STORMWATER POLLUTION FROM CONSTRUCTION ACTIVITIES

The two most common sources of stormwater pollution problems associated with construction activities are ***erosion*** and ***sedimentation***. Failure to maintain adequate erosion and sediment controls at construction sites often results in sediment discharges into the storm drain system, creating multiple problems once it enters local waterways.

Construction vehicles and heavy equipment can also track significant amounts of mud and sediment onto adjacent streets. Additionally, wind may transport construction materials and wastes into streets storm drains, or directly into our local waterways.

What Should You Do?

Advance Planning to Prevent Pollution

- ❑ Remove existing vegetation only as needed.
- ❑ Schedule excavation, grading, and paving operations for dry weather periods, if possible.
- ❑ Designate a specific area of the construction site, well away from storm drain inlets or watercourses, for material storage and equipment maintenance.
- ❑ Develop and implement an effective combination of erosion and sediment controls for the construction site.
- ❑ Practice source reduction by ordering only the amount of materials that are needed to finish the project.
- ❑ Educate your employees and subcontractors about stormwater management requirements and their pollution prevention responsibilities.
- ❑ Control the amount of surface runoff at the construction site by impeding internally generated flows and using berms or drainage ditches to direct incoming offsite flows to go around the site. ***Note:*** *Consult local drainage policies for more information.*

Best Management Practices

The following Best Management Practices (BMPs) can significantly reduce pollutant discharges from your construction site. Compliance with stormwater regulations can be as simple as minimizing stormwater contact with potential pollutants by providing covers and secondary containment for construction materials, designating areas away from storm drain systems for storing equipment and materials and implementing good housekeeping practices at the construction site.

- ❑ Protect all storm drain inlets and streams located near the construction site to prevent sediment-laden water from entering the storm drain system.
- ❑ Limit access to and from the site. Stabilize construction entrances/exits to minimize the track out of dirt and mud onto adjacent streets. Conduct frequent street sweeping.
- ❑ Protect stockpiles and construction materials from winds and rain by storing them under a roof, secured impermeable tarp or plastic sheeting.
- ❑ Avoid storing or stockpiling materials near storm drain inlets, gullies or streams.
- ❑ Phase grading operations to limit disturbed areas and duration of exposure.
- ❑ Perform major maintenance and repairs of vehicles and equipment offsite.
- ❑ Wash out concrete mixers only in designated washout areas at the construction site.
- ❑ Set-up and operate small concrete mixers on tarps or heavy plastic drop cloths.
- ❑ Keep construction sites clean by removing trash, debris, wastes, etc. on a regular basis.
- ❑ Clean-up spills immediately using dry clean-up methods (e.g., absorbent materials such as cat litter, sand or rags for liquid spills; sweeping for dry spills such as cement, mortar or fertilizer) and by removing the contaminated soil from spills on dirt areas. .
- ❑ Prevent erosion by implementing any or a combination of soil stabilization practices such as mulching, surface roughening, permanent or temporary seeding.
- ❑ Maintain all vehicles and equipment in good working condition. Inspect frequently for leaks, and repair promptly.
- ❑ Practice proper waste disposal. Many construction materials and wastes, including solvents, water-based paint, vehicle fluids, broken asphalt and concrete, wood, and cleared vegetation can be recycled. Materials that cannot be recycled must be taken to an appropriate landfill or disposed of as hazardous waste.
- ❑ Cover open dumpsters with secured tarps or plastic sheeting. Never clean out a dumpster by washing it down on the construction site.
- ❑ Arrange for an adequate debris disposal schedule to insure that dumpsters do not overflow.

General Construction Activities Stormwater Permit

(Construction Activities General Permit)

The State Water Resources Control Board (SWRCB) adopted a new Construction Activities General Permit (WQ Order No. 99-08DWQ) on August 19, 1999, superseding the now expired SWRCB statewide General Permit (WQ Order No. 92-08DWQ). This permit is administered and enforced by the SWRCB and the local Regional Water Quality Control Boards (RWQCB). The updated Construction Activities General Permit establishes a number of new stormwater management requirements for construction site operator.

NOTE: *Some construction activies stormwater permits are issued on a regional basis. Consult your local RWQCB to find out if your project requires coverage under any of these permits.*

Frequently Asked Questions:

Does my construction site require coverage under the Construction Activities General Permit?

Yes, if construction activity results in the disturbance of five or more acres of total land area or is part of a common plan of development that results in the disturbance of five or more acres.

How do I obtain coverage under the Construction Activities General Permit?

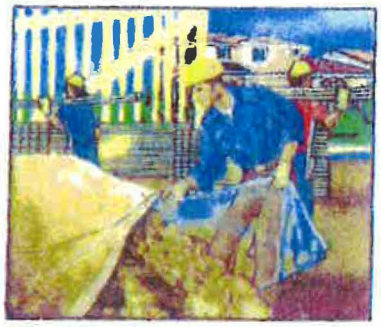
Obtain the permit package and submit the completed Notice of Intent (NOI) form to the SWRCB prior to grading or disturbing soil at the construction site. For ongoing construction activity involving a change of ownership, the new owner must submit a new NOI within 30 days of the date of change of ownership. The completed NOI along with the required fee should be mailed to the SWRCB.

What must I do to comply with the requirements of the Construction Activities General Permit?

- ● Implement BMPs for non-stormwater discharges year-round.
- ● Prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) prior to commencing construction activities.
- ● Keep a copy of the SWPPP at the construction site for the entire duration of the project.
- ● Calculate the anticipated stormwater run-off.
- ● Implement an effective combination of erosion and sediment control on all soil disturbed areas.
- ● Conduct site inspections prior to anticipated storm events, every 24-hours during extended storm events, and after actual storm event.
- ● Perform repair and maintenance of BMPs as soon as possible after storm events depending upon worker safety.
- ● Update the SWPPP as needed, to manage pollutants or reflect changes in site conditions.
- ● Include description of post construction BMPs at the construction site, including parties responsible for long-term maintenance.

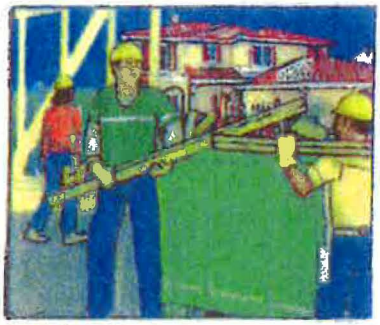
NOTE: *Please refer to the Construction Activities General Permit for detailed information. You may contact the SWRCB, your local RWQCB, or visit the SWRCB website at www.swrcb.ca.gov/stormwtr/ to obtain a State Construction Activities Stormwater General Permit packet.*

How long is this Construction Activities General Permit in effect?



The Permit coverage stays in effect untilyou submit a Notice of Termination (NOT) to the SWRCB. For the purpose of submitting a NOT, all soil disturbing activities have to be completed and one of the three following criteria has to be met:

1. Change of ownership;
2. A uniform vegetative cover with 70 percent coverage has been established; or,
3. Equivalent stabilization measures such as the use of reinforced channel liners, soil cement, fiber matrices, geotextiles, etc., have been employed.



STORMWATER Pollution Prevention

CONSTRUCTION

Cement wash, sediment, vehicle fluids, dust and hazardous debris from construction sites often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Store Materials Safely
Keep construction materials and debris away from the street, gutter and storm drains. Cover exposed stockpiles of soil, sand or gravel and excavated material with plastic sheeting, protected from rain, wind and runoff.

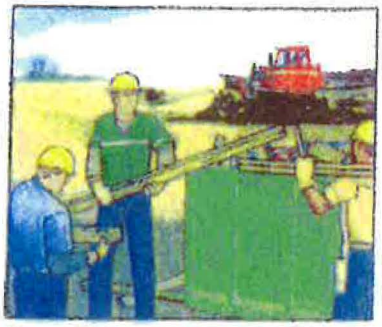
Ordering Materials & Recycling Waste
Reduce waste by ordering only the amounts of materials needed for the job. Use recycled or recyclable materials whenever possible. You can recycle broken asphalt, concrete, wood, and cleared vegetation. Non-recyclable materials should be taken to a landfill or disposed of as hazardous waste. For recycling and disposal information, call (909) 386-8401.

Cleaning & Preventing Spills
Use a drip pan and funnel when draining or pouring fluids. Sweep up dry spills, instead of hosing. Be ready for spills by preparing and using spill containment and cleanup kits that include safety equipment and dry cleanup materials such as kitty litter or sawdust. To report serious spills, call 911.

Preventing Erosion
Avoid excavation or grading during wet weather. Plant temporary vegetation or add hydromulch on slopes where construction is not immediately planned, and permanent vegetation once excavation and grading are complete. Construct diversion dikes to channel runoff to a detention basin and around the construction site. Channels can be lined with grass or roughened pavement to reduce runoff velocity.

Maintaining Vehicles & Equipment
Maintain and refuel vehicles and equipment at a single location on-site, away from the street, gutter and storm drains. Perform major equipment repairs and washings off-site. Inspect vehicles and equipment frequently for leaks, and prevent leaks from stored vehicles by draining gas, hydraulic oil, transmission, brake and radiator fluids.

To report illegal dumping or for more information on stormwater pollution prevention, call:



1 (800) CLEANUP

www.1800cleanup.org

STORMWATER Pollution Prevention

EXCAVATION AND GRADING

Sediment, cement wash, asphalt and vehicle fluids from soil excavation and grading often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Recycling Waste
Recycle broken asphalt, concrete, wood, and cleared vegetation whenever possible. Non-recyclable materials should be taken to a landfill or disposed of as hazardous waste. For recycling and disposal information, call (909) 386-8401.

Maintaining Vehicles & Equipment
Maintain and refuel vehicles and equipment at a single location on-site, away from the street, gutters and storm drains. Perform major equipment repairs and washings off-site. Inspect vehicles and equipment frequently for leaks. Use gravel approaches where truck traffic is heavy to reduce soil compaction and limit the tracking of sediment into the street.

Cleaning & Preventing Spills
Use a drip pan and funnel when draining or pouring fluids. Sweep up dry spills, instead of hosing. Be ready for spills by preparing and using spill containment and cleanup kits that include safety equipment and dry cleanup materials such as kitty litter or sawdust. Prevent leaks from stored vehicles by draining gas, hydraulic oil, transmission, brake and radiator fluids. To report serious spills, call 911.

Storing Materials
Keep construction materials and debris away from the street, gutter and storm drains. Cover exposed stockpiles of soil, sand or gravel and excavated material with plastic sheeting, protected from rain, wind and runoff.

Preventing Erosion
Avoid excavation or grading during wet weather. Plant temporary vegetation on slopes where construction is not immediately planned, and permanent vegetation once excavation and grading are complete. Construct diversion dikes to channel runoff. Channels can be lined with grass or roughened pavement to reduce runoff velocity.

To report illegal dumping or for more information on stormwater pollution prevention, call

1 (800) CLEANUP

www.1800cleanup.org

STORMWATER Pollution Prevention

FRESH CONCRETE & MORTAR APPLICATION

Cement wash, sediment, vehicle fluids, dust and hazardous debris from construction sites often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Storing Materials

Keep construction materials and debris away from the street, gutter and storm drains. Secure open bags of cement and cover exposed stockpiles of soil, sand or gravel and excavated material with plastic sheeting, protected from rain, wind and runoff.

Ordering Materials & Recycling Waste

Reduce waste by ordering only the amounts of materials needed for the job. Use recycled or recyclable materials whenever possible. When breaking up paving, recycle the pieces at a crushing company. You can also recycle broken asphalt, concrete, wood, and cleared vegetation. Non-recyclable materials should be taken to a landfill or disposed of as hazardous waste. Call [800] 336-9401 for recycling and disposal information.

During Construction

Schedule excavation and grading during dry weather. Prevent mortar and cement from entering the street and storm drains by placing erosion controls. Setup small mixers on tarps or drop cloths, for easy cleanup of debris. Never bury waste material. Recycle or dispose of it as hazardous waste.

Cleaning Up

Wash concrete dust onto designated dirt areas, not down driveways or into the street or storm drains. Wash out concrete mixers and equipment in specified washout areas, where water can flow into a containment pond. Cement washwater can be recycled by pumping it back into cement mixers for reuse. Never dispose of cement washout into driveways, streets, gutters, storm drains or drainage ditches.

To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP

www.1800cleanup.org

STORMWATER Pollution Prevention

ROADWORK AND PAVING

Asphalt, saw-cut slurry and excavated materials from road paving, surfacing and pavement removal often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Preventing Erosion
Schedule excavation and grading work during dry weather. Develop and implement erosion and sediment control plans for excavated embankments. Cover exposed stockpiles of soil, sand or gravel and excavated material with plastic sheeting, protected from rain, wind and runoff.

During Construction
Cover catch basins and maintenance holes when applying seal coat, slurry seal or fog seal. Use check dams, ditches or berms around excavations, and avoid over applying water for dust control. Never wash excess materials from exposed aggregate or concrete into the street, gutter or a storm drain.

Maintaining Vehicles & Equipment
Maintain and refuel vehicles and equipment at a single location on-site, away from the street, gutter and storm drains. Perform major equipment repairs and washings off-site. Inspect vehicles and equipment frequently for leaks, and prevent leaks from stored vehicles by draining gas, hydraulic oil, transmission, brake and radiator fluids.

Asphalt & Concrete Removal
Barricade storm drain openings during saw-cutting, and recycle broken up pavement at a crushing company. For recycling information, call (909) 386-8401.

Cleaning & Preventing Spills
Be ready for spills by preparing and using spill containment and cleanup kits that include safety equipment and dry cleanup materials such as kitty litter or sawdust. Sweep up dry spills, instead of hosing. Prevent spills from paver machines by using drip pans, or by placing absorbent materials like cloths or rags under the machines when not in use. To report serious spills, call 911.

STORMWATER Pollution Prevention

PAINTING

Paints, solvents, adhesives and other toxic chemicals used in painting often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect our health.

Water-Based Paints
Use water-based paints whenever possible. They are less toxic than oil-based paints and easier to clean up. Look for products labeled "latex" or "cleans with water."

Paint Removal
Sweep up paint stripping residue, chips and dust instead of hosing into the street and dispose of them safely at a household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.

Painting Cleanup
Never clean brushes or rinse paint containers in the street, gutter or near a storm drain. Clean water-based paints in the sink. Clean oil-based paints with thinner, which can be reused by putting it in a jar to settle out the paint particles and then pouring off the clear liquid for future use. Wrap dried paint residue in newspaper and dispose of it in the trash.

Exterior Paint Removal
When stripping or cleaning building exteriors with high-pressure water, block nearby storm drains and divert washwater onto a designated dirt area. Ask your local wastewater treatment authority if you can collect building cleaning water and discharge it to the sewer.

Recycling Paint
Recycle leftover paint at a household hazardous waste collection facility, save it for touch ups or give it to someone who can use it, like a theatre group, school, city or community organization.

To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP

www.1800cleanup.org

STORMWATER Pollution Prevention

HOME & GARDEN

Yard waste and household toxics like paints and pesticides often make their way into the San Bernardino County storm drain system and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these simple tips to prevent pollution and protect your health.

Recycle Household Hazardous Waste
Household products like paint, pesticides, solvents and cleaners are too dangerous to dump and too toxic to trash. Take them to be recycled at a convenient household hazardous waste collection facility. Call (800) CLEANUP for the facility in your area.

Disposing of Yard Waste
Recycle leaves, grass clippings and other yard waste, instead of blowing, sweeping or hosing into the street. Try grasscycling, leaving grass clippings on your lawn instead of using a grass catcher. The clippings act as a natural fertilizer, and because grass is mostly water, it also irrigates your lawn, conserving water.

Use Fertilizers & Pesticides Safely
Fertilizers and pesticides are often carried into the storm drain system by sprinkler runoff. Try using organic or non-toxic alternatives. If you use chemical fertilizers or pesticides, avoid applying near curbs and driveways and never apply before a rain.

Planting in the Yard
Produce less yard waste and save water by planting low maintenance, drought-tolerant trees and shrubs. Using drip irrigation, soaker hoses or micro-spray systems for flower beds and vegetation can also help reduce your water bill and prevent runoff.

Use Water Wisely
Cut your water costs and prevent runoff by controlling the amount of water and direction of sprinklers. The average lawn needs about an inch of water a week, including rainfall, or 10 to 20 minutes of watering. A half-inch per week is enough for fall and spring. Sprinklers should be on long enough to allow water to soak into the ground but not so long as to cause runoff.

To report illegal dumping or for more information on stormwater pollution prevention, call:

1 (800) CLEANUP

www.1800cleanup.org

STORMWATER Pollution Prevention

FOOD AND RESTAURANT

Food waste, grease, cleaning fluids, mop water and trash from restaurant operations often make their way into the San Bernardino County storm drain system, and do not get treated before reaching the Santa Ana River. This pollutes our drinking water and contaminates waterways, making them unsafe for people and wildlife. Follow these best management practices to prevent pollution and protect public health.

Recycle Oil & Grease

Oil and grease wastes can be recycled. Look in the yellow pages for rendering companies, or call (909) 386-8401 for disposal information. Don't pour oil or grease into sinks, floor drains or onto a parking lot or street. Keep grease bins covered and contained. Keep your grease interceptor maintained to prevent sewer overflows or backups and keep records of grease waste hauling.

Dumpster Areas

Keep dumpster lids closed and the areas around them clean. Do not fill with liquid waste or hose them out. Call your trash hauler to replace any dumpsters that are damaged or leak.

Cleaning & Maintenance

Clean equipment, floor mats, filters and garbage cans in a mop sink, wash rack or floor drain connected to the sewer through a grease trap. Don't wash them or pour wash water in a parking lot, alley, sidewalk or street. Sweep outside areas and put the debris in the garbage, instead of sweeping or hosing it into the parking lot or street.

Managing Spills

Clean food spills in loading and trash areas by using absorbent materials and sweeping then mopping, and discharge mop water into the sewer through a grease interceptor. Have spill containment and cleanup kits available. To report serious toxic spills, call 911.

Handling Toxic Chemicals

Dispose of all unwanted toxics materials like cleaners, solvents and detergents through a hazardous waste hauler. These items are not trash. For information on hazardous waste pickup, call (909) 386-8401. Use non-toxic cleaning products whenever possible.

To report illegal dumping or for more information on stormwater pollution prevention, call

Prevención de Contaminación del Desagüe

RESTAURANTES

Desechos de comida, grasa, líquidos de limpieza, agua del trapiador y basura de un restaurant acaban por llegar a los drenajes del Condado de San Bernardino y terminando en el río de Santa Ana. Para prevenir esta contaminación y protejer la salud publica, siga estas practicas.

Reciclando Aceite & Grasa

El aceite y la grasa se pueden reciclar. Busca en las paginas amarillas compañías de reciclaje o llama al (909) 386-8401 para información. No los tires en los fregaderos, las coladeras, el estacionamiento o en la calle. Manten los recipientes de grasa cubiertos y guardados.

Areas de Basura

Manten el bote de basura cerrada y el área del basurero limpia. No lo llenes con desechos líquidos ni utilices la manguera para lavarlo. Llama al transportador de basura para reemplasar los botes de basura que esten dañados.

Limpiando & Mantenimiento

Limpia los tapetes de piso, los filtros y los botes de basura en el contenedor para trapeadores, lavavo, o en la coladera apropiado que llegue al drenaje. No los laves en el estacionamiento, los callejones, en la banqueta o en la calle. Barre el area de afuera y pon todo en la basura, en ves de dejarlo en la banqueta o en la calle.

Controlando Derrames

Usa métodos secos para limpiar los derrames, barriendo y usando tierra para desechos de gato, no uses la manguera para limpiar los derrames. Manten un kit de limpieza de derramamientos en tu negocio. Para reportar derrames llama al 911.

Manejando Quimicos Toxicos

Deposita los desechos toxicos como limpiadores, solvantes, detergentes a un bote para toxicos. Estos no son basura. Para mas información sobre desechos peligrosos, llama al (909) 386-8401. Usa productos de limpieza que no sean toxicos.

Para reportar actividades ilegales u obtener más información de la prevención de contaminación llamar al

1 (800) CLEANUP

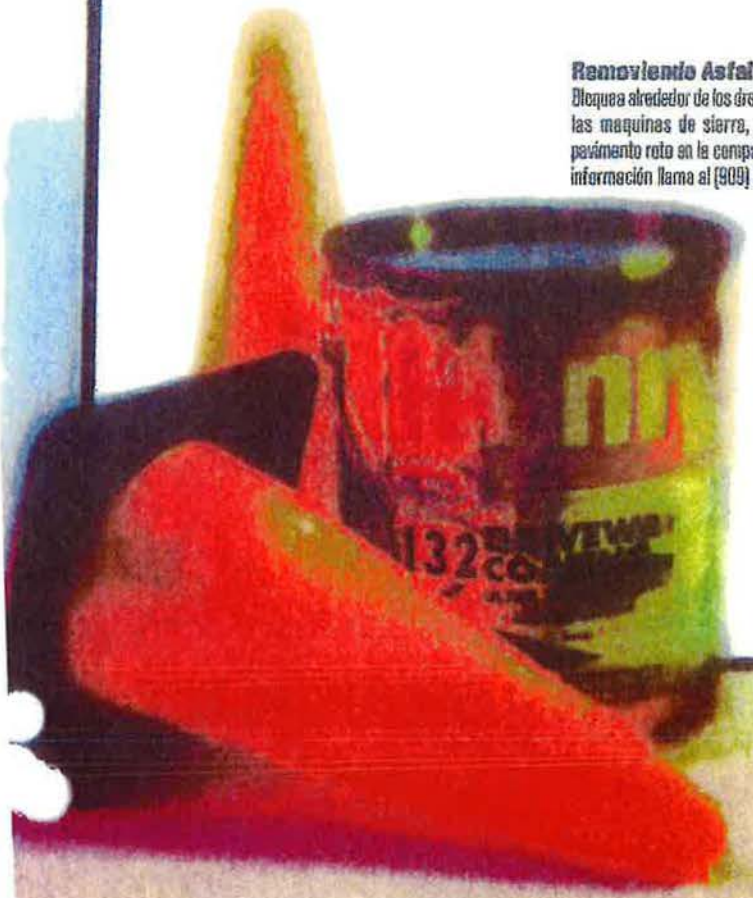
www.1800cleanup.org

Prevención de Contaminación del Desagüe

TRABAJO DE CARRETERAS & PAVIMENTO

Asfalto, mezcla y materiales de excavaciones del pavimento acaban por llegar a los drenajes del Condado de San Bernardino y terminando en el Rio de Santa Ana. Esto contamina el agua que tomamos, haciendola peligorsa para la gente y la vida salvaje. Sigue estas practicas para prevenir la contaminación y protejer la salud publica.

Previniendo Erosiones
Planea las excavaciones trabajo de jardineria durante el clima seco. Desarrolla e implementa planes de embancamientos de control de sedimento y excavaciones. Cubre montones de tierra, grava y otros materiales con un plastico para protejerlos de la lluvia, aire y desagüe.



Durante Construcción
Cubre los lavados y de mantenimiento a los hoyos al aplicar selladura o mezcla. Revisa las areas de excavaciones, y evita pasarte de agua para prevenir polvadura. **Nunca** laves los materiales lienes de concreto en la calle, drenajes o en el desagüe.

Mantenimiento de Vehiculos & Herramientas
Has el mantenimiento y carga de vehiculos en el mismo lugar, lejos de la calle, las alcantarillas y los drenajes. Inspecciona los vehiculos y el equipo de cualquier goteadura y evita goteaduras de autos que no se usan vasiandolos la gasolina, aceite de transmision, frenos y liquidos del radiador.

Removiendo Asfalto & Concreto
Bloquea alrededor de los drenajes cuando estes usando las maquinas de sierra, tambien recicla todo el pavimento roto en la compañia demolidora. Para más información llama al (909) 386-8401.

Limpiando & Previniendo Derrames
Mantente siempre preparado para cualquier derrame, usa siempre las herramientas de seguridad al igual que materiales como, tierra para desechos de gato o aserrin Barre los derrames en ves de lavarlos con la manguera. Previene los derremes de las maquinas usando enbudos o colocanto garras para absorver cualquier liquido. Para reportar derrames llame al 911.

Para reportar actividades ilegales u obtener más información de la prevención de contaminación llamar al:

1 (800) CLEANUP

www.1800cleanup.org

Prevención de Contaminación del Desagüe

PINTURA

Pintura, solventes y otros quimicos peligrosos que se usan al pintar acaban por llegar a los drenajes del Condado de San Bernardino y terminando en el Rio de Santa Ana. Esto contamina el agua que tomamos, haciendola peligorsa para la gente y la vida salvaje. Sigue estas practicas para prevenir la contaminación y protejer la salud publica.

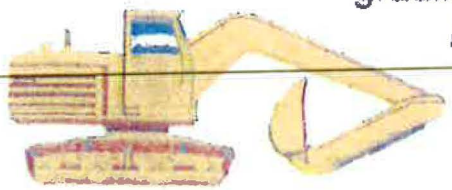
Pinturas de Agua
Usa pinturas de agua cuando sea posible. Son menos toxicas que las pinturas de aceite y mas faciles para limpiar. Busca los productos "latex" or "cleans with water".

Removiendo Pintura
Residuos de pintura, polvo de pintura y pinturas que contienen plomo son peligrosas. Barrelos en vez de lavarlos con la manguera y desechalos en vallugar de colección de desechos peligrosos. Llama al (800) CLEANUP para un lugar en tu area.

Limpiando Pintura
Nunca laves las brochas ni los contenedores de pintura en la calle, coladeras o desagües. Las de pintura de agua limpielas en el labavo y las de pintura de aceite con thiner, y vuelvelas a guardar en un frasco, para un uso futuro. Envuelve los residuos de pintura en un periodico y tiralos a la basura.

Removiendo Pintura en Exteriores
Al despintar o lavar exteriores de los edificios con agua de alta presión bloquea los drenajes cercanos y desvia el desagüe. Pregunta las autoridades si puedes descharla en las alcantarillas.

Reciclando Pintura
Recicla la pintura que sobra en un lugar de colección de materiales peligrosos, guardala para re-toques or regalala a alguien que la use, como a un teatro, a la escuela, una oraganizacion de la ciudad o de la comunidad.



Para reportar actividades ilegales u obtener una información de la prevención de contaminación llamar al:

1 (800) CLEANUP

www.1800cleanup.org

EXCAVATION & GRADING OPERATIONS

Sediment, cement wash, asphalt, and motor oil from soil excavation and grading operations often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

Erosion Prevention...

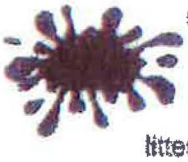
Reduce erosion by avoiding excavation or grading activities during wet weather, and by planting temporary vegetation on slopes where construction is not immediately planned. Plant permanent vegetation as soon as possible, once excavation and grading activities are complete. Diversion dikes can be constructed to channel runoff around the site; channels can be lined with grass or roughened pavement to reduce runoff velocity. For information on erosion control, call 799-7407.

General Business Practices...

Cover exposed piles of soil and other construction materials with plastic sheeting to prevent contact with rain water.

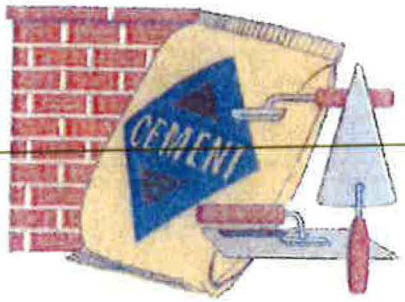
Recycling...

Recycle broken asphalt, concrete, wood, and cleared vegetation whenever possible. Unrecyclable materials must be taken to an appropriate landfill or disposed of as hazardous waste. For recycling or disposal information, call 386-8401.



Equipment Maintenance...

Maintain all vehicles and equipment by inspecting them frequently for leaks. Also, conduct maintenance and refueling at one location -- away from storm drains, and perform major equipment repairs and washings off site. Finally, use gravel approaches where truck traffic is frequent to reduce soil compaction and limit the tracking of sediment into the streets.



Spills...

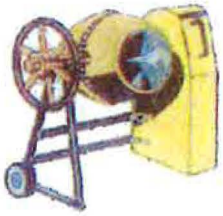
Avoid accidental spills by using a drip pan and funnel when draining or pouring fluids. Be ready for unexpected spills by preparing and using easy to find spill containment and cleanup kits. Kits should include safety equipment and cleanup materials such as kitty litter, sawdust or commeal. Furthermore, prevent leaks from stored vehicles by draining gas, hydraulic oil, and transmission, brake & radiator fluid. REMEMBER: Never hose down dirty surfaces. To report serious spills, call 1-800-33-TOXIC.

For more information, call your city's stormwater representative

FRESH CONCRETE & MORTAR APPLICATION

Cement, cement wash, gravel, asphalt, solvents, and motor oil from fresh concrete and mortar activities often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...



General Business Practices...

Schedule excavation and grading work during dry weather, and in case it rains, prevent materials from contacting stormwater by storing them under cover. Also, secure open bags of cement to keep wind-blown cement powder away from streets, gutters and storm drains.

During Construction...

Prevent mortar and cement from entering the storm drains by placing erosion controls (i.e., berms or temporary vegetation) down-slope to capture runoff. When breaking up paving, be sure to pick up all pieces and recycle them at a crushing company; small amounts of excess dry concrete, grout and mortar can be disposed of in the trash. Setup small mixers on tarps or heavy drop cloths to allow for easy cleanup of debris. REMEMBER: Never bury waste material -- recycle or dispose of it as hazardous waste. Call 386-8401 for recycling and disposal information.

Handling Materials & Wastes...

Minimize wastes when ordering materials by ordering only the amounts needed to complete the job. Whenever possible, use recycled or recyclable materials. Recycle broken asphalt, concrete, wood, and cleared vegetation. Unrecyclable materials must be taken to an appropriate landfill or disposed of as hazardous waste. For recycling and disposal information, call 386-8401.

Cleaning up...

When cleaning up after driveway or sidewalk construction, wash concrete dust onto designated dirt areas, not down the driveway or into the street or storm drain. Also, wash out concrete mixers and equipment only in specified wash-out areas, where the water flows into containment ponds. Cement washwater can be recycled by pumping it back into cement mixers for reuse. REMEMBER: Never dispose of cement washout into driveways, streets, gutters, storm drains or drainage ditches.

For more information, call your city's stormwater representative

GENERAL CONSTRUCTION

Soil, cement wash, asphalt and motor oil from construction sites often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

General Business Practices...

Cover exposed piles of soil and other construction materials with plastic sheeting to prevent contact with rain water.

Erosion Prevention...

Reduce erosion by avoiding excavation or grading activities during wet weather, and by planting temporary vegetation on slopes where construction is not immediately planned.

Plant permanent vegetation as soon as possible, once excavation and grading activities are complete. Diversion dikes can be constructed to channel runoff around the site; channels can be lined with grass or roughened pavement to reduce runoff velocity. For information on erosion control, call 799-7407.

Equipment Maintenance...

Maintain all vehicles and equipment by inspecting them frequently for leaks. Also, conduct maintenance and refueling at one location -- away from storm drains, and perform major equipment repairs and washings off site.

Handling Materials & Waste...

Minimize wastes when ordering materials by ordering only the amounts needed to complete the job. Whenever possible, use recycled or recyclable materials. Recycle broken asphalt, concrete, wood, and cleared vegetation. Unrecyclable materials must be taken to an appropriate landfill or disposed of as hazardous waste. For recycling and disposal information, call 386-8401.

Spills...

Avoid accidental spills by using a drip pan and funnel when draining or pouring fluids. Be ready for unexpected spills by preparing and using easy to find spill containment and cleanup kits. Kits should include safety equipment and cleanup materials such as kitty litter, sawdust or commeal. Furthermore, prevent leaks from stored vehicles by draining gas, hydraulic oil, and transmission, brake & radiator fluid. REMEMBER: Never hose down dirty surfaces; instead, sweep regularly. To report serious spills, call 1-800-33-TOXIC.

For more information, call your city's stormwater representative

HOME & GARDEN

Yard waste and household toxics such as paints, solvents, and pesticides often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

In Your Home...

Household products such as paints, paint thinners, drain openers, motor oil, wood polishes, insecticides & herbicides, oven cleaners, and many other general cleaners frequently get dumped on the ground, or into a gutter, street or storm drain. Instead of polluting our stormwaters, take these items to a household hazardous waste collection facility. Call 1-800-OILY-CAT for a facility in your area.

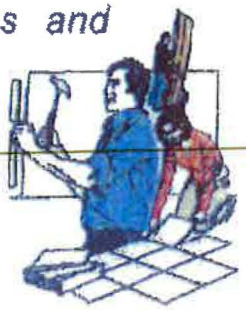
Fertilizers and Pesticides...

Fertilizers and pesticides are often carried into our storm drains by sprinkler runoff. To minimize stormwater pollution, use organic or non-toxic pesticides and fertilizers as directed, and keep them away from ditches, gutters and storm drains. Store them in a covered area, off the ground, to prevent contact with water. For additional gardening questions, call the San Bernardino Master Gardeners at 387-2182.

Trimmin' the Garden...

Decaying organic materials that enter our storm drains, such as grass, leaves, yard clippings, and pet waste, will use up oxygen in nearby streams, stressing aquatic life. Prevent stormwater pollution by not blowing, sweeping, raking or hosing yard waste into the street, gutter, or storm drain. Alternatively, leave grass clippings on your lawn after mowing, or compost your clippings and yard waste. Pet waste should not be composted, but rather disposed of in the trash to prevent the potential spread of diseases.

Planting In The Yard



Produce less yard waste and save water by planting low maintenance trees and shrubs. Also, conserve water and minimize unwanted runoff by using drip irrigation, soaker hoses, or micro-spray systems to water vegetation.

For more information, call your city's stormwater representative

HOME REPAIR & REMODELING

Paints, solvents, adhesives, dusts, sediments, pesticides and household toxics commonly associated with home repair and remodeling activities often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

Household Hazardous Wastes...

Common household cleaners, paint products, and wallpaper & tile adhesives contain toxic substances. Dispose of these products properly. REMEMBER: Toxic wastes should never enter the storm drain system. For disposal information, call 1-800-OILY-CAT.

Construction...

Keep all construction debris away from the street, gutter and storm drain, and if possible, schedule grading and excavation projects for dry weather. Cover excavated material and stockpiles of asphalt, sand, etc. with plastic tarps, and prevent erosion by planting fast-growing annual and perennial grasses, which will shield and bind the soil.

Landscape & Gardening...

Use fertilizers and pesticides as directed. Keep them away from ditches, gutters and storm drains, and store them in a covered area to prevent contact with rain water. Also, minimize runoff and conserve water by using drip irrigation, soaker hoses, or micro-spray systems. REMEMBER: Do not deposit leaves into the street, gutter, or storm drain.

Painting...

CLEANUP... Avoid cleaning brushes or rinsing paint containers into a street, gutter, or storm drain. For water-based paints, "brush out" as much paint as possible, and rinse in the sink. For oil-based paints, "brush out" as much paint as possible, clean with thinner, and then filter and reuse thinner or solvent.

REMOVAL... Paint stripping residue, chips & dust from marine paints, and paints containing lead or tributyl tin are hazardous wastes. Sweep them up and call 1-800-OILY-CAT for disposal information.

RECYCLING... Recycle or reuse leftover paint by using it for touch-ups, or by giving it to someone who can us it, such as a theatre group, school, city or other community organization. If you're unable to give it away, contact 1-800-OILY-CAT for disposal information.

Concrete & Masonry...

Store bags of cement and plaster away from gutters and storm drains, and under cover, protected from rainfall, runoff and wind. REMEMBER: Never dispose of cement washout or concrete dust onto driveways, streets, gutters or storm drains.

For more information, call your city's stormwater representative

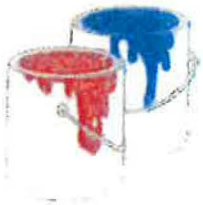
PAINTING

Paints, solvents, adhesives, and toxic chemicals from painting operations often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

General Business Practices...

Keep all paint products and wastes away from the street, gutter, and storm drains. Reuse paint thinner by setting used thinner aside in a closed, labeled jar to settle out paint particles, and then pouring off the clear liquid for future use. Wrap dried paint residue in newspaper and dispose of it in the trash.



Water-Based Paints...

Purchase water-based paints whenever possible. Look for products labeled "latex" or "clean up with water."

Recycle or Reuse Paints...

Recycle/reuse leftover paint by using it for touch-ups, or by giving it to someone who can use it, such as a theatre group, school, city or other community organization. If you're unable to give it away, contact 386-8401 for information on hazardous waste pick-up.

Paint Cleanup...

Avoid cleaning brushes and rinsing paint containers in a street, gutter, or storm drain. For water-based paints, "brush out" as much paint as possible and and rinse in the sink. For oil-based paints, "brush out" as much paint as possible, clean with thinner, and then filter and reuse thinner or solvent.

Paint Removal...

Chemical paint stripping residue, chips & dust from marine paints, and paints containing lead or tributyl tin are hazardous wastes. For disposal information, call 386-8401. Also, when stripping or cleaning building exteriors with high-pressure water, block storm drains and divert the washwater onto a designated dirt area. Check with your local wastewater treatment authority to find out if you can collect building cleaning water and discharge it to the sewer.

For more information, call your city's stormwater representative

RESTAURANTS

Food waste, grease, cleaning solvents & chemicals, mop water and trash from restaurant operations often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

Cleanin' It Right...

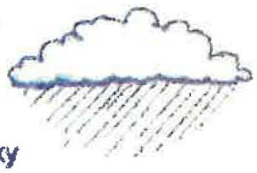
Pour mop and wash water into the mop sink or down floor drains, not into gutters, alleys, or parking lots. Wash greasy equipment only in designated wash areas properly connected to the sewer system with an appropriate oil/water separator, and avoid washing kitchen mats, garbage containers, and other items anywhere that wastewater can flow into the storm drain system.

What About Toxics...

General cleaners, floor cleaners, solvents, and detergents often contain toxic substances. Read labels carefully and store and dispose of these products properly. REMEMBER: Toxic wastes should never enter the storm drain system. To report toxic spills call 1-800-33-TOXIC. For information on hazardous waste pick-up call 386-8401.

Water - Friendly Products...

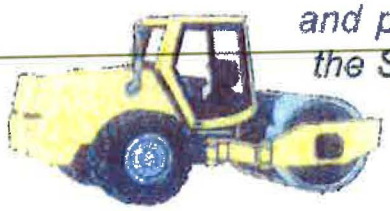
Whenever possible, purchase water-based cleaning products. Look for products labeled "non-toxic," "non-petroleum based," "ammonia-free," "phosphate-free," "dye and perfume-free," or "readily biodegradable."



Recycle That Waste...

Oil and grease wastes can be recycled. REMEMBER: Never dump them down storm drains or onto parking lots. Look in the yellow pages for rendering companies, or call 386-8401 for disposal information.

How 'Bout That Dumpster...



Rain can wash oil, grease, and other substances often found in dumpsters into the storm drain system. Prevent polluted runoff by covering all dumpsters and replacing leaky ones, and ensuring that the area surrounding dumpsters remains free of litter.

For more information, call your city's stormwater representative

ROADWORK & PAVING

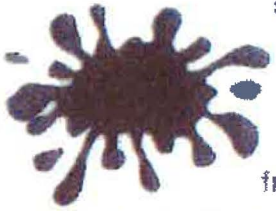
Asphalt, saw-cut slurry, and excavated materials from Road paving, surfacing and pavement removal operations often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

During Construction...

Cover catch basins and maintenance holes when applying seal coat, slurry seal, fog seal, etc. Use check dams, ditches or berms around excavations, and avoid over-application of water for dust control. REMEMBER: Never wash excess materials from exposed aggregate or concrete into a street, gutter, or storm drain; collect and recycle them.

Asphalt & Concrete Removal...



Barricade storm drain openings during saw-cutting, and after breaking up paving, be sure to remove all chunks and pieces and recycle them at a crushing company. For recycling information, call 386-8401.

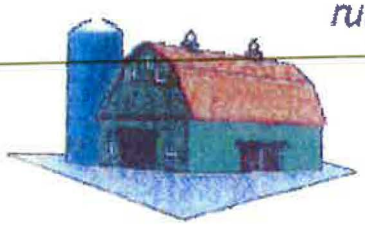
Equipment Maintenance...

Maintain all vehicles and equipment by inspecting them frequently for leaks. Also, conduct maintenance and refueling at one location -- away from storm drains, and perform major equipment repairs and washings off site.

Spills...

Be ready for unexpected spills by preparing and using spill containment and cleanup kits. Kits should include safety equipment and cleanup materials such as kitty litter, sawdust or cornmeal. Prevent drips from paver machines by catching fluids with drip pans or by placing absorbent material (cloth, rags, etc....) underneath the machines when they're not in use. To report serious spills, call 1-800-33-TOXIC.

General Business Practices...



Schedule excavation and grading work during dry weather, and develop and implement erosion and sediment control plans for excavated embankments. In case it rains, cover exposed piles of soil and other construction materials with plastic sheeting to prevent contact with rain water.

For more information, call your city's stormwater representative

RURAL HOMES

Pesticides, fertilizers, septic system overflows, soil, and animal manure from rural homes often make their way into the San Bernardino County storm drain system and DO NOT GET TREATED before reaching the Santa Ana River. These wastes pollute our drinking water, and make our waters unhealthy and unsafe for people and wildlife.

Follow these practices to help prevent stormwater pollution...

Protecting Your Well...

Since old, uncapped and abandoned wells can serve as direct conduits to our groundwater, it s important to maintain these areas. Keep all livestock confinement areas away from wells, and keep septic drain fields and chemical storage areas down slope from wells. Install anti-siphoning devices between your well and water pipes to prevent backflow of pollutants and drinking water contamination. REMEMBER: Never dispose of anything in wells.

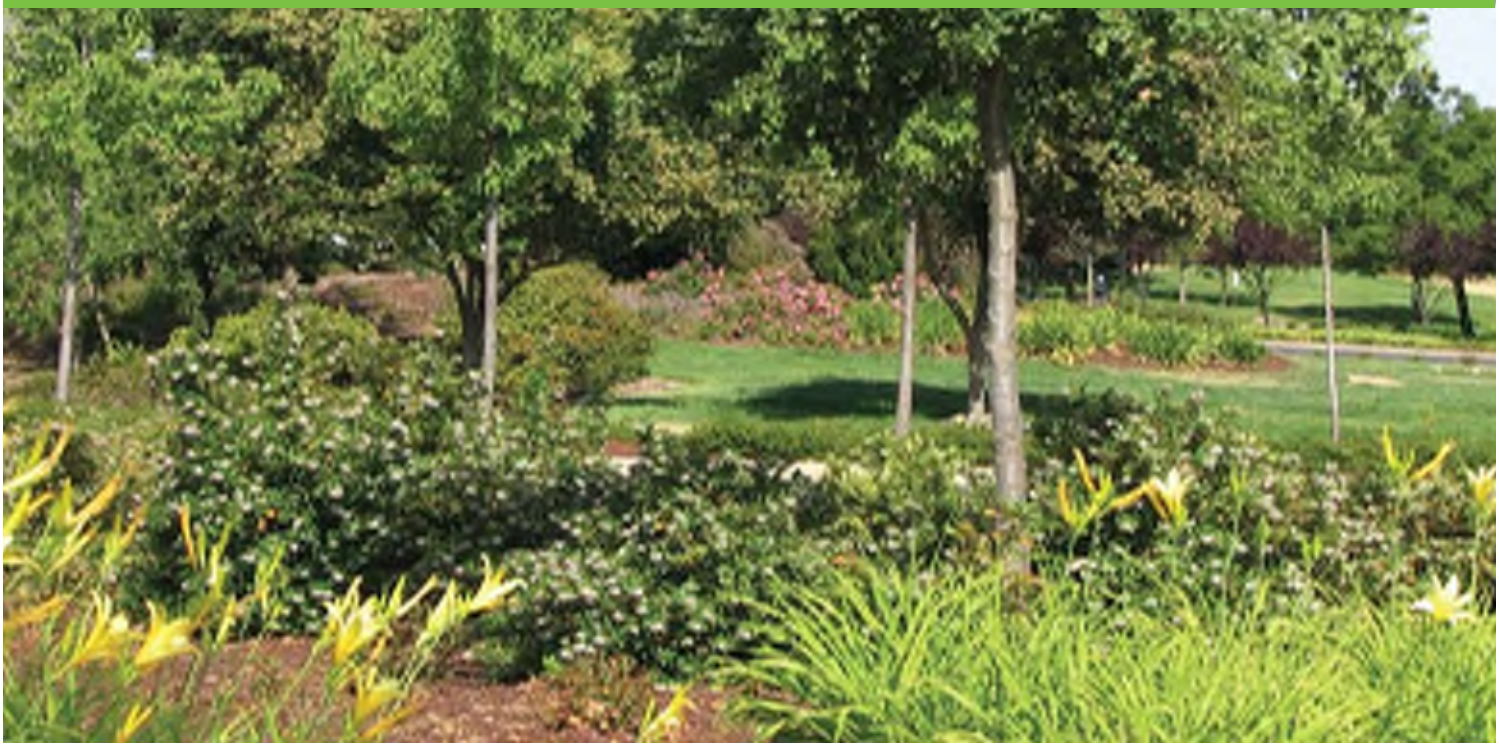
Fertilizers and Pesticides...

Avoid buying and mixing more pesticide than you need, and never apply more than the recommended amount. Consider spot treatments, rather than spraying pesticides everywhere. REMEMBER: Don t dispose of excess chemicals by dumping them on the ground, pouring them down a well, or draining them into ditches, sewers, drains or septic systems. Call 1-800-OILY-CAT for disposal information. Finally, store chemicals in a covered area, with an impermeable lined floor to prevent contact with rainwater.

That Rural Landscape...

Reduce soil erosion by covering parking areas with gravel, and by covering other exposed soils with vegetation. Gravel and vegetation will not only improve the appearance of your home, but will also assist in filtering out pollutants from water. For information on reducing erosion, call 799-7407.

Autos & Other Equipment...



Repair vehicles and other equipment away from wells, ditches and drains. Avoid accidental spills by using a drip pan and funnel when draining or pouring fluids. Prevent leaks from stored vehicles by draining gas, hydraulic oil, and transmission, brake & radiator fluid. For recycling information, call 1-800-OILY-CAT

Septic Systems

Septic systems should never be piped into a road ditch, storm sewer, stream or farm drain tile system. Also, avoid washing or flushing grease, alcohol, or strong chemicals into your septic system; these subetances kill the bacteria needed to break down wastes.

For more information, call your city s stormwater representative

The Updated Model Water Efficient Landscape Ordinance

CALIFORNIA DEPARTMENT OF WATER RESOURCES

Landscapes are essential to the quality of life in California. They provide areas for recreation, enhance the environment, clean the air and water, prevent erosion, offer fire protection and replace ecosystems lost to development.

California's economic prosperity and environmental quality are dependant on an adequate supply of water for beneficial uses. In California, about half of the urban water used is for landscape irrigation. Ensuring **efficient landscapes** in new developments and reducing water waste in existing landscapes are the most cost-effective ways to stretch our limited water supplies and ensure that we continue to have sufficient water for California to prosper.

The Water Conservation in Landscaping Act of 2006 (Assembly Bill 1881, Laird) requires cities, counties, and charter cities and charter counties, to adopt landscape water conservation ordinances by January 1, 2010. Pursuant to this law, the Department of Water Resources (DWR) has prepared a Model Water Efficient Landscape Ordinance (Model Ordinance) for use by local agencies. The Model Ordinance was approved by the Office of Administrative Law on September 10, 2009. The Model Ordinance became effective on September 10.

All local agencies must adopt a water efficient landscape ordinance by **January 1, 2010**. The local agencies may adopt the state Model Ordinance, or craft an ordinance to fit local conditions. In addition, several local agencies may collaborate and craft a region-wide ordinance. In any case, the adopted ordinance must be as effective as the Model Ordinance in regard to water conservation.

For more information, please visit our web site at
http://www.water.ca.gov/wateruseefficiency/landscapeordinance/

DWR October 2009

Important points to consider...

Water purveyors have an important role.

The enabling statute was directed to local agencies that make land use decisions and approve land development. Active participation by water purveyors can make the implementation, enforcement and follow-up actions of an ordinance more effective.

Most new and rehabilitated landscapes are subject to a water efficient landscape ordinance. Public landscapes and private development projects including developer installed single family and multi-family residential landscapes with at least 2500 sq. ft. of landscape area are subject to the Model Ordinance .

Homeowner provided landscaping at single family and multi-family homes are subject to the Model Ordinance if the landscape area is at least 5000 sq. ft

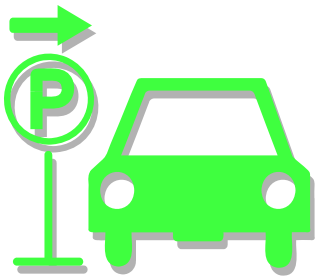
Existing landscapes are also subject to the Model Ordinance.

Water waste is common in landscapes that are poorly designed or not well maintained. Water waste (from runoff, overspray, low head drainage, leaks and excessive amounts of applied irrigation water in landscapes is prohibited by Section 2, Article X of the California Constitution.

Any landscape installed prior to January 1, 2010, that is at least one acre in size may be subject to irrigation audits, irrigation surveys or water use analysis programs for evaluating irrigation system performance and adherence to the Maximum Applied Water Allowance as defined in the 1992 Model Ordinance with an Evapotranspiration Adjustment Factor (ETAF) of 0.8. Local agencies and water purveyors (designated by the local agency) may institute these or other programs to increase efficiency in existing landscapes.

All new landscapes will be assigned a water budget.

The water budget approach is a provision in the statute that ensures a landscape is allowed sufficient water. There are two water budgets in the Model Ordinance; the Maximum Applied Water Allowance (MAWA) and the Estimated Total Water Use (ETWU).



The MAWA, is the water budget used for compliance and is an annual water allowance based on landscape area, local evapotranspiration and ETAF of 0.7. The ETWU is an annual water use estimation for design purposes and is based on the water needs of the plants actually chosen for a given landscape. The ETWU may not exceed the MAWA.

Water efficient landscapes offer multiple benefits.

Water efficient landscapes will stretch our limited water supplies. Other benefits include reduced irrigation runoff, reduced pollution of waterways, less property damage, less green waste, increased drought resistance and a smaller carbon footprint.

The Department of Water Resources will offer technical assistance.

The Department plans to offer a series of workshops, publications and other assistance for successful adoption and implementation of the Model Ordinance or local water efficient landscape ordinances. Information regarding these resources may be found on the DWR website: **http://www.water.ca.gov/wateruseefficiency/landscapeordinance/** Questions on the Model Ordinance may be sent by e-mail to DWR staff at: **mweo@water.ca.gov.**

R-3
AUTOMOBILE PARKING

The activities outlined in this fact sheet target the following pollutants:	
Sediment	x
Nutrients	
Bacteria	
Foaming Agents	
Metals	X
Hydrocarbons	X
Hazardous Materials	x
Pesticides and Herbicides	
Other	

Parked automobiles may contribute pollutants to the storm drain because poorly maintained vehicles may leak fluids containing hydrocarbons, metals, and other pollutants. In addition, heavily soiled automobiles may drop clods of dirt onto the parking surface, contributing to the sediment load when runoff is present. During rain events, or wash-down activities, the pollutants may be carried into the storm drain system. The pollution prevention activities outlined in this fact sheets are used to prevent the discharge of pollutants to the storm drain system.

Think before parking your car. Remember - The ocean starts at your front door.

Required Activities

- If required, vehicles have to be removed from the street during designated street sweeping/cleaning times.
- If the automobile is leaking, place a pan or similar collection device under the automobile, until such time as the leak may be repaired.
- Use dry cleaning methods to remove any materials deposited by vehicles (e.g. adsorbents for fluid leaks, sweeping for soil clod deposits).

Recommended Activities

- Park automobiles over permeable surfaces (e.g. gravel, or porous cement).
- Limit vehicle parking to covered areas.
- Perform routine maintenance to minimize fluid leaks, and maximize fuel efficiency.

For additional information contact:
County of Orange, OC Watershed
Main: (714) 955-0600/ 24hr Water Pollution Discharge Hotline 1-877-89-SPILL
or visit our website at: www.ocwatersheds.com

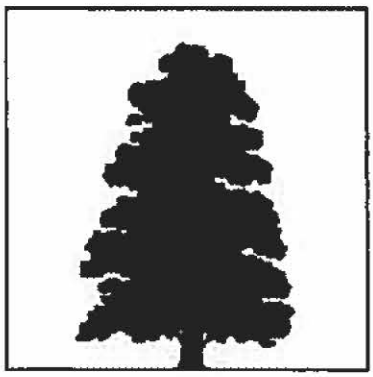
R-8
WATER CONSERVATION

The activities outlined in this fact sheet target the following pollutants:	
Sediment	x
Nutrients	x
Bacteria	x
Foaming Agents	x
Metals	x
Hydrocarbons	x
Hazardous Materials	x
Pesticides and Herbicides	x
Other	x

Excessive irrigation and/or the overuse of water is often the most significant factor in transporting pollutants to the storm drain system. Pollutants from a wide variety of sources including automobile repair and maintenance, automobile washing, automobile parking, home and garden care activities and pet care may dissolve in the water and be transported to the storm drain. In addition, particles and materials coated with fertilizers and pesticides may be suspended in the flow and be transported to the storm drain.

Hosing off outside areas to wash them down not only consumes large quantities of water, but also transports any pollutants, sediments, and waste to the storm drain system. The pollution prevention activities outlined in this fact sheets are used to prevent the discharge of pollutants to the storm drain system.

Think before using water. Remember - The ocean starts at your front door.



Required Activities

- Irrigation systems must be properly adjusted to reflect seasonal water needs.
- Do not hose off outside surfaces to clean, sweep with a broom instead.

Recommended Activities

- Fix any leaking faucets and eliminate unnecessary water sources.
- Use xeroscaping and drought tolerant landscaping to reduce the watering needs.
- Do not over watering lawns or gardens. Over watering wastes water and promotes diseases.
- Use a bucket to re-soak sponges/rags while washing automobiles and other items outdoors. Use hose only for rinsing.
- Wash automobiles at a commercial car wash employing water recycling.

For additional information contact:
County of Orange, OC Watershed
Main: (714) 955-0600/ 24hr Water Pollution Discharge Hotline 1-877-89-SPILL
or visit our website at: www.ocwatersheds.com

FP-2

LANDSCAPE MAINTENANCE

The model procedures described below focus on minimizing the discharge of pesticides and fertilizers, landscape waste, trash, debris, and other pollutants to the storm drain system and receiving waters. Landscape maintenance practices may involve one or more of the following activities:

1. **Mowing, Trimming/Weeding, and Planting**
2. **Irrigation**
3. **Fertilizer and Pesticide Management**
4. **Managing Landscape Waste**
5. **Erosion Control**

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measures for landscape maintenance include:

- Implement an integrated pest management (IPM) program. IPM is a sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools. Refer to Appendix D, Fertilizer and Pesticide Management Guidance for further details.
- Choose low water using flowers, trees, shrubs, and groundcover.
- Appropriate maintenance (i.e. properly timed fertilizing, weeding, pest control, and pruning) will preserve the landscapes water efficiency.
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

1. Mowing, Trimming/Weeding, and Planting

Mowing, Trimming/Weeding

✓ Whenever possible, use mechanical methods of vegetation removal rather than applying herbicides. Use hand weeding where practical.

- ✓ When conducting mechanical or manual weed control, avoid loosening the soil, which could erode into streams or storm drains.
- ✓ Use coarse textured mulches or geotextiles to suppress weed growth and reduce the use of herbicides.
- ✓ Do not blow or rake leaves, etc. into the street or place yard waste in gutters or on dirt shoulders. Sweep up any leaves, litter or residue in gutters or on street.
- ✓ Collect lawn and garden clippings, pruning waste, tree trimmings, and weeds. Chip if necessary, and compost or dispose of at a landfill (see waste management section of this procedure sheet).
- ✓ Place temporarily stockpiled material away from watercourses, and berm or cover stockpiles to prevent material releases to storm drains.

Planting

- ✓ Where feasible, retain and/or plant selected native vegetation whose features are determined to be beneficial. Native vegetation usually requires less maintenance (e.g., irrigation, fertilizer) than planting ornamental vegetation.
- ✓ When planting or replanting consider using low water use groundcovers.

OPTIONAL:

- Careful soil mixing and layering techniques using a topsoil mix or composted organic material can be used as an effective measure to reduce herbicide use and watering.

2. Irrigation

- ✓ Utilize water delivery rates that do not exceed the infiltration rate of the soil.
- ✓ Use timers appropriately or a drip system to prevent runoff and then only irrigate as much as is needed.
- ✓ Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering, and repair leaks in the irrigation system as soon as they are observed.
- ✓ Where practical, use automatic timers to minimize runoff.
- ✓ Use popup sprinkler heads in areas with a lot of activity or where there is a chance the pipes may be broken. Consider the use of mechanisms that reduce water flow to sprinkler heads if broken.
- ✓ If re-claimed water is used for irrigation, ensure that there is no runoff from the landscaped area(s).
- ✓ If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.

3. Fertilizer and Pesticide Management

Usage

- ✓ Utilize a comprehensive management system that incorporates integrated pest management techniques.
- ✓ Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- ✓ Educate and train employees on use of pesticides and in pesticide application techniques to prevent pollution.
- ✓ Pesticide application must be under the supervision of a California qualified pesticide applicator.
- ✓ When applicable use the least toxic pesticides that will do the job. Avoid use of copper-based pesticides if possible.
- ✓ Do not mix or prepare pesticides or fertilizers for application near storm drains.
- ✓ Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the pest.
- ✓ Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
- ✓ Calibrate fertilizer and pesticide application equipment to avoid excessive application.
- ✓ Periodically test soils for determining proper fertilizer use.
- ✓ Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- ✓ Inspect pesticide/fertilizer equipment and transportation vehicles daily.
- ✓ Refer to Appendix D for further guidance on Fertilizer and Pesticide management

OPTIONAL:

- Work fertilizers into the soil rather than dumping or broadcasting them onto the surface.
- Use beneficial insects where possible to control pests (green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seedhead weevils, and spiders prey on detrimental pest species).
- Use slow release fertilizers whenever possible to minimize leaching.

Scheduling

- ✓ Do not use pesticides if rain is expected within 24 hours.
- ✓ Apply pesticides only when wind speeds are low (less than 5 mph).

Disposal

- ✓ Purchase only the amount of pesticide that you can reasonably use in a given time period (month or year depending on the product).
- ✓ Triple rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- ✓ Dispose of empty pesticide containers according to the instructions on the container label.

4. Managing Landscape Waste

- ✓ Compost leaves, sticks, or other collected vegetation or dispose of at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.

Also see Waste Handling and Disposal procedure sheet

- ✓ Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- ✓ Reduce the use of high nitrogen fertilizers that produce excess growth requiring more frequent mowing or trimming.
- ✓ Inspection of drainage facilities should be conducted to detect illegal dumping of clippings/cuttings in or near these facilities. Materials found should be picked up and properly disposed of.
- ✓ Landscape wastes in and around storm drain inlets should be avoided by either using bagging equipment or by manually picking up the material.

5. Erosion Control

- ✓ Maintain vegetative cover on medians and embankments to prevent soil erosion. Apply mulch or leave clippings to serve as additional cover for soil stabilization and to reduce the velocity of storm water runoff.

Also see Waste Handling and Disposal procedure sheet

- ✓ Minimize the use of disking as a means of vegetation management because the practice may result in erodable barren soil.
- ✓ Confine excavated materials to pervious surfaces away from storm drain inlets, sidewalks, pavement, and ditches. Material must be covered if rain is expected.

LIMITATIONS:

Alternative pest/weed controls may not be available, suitable, or effective in every case.

IC7. LANDSCAPE MAINTENANCE

Best Management Practices (BMPs)

A BMP is a technique, measure or structural control that is used for a given set of conditions to improve the quality of the stormwater runoff in a cost effective manner[1]. The minimum required BMPs for this activity are outlined in the box to the right. Implementation of pollution prevention/good housekeeping measures may reduce or eliminate the need to implement other more costly or complicated procedures. Proper employee training is key to the success of BMP implementation.

MINIMUM BEST MANAGEMENT PRACTICES

Pollution Prevention/Good Housekeeping

- Properly store and dispose of gardening wastes.
- Use mulch or other erosion control measures on exposed soils.
- Properly manage irrigation and runoff.
- Properly store and dispose of chemicals.
- Properly manage pesticide and herbicide use.
- Properly manage fertilizer use.

Stencil storm drains

Training

- Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.
- Provide on-going employee training in pollution prevention.

The BMPs outlined in this fact sheet target the following pollutants:

Targeted Constituents	
Sediment	x
Nutrients	x
Floatable Materials	x
Metals	
Bacteria	x
Oil & Grease	
Organics & Toxicants	
Pesticides	x
Oxygen Demanding	x

Provided below are specific procedures associated with each of the minimum BMPs along with procedures for additional BMPs that should be considered if this activity takes place at a facility located near a sensitive waterbody. In order to meet the requirements for medium and high priority facilities, the owners/operators must select, install and maintain appropriate BMPs on site. Since the selection of the appropriate BMPs is a site-specific process, the types and numbers of additional BMPs will vary for each facility.

1. **Take steps to reduce landscape maintenance requirements.**
   - Where feasible, retain and/or plant native vegetation with features that are determined to be beneficial. Native vegetation usually requires less maintenance than planting new vegetation.
   - When planting or replanting consider using low water use flowers, trees, shrubs, and groundcovers.
   - Consider alternative landscaping techniques such as naturescaping and xeriscaping.
2. **Properly store and dispose of gardening wastes.**
   - Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage at a permitted landfill or by composting.
   - Do not dispose of gardening wastes in streets, waterways, or storm drainage systems.
   - Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm and/or cover.
3. **Use mulch or other erosion control measures on exposed soils.**

[1] EPA " *Preliminary Data Summary of Urban Stormwater Best Management Practices*"

4. **Properly manage irrigation and runoff.**
    - Irrigate slowly or pulse irrigate so the infiltration rate of the soil is not exceeded.
    - Inspect irrigation system regularly for leaks and to ensure that excessive runoff is not occurring.
    - If re-claimed water is used for irrigation, ensure that there is no runoff from the landscaped area(s).
    - If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.
    - Use automatic timers to minimize runoff.
    - Use popup sprinkler heads in areas with a lot of activity or where pipes may be broken. Consider the use of mechanisms that reduce water flow to broken sprinkler heads.
5. **Properly store and dispose of chemicals.**
    - Implement storage requirements for pesticide products with guidance from the local fire department and/or County Agricultural Commissioner.
    - Provide secondary containment for chemical storage.
    - Dispose of empty containers according to the instructions on the container label.
    - Triple rinse containers and use rinse water as product.
6. **Properly manage pesticide and herbicide use.**
    - Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of pesticides and herbicides and training of applicators and pest control advisors.
    - Follow manufacturers' recommendations and label directions.
    - Use pesticides only if there is an actual pest problem (not on a regular preventative schedule). When applicable use less toxic pesticides that will do the job. Avoid use of copper-based pesticides if possible. Use the minimum amount of chemicals needed for the job.
    - Do not apply pesticides if rain is expected or if wind speeds are above 5 mph.
    - Do not mix or prepare pesticides for application near storm drains. Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the targeted pest.
    - Whenever possible, use mechanical methods of vegetation removal rather than applying herbicides. Use hand weeding where practical.
    - Do not apply any chemicals directly to surface waters, unless the application is approved and permitted by the state. Do not spray pesticides within 100 feet of open waters.
    - Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
    - When conducting mechanical or manual weed control, avoid loosening the soil, which could lead to erosion.
    - Purchase only the amount of pesticide that you can reasonably use in a given time period.
    - Careful soil mixing and layering techniques using a topsoil mix or composted organic material can be used as an effective measure to reduce herbicide use and watering.
7. **Properly manage fertilizer use.**
    - Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers.
    - Follow manufacturers' recommendations and label directions.
    - Employ techniques to minimize off-target application (e.g. spray drift) of fertilizer, including consideration of alternative application techniques. Calibrate fertilizer distributors to avoid excessive application.
    - Periodically test soils for determining proper fertilizer use.
    - Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
    - Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
    - Use slow release fertilizers whenever possible to minimize leaching
    -

8. **Incorporate the following integrated pest management techniques where appropriate:**
    - Mulching can be used to prevent weeds where turf is absent.
    - Remove insects by hand and place in soapy water or vegetable oil. Alternatively, remove insects with water or vacuum them off the plants.
    - Use species-specific traps (e.g. pheromone-based traps or colored sticky cards).
    - Sprinkle the ground surface with abrasive diatomaceous earth to prevent infestations by soft-bodied insects and slugs. Slugs also can be trapped in small cups filled with beer that are set in the ground so the slugs can get in easily.
    - In cases where microscopic parasites, such as bacteria and fungi, are causing damage to plants, the affected plant material can be removed and disposed of (pruning equipment should be disinfected with bleach to prevent spreading the disease organism).
    - Small mammals and birds can be excluded using fences, netting, and tree trunk guards.
    - Promote beneficial organisms, such as bats, birds, green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seedhead weevils, and spiders that prey on detrimental pest species.

Training

1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
2. **Educate and train employees on the use of pesticides and pesticide application techniques. Only employees properly trained to use pesticides can apply them.**
3. **Train and encourage employees to use integrated pest management techniques.**
4. **Train employees on proper spill containment and cleanup.**
    - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
    - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
    - BMP IC17 discusses Spill Prevention and Control in detail.
5. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
6. **Use a training log or similar method to document training.**

Stencil storm drains

Storm drain system signs act as highly visible source controls that are typically stenciled directly adjacent to storm drain inlets. Stencils should read "No Dumping Drains to Ocean".

MATERIAL LOADING AND UNLOADING

The loading/unloading of materials usually takes place outside; therefore, materials spilled, leaked, or lost during loading/unloading have the potential to collect in the soil or on other surfaces and be carried away by runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Material loading and unloading involves the following activities:

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measures for material loading and unloading include:

- Check loading and unloading equipment regularly for leaks.
- Cover loading docks.
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

General Guidelines

- ✓ Regularly clean work areas to remove materials such as debris, sandblasting material, etc.
- ✓ Design loading/unloading area to prevent stormwater runon that would include grading or berming the area, and positioning roof downspouts so they direct stormwater away from loading/unloading areas.
- ✓ Use overhangs or door skirts that enclose the trailer.
- ✓ Park tank trucks or delivery vehicles so that spills or leaks can be contained.
- ✓ Avoid loading and exposing materials during rain events unless the loading dock is covered and protected from rain. A seal or door skirt between the trailer and the building may also prevent exposure to rain.
- ✓ Shipboard cooling and process water discharges should be directed to minimize contact with spent abrasives, paint, and other debris.

Tank truck transfers

- ✓ The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
- ✓ Transfer area should be designed to prevent runon of stormwater from adjacent areas. Sloping the pad and using a berm around the uphill side of the transfer area should reduce runon.
- ✓ Transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump. A positive control valve should be installed on the drain.

Spill Control

Also see Spill Prevention and Control procedures sheet

- ✓ Contain leaks during transfer.
- ✓ Use drip pans under hoses.
- ✓ Have an emergency spill cleanup plan readily available.
- ✓ Place spill kits and materials next to or near each loading/unloading area.
- ✓ Use drip pans or comparable devices when transferring oils, solvents, and paints.

Training

- ✓ Make sure forklift operators are properly trained.
- ✓ Train employees regarding spill containment and cleanup.
- ✓ Employees trained in spill containment and cleanup should be present during the loading/unloading.
- ✓ Use a written operations plan that describes procedures for loading and/or unloading.

Inspection

Also see Spill Prevention and Control procedures sheet

- ✓ Check loading and unloading equipment regularly for leaks, including valves, pumps, flanges and connections.
- ✓ Inspect regularly for leaking valves, pipes, hoses, or soil chutes carrying either water or wastewater.
- ✓ Look for dust or fumes during loading or unloading operations.

LIMITATIONS:

Space and time limitations may preclude all transfers from being performed indoors or under cover. It may not be possible to conduct transfers only during dry weather.

ROADS, STREETS, AND HIGHWAYS OPERATION AND MAINTENANCE

Streets, roads, and highways are significant sources of pollutants in storm water discharges, and operation and maintenance (O&M) practices, if not conducted properly, can contribute to the problem. O&M practices may involve one or more of the following activities:

1. **Sweeping & Cleaning**
2. **Street Repair & Maintenance**
3. **Bridge and Structure Maintenance**

Streets, roads, and highways are significant sources of pollutants in storm water discharges, and operation and maintenance (O&M) practices, if not conducted properly, can contribute to the problem. O&M practices may involve one or more of the following activities:

Pollution prevention measures that should be consider and the minimum required and optional model procedures for each performance standard are provided below.

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measure for roads, streets, and highways operation and maintenance include:

- Use the least toxic materials available (e.g. water based paints, gels or sprays for graffiti removal)
- Recycle paint and other materials whenever possible.
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

1. Sweeping & Cleaning

Sweeping Frequency and Timing

- ✓ Maintain a consistent sweeping schedule. Provide minimum monthly sweeping of streets.
- ✓ Perform street cleaning during dry weather if possible.
- ✓ Avoid wet cleaning or flushing of streets, and utilize dry methods where possible.
- ✓ If flushing of a street is absolutely necessary, sweep and remove debris before flushing. Do not let wash water enter storm drain inlets. Collect wash water and direct to a dirt or vegetated area, pump into a vacuum truck and dispose of properly.

OPTIONAL:

- Consider increasing sweeping frequency based on factors such as traffic volume, land use, field observations of sediment and trash accumulation, proximity to water courses, etc.

Equipment Operation and Selection

- ✓ Maintain cleaning equipment in good working condition and purchase replacement equipment as needed. Old sweepers should be replaced as needed with new technologically advanced sweepers (preferably regenerative air sweepers) that maximize pollutant removal.
- ✓ Operate sweepers at manufacturer requested optimal speed levels to increase effectiveness.
- ✓ Clean sweepers at a wash rack that drains to the sanitary sewer. The wash rack area should be covered and bermed and wash water should drain to a clarifier prior to entering the sanitary sewer.
- ✓ Regularly inspect vehicles and equipment for leaks, and repair immediately.

→ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

OPTIONAL:

- If available use vacuum or regenerative air sweepers in the high sediment and trash areas (typically industrial/commercial).

Management of Material Removed by Sweeping

- ✓ Dispose of street sweeping debris and dirt at a landfill.
- ✓ Do not store swept material along the side of the street or near a storm drain inlet.
- ✓ If dewatering of saturated materials is necessary it should be conducted in a designated area away from storm drain inlets and the water contained for proper disposal.

→ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

- ✓ If authorized by the local sanitation agency, water may be discharged to the sanitary sewer only after passing through a clarifier. As an alternative, dewatering can be conducted in a containment area in which saturated materials are placed on a tarp and allowed to dry. Dry debris is then disposed of properly.
- ✓ Keep debris storage to a minimum during the wet season or make sure debris piles are contained (e.g. by berming the area) or covered (e.g. with tarps or permanent covers).

Maximize Access for Sweepers

- ✓ Keep accurate operation logs to track program.
- ✓ Properly maintain and operate equipment; which will increase efficiency.
- ✓ Sweeping should be conducted as close to the curb line as possible.

OPTIONAL:

- Institute a parking policy to restrict parking in problematic areas during periods of street sweeping.
- Post permanent street sweeping signs in problematic areas; use temporary signs if installation of permanent signs is not possible.
- Develop and distribute flyers notifying residents of street sweeping schedules.

2. Repair and Maintenance

Pavement Marking

- ✓ Develop paint handling procedures for proper use, storage, and disposal of paints.
- ✓ Transfer and load paint and hot thermoplastic away from storm drain inlets.
- ✓ Street or hand sweep thermoplastic grindings. Yellow thermoplastic grindings may require special handling as they may contain lead.
- ✓ Replace paints containing lead and tributyltin with less toxic alternatives.
- ✓ Use water based paints. Clean application equipment in a sink that is connected to the sanitary sewer.
- ✓ Properly store leftover paints if they are to be kept for the next job, or dispose of properly.
- ✓ See *Spill Control procedure sheet* for guidance on the proper cleanup of paint spills.

Concrete Installation and Repair

- ✓ Avoid mixing excess amounts of fresh concrete or cement mortar on-site. Only mix what is needed for the job.
- ✓ Wash concrete trucks off site or in designated areas on site, such that there is no discharge of concrete wash water into storm drain inlets, open ditches, streets, or other stormwater conveyance structures.

- ✓ Store concrete materials under cover, away from drainage areas.
- ✓ Return leftover materials to the transit mixer. Dispose of small amounts of hardened excess concrete, grout, and mortar in the trash.
- ✓ Do not wash sweepings from exposed aggregate concrete into the street or storm drain. Collect and return sweepings to aggregate base stockpile, or dispose in the trash.
- ✓ When washing poured concrete areas to remove fine particles and expose the aggregate, contain the wash water for proper disposal; do not discharge water to the storm drain system.
- ✓ Do not allow excess concrete to be dumped on-site, except in designated areas.
- ✓ Apply concrete, asphalt, and seal coat during dry weather to allow the material to adequately dry prior to a rain event.
- ✓ When making saw cuts in pavement, use as little water as possible and perform during dry weather. Cover each nearby or appropriate storm drain inlet completely with filter fabric or plastic during the sawing operation and contain the slurry by placing straw bales, sandbags, or gravel dams around the inlets. After the liquid drains or evaporates, shovel or vacuum the slurry residue from the pavement or gutter and remove from site. Alternatively, a small on-site vacuum may be used to pick up the slurry as this will prohibit slurry from reaching storm drain inlets.

Patching, Resurfacing, and Surface Sealing

- ✓ Pre-heat, transfer or load hot bituminous material away from storm drain inlets.
- ✓ Apply concrete, asphalt, and seal coat during dry weather to allow the material to adequately dry prior to a rain event.
- ✓ Where applicable, cover and seal each nearby or appropriate storm drain inlet (with waterproof material, plastic or mesh) and maintenance holes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from covered man holes and storm drain inlets when the job is complete.
- ✓ Use only as much water as necessary for dust control, to avoid runoff.
- ✓ Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.
- ✓ Prior to a rain event or at the completion of a project, sweep the project area by hand or with a street sweeper.

Equipment Cleaning, Maintenance, and Storage

Also see Equipment Repair & Maintenance procedure sheet.

- ✓ Clean equipment including sprayers, sprayer paint supply lines, patch and paving equipment, and mudjacking equipment at the end of each day. If equipment can be cleaned and materials reapplied at the job site, do so in compliance with the laws and regulations. Clean in a sink or other area (e.g. vehicle wash area) that is connected to the sanitary sewer.

✓ If refueling or repairing vehicles and equipment must be done on-site, conduct the activity away from storm drain inlets and watercourses.

→ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

✓ Place drip pans or absorbent materials under heavy equipment when not in use.

✓ Clean paint brushes and tools covered with water-based paints in sinks connected to sanitary sewers. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

OPTIONAL:

- Conduct cleaning at a corporation or maintenance yard if possible.
- When practical, perform major equipment repairs at the corporation yard.

→ *In addition to the procedures above, review and apply general procedures outlined for Minor Construction activities when conducting street, road, and highway repair and maintenance activities.*

3. Bridge and Structure Maintenance

Painting and Paint Removal

✓ Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.

✓ Do not transfer or load paint near storm drain inlets or watercourses.

✓ Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint container.

✓ If sand blasting is used to remove paint, cover nearby storm drain inlets prior to starting work.

✓ If the bridge crosses a watercourse, perform work on a maintenance traveler or platform, or use suspended netting or tarps to capture paint, rust, paint removing agents, or other materials, to prevent discharge of materials to surface waters. If sanding, use a sander with a vacuum filter bag.

✓ Recycle paint when possible (e.g. paint may be used for graffiti removal activities). Dispose of paint at an appropriate household hazardous waste facility.

✓ See Spill Control procedure sheet for guidance on the proper cleanup of paint spills.

Graffiti Removal

✓ Avoid graffiti abatement activities during rain events.

✓ Protect nearby storm drain inlets prior to removing graffiti from walls, signs, sidewalks, or other structures needing graffiti abatement. Clean up

afterwards by sweeping or vacuuming thoroughly, and/or by using absorbent and properly disposing of the absorbent.

- ✓ Note that care should be taken when disposing of waste since it may need to be disposed of as hazardous waste.
- ✓ When graffiti is removed by painting over, implement the procedures under Painting and Paint Removal above.
- ✓ Direct runoff from sand blasting and high pressure washing (with no cleaning agents) into a landscaped or dirt area.
- ✓ If a graffiti abatement method generates wash water containing a cleaning compound (such as high pressure washing with a cleaning compound), plug nearby storm drains and collect wash water and dispose of properly.

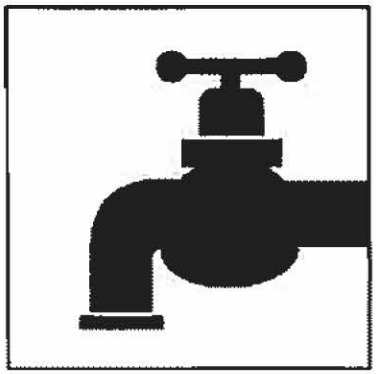
OPTIONAL:

- Consider using a waterless and non-toxic chemical cleaning method for graffiti removal (e.g. gels or spray compounds).

Guardrail and Fence Repair

- ✓ When cleaning guardrails or fences follow the appropriate surface cleaning methods (depending on the type of surface) outlined in the *Sidewalk, Plaza, and Fountain Maintenance and Cleaning* procedure sheet.
- ✓ If painting is conducted, follow the *Painting and Paint Removal* procedures above.
- ✓ If graffiti removal is conducted, follow the *Graffiti Removal* procedures above.
- ✓ If construction takes place, see the procedure sheet for *Minor Construction*.
- ✓ Recycle materials whenever possible.

LIMITATIONS:



Limitations related to street sweeping may include high equipment costs, the potential inability to restrict parking in urban areas, the need for sweeper operator training, the inability of current sweeper technology to remove oil and grease, and the lack of scientific evidence regarding the expected levels of pollutant removal.

Santa Clara Valley Urban Runoff Pollution Prevention Program. 1997 Urban Runoff Management Plan. September 1997, updated October 2000.

FP-6

WATER AND SEWER UTILITY OPERATION AND MAINTENANCE

Although the operation and maintenance of public utilities are not considered themselves a chronic source of stormwater pollution, some activities and accidents can result in the discharge of pollutants that can pose a threat to both human health and the quality of receiving waters if they enter the storm drain system. Activities associated with the operation and maintenance of water and sewer utilities to prevent and handle such incidents include the following:

1. **Water Line Maintenance**
2. **Sanitary Sewer Maintenance**
3. **Spill/Leak/Overflow Control, Response, and Containment**

Cities that do not provide maintenance of water and sewer utilities should coordinate with the contracting agency responsible for these activities and ensure that these model procedures are followed.

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measures for water and sewer utility operation and maintenance include:

- Inspect potential non-storm water discharge flow paths and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

1. Water Line Maintenance

Procedures can be employed to reduce pollutants from discharges associated with water utility operation and maintenance activities. Planned discharges may include fire hydrant testing, flushing water supply mains after new construction, flushing lines due to complaints of taste and odor, dewatering mains for maintenance work. Unplanned discharges from treated, recycled water, raw water, and groundwater systems operation and maintenance activities can occur from water main breaks, sheared fire hydrants, equipment malfunction, and operator error.

Planned Discharges

✓ For planned discharges use one of the following options:

- Reuse water for dust suppression, irrigation, or construction compaction
- Discharge to the sanitary sewer system with approval
- Discharge to the storm drain system or to a creek using applicable pollution control measures listed below (this option is ONLY applicable to uncontaminated pumped ground water, water line flushing, fire hydrant testing and flushing, discharges from potable water sources other than water main breaks) and may require a permit from the Regional Water Quality Control Board.

✓ If water is discharged to a storm drain inlet (catch basin), control measures must be put in place to control potential pollutants (i.e. sediment, chlorine, etc.). Examples of some storm drain inlet protection options include:

- Silt fence – appropriate where the inlet drains a relatively flat area.
- Gravel and wire mesh sediment filter – Appropriate where concentrated flows are expected.
- Wooden weir and fabric – use at curb inlets where a compact installation is desired.

✓ Prior to discharge, inspect discharge flow path and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).

✓ Select appropriate pollution control measure(s) considering the receiving system (i.e. curb inlet, drop inlet, culvert, creek, etc.) and ensure that the control device(s) fit properly.

✓ General design considerations for inlet protection devices include the following:

- The device should be constructed such that cleaning and disposal of trapped sediment is made easy, while minimizing interference with discharge activities.
- Devices should be constructed so that any standing water resulting from the discharge will not cause excessive inconvenience or flooding/damage to adjacent land or structures.

✓ The effectiveness of control devices must be monitored during the discharge period and any necessary repairs or modifications made as needed.

OPTIONAL:

- Sediment removal may be enhanced by placing filter fabric, gravel bags, etc. at storm drain inlets.

Unplanned Discharges

✓ Stop the discharge as quickly as possible by turning off water source.

✓ Inspect flow path of the discharged water:

- Control erosion along the flow path.
- Identify areas that may produce significant sediment or gullies, use sandbags to redirect the flow.
- Identify erodible areas which may need to be repaired or protected during subsequent repairs or corrective actions

✓ If repairs or corrective action will cause additional discharges of water, select the appropriate procedures for erosion control, chlorine residual, turbidity, and chemical additives. Prevent potential pollutants from entering the flow path and ensure that no additional discharged water enters storm drain inlets.

2. Sanitary Sewer Maintenance

Applicable to municipalities who own and operated a sewage collection system. Facilities that are covered under this program include sanitary sewer pipes and pump stations owned and operated by the Permittee. The owner of the sanitary sewer facilities is the entity responsible for carrying out this prevention and response program.

Sewer System Cleaning

- ✓ Sewer lines should be cleaned on a regular basis to remove grease, grit, and other debris that may lead to sewer backups.
- ✓ Establish routine maintenance program. Cleaning should be conducted at an established minimum frequency and more frequently for problem areas such as restaurants that are identified
- ✓ Cleaning activities may require removal of tree roots and other identified obstructions.

Preventative and Corrective Maintenance

- ✓ During routine maintenance and inspection note the condition of sanitary sewer structures and identify areas that need repair or maintenance. Items to note may include the following:
  - cracked/deteriorating pipes
  - leaking joints/seals at manhole
  - frequent line plugs
  - line generally flows at or near capacity
  - suspected infiltration or exfiltration
- ✓ Document suggestions and requests for repair and report the information to the appropriate manager or supervisor.
- ✓ Prioritize repairs based on the nature and severity of the problem. Immediate clearing of blockage or repair is required where an overflow is currently occurring or for urgent problems that may cause an imminent overflow (e.g. pump station failures, sewer line ruptures, sewer line blockages). These repairs may be temporary until scheduled or capital improvements can be completed.
- ✓ Review previous sewer maintenance records to help identify "hot spots" or areas with frequent maintenance problems and locations of potential system failure.

3. Spill/Leak/Overflow Control, Response, and Containment

Control

Also see Drainage System procedures sheet

- ✓ Refer to countywide *Illicit Discharge Detection and Elimination Program.* Components of this program include:
  - Investigation/inspection and follow-up
  - Elimination of illicit discharges and connections
  - Enforcement of ordinances
  - Respond to sewage spills

- Facilitate public reporting of illicit discharges and connections. A citizen's hotline for reporting observed overflow conditions should be established to supplement the field screening efforts being conducted by the Principal Permittee.

Response and Containment

- ✓ Establish lead department/agency responsible for spill response and containment. Provide coordination within departments.
- ✓ When a spill, leak, and/or overflow occurs, keep sewage from entering the storm drain system to the maximum extent practicable by covering or blocking storm drain inlets or by containing and diverting the sewage away from open channels and other storm drain facilities (using sandbags, inflatable dams, etc.).
- ✓ If a spill reaches the storm drain notify County of Orange Health Care Agency through Control One at (714) 628-7208.
- ✓ Remove the sewage using vacuum equipment or use other measures to divert it back to the sanitary sewer system.
- ✓ Record required information at the spill site.
- ✓ Perform field tests as necessary to determine the source of the spill.
- ✓ Develop additional notification procedures regarding spill reporting as needed.

LIMITATIONS:

Private property access rights needed to perform testing along storm drain right-of-ways. Requirements of municipal ordinance authority for suspected source verification testing necessary for guaranteed rights of entry.

Outdoor Loading/Unloading SC-30

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	
Oil and Grease	✓
Organics	✓

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Keep accurate maintenance logs to evaluate materials removed and improvements made.
- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

CASQA California Stormwater Quality Association

Suggested Protocols

Loading and Unloading – General Guidelines

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.
- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains in the area.
- Grade and/or berm the loading/unloading area to a drain that is connected to a deadend.

Inspection

- Check loading and unloading equipment regularly for leaks, including valves, pumps, flanges and connections.
- Look for dust or fumes during loading or unloading operations.

Training

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all and ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Have an emergency spill cleanup plan readily available.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

Other Considerations (Limitations and Regulations)

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
- It may not be possible to conduct transfers only during dry weather.

Requirements

Costs

Costs should be low except when covering a large loading/unloading area.

Maintenance

- Conduct regular inspections and make repairs as necessary. The frequency of repairs will depend on the age of the facility.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area.

Supplemental Information

Further Detail of the BMP

Special Circumstances for Indoor Loading/Unloading of Materials

Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer, treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.

- The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.

- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:

  - Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.

  - Drip pan systems should be installed between the rails to collect spillage from tank cars.

Building & Grounds Maintenance SC-41

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	
Organics	

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.

CASQA California Stormwater Quality Association

- Encourage use of Integrated Pest Management techniques for pest control.
- Encourage proper onsite recycling of yard trimmings.
- Recycle residual paints, solvents, lumber, and other material as much as possible.

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.
- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.
- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures on exposed soils.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.
- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Dispose of empty pesticide containers according to the instructions on the container label.

- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Training

- Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- Clean up spills immediately.

Other Considerations

Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements

Costs

- Cost will vary depending on the type and size of facility.
- Overall costs should be low in comparison to other BMPs.

Maintenance

Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.
- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.
- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.
- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.
- Promote natural vegetation by using parking lot islands and other landscaped areas.
- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.
- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include "NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.
- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Maintenance Bays & Docks SD-31

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Several measures can be taken to prevent operations at maintenance bays and loading docks from contributing a variety of toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to the stormwater conveyance system.

Approach

In designs for maintenance bays and loading docks, containment is encouraged. Preventative measures include overflow containment structures and dead-end sumps. However, in the case of loading docks from grocery stores and warehouse/distribution centers, engineered infiltration systems may be considered.

Suitable Applications

Appropriate applications include commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for vehicle maintenance and repair are governed by Building and Fire Codes, and by current local agency ordinances, and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code requirements.

Designing New Installations

Designs of maintenance bays should consider the following:

- Repair/maintenance bays and vehicle parts with fluids should be indoors; or designed to preclude urban run-on and runoff.
- Repair/maintenance floor areas should be paved with Portland cement concrete (or equivalent smooth impervious surface).

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Repair/maintenance bays should be designed to capture all wash water leaks and spills. Provide impermeable berms, drop inlets, trench catch basins, or overflow containment structures around repair bays to prevent spilled materials and wash-down waters form entering the storm drain system. Connect drains to a sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required by local jurisdiction, obtain an Industrial Waste Discharge Permit.
- Other features may be comparable and equally effective.

The following designs of loading/unloading dock areas should be considered:

- Loading dock areas should be covered, or drainage should be designed to preclude urban run-on and runoff.
- Direct connections into storm drains from depressed loading docks (truck wells) are prohibited.
- Below-grade loading docks from grocery stores and warehouse/distribution centers of fresh food items should drain through water quality inlets, or to an engineered infiltration system, or an equally effective alternative. Pre-treatment may also be required.
- Other features may be comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Stormwater and non-stormwater will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without the appropriate permit.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

Trash Storage Areas SD-32

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Trash storage areas are areas where a trash receptacle (s) are located for use as a repository for solid wastes. Stormwater runoff from areas where trash is stored or disposed of can be polluted. In addition, loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or creeks. Waste handling operations that may be sources of stormwater pollution include dumpsters, litter control, and waste piles.

Approach

This fact sheet contains details on the specific measures required to prevent or reduce pollutants in stormwater runoff associated with trash storage and handling. Preventative measures including enclosures, containment structures, and impervious pavements to mitigate spills, should be used to reduce the likelihood of contamination.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Design requirements for waste handling areas are governed by Building and Fire Codes, and by current local agency ordinances and zoning requirements. The design criteria described in this fact sheet are meant to enhance and be consistent with these code and ordinance requirements. Hazardous waste should be handled in accordance with legal requirements established in Title 22, California Code of Regulation.

Wastes from commercial and industrial sites are typically hauled by either public or commercial carriers that may have design or access requirements for waste storage areas. The design criteria in this fact sheet are recommendations and are not intended to be in conflict with requirements established by the waste hauler. The waste hauler should be contacted prior to the design of your site trash collection areas. Conflicts or issues should be discussed with the local agency.

Designing New Installations

Trash storage areas should be designed to consider the following structural or treatment control BMPs:

- Design trash container areas so that drainage from adjoining roofs and pavement is diverted around the area(s) to avoid run-on. This might include berming or grading the waste handling area to prevent run-on of stormwater.
- Make sure trash container areas are screened or walled to prevent off-site transport of trash.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Use lined bins or dumpsters to reduce leaking of liquid waste.
- Provide roofs, awnings, or attached lids on all trash containers to minimize direct precipitation and prevent rainfall from entering containers.
- Pave trash storage areas with an impervious surface to mitigate spills.
- Do not locate storm drains in immediate vicinity of the trash storage area.
- Post signs on all dumpsters informing users that hazardous materials are not to be disposed of therein.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Additional Information

Maintenance Considerations

The integrity of structural elements that are subject to damage (i.e., screens, covers, and signs) must be maintained by the owner/operator. Maintenance agreements between the local agency and the owner/operator may be required. Some agencies will require maintenance deed restrictions to be recorded of the property title. If required by the local agency, maintenance agreements or deed restrictions must be executed by the owner/operator before improvement plans are approved.

Other Resources

A Manual for the Standard Urban Stormwater Mitigation Plan (SUSMP), Los Angeles County Department of Public Works, May 2002.

Model Standard Urban Storm Water Mitigation Plan (SUSMP) for San Diego County, Port of San Diego, and Cities in San Diego County, February 14, 2002.

Sediment	☑
Nutrients	
Trash	☑
Metals	
Bacteria	
Oil and Grease	☑
Organics	

Potential Alternatives

None

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways, and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).

Implementation

- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused, and perhaps save money.
- Inspect potential sediment tracking locations daily.
- Visible sediment tracking should be swept or vacuumed on a daily basis.
- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.

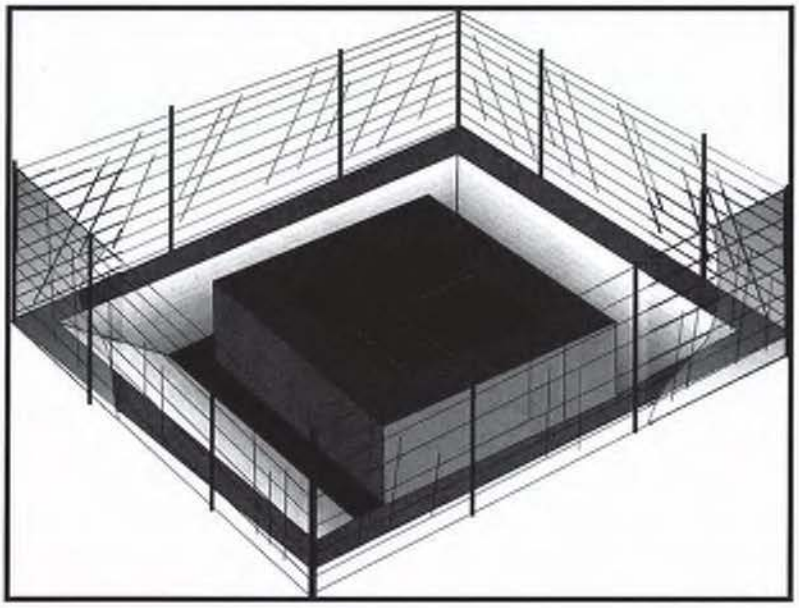
CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $58/hour (3 yd^3 hopper) to $88/hour (9 yd^3 hopper), plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance



- Inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

Potential Alternatives

SE-1 Silt Fence
SE-5 Fiber Rolls
SE-6 Gravel Bag Berm
SE-8 Sandbag Barrier
SE-14 Biofilter Bags

Description and Purpose

Storm drain inlet protection consists of a sediment filter or an impounding area in, around or upstream of a storm drain, drop inlet, or curb inlet. Storm drain inlet protection measures temporarily pond runoff before it enters the storm drain, allowing sediment to settle. Some filter configurations also remove sediment by filtering, but usually the ponding action results in the greatest sediment reduction. Temporary geotextile storm drain inserts attach underneath storm drain grates to capture and filter storm water.

Suitable Applications

Every storm drain inlet receiving runoff from unstabilized or otherwise active work areas should be protected. Inlet protection should be used in conjunction with other erosion and sediment controls to prevent sediment-laden stormwater and non-stormwater discharges from entering the storm drain system.

Limitations

- Drainage area should not exceed 1 acre.
- In general straw bales should not be used as inlet protection.
- Requires an adequate area for water to pond without encroaching into portions of the roadway subject to traffic.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Sediment removal may be inadequate to prevent sediment discharges in high flow conditions or if runoff is heavily sediment laden. If high flow conditions are expected, use other onsite sediment trapping techniques in conjunction with inlet protection.
- Frequent maintenance is required.
- Limit drainage area to 1 acre maximum. For drainage areas larger than 1 acre, runoff should be routed to a sediment-trapping device designed for larger flows. See BMPs SE-2, Sediment Basin, and SE-3, Sediment Traps.
- Excavated drop inlet sediment traps are appropriate where relatively heavy flows are expected, and overflow capability is needed.

Implementation

General

Inlet control measures presented in this handbook should not be used for inlets draining more than one acre. Runoff from larger disturbed areas should be first routed through SE-2, Sediment Basin or SE-3, Sediment Trap and/or used in conjunction with other drainage control, erosion control, and sediment control BMPs to protect the site. Different types of inlet protection are appropriate for different applications depending on site conditions and the type of inlet. Alternative methods are available in addition to the methods described/shown herein such as prefabricated inlet insert devices, or gutter protection devices.

Design and Layout

Identify existing and planned storm drain inlets that have the potential to receive sediment-laden surface runoff. Determine if storm drain inlet protection is needed and which method to use.

- The key to successful and safe use of storm drain inlet protection devices is to know where runoff that is directed toward the inlet to be protected will pond or be diverted as a result of installing the protection device.
  - Determine the acceptable location and extent of ponding in the vicinity of the drain inlet. The acceptable location and extent of ponding will influence the type and design of the storm drain inlet protection device.
  - Determine the extent of potential runoff diversion caused by the storm drain inlet protection device. Runoff ponded by inlet protection devices may flow around the device and towards the next downstream inlet. In some cases, this is acceptable; in other cases, serious erosion or downstream property damage can be caused by these diversions. The possibility of runoff diversions will influence whether or not storm drain inlet protection is suitable; and, if suitable, the type and design of the device.
- The location and extent of ponding, and the extent of diversion, can usually be controlled through appropriate placement of the inlet protection device. In some cases, moving the inlet protection device a short distance upstream of the actual inlet can provide more efficient sediment control, limit ponding to desired areas, and prevent or control diversions.

- Six types of inlet protection are presented below. However, it is recognized that other effective methods and proprietary devices exist and may be selected.
  - Silt Fence: Appropriate for drainage basins with less than a 5% slope, sheet flows, and flows under 0.5 cfs.
  - Excavated Drop Inlet Sediment Trap: An excavated area around the inlet to trap sediment (SE-3).
  - Gravel bag barrier: Used to create a small sediment trap upstream of inlets on sloped, paved streets. Appropriate for sheet flow or when concentrated flow may exceed 0.5 cfs, and where overtopping is required to prevent flooding.
  - Block and Gravel Filter: Appropriate for flows greater than 0.5 cfs.
  - Temporary Geotextile Storm drain Inserts: Different products provide different features. Refer to manufacturer details for targeted pollutants and additional features.
  - Biofilter Bag Barrier: Used to create a small retention area upstream of inlets and can be located on pavement or soil. Biofilter bags slowly filter runoff allowing sediment to settle out. Appropriate for flows under 0.5 cfs.
- Select the appropriate type of inlet protection and design as referred to or as described in this fact sheet.
- Provide area around the inlet for water to pond without flooding structures and property.
- Grates and spaces around all inlets should be sealed to prevent seepage of sediment-laden water.
- Excavate sediment sumps (where needed) 1 to 2 ft with 2:1 side slopes around the inlet.

Installation

- ***DI Protection Type 1 - Silt Fence*** - Similar to constructing a silt fence; see BMP SE-1, Silt Fence. Do not place fabric underneath the inlet grate since the collected sediment may fall into the drain inlet when the fabric is removed or replaced and water flow through the grate will be blocked resulting in flooding. See typical Type 1 installation details at the end of this fact sheet.
  1. Excavate a trench approximately 6 in. wide and 6 in. deep along the line of the silt fence inlet protection device.
  2. Place 2 in. by 2 in. wooden stakes around the perimeter of the inlet a maximum of 3 ft apart and drive them at least 18 in. into the ground or 12 in. below the bottom of the trench. The stakes should be at least 48 in.
  3. Lay fabric along bottom of trench, up side of trench, and then up stakes. See SE-1, Silt Fence, for details. The maximum silt fence height around the inlet is 24 in.
  4. Staple the filter fabric (for materials and specifications, see SE-1, Silt Fence) to wooden stakes. Use heavy-duty wire staples at least 1 in. in length.

5. Backfill the trench with gravel or compacted earth all the way around.

- ***DI Protection Type 2 - Excavated Drop Inlet Sediment Trap*** - Install filter fabric fence in accordance with DI Protection Type 1. Size excavated trap to provide a minimum storage capacity calculated at the rate 67 yd^3/acre of drainage area. See typical Type 2 installation details at the end of this fact sheet.

- ***DI Protection Type 3 - Gravel bag*** - Flow from a severe storm should not overtop the curb. In areas of high clay and silts, use filter fabric and gravel as additional filter media. Construct gravel bags in accordance with SE-6, Gravel Bag Berm. Gravel bags should be used due to their high permeability. See typical Type 3 installation details at the end of this fact sheet.

  1. Construct on gently sloping street.
  2. Leave room upstream of barrier for water to pond and sediment to settle.
  3. Place several layers of gravel bags – overlapping the bags and packing them tightly together.
  4. Leave gap of one bag on the top row to serve as a spillway. Flow from a severe storm (e.g., 10 year storm) should not overtop the curb.

- ***DI Protection Type 4 – Block and Gravel Filter*** - Block and gravel filters are suitable for curb inlets commonly used in residential, commercial, and industrial construction. See typical Type 4 installation details at the end of this fact sheet.

  1. Place hardware cloth or comparable wire mesh with 0.5 in. openings over the drop inlet so that the wire extends a minimum of 1 ft beyond each side of the inlet structure. If more than one strip is necessary, overlap the strips. Place woven geotextile over the wire mesh.
  2. Place concrete blocks lengthwise on their sides in a single row around the perimeter of the inlet, so that the open ends face outward, not upward. The ends of adjacent blocks should abut. The height of the barrier can be varied, depending on design needs, by stacking combinations of blocks that are 4 in., 8 in., and 12 in. wide. The row of blocks should be at least 12 in. but no greater than 24 in. high.
  3. Place wire mesh over the outside vertical face (open end) of the concrete blocks to prevent stone from being washed through the blocks. Use hardware cloth or comparable wire mesh with 0.5 in. opening.
  4. Pile washed stone against the wire mesh to the top of the blocks. Use 0.75 to 3 in.

- ***DI Protection Type 5 – Temporary Geotextile Insert (proprietary)*** – Many types of temporary inserts are available. Most inserts fit underneath the grate of a drop inlet or inside of a curb inlet and are fastened to the outside of the grate or curb. These inserts are removable and many can be cleaned and reused. Installation of these inserts differs between manufacturers. Please refer to manufacturer instruction for installation of proprietary devices.

- ***DI Protection Type 6 - Biofilter bags*** – Biofilter bags may be used as a substitute for gravel bags in low-flow situations. Biofilter bags should conform to specifications detailed in SE-14, Biofilter bags.

    1. Construct in a gently sloping area.
    2. Biofilter bags should be placed around inlets to intercept runoff flows.
    3. All bag joints should overlap by 6 in.
    4. Leave room upstream for water to pond and for sediment to settle out.
    5. Stake bags to the ground as described in the following detail. Stakes may be omitted if bags are placed on a paved surface.

Costs

- Average annual cost for installation and maintenance of DI Type 1-4 and 6 (one year useful life) is $200 per inlet.
- Temporary geotextile inserts are proprietary and cost varies by region. These inserts can often be reused and may have greater than 1 year of use if maintained and kept undamaged. Average cost per insert ranges from $50-75 plus installation, but costs can exceed $100. This cost does not include maintenance.

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Silt Fences. If the fabric becomes clogged, torn, or degrades, it should be replaced. Make sure the stakes are securely driven in the ground and are in good shape (i.e., not bent, cracked, or splintered, and are reasonably perpendicular to the ground). Replace damaged stakes. At a minimum, remove the sediment behind the fabric fence when accumulation reaches one-third the height of the fence or barrier height.
- Gravel Filters. If the gravel becomes clogged with sediment, it should be carefully removed from the inlet and either cleaned or replaced. Since cleaning gravel at a construction site may be difficult, consider using the sediment-laden stone as fill material and put fresh stone around the inlet. Inspect bags for holes, gashes, and snags, and replace bags as needed. Check gravel bags for proper arrangement and displacement.
- Sediment that accumulates in the BMP should be periodically removed in order to maintain BMP effectiveness. Sediment should be removed when the sediment accumulation reaches one-third of the barrier height.
- Inspect and maintain temporary geotextile insert devices according to manufacturer's specifications.
- Remove storm drain inlet protection once the drainage area is stabilized.

- Clean and regrade area around the inlet and clean the inside of the storm drain inlet, as it should be free of sediment and debris at the time of final inspection.

DI PROTECTION – TYPE 4
NOT TO SCALE

Drain Inserts MP-52

Description

Drain inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris. There are a multitude of inserts of various shapes and configurations, typically falling into one of three different groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are one box; that is, the setting area and filtration through media occur in the same box. Some products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon.

California Experience

The number of installations is unknown but likely exceeds a thousand. Some users have reported that these systems require considerable maintenance to prevent plugging and bypass.

Advantages

- Does not require additional space as inserts as the drain inlets are already a component of the standard drainage systems.
- Easy access for inspection and maintenance.
- As there is no standing water, there is little concern for mosquito breeding.
- A relatively inexpensive retrofit option.

Limitations

Performance is likely significantly less than treatment systems that are located at the end of the drainage system such as ponds and vaults. Usually not suitable for large areas or areas with trash or leaves than can plug the insert.

Design and Sizing Guidelines

Refer to manufacturer's guidelines. Drain inserts come any many configurations but can be placed into three general groups: socks, boxes, and trays. The sock consists of a fabric, usually constructed of polypropylene. The fabric may be attached to a frame or the grate of the inlet holds the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene "bag" is placed in the wire mesh box. The bag takes the form of the box. Most box products are

CASQA California Stormwater Quality Association

one box; that is, the setting area and filtration through media occurs in the same box. One manufacturer has a double-box. Stormwater enters the first box where setting occurs. The stormwater flows into the second box where the filter media is located. Some products consist of one or more trays or mesh grates. The trays can hold different types of media. Filtration media vary with the manufacturer: types include polypropylene, porous polymer, treated cellulose, and activated carbon.

Construction/Inspection Considerations

Be certain that installation is done in a manner that makes certain that the stormwater enters the unit and does not leak around the perimeter. Leakage between the frame of the insert and the frame of the drain inlet can easily occur with vertical (drop) inlets.

Performance

Few products have performance data collected under field conditions.

Siting Criteria

It is recommended that inserts be used only for retrofit situations or as pretreatment where other treatment BMPs presented in this section area used.

Additional Design Guidelines

Follow guidelines provided by individual manufacturers.

Maintenance

Likely require frequent maintenance, on the order of several times per year.

Cost

- The initial cost of individual inserts ranges from less than $100 to about $2,000. The cost of using multiple units in curb inlet drains varies with the size of the inlet.
- The low cost of inserts may tend to favor the use of these systems over other, more effective treatment BMPs. However, the low cost of each unit may be offset by the number of units that are required, more frequent maintenance, and the shorter structural life (and therefore replacement).

▲ Medium

Description

An infiltration basin is a shallow impoundment that is designed to infiltrate stormwater. Infiltration basins use the natural filtering ability of the soil to remove pollutants in stormwater runoff. Infiltration facilities store runoff until it gradually exfiltrates through the soil and eventually into the water table. This practice has high pollutant removal efficiency and can also help recharge groundwater, thus helping to maintain low flows in stream systems. Infiltration basins can be challenging to apply on many sites, however, because of soils requirements. In addition, some studies have shown relatively high failure rates compared with other management practices.

California Experience

Infiltration basins have a long history of use in California, especially in the Central Valley. Basins located in Fresno were among those initially evaluated in the National Urban Runoff Program and were found to be effective at reducing the volume of runoff, while posing little long-term threat to groundwater quality (EPA, 1983; Schroeder, 1995). Proper siting of these devices is crucial as underscored by the experience of Caltrans in siting two basins in Southern California. The basin with marginal separation from groundwater and soil permeability failed immediately and could never be rehabilitated.

Advantages

- Provides 100% reduction in the load discharged to surface waters.
- The principal benefit of infiltration basins is the approximation of pre-development hydrology during which a

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

significant portion of the average annual rainfall runoff is infiltrated and evaporated rather than flushed directly to creeks.

- If the water quality volume is adequately sized, infiltration basins can be useful for providing control of channel forming (erosion) and high frequency (generally less than the 2-year) flood events.

Limitations

- May not be appropriate for industrial sites or locations where spills may occur.
- Infiltration basins require a minimum soil infiltration rate of 0.5 inches/hour, not appropriate at sites with Hydrologic Soil Types C and D.
- If infiltration rates exceed 2.4 inches/hour, then the runoff should be fully treated prior to infiltration to protect groundwater quality.
- Not suitable on fill sites or steep slopes.
- Risk of groundwater contamination in very coarse soils.
- Upstream drainage area must be completely stabilized before construction.
- Difficult to restore functioning of infiltration basins once clogged.

Design and Sizing Guidelines

- Water quality volume determined by local requirements or sized so that 85% of the annual runoff volume is captured.
- Basin sized so that the entire water quality volume is infiltrated within 48 hours.
- Vegetation establishment on the basin floor may help reduce the clogging rate.

Construction/Inspection Considerations

- Before construction begins, stabilize the entire area draining to the facility. If impossible, place a diversion berm around the perimeter of the infiltration site to prevent sediment entrance during construction or remove the top 2 inches of soil after the site is stabililized. Stabilize the entire contributing drainage area, including the side slopes, before allowing any runoff to enter once construction is complete.
- Place excavated material such that it can not be washed back into the basin if a storm occurs during construction of the facility.
- Build the basin without driving heavy equipment over the infiltration surface. Any equipment driven on the surface should have extra-wide ("low pressure") tires. Prior to any construction, rope off the infiltration area to stop entrance by unwanted equipment.
- After final grading, till the infiltration surface deeply.
- Use appropriate erosion control seed mix for the specific project and location.

Performance

As water migrates through porous soil and rock, pollutant attenuation mechanisms include precipitation, sorption, physical filtration, and bacterial degradation. If functioning properly, this approach is presumed to have high removal efficiencies for particulate pollutants and moderate removal of soluble pollutants. Actual pollutant removal in the subsurface would be expected to vary depending upon site-specific soil types. This technology eliminates discharge to surface waters except for the very largest storms; consequently, complete removal of all stormwater constituents can be assumed.

There remain some concerns about the potential for groundwater contamination despite the findings of the NURP and Nightingale (1975; 1987a,b,c; 1989). For instance, a report by Pitt et al. (1994) highlighted the potential for groundwater contamination from intentional and unintentional stormwater infiltration. That report recommends that infiltration facilities not be sited in areas where high concentrations are present or where there is a potential for spills of toxic material. Conversely, Schroeder (1995) reported that there was no evidence of groundwater impacts from an infiltration basin serving a large industrial catchment in Fresno, CA.

Siting Criteria

The key element in siting infiltration basins is identifying sites with appropriate soil and hydrogeologic properties, which is critical for long term performance. In one study conducted in Prince George's County, Maryland (Galli, 1992), all of the infiltration basins investigated clogged within 2 years. It is believed that these failures were for the most part due to allowing infiltration at sites with rates of less than 0.5 in/hr, basing siting on soil type rather than field infiltration tests, and poor construction practices that resulted in soil compaction of the basin invert.

A study of 23 infiltration basins in the Pacific Northwest showed better long-term performance in an area with highly permeable soils (Hilding, 1996). In this study, few of the infiltration basins had failed after 10 years. Consequently, the following guidelines for identifying appropriate soil and subsurface conditions should be rigorously adhered to.

- Determine soil type (consider RCS soil type 'A, B or C' only) from mapping and consult USDA soil survey tables to review other parameters such as the amount of silt and clay, presence of a restrictive layer or seasonal high water table, and estimated permeability. The soil should not have more than 30% clay or more than 40% of clay and silt combined. Eliminate sites that are clearly unsuitable for infiltration.

- Groundwater separation should be at least 3 m from the basin invert to the measured ground water elevation. There is concern at the state and regional levels of the impact on groundwater quality from infiltrated runoff, especially when the separation between groundwater and the surface is small.

- Location away from buildings, slopes and highway pavement (greater than 6 m) and wells and bridge structures (greater than 30 m). Sites constructed of fill, having a base flow or with a slope greater than 15% should not be considered.

- Ensure that adequate head is available to operate flow splitter structures (to allow the basin to be offline) without ponding in the splitter structure or creating backwater upstream of the splitter.

- Base flow should not be present in the tributary watershed.

Secondary Screening Based on Site Geotechnical Investigation

- At least three in-hole conductivity tests shall be performed using USBR 7300-89 or Bouwer-Rice procedures (the latter if groundwater is encountered within the boring), two tests at different locations within the proposed basin and the third down gradient by no more than approximately 10 m. The tests shall measure permeability in the side slopes and the bed within a depth of 3 m of the invert.

- The minimum acceptable hydraulic conductivity as measured in any of the three required test holes is 13 mm/hr. If any test hole shows less than the minimum value, the site should be disqualified from further consideration.

- Exclude from consideration sites constructed in fill or partially in fill unless no silts or clays are present in the soil boring. Fill tends to be compacted, with clays in a dispersed rather than flocculated state, greatly reducing permeability.

- The geotechnical investigation should be such that a good understanding is gained as to how the stormwater runoff will move in the soil (horizontally or vertically) and if there are any geological conditions that could inhibit the movement of water.

Additional Design Guidelines

(1) Basin Sizing - The required water quality volume is determined by local regulations or sufficient to capture 85% of the annual runoff.

(2) Provide pretreatment if sediment loading is a maintenance concern for the basin.

(3) Include energy dissipation in the inlet design for the basins. Avoid designs that include a permanent pool to reduce opportunity for standing water and associated vector problems.

(4) Basin invert area should be determined by the equation:

$$A = \frac{WQV}{kt}$$

where A = Basin invert area (m^2)

WQV = water quality volume (m^3)

k = 0.5 times the lowest field-measured hydraulic conductivity (m/hr)

t = drawdown time (48 hr)

(5) The use of vertical piping, either for distribution or infiltration enhancement shall not be allowed to avoid device classification as a Class V injection well per 40 CFR146.5(e)(4).

Maintenance

Regular maintenance is critical to the successful operation of infiltration basins. Recommended operation and maintenance guidelines include:

- Inspections and maintenance to ensure that water infiltrates into the subsurface completely (recommended infiltration rate of 72 hours or less) and that vegetation is carefully managed to prevent creating mosquito and other vector habitats.
- Observe drain time for the design storm after completion or modification of the facility to confirm that the desired drain time has been obtained.
- Schedule semiannual inspections for beginning and end of the wet season to identify potential problems such as erosion of the basin side slopes and invert, standing water, trash and debris, and sediment accumulation.
- Remove accumulated trash and debris in the basin at the start and end of the wet season.
- Inspect for standing water at the end of the wet season.
- Trim vegetation at the beginning and end of the wet season to prevent establishment of woody vegetation and for aesthetic and vector reasons.
- Remove accumulated sediment and regrade when the accumulated sediment volume exceeds 10% of the basin.
- If erosion is occurring within the basin, revegetate immediately and stabilize with an erosion control mulch or mat until vegetation cover is established.
- To avoid reversing soil development, scarification or other disturbance should only be performed when there are actual signs of clogging, rather than on a routine basis. Always remove deposited sediments before scarification, and use a hand-guided rotary tiller, if possible, or a disc harrow pulled by a very light tractor.

Cost

Infiltration basins are relatively cost-effective practices because little infrastructure is needed when constructing them. One study estimated the total construction cost at about $2 per ft (adjusted for inflation) of storage for a 0.25-acre basin (SWRPC, 1991). As with other BMPs, these published cost estimates may deviate greatly from what might be incurred at a specific site. For instance, Caltrans spent about $18/ft^3 for the two infiltration basins constructed in southern California, each of which had a water quality volume of about 0.34 ac.-ft. Much of the higher cost can be attributed to changes in the storm drain system necessary to route the runoff to the basin locations.

Infiltration basins typically consume about 2 to 3% of the site draining to them, which is relatively small. Additional space may be required for buffer, landscaping, access road, and fencing. Maintenance costs are estimated at 5 to 10% of construction costs.

One cost concern associated with infiltration practices is the maintenance burden and longevity. If improperly maintained, infiltration basins have a high failure rate. Thus, it may be necessary to replace the basin with a different technology after a relatively short period of time.

XIV.1. Hydrologic Source Control Fact Sheets (HSC)

HSC-1: Localized On-Lot Infiltration

'Localized on-lot infiltration' refers to the practice of collecting on-site runoff from small distributed areas within a catchment and diverting it to a dedicated on-site infiltration area. This technique can include disconnecting downspouts and draining sidewalks and patios into french drains, trenches, small rain gardens, or other surface depressions. For downspout disconnections and other impervious area disconnection involving dispersion over pervious surfaces, but without intentional ponding, see HSC-2: Impervious Area Dispersion.

Also known as:

- *Downspout infiltration*
- *Retention grading*
- *French drains*
- *On-lot rain gardens*

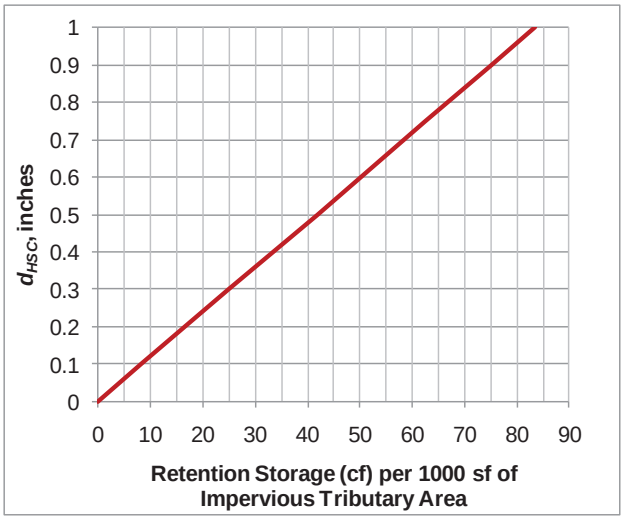
On-lot rain garden
Source: lowimpactdevelopment.org

Feasibility Screening Considerations

- 'Localized on-lot infiltration' shall meet infiltration infeasibility screening criteria to be considered for use.

Opportunity Criteria

- Runoff can be directed to and temporarily pond in pervious area depressions, rock trenches, or similar.
- Soils are adequate for infiltration or can be amended to provide an adequate infiltration rate.
- Shallow utilities are not present below infiltration areas.



OC-Specific Design Criteria and Considerations

- ☐ A single on-lot infiltration area should not be sized to retain runoff from impervious areas greater than 4,000 sq. ft.; if the drainage area exceeds this criteria, sizing should be based on calculations for bioretention areas or infiltration trenches.
- ☐ Soils should be sufficiently permeable to eliminate ponded water within 24 hours following a 85th percentile, 24-hour storm event.
- ☐ Maximum ponding depth should be should be less than 3 inches and trench depth should be less than 1.5 feet.
- ☐ Infiltration should not be used when the depth to the mounded seasonally high table is within 5 feet of the bottom of infiltrating surface.
- ☐ Infiltration via depression storage, french drains, or rain gardens should be located greater than 8 feet from building foundations.
- ☐ Site slope should be less than 10%.
- ☐ Infiltration unit should not be located within 50 feet of slopes greater than 15 percent.
- ☐ Side slopes of rain garden or depression storage should not exceed 3H:1V.
- ☐ Effective energy dissipation and uniform flow spreading methods should be employed to prevent erosion resulting fromwater entering infiltration areas.

☐ Overflow should be located such that it does not cause erosion orand is conveyed away from structures toward the downstream conveyance and treatment system. .

Calculating HSC Retention Volume

- The retention volume provided by localized on-lot infiltration can be computed as the storage volume provided by surface ponding and the pore space within an amended soil layer or gravel trench.
- Estimate the average retention volume per 1000 square feet impervious tributary area provided by on-lot infiltration.
- Look up the storm retention depth, d_{HSC} from the chart to the right.
- The max d_{HSC} is equal to the design capture storm depth for the project site.

Configuration for Use in a Treatment Train

- Localized on-lot infiltration would typically serve as the first in a treatment train and should only be used where tributary areas do not generate significant sediment that would require pretreatment to mitigate clogging.
- The use of impervious area disconnection reduces the sizing requirement for downstream LID and/or conventional treatment control BMPs.

Additional References for Design Guidance

- LID Center – Rain Garden Design Template. http://www.lowimpactdevelopment.org/raingarden_design/
- University of Wisconsin Extension. Rain Gardens: A How-To Manual for Homeowners. http://learningstore.uwex.edu/assets/pdfs/GWQ037.pdf

HSC-2: Impervious Area Dispersion

Also known as:

- *Downspout disconnection*
- *Impervious area disconnection*
- *Sheet flow dispersion*

Impervious area dispersion refers to the practice of routing runoff from impervious areas, such as rooftops, walkways, and patios onto the surface of adjacent pervious areas. Runoff is dispersed uniformly via splash block or dispersion trench and soaks into the ground as it move slowly across the surface of pervious areas. Minor ponding may occur, but it is not the intent of this practice to actively promote localized on-lot storage (See HSC-1: Localized On-Lot Infiltration).

Simple Downspout Dispersion
Source: toronto.ca/environment/water.htm

Feasibility Screening Considerations

- Impervious area dispersion can be used where infiltration would otherwise be infeasible, however dispersion depth over landscaped areas should be limited by site-specific conditions to prevent standing water or geotechnical issues.

Opportunity Criteria

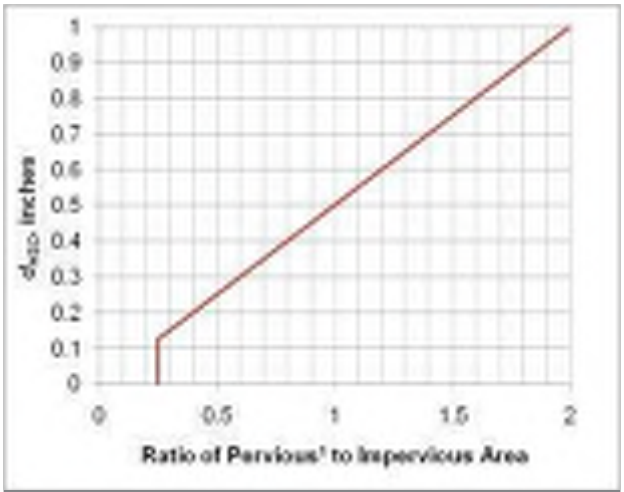
- Rooftops and other low traffic impervious surface present in drainage area.
- Soils are adequate for infiltration. If not, soils can be amended to improve capacity to absorb dispersed water (see MISC-2: Amended Soils).
- Significant pervious area present in drainage area with shallow slope
- Overflow from pervious area can be safely managed.

OC-Specific Design Criteria and Considerations

- ☐ Soils should be preserved from their natural condition or restored via soil amendments to meet minimum criteria described in Section .
- ☐ A minimum of 1 part pervious area capable of receiving flow should be provided for every 2 parts of impervious area disconnected.
- ☐ The pervious area receiving flow should have a slope ≤ 2 percent and path lengths of ≥ 20 feet per 1000 sf of impervious area.
- ☐ Dispersion areas should be maintained to remove trash and debris, loose vegetation, and protect any areas of bare soil from erosion.
- ☐ Velocity of dispersed flow should not be greater than 0.5 ft per second to avoid scour.

Calculating HSC Retention Volume

- The retention volume provided by downspout dispersion is a function of the ratio of impervious to pervious area and the condition of soils in the pervious area.
- Determine flow patterns in pervious area and estimate footprint of pervious area receiving dispersed flow. Calculate the ratio of pervious to impervious area.
- Check soil conditions using the soil condition design criteria below; amend if necessary.
- Look up the storm retention depth, d_{HSC} from the chart below.



- The max d_{HSC} is equal to the design storm depth for the project site.

Soil Condition Design Criteria

- ☐ Maximum slope of 2 percent
- ☐ Well-established lawn or landscaping
- ☐ Minimum soil amendments per criteria in MISC-2: Amended Soils.

Configuration for Use in a Treatment Train

- Impervious area disconnection is an HSC that may be used as the first element in any treatment train
- The use of impervious area disconnection reduces the sizing requirement for downstream LID and/or treatment control BMPs

[1] Pervious area used in calculation should only include the pervious area receiving flow, not pervious area receiving only direct rainfall or upslope pervious drainage.

HSC-3: Street Trees

By intercepting rainfall, trees can provide several aesthetic and stormwater benefits including peak flow control, increased infiltration and ET, and runoff temperature reduction. The volume of precipitation intercepted by the canopy reduces the treatment volume required for downstream treatment BMPs. Shading reduces the heat island effect as well as the temperature of adjacent impervious surfaces, over which stormwater flows, and thus reduces the heat transferred to downstream receiving waters. Tree roots also strengthen the soil structure and provide infiltrative pathways, simultaneously reducing erosion potential and enhancing infiltration.

Also known as:

- *Canopy interception*

Street trees
Source: Geosyntec Consultants

Feasibility Screening Considerations

- Not applicable

Opportunity Criteria

- Street trees can be incorporated in green streets designs along sidewalks, streets, parking lots, or driveways.
- Street trees can be used in combination with bioretention systems along medians or in traffic calming bays.
- There must be sufficient space available to accommodate both the tree canopy and root system.

OC-Specific Design Criteria and Considerations

☐ Mature tree canopy, height, and root system should not interfere with subsurface utilities, suspended powerlines, buildings and foundations, or other existing or planned structures. Required setbacks should be adhered to.

☐ Depending on space constarints, a 20 to 30 foot diameter canopy (at maturity) is recommended for stormwater mitigation.

☐ Native, drought-tolerant species should be selected in order to minimize irrigation requirements and improve the long-term viability of trees.

☐ Trees should not impede pedstrian or vehicle sight lines.

☐ Planting locations should receive adequate sunlight and wind protection; other environmental factors should be considered prior to planting.

☐ Frequency and degree of vegetation management and maintenance should be considered with respect to owner capabilities (e.g., staffing, funding, etc.).

☐ Soils should be preserved in their natural condition (if appropriate for planting) or restored via soil amendments to meet minimum criteria described in MISC-2: Amended Soils. If necessary, a landscape architect or plant biologist should be consulted.

☐ A street tree selection guide, such as that specific to the City of Los Angeles, may need to be consulted to select species appropriate for the site design constraints (e.g., parkway size, tree height, canopy spread, etc.)

☐ Infiltration should not cause geotechnical hazards related to adjacent structures (buildings,

roadways, sidewalks, utilities, etc.)

Calculating HSC Retention Volume

- The retention volume provided by streets trees via canopy interception is dependent on the tree species, time of the year, and maturity.
- To compute the retention depth, the expected impervious area covered by the full tree canopy after 4 years of growth must be computed (IA_{HSC}). The maximum retention depth credit for canopy interception (d_{HSC}) is 0.05 inches over the area covered by the canopy at 4 years of growth.

Configuration for Use in a Treatment Train

- As a HSC, street trees would serve as the first step in a treatment train by reducing the treatment volume and flow rate of a downstream treatment BMP.

RE: **Response to City Civil Plan Check Review** - Proposed Industrial Warehouse Development - Located at the Southeast Corner of Victoria Avenue and 5th Street, in the City of Highland, California

Dear Mr. Rice:
Submitted herewith is our response to the recent "City of Highland Engineering Department First Review Comments" dated September 23, 2022 for the above referenced project. The following items are addressed below.

Response to Comment No. 3
The infiltration rate calculations given in our previous report, dated June 9, 2022 were from field test measurements in four test holes. The water level drop in the inner and outer rings were recorded at 12 time intervals in each hole. The seepage rate for each hole was computed and the results plotted graphically, as given in Appendix A. Our previous infiltration rate calculations are accurate and the time recommended value was obtained by averaging the last 6 readings in each hole.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,

Subject: **First Review Comments – Conceptual Water Quality Management Plan (C-WQMP) for 5th at Victoria Industrial - Highland**
Project No. WQP22-009 (3082.31)

Dear Mr. Bennett:

CASC Engineering and Consulting (CASC), as a consultant to the City of Highland, has performed a first review of the Conceptual Water Quality Management Plan (C-WQMP) prepared by Huitt-Zollars, Inc. (Preparer) for WQP22-009 (3082.31) 5th at Victoria Industrial (Project) located at the southeast corner of 5th Street and Victoria Avenue and submitted by Patriot Development Partners (Applicant). The C-WQMP is not ready to be recommended for acceptance based on the findings enumerated herein:

Review Comments

1. The C-WQMP mentions improvements to Victoria Avenue and 5th Street that will require stormwater BMPs. Clearly identify the drainage areas for on-site and off-site improvements on the WQMP site plan.
2. Provide a copy of the conceptual grading plan, storm drain plan, street plan, and drainage report.
3. Revise the infiltration rate calculations in the geotechnical report per ASTM D3385. The infiltration rates in the report were not calculated per ASTM D3385.
4. Describe in the WQMP if the proposed underground infiltration system is for water quality (DCV) purposes only or is to also serve as a mitigating device to limit outflows (increased runoff mitigation). See redlines.
5. Provide calculations for sizing the proposed CDS units to meet trash amendment requirements. See redlines.
6. The proposed underground infiltration system will require registration with the EPA as a Class V Injection Well.
7. Address all redline comments.

Please review and forward to the preparer. If there are any questions regarding this review, please contact me at your earliest convenience.

Best regards,
CASC Engineering and Consulting

RE: **Geotechnical Engineering Investigation** - Proposed Industrial Warehouse Development - Located at the Southeast Corner of Victoria Avenue and 5th Street, in the City of Highland, California

Dear Mr. Rice:

Pursuant to your request, this firm has performed a Geotechnical Engineering Investigation for the above referenced project in accordance with your approval of our proposal dated May 11, 2022. The purpose of this investigation is to evaluate the geotechnical conditions of the subject site and to provide recommendations for the construction of a proposed industrial warehouse development.

The scope of work included the following: 1) site reconnaissance; 2) subsurface geotechnical exploration and sampling; 3) laboratory testing; 4) soil infiltration testing; 5) engineering analysis of field and laboratory data; 6) preparation of a geotechnical engineering report. It is the opinion of this firm that the proposed development is feasible from a geotechnical standpoint provided that the recommendations presented in this report are followed in the design and construction of the project.

1.0 Project Description

It is proposed to construct an industrial warehouse development consisting of 152,391 square feet building on the subject site as shown on the attached Site Plan (figure 1). The proposed concrete tilt-up building will be supported by a conventional slab-on-grade foundation system with perimeter-spread footings and isolated interior footings. Other improvements will include asphalt and concrete pavement areas, hardscape and landscaping. It is assumed that the proposed grading for the development will include cut and fill procedures on the order of a few feet to achieve finished grade elevations. Final building plans shall be reviewed by this firm prior to submittal for city approval to determine the need for any additional study and revised recommendations pertinent to the proposed development, if necessary.

2.0 Site Description

The subject property is located at the southeast corner of Victoria Avenue and 5th Street, bordered by 3rd Street to the south in the City of Highland. The generally rectangular shaped parcel is elongated in an east to west direction and is relatively level. The southeast corner of the site is currently occupied by several single-story wood framed buildings with isolated areas of asphaltic parking. The remaining portion of the site is currently vacant and contains some light, natural vegetation.

3.0 Site Exploration

The investigation consisted of the placement of twelve (12) subsurface exploratory trenches by use of backhoe and hand operated equipment to depths of approximately 10 and 18 feet below current ground elevations. The trenches were placed at accessible locations throughout the property. The explorations were visually classified and logged by a field engineer with locations of the subsurface explorations shown on the attached plan.

The exploratory trenches revealed the existing earth materials to consist of fill and natural soil. Detailed descriptions of the subsurface conditions are listed on the boring logs in Appendix A. It should be noted that the transition from one soil type to another as shown on the trench logs is approximate and may in fact be a gradual transition. The soils encountered are described as follows:

Fill: A fill soil classifying as a brown, fine to medium grained, silty SAND with gravel and rootlets was encountered across the site to depths ranging from 1 to 3 feet below ground surface, these soils were noted to loose and dry. Minor amounts of asphalt and brick were encountered in exploratory trenches T-7 and T8. Approximately 2 to 6 inches of pulverized asphalt was noted on the surface near exploratory borings B-1, B-2 and B-3.

Natural: A natural undisturbed soil classifying as a brown, fine to coarse grained slightly silty SAND with occasional cobbles (up to a maximum of 30 inches in diameter) was encountered beneath the upper fill soils. The native soils as encountered were observed to be medium dense and damp.

The overall engineering characteristics of the earth material were relatively uniform with each excavation. Groundwater was not encountered to the depth of our trenches and caving occurred in the deeper cohesionless soils. Historic high groundwater in the vicinity has been recorded greater than 65 feet below grade at a nearby well located less than 1,000 feet to the west of the subject site as given on the California Department of Water Recourses database http://www.water.ca.gov/waterdatalibrary/ (State well numbers 01S03W05N006S). Additionally, local groundwater maps (Carson & Matti 1982), record historic groundwater depths in excess of 250 feet.

4.0 Laboratory Tests

Relatively undisturbed samples of the subsurface soils were obtained to perform laboratory testing and analysis for direct shear, consolidation tests, and to determine in-place moisture/densities. These relatively undisturbed ring samples were obtained by driving a thin-walled steel sampler lined with one-inch-long brass rings with an inside diameter of 2.42 inches into the undisturbed soils. Bulk bag samples were obtained in the upper soils for expansion index tests and maximum density tests. All test results are included in Appendix B, unless otherwise noted.

4.1 **Field Moisture Content** (ASTM: D 2216) and the dry density of the ring samples were determined in the laboratory. This data is listed on the logs of explorations.

4.2 **Maximum Density tests** (ASTM: D 1557) were performed on typical samples of the upper soils. Results of these tests are shown on Table I.

4.3 **Expansion Index tests** (ASTM: D 4829) were performed on remolded samples of the upper soils to determine expansive characteristics. Results of these tests are provided on Table II.

4.4 **Corrosion tests** consisting of sulfate, pH, resistivity and chloride analysis to determine potential corrosive effects of soils on concrete and underground utilities. Test results are provided on Table III.

4.5 **R-Value test** per California Test Method 301 was performed on a representative sample, which may be anticipated to be near subgrade to determine pavement design. Results are provided within the pavement design section of the report.

4.6 **Direct Shear tests** (ASTM: D 3080) were performed on undisturbed and/or remolded samples of the subsurface soils. The test is performed under saturated conditions at loads of 1,000 lbs./sq.ft., 2,000 lbs./sq.ft., and 3,000 lbs./sq.ft. with results shown on Plate A to B.

4.7 **Consolidation tests** (ASTM: D 2435) were performed on undisturbed samples to determine the differential and total settlement which may be anticipated based upon the proposed loads. Water was added to the samples at a surcharge of one KSF and the settlement curves are plotted on Plates C to D.

5.0 Seismicity Evaluation

The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely. The San Andreas Fault (San Bernardino Segment) is located approximately 5 kilometers from the site and is capable of producing a Magnitude 7.4 earthquake. Ground shaking originating from earthquakes along other active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults.

The seismic design acceleration parameters for the project site are provided on the following page based on the ASCE/SEI 7-22 American Society of Civil Engineers (ASCE) website, https://asce7hazardtool.online/. The ASCE/SEI 7-22 report is attached is Appendix C

Seismic Design Acceleration Parameters

Latitude	34.106
Longitude	-117.225
Site Class	D
Risk Category	II
Peak Ground Acceleration	$PGA_M = 0.8$
Adjusted Maximum Acceleration	$S_{MS} = 2.31$ $S_{M1} = 2.73$
Design Spectral Response Acceleration Parameters	$S_{DS} = 1.54$ $S_{D1} = 1.82$
Mapped Spectral Response Acceleration	$S_S = 2.38$ $S_1 = 0.93$

Use of these values is dependent on the latest requirements of the ASCE, 11-4.8, Exception 2 that requires the value of the seismic response coefficient C_s be determined by Equation 12.8.2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either 12.8-3 for $T_L \geq T \geq 1.5T_s$ or Equation 12.8-4 for $T > T_L$. Computations and verification of these conditions is referred to the structural engineer.

6.0 Liquefaction Evaluation

The site is expected to experience ground shaking and earthquake activity that is typical of the Southern California area. It is during severe shaking that loose, granular soils below the groundwater table can liquefy. Based on review of the *County of San Bernardino County Land Use Plan – General Plan – Geologic Hazard Overlays (2009)*, the site lies *outside* a zone of "Suspected Liquefaction Susceptibility". Based on review of local groundwater maps, the depth of groundwater is in excess of 100 feet (Carson & Matti 1982). Thus, the design of the proposed construction in conformance with the latest Building Code provisions for earthquake design is expected to provide mitigation of ground shaking hazards that are typical to Southern California.

7.0 Infiltration Characteristics

Infiltration tests within the site were performed to provide preliminary infiltration rates for the purpose of planning and design of an on-site water disposal system. The infiltration tests consisted of the double ring infiltration test per ASTM Method D 3385 with test results given in Appendix D. Based upon the results of our testing, the soils encountered in the planned on-site drainage disposal system area exhibit the following infiltration rates.

Boring/Test No.	Depth	Soil Classification	Field Infiltration Rate
T-1/TH-1	10'	Slightly Silty SAND	72.0 in/hr
T-2/TH-2	12'	Slightly Silty SAND	170.0 in/hr
T-3/TH-3	10'	Slightly Silty SAND	56.0 in/hr
T-4/TH-4	12'	Slightly Silty SAND	67.8 in/hr

SEE AMENDED CALCS IN FRONT OF SECTION

Based on the results of our field testing, the subsurface soils encountered in the proposed on-site drainage disposal system shall utilize the design infiltration rates based on the safety factor required by the county standard. All systems must meet the latest city and/or county specifications and the California Regional Water Quality Control Board (CRWQCB) requirements.

It is recommended that foundations shall be setback a minimum distance of 10 feet from the drainage disposal system and the bottom of footing shall be a minimum of 10 feet from the expected zone of saturation. The boundary of the zone of saturation may be assumed to project downward from the top of the permeable portion of the disposal system at an inclination of 1 to 1 or flatter, as determined by the geotechnical engineer.

8.0 Conclusions and Recommendations

Based upon our evaluations, the proposed development is acceptable from a geotechnical engineering standpoint. By following the recommendations and guidelines set forth in our report, the structures will be safe from excessive settlements under the anticipated design loadings and conditions. The proposed development shall meet all requirements of the City Building Ordinance and will not impose any adverse effect on existing adjacent structures.

The following recommendations are based upon soil conditions encountered in our field investigation; these near-surface soil conditions could vary across the site. Variations in the soil conditions may not become evident until the commencement of grading operations for the proposed development and revised recommendations from the soils engineer may be necessary based upon the conditions encountered.

It is recommended that site inspections be performed by a representative of this firm during all grading and construction of the development to verify the findings and recommendations documented in this report. Any unusual conditions which may be encountered in the course of the project development may require the need for additional study and revised recommendations.

8.1 Site Grading Recommendations

Any vegetation and/or demolition debris shall be removed and hauled from proposed grading areas prior to the start of grading operations. Existing vegetation shall not be mixed or disced into the soils. Any removed soils may be reutilized as compacted fill once any deleterious material or oversized materials (in excess of eight inches) is removed. Grading operations shall be performed in accordance with the attached *Specifications for Placement of Compacted Fill.*

8.1.1 Removal and Recompaction Recommendations

All disturbed soils and/or fill (about 1 to 3 feet below ground surface) shall be removed to competent native material, the exposed surface scarified to a depth of 12 inches, brought to within 2% of optimum moisture content and compacted to a minimum of 90% of the laboratory standard (ASTM: D-1557) prior to placement of any additional compacted fill soils, foundations, slabs-on-grade and pavement. The upper 12 inches of soils beneath building pad and concrete paving shall be compacted to a minimum of 95% of the laboratory standard. Grading shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

The site is underlain by alluvium generally composed of gravels, cobbles and boulders in a silty sand matrix. Oversized materials are anticipated to be encountered during grading operations. The proposed building pad shall be graded with cobbles up to 6-inch minus blended uniformly with soils in the upper one foot beneath pad grade and within planned utility/foundation areas. Rock size up to 12 inches blended uniformly with soils shall be placed below two feet of more below grade. All fill will be required to be placed in suitable lifts, moisture conditioned and compacted to a minimum of 90% of the laboratory standard.

It is possible that isolated areas of undiscovered fill not described in this report are present on site; if found, these areas should be treated as discussed earlier. A diligent search shall also be conducted during grading operations in an effort to uncover any underground structures, irrigation or utility lines. If encountered, these structures and lines shall be either removed or properly abandoned prior to the proposed construction.

Any imported fill material should be preferably soil similar to the upper soils encountered at the subject site. All soils shall be approved by this firm prior to importing at the site and will be subjected to additional laboratory testing to assure concurrence with the recommendations stated in this report.

If placement of slabs-on-grade and pavement is not completed immediately upon completion of grading operations, additional testing and grading of the areas may be necessary prior to continuation of construction operations. Likewise, if adverse weather conditions occur which may damage the subgrade soils, additional assessment by the soils engineer as to the suitability of the supporting soils may be needed.

Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase. Adequate drainage away from the structures, pavement and slopes should be provided at all times.

8.1.2 **Fill Blanket Recommendations**

Due to the potential for differential settlement of foundations placed on compacted fill and native materials, it is recommended that all foundations including floor slab areas be underlain by a uniform compacted fill blanket at least two feet in thickness. This fill blanket shall extend a minimum of five horizontal feet outside the edges of foundations or equidistant to the depth of fill placed, whichever is greater.

8.2 **Shrinkage and Subsidence**

The site is underlain by alluvium generally composed of gravels, cobbles and boulders blended with a sand matrix. It is our experience that a loss of volume from oversize rock will be anticipated. Results of our in-place density tests reveal that the soil shrinkage of the matrix will be on the order of 5 to 10% due to excavation and recompaction, based upon the assumption that the fill is compacted to 92% of the maximum dry density per ASTM standards. Subsidence should be 0.2 feet due to earthwork operations.

The volume change does not include any allowance for vegetation or organic stripping, removal of subsurface improvements, or topographic approximations. Although these values are only approximate, they represent our best estimate of lost yardage, which will likely occur during grading. If more accurate shrinkage and subsidence factors are needed, it is recommended that field testing the actual equipment and grading techniques should be conducted.

8.3 **Temporary Excavations**

Temporary *unsurcharged* excavations in the existing site materials may be made at vertical inclinations up to 4 feet in height unless cohesionless soils are encountered. In areas where soils with little or no binder are encountered, where adverse geological conditions are exposed, or where excavations are adjacent to existing structures, shoring or flatter excavations may be required. The temporary cut slope gradients given above do not preclude local raveling and sloughing.

All excavations shall be made in accordance with the requirements of the soils engineer, CAL-OSHA and other public agencies having jurisdiction. Care should be taken to provide or maintain adequate lateral support for all adjacent improvements and structures at all times during the grading operations and construction phase.

8.4 Foundation Design

All foundations may be designed utilizing the following allowable bearing capacities for an embedded depth of 18 inches into approved engineered fill with the corresponding widths:

Allowable Bearing Capacity (psf)		
Width (feet)	Continuous Foundation	Isolated Foundation
1.5	2000	2500
2.0	2075	2575
4.0	2375	2875
6.0	2500	3000

The bearing value may be increased by 500 psf for each additional foot of depth in excess of the 18-inch minimum depth, up to a maximum of 4,000 psf. A one-third increase may be used when considering short-term loading and seismic forces.

Any foundations located along property line may utilize an allowable bearing capacity of 1,500 psf and embedded into competent native soils. A modulus of subgrade reaction (k) of 200 pci may be used for design of slabs placed on engineered fill soils supporting sustained concentrated loads. A representative of this firm shall inspect all foundation excavations prior to pouring concrete.

8.5 Settlement Analysis

Resultant pressure curves for the consolidation tests are shown on Plates B to C. Computations utilizing these curves and the recommended allowable soil bearing capacities reveal that the foundations will experience settlements on the order of ¾ inch and differential settlements of less than ¼ inch.

8.6 **Lateral Resistance**

The following values may be utilized in resisting lateral loads imposed on the structure. Requirements of the California Building Code should be adhered to when the coefficient of friction and passive pressures are combined.

Coefficient of Friction - 0.40

Equivalent Passive Fluid Pressure = 250 lbs./cu.ft.

Maximum Passive Pressure = 2,500 lbs./cu.ft.

The passive pressure recommendations are valid only for approved compacted fill soils or competent native materials.

8.7 **Retaining Wall Design Parameters**

Active earth pressures against retaining walls will be equal to the pressures developed by the following fluid densities. These values are for **granular backfill material** placed behind the walls at various ground slopes above the walls.

Surface Slope of Retained Materials (Horizontal to Vertical	Equivalent Fluid Density (lb./cu.ft.)
Level	30
5 to 1	35
4 to 1	38
3 to 1	40
2 to 1	45

Any applicable short-term construction surcharges and seismic forces should be added to the above lateral pressure values. An equivalent fluid pressure of 45 pcf may be utilized for the restrained wall condition with a level grade behind the wall.

The seismic-induced lateral soil pressure for walls greater than 6 feet may be computed using a triangular pressure distribution with the maximum value at the top of the wall. The maximum lateral pressure of (20 pcf) H where H is the height of the retained soils above the wall footing should be used in final design of retaining walls. Sliding resistance values and passive fluid pressure values may be increased by 1/3 during short-term wind and seismic loading conditions.

All walls shall be waterproofed as needed and protected from hydrostatic pressure by a reliable permanent subdrain system. The granular backfill to be utilized immediately adjacent to retaining walls shall consist of an approved select granular soil with a sand equivalency greater than 30. This backfill zone of free draining material shall consist of a wedge beginning a minimum of one horizontal foot from the base of the wall extending upward at an inclination of no less than ¾ to 1 (horizontal to vertical).

8.8 **Slab Design**

All concrete slabs shall be a minimum of six inches in thickness in the proposed warehouse areas and four inches in office and hardscape and placed on approved subgrade soils compacted to a minimum of 95% of the laboratory standard in the upper 12 inches. Additional reinforcement requirements and an increase in thickness of the slabs-on-grade may be necessary based upon soils expansion potential and proposed loading conditions in the structures and should be evaluated further by the project engineers and/or architect.

A vapor retarder (10-mil minimum thickness) should be utilized in areas which would be sensitive to the infiltration of moisture. This retarder shall meet requirements of ASTM E 96, *Water Vapor Transmission of Materials* and ASTM E 1745, *Standard Specification for Water Vapor Retarders used in Contact with Soil or Granular Fill Under Concrete Slabs.* The vapor retarder shall be installed in accordance with procedures stated in ASTM E 1643, *Standard practice for Installation of Water Vapor Retarders used in Contact with Earth or Granular Fill Under Concrete Slabs.*

The moisture retarder may be placed directly upon compacted subgrade soils conditioned to near optimum moisture levels, although one to two inches of sand beneath the membrane is desirable. The subgrade upon which the retarder is placed shall be smooth and free of rocks, gravel or other protrusions which may damage the retarder. Use of sand above the retarder is under the purview of the structural engineer; if sand is used over the retarder, it should be placed in a dry condition.

8.9 **Preliminary Pavement Section Design**

The table below provides a preliminary pavement design based upon an *estimated* R-Value of 65 for the subgrade soils for the proposed pavement areas. An updated pavement design may be provided upon completion of pending laboratory testing of the near surface soils. Final pavement design may need to be based on R-Value testing of the subgrade soils near the conclusion of site grading to assure that these soils are consistent with those assumed in this preliminary design. *The recommendations are based upon estimated traffic loads. Client should submit any other anticipated traffic loadings to the geotechnical engineer, if necessary, so that pavement sections may be reviewed to determine adequacy to support the proposed loadings.*

Type of Traffic	Traffic Index	Asphalt (in.)	Base Material (in.)
Automobile Parking Stalls	4.0	3.0	3.0
Light Vehicle Circulation Areas	5.5	3.5	5.5
Heavy Truck Access Areas	7.0	4.0	8.0

Any concrete slab-on-grade in pavement areas shall be a minimum of six inches in thickness and may be placed on approved subgrade soils.

All pavement areas shall have positive drainage toward an approved outlet from the site. Drain lines behind curbs and/or adjacent to landscape areas should be considered by client and the appropriate design engineers to prevent water from infiltrating beneath pavement. If such infiltration occurs, damage to pavement, curbs and flow lines, especially on sites with expansive soils, may occur during the life of the project.

Any approved base material shall consist of a Class II aggregate or equivalent and should be compacted to a minimum of 95% relative compaction. All pavement materials shall conform to the requirements set forth by the City of Fontana. The base material; and asphaltic concrete should be tested prior to delivery to the site and during placement to determine conformance with the project specifications. A pavement engineer shall designate the specific asphalt mix design to meet the required project specifications.

8.10 **Utility Trench and Excavation Backfill**

Trenches from installation of utility lines and other excavations may be backfilled with on-site soils or approved imported soils compacted to a minimum of 90% relative compaction. All utility lines shall be properly bedded with clean sand having a sand equivalency rating of 30 or more. This bedding material shall be thoroughly water jetted around the pipe structure prior to placement of compacted backfill soils.

8.11 **Corrosion Design Criteria**

Representative samples of the surficial soils, typical of the subgrade soils expected to be encountered within foundation excavations and underground utilities were tested for corrosion potential. The minimum resistivity value obtained for the samples tested is representative of an environment that may be severely corrosive to metals. The soil pH value was considered mildly alkaline and may not have a significant effect on soil corrosivity. Consideration should be given to corrosion protection systems for buried metal such as protective coatings, wrappings or the use of PVC where permitted by local building codes.

According to Table 4.3.1 of ACI 318 Building Code and Commentary, these contents revealed negligible sulfate concentrations. Therefore, a Type II cement according to latest CBC specifications may be utilized for building foundations at this time. It is recommended that additional sulfate tests be performed at the completion of site grading to assure that the as graded conditions are consistent with the recommendations stated in this design. Corrosion test results may be found on the attached Table IV.

8.12 **Expansive Soil**

On-site soils are very low in expansion potential (EI 0-20). When soils have an expansion index (EI) of 20 or more, special attention should be given to the project design and maintenance. The attached *Expansive Soil Guidelines* should be reviewed by the engineers, architects, owner, maintenance personnel and other interested parties and considered during the design of the project and future property maintenance. Expansion test results may be found on the attached Table II.

9.0 Closure

The recommendations and conclusions contained in this report are based upon the soil conditions uncovered in our test excavations. No warranty of the soil condition between our excavations is implied. NorCal Engineering should be notified for possible further recommendations if unexpected to unfavorable conditions are encountered during construction phase. It is the responsibility of the owner to ensure that all information within this report is submitted to the Architect and appropriate Engineers for the project.

A preconstruction conference should be held between the developer, general contractor, grading contractor, city inspector, architect, and soil engineer to clarify any questions relating to the grading operations and subsequent construction. Our representative should be present during the grading operations and construction phase to certify that such recommendations are complied within the field.

This geotechnical investigation has been conducted in a manner consistent with the level of care and skill exercised by members of our profession currently practicing under similar conditions in the Southern California area. No other warranty, expressed or implied is made.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,
NORCAL ENGINEERING

SPECIFICATIONS FOR PLACEMENT OF COMPACTED FILL

Excavation

Any existing low-density soils and/or saturated soils shall be removed to competent natural soil under the inspection of the Geotechnical Engineering Firm. After the exposed surface has been cleansed of debris and/or vegetation, it shall be scarified until it is uniform in consistency, brought to the proper moisture content and compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557).

In any area where a transition between fill and native soil or between bedrock and soil are encountered, additional excavation beneath foundations and slabs will be necessary in order to provide uniform support and avoid differential settlement of the structure.

Material for Fill

The on-site soils or approved import soils may be utilized for the compacted fill provided they are free of any deleterious materials and shall not contain any rocks, brick, asphaltic concrete, concrete or other hard materials greater than eight inches in maximum dimensions. Any import soil must be approved by the Geotechnical Engineering firm a minimum of 72 hours prior to importation of site.

Placement of Compacted Fill Soils

The approved fill soils shall be placed in layers not excess of six inches in thickness. Each lift shall be uniform in thickness and thoroughly blended. The fill soils shall be brought to within 2% of the optimum moisture content, unless otherwise specified by the Soils Engineering firm. Each lift shall be compacted to a minimum of 90% relative compaction (in accordance with ASTM: D 1557) and approved prior to the placement of the next layer of soil. Compaction tests shall be obtained at the discretion of the Geotechnical Engineering firm but to a minimum of one test for every 500 cubic yards placed and/or for every 2 feet of compacted fill placed.

The minimum relative compaction shall be obtained in accordance with accepted methods in the construction industry. The final grade of the structural areas shall be in a dense and smooth condition prior to placement of slabs-on-grade or pavement areas. No fill soils shall be placed, spread or compacted during unfavorable weather conditions. When the grading is interrupted by heavy rains, compaction operations shall not be resumed until approved by the Geotechnical Engineering firm.

Grading Observations

The controlling governmental agencies should be notified prior to commencement of any grading operations. This firm recommends that the grading operations be conducted under the observation of a Soils Engineering firm as deemed necessary. A 24-hour notice must be provided to this firm prior to the time of our initial inspection.

Observation shall include the clearing and grubbing operations to assure that all unsuitable materials have been properly removed; approve the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished grade and designate areas of overexcavation; and perform field compaction tests to determine relative compaction achieved during fill placement. In addition, all foundation excavations shall be observed by the Soils Engineering firm to confirm that appropriate bearing materials are present at the design grades and recommend any modifications to construct footings.

EXPANSIVE SOIL GUIDELINES

The following expansive soil guidelines are provided for your project. The intent of these guidelines is to inform you, the client, of the importance of proper design and maintenance of projects supported on expansive soils. ***You, as the owner or other interested party, should be warned that you have a duty to provide the information contained in the soil report including these guidelines to your design engineers, architects, landscapers and other design parties in order to enable them to provide a design that takes into consideration expansive soils.***

In addition, you should provide the soil report with these guidelines to any property manager, lessee, property purchaser or other interested party that will have or assume the responsibility of maintaining the development in the future.

Expansive soils are fine-grained silts and clays which are subject to swelling and contracting. The amount of this swelling and contracting is subject to the amount of fine-grained clay materials present in the soils and the amount of moisture either introduced or extracted from the soils. Expansive soils are divided into five categories ranging from "very low" to "very high". Expansion indices are assigned to each classification and are included in the laboratory testing section of this report. *If the expansion index of the soils on your site, as stated in this report, is 21 or higher, you have expansive soils.* The classifications of expansive soils are as follows:

Classification of Expansive Soil*

Expansion Index	Potential Expansion
0-20	Very Low
21-50	Low
51-90	Medium
91-130	High
Above 130	Very High

*From Table 18A-I-B of California Building Code (1988)

When expansive soils are compacted during site grading operations, care is taken to place the materials at or slightly above optimum moisture levels and perform proper compaction operations. Any subsequent excessive wetting and/or drying of expansive soils will cause the soil materials to expand and/or contract. These actions are likely to cause distress of foundations, structures, slabs-on-grade, sidewalks and pavement over the life of the structure. ***It is therefore imperative that even after construction of improvements, the moisture contents are maintained at relatively constant levels, allowing neither excessive wetting or drying of soils.***

Evidence of excessive wetting of expansive soils may be seen in concrete slabs, both interior and exterior. Slabs may lift at construction joints producing a trip hazard or may crack from the pressure of soil expansion. Wet clays in foundation areas may result in lifting of the structure causing difficulty in the opening and closing of doors and windows, as well as cracking in exterior and interior wall surfaces. In extreme wetting of soils to depth, settlement of the structure may eventually result. Excessive wetting of soils in landscape areas adjacent to concrete or asphaltic pavement areas may also result in expansion of soils beneath pavement and resultant distress to the pavement surface.

Excessive drying of expansive soils is initially evidenced by cracking in the surface of the soils due to contraction. Settlement of structures and on-grade slabs may also eventually result along with problems in the operation of doors and windows.

Projects located in areas of expansive clay soils will be subject to more movement and "hairline" cracking of walls and slabs than similar projects situated on non-expansive sandy soils. There are, however, measures that developers and property owners may take to reduce the amount of movement over the life the development. The following guidelines are provided to assist you in both design and maintenance of projects on expansive soils:

- Drainage away from structures and pavement is essential to prevent excessive wetting of expansive soils. Grades should be designed to the latest building code and maintained to allow flow of irrigation and rain water to approved drainage devices or to the street. Any "ponding" of water adjacent to buildings, slabs and pavement after rains is evidence of poor drainage; the installation of drainage devices or regrading of the area may be required to assure proper drainage. Installation of rain gutters is also recommended to control the introduction of moisture next to buildings. Gutters should discharge into a drainage device or onto pavement which drains to roadways.

- Irrigation should be strictly controlled around building foundations, slabs and pavement and may need to be adjusted depending upon season. This control is essential to maintain a relatively uniform moisture content in the expansive soils and to prevent swelling and contracting. Over-watering adjacent to improvements may result in damage to those improvements. NorCal Engineering makes no specific recommendations regarding landscape irrigation schedules.

- Planting schemes for landscaping around structures and pavement should be analyzed carefully. Plants (including sod) requiring high amounts of water may result in excessive wetting of soils. Trees and large shrubs may actually extract moisture from the expansive soils, thus causing contraction of the fine-grained soils.

- Thickened edges on exterior slabs will assist in keeping excessive moisture from entering directly beneath the concrete. A six-inch thick or greater deepened edge on slabs may be considered. Underlying interior and exterior slabs with 6 to 12 inches or more of non-expansive soils and providing presaturation of the underlying clayey soils as recommended in the soil report will improve the overall performance of on-grade slabs.

- Increase the amount of steel reinforcing in concrete slabs, foundations and other structures to resist the forces of expansive soils. The precise amount of reinforcing should be determined by the appropriate design engineers and/or architects.

- Recommendations of the soil report should always be followed in the development of the project. Any recommendations regarding presaturation of the upper subgrade soils in slab areas should be performed in the field and verified by the Soil Engineer.

VII.4.1. Site Suitability Considerations

Suitability assessment related considerations include (**Table VII.3**):

- Soil assessment methods – the site assessment extent (e.g., number of borings, test pits, etc.) and the measurement method used to estimate the short-term infiltration rate.
- Predominant soil texture/percent fines – soil texture and the percent of fines can greatly influence the potential for clogging.
- Site soil variability – site with spatially heterogeneous soils (vertically or horizontally) as determined from site investigations are more difficult to estimate average properties for resulting in a higher level of uncertainty associated with initial estimates.
- Depth to seasonal high groundwater/impervious layer – groundwater mounding may become an issue during excessively wet conditions where shallow aquifers or shallow clay lenses are present.

Table VII.3: Suitability Assessment Related Considerations for Infiltration Facility Safety Factors

Consideration	High Concern	Medium Concern	Low Concern	
Assessment methods (see explanation below)	Use of soil survey maps or simple texture analysis to estimate short-term infiltration rates	Direct measurement of ≥ 20 percent of infiltration area with localized infiltration measurement methods (e.g., infiltrometer)	Direct measurement of ≥ 50 percent of infiltration area with localized infiltration measurement methods or Use of extensive test pit infiltration measurement methods	Per infiltration report in Attachment D
Texture Class	Silty and clayey soils with significant fines	Loamy soils	Granular to slightly loamy soils	Per infiltration report in Attachment D
Site soil variability	Highly variable soils indicated from site assessment or limited soil borings collected during site assessment	Soil borings/test pits indicate moderately homogeneous soils	Multiple soil borings/test pits indicate relatively homogeneous soils	Per infiltration report in Attachment D
Depth to groundwater/ impervious layer	<5 ft below facility bottom	5-10 ft below facility bottom	>10 below facility bottom	Per infiltration report in Attachment D

Localized infiltration testing refers to methods such as the double ring infiltrometer test (ASTM D3385-88) which measure infiltration rates over an area less than 10 sq-ft, may include lateral

flow, and do not attempt to account for heterogeneity of soil. The amount of area each test represents should be estimated depending on the observed heterogeneity of the soil.

Extensive infiltration testing refers to methods that include excavating a significant portion of the proposed infiltration area, filling the excavation with water, and monitoring drawdown. The excavation should be to the depth of the proposed infiltration surface and ideally be at least 50 to 100 square feet.

In all cases, testing should be conducted in the area of the proposed BMP where, based on review of available geotechnical data, soils appear least likely to support infiltration.

VII.4.2. Design Related Considerations

Design related considerations include (**Table VII.4**):

- Size of area tributary to facility – all things being equal, risk factors related to infiltration facilities increase with an increase in the tributary area served. Therefore facilities serving larger tributary areas should use more restrictive adjustment factors.
- Level of pretreatment/expected influent sediment loads – credit should be given for good pretreatment by allowing less restrictive factors to account for the reduced probability of clogging from high sediment loading. Also, facilities designed to capture runoff from relatively clean surfaces such as rooftops are likely to see low sediment loads and therefore should be allowed to apply less restrictive safety factors.
- Redundancy – facilities that consist of multiple subsystems operating in parallel such that parts of the system remains functional when other parts fail and/or bypass should be rewarded for the built-in redundancy with less restrictive correction and safety factors. For example, if bypass flows would be at least partially treated in another BMP, the risk of discharging untreated runoff in the event of clogging the primary facility is reduced. A bioretention facility that overflows to a landscaped area is another example.
- Compaction during construction – proper construction oversight is needed during construction to ensure that the bottoms of infiltration facility are not overly compacted. Facilities that do not commit to proper construction practices and oversight should have to use more restrictive correction and safety factors.

Table VII.4: Design Related Considerations for Infiltration Facility Safety Factors

Consideration	High Concern	Medium Concern	Low Concern
Tributary area size	Greater than 10 acres.	Greater than 2 acres but less than 10 acres.	2 acres or less.
Level of pretreatment/ expected influent sediment loads	Pretreatment from gross solids removal devices only, such as hydrodynamic separators, racks and screens AND tributary area includes landscaped areas, steep slopes, high traffic areas, or any other areas expected to produce high sediment, trash, or debris loads.	Good pretreatment with BMPs that mitigate coarse sediments such as vegetated swales AND influent sediment loads from the tributary area are expected to be relatively low (e.g., low traffic, mild slopes, disconnected impervious areas, etc.).	Excellent pretreatment with BMPs that mitigate fine sediments such as bioretention or media filtration OR sedimentation or facility only treats runoff from relatively clean surfaces, such as rooftops.
Redundancy of treatment	No redundancy in BMP treatment train.	Medium redundancy, other BMPs available in treatment train to maintain at least 50% of function of facility in event of failure.	High redundancy, multiple components capable of operating independently and in parallel, maintaining at least 90% of facility functionality in event of failure.
Compaction during construction	Construction of facility on a compacted site or elevated probability of unintended/ indirect compaction.	Medium probability of unintended/ indirect compaction.	Heavy equipment actively prohibited from infiltration areas during construction and low probability of unintended/ indirect compaction.

7.82 acres

VII.4.3. Determining Factor of Safety

A factor of safety shall be used. To assist in selecting the appropriate design infiltration rate, the measured short term infiltration rate should be adjusted using a weighted average of several safety factors using the worksheet shown in **Worksheet H** below. The design infiltration rate would be determined as follows:

1. For each consideration shown in **Table VII.3** and **Table VII.4** above, determine whether the consideration is a high, medium, or low concern.
2. For all high concerns, assign a factor value of 3, for medium concerns, assign a factor value of 2, and for low concerns assign a factor value of 1.
3. Multiply each of the factors by the corresponding weight to get a product.
4. Sum the products within each factor category to obtain a safety factor for each.
5. Multiply the two safety factors together to get the final combined safety factor. If the combined safety factor is less than 2, then 2 shall be used as the safety factor.
6. Divide the measured short term infiltration rate by the combined safety factor to obtain the adjusted design infiltration rate for use in sizing the infiltration facility.

The design infiltration rate shall be used to size BMPs and to evaluate their expected long term performance. This rate shall not be less than 2, but may be higher at the discretion of the design engineer.

Worksheet H: Factor of Safety and Design Infiltration Rate and Worksheet

Factor Category		Factor Description	Assigned Weight (w)	Factor Value (v)	Product (p) p = w x v
A	Suitability Assessment	Soil assessment methods	0.25	1	0.25
		Predominant soil texture	0.25	1	0.25
		Site soil variability	0.25	1	0.25
		Depth to groundwater / impervious layer	0.25	1	0.25
		Suitability Assessment Safety Factor, $S_A = \Sigma p$			1.00
B	Design	Tributary area size	0.25	2	0.50
		Level of pretreatment/ expected sediment loads	0.25	2	0.50
		Redundancy	0.25	1	0.25
		Compaction during construction	0.25	1	0.25
		Design Safety Factor, $S_B = \Sigma p$			1.50
Combined Safety Factor, $S_{TOT} = S_A \times S_B$					2.50, use 5
Measured Infiltration Rate, inch/hr, K_M (corrected for test-specific bias)					61.9
Design Infiltration Rate, in/hr, $K_{DESIGN} = ~~S_{TOT} \times K_M~~ \; K_M \div S_{TOT}$					12.4, use 2.4

Supporting Data

Briefly describe infiltration test and provide reference to test forms:

*See Attachment D for Infiltration Report for infiltration rate. Infiltration rate 61.9 in/hr will be used per CASQA guidance.

Note: The minimum combined adjustment factor shall not be less than 2.0 and the maximum combined adjustment factor shall not exceed 9.0.

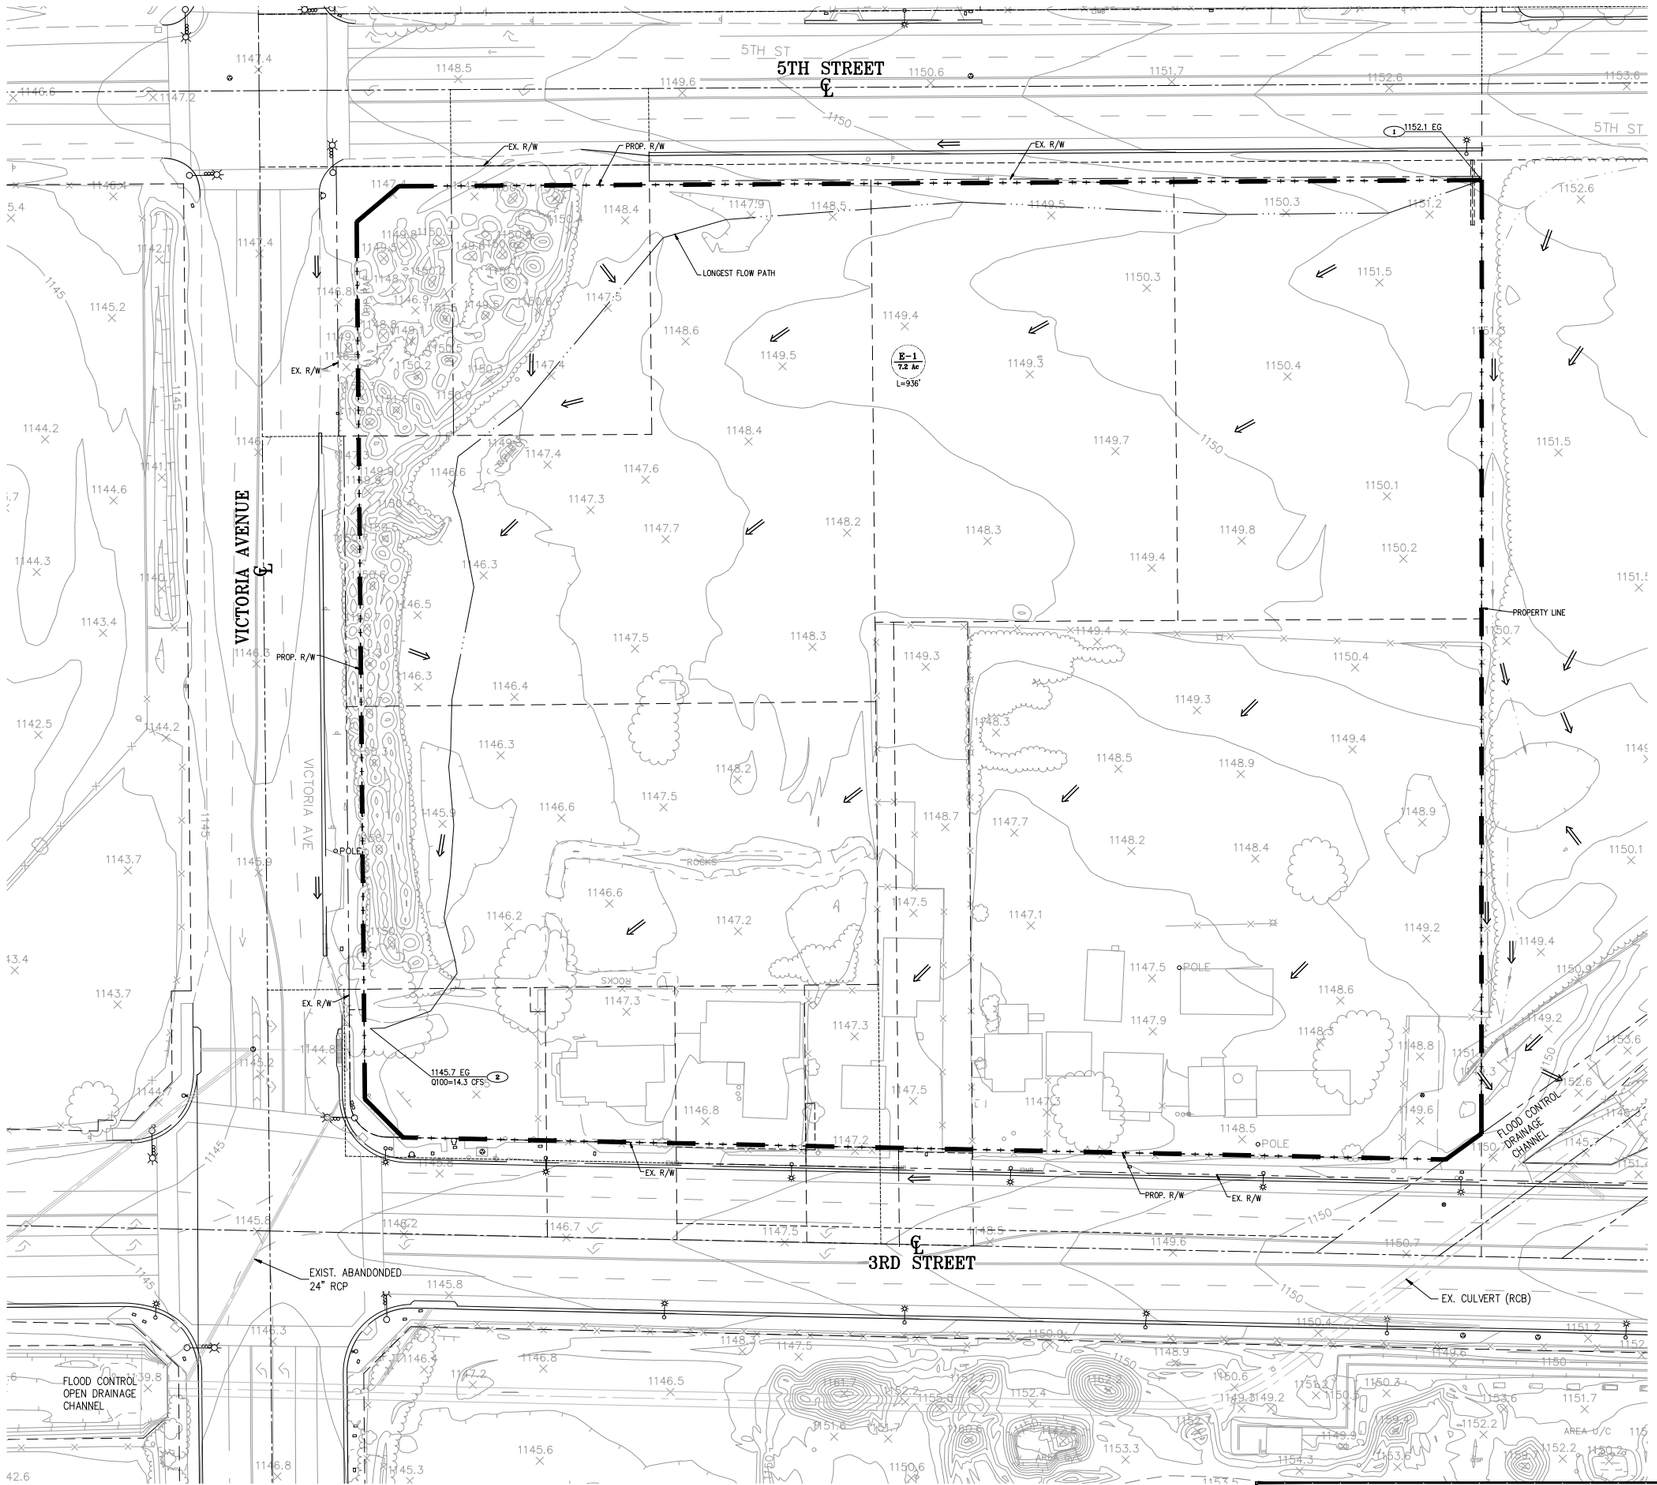
Introduction
The project is a new development of an industrial facility located at the southeast corner of 5th Street and Victoria Avenue in Highland, California. Proposed building is approximately 176,066 square feet on approximately 7.23 acres. Currently, the southeast portion of the site is used as a car and trailer storage yard and directly south of the property are residential homes facing Central Ave.

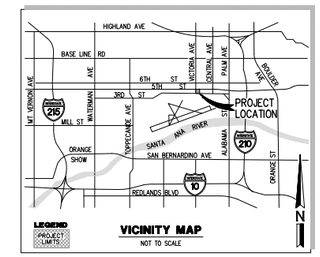
Purpose
The purpose of this preliminary report is to present the drainage concept for the project and to determine the design flow rates and estimate storm drain sizes that will be needed for the proposed development. The drainage maps (Appendix A) and calculations reflect the tributary areas and 100-year storm event runoff flows (Q100).

Existing Condition
The northerly portion of the site is vacant with scattered grass. The site slopes down by approximately 0.7% from the northeast corner to the southwest corner and has about six (6) feet of fall from upstream to downstream. Existing runoff sheet flows onto the 3rd Street and Victoria Intersection where it is intercepted by existing catch basins. The collected flow then discharges to the 3rd Street Storm Drain system, followed by the City Creek Channel, Santa Ana River, and finally enters the Prado Basin. See Appendix A for existing drainage map.

Proposed Condition
The proposed post-development drainage pattern preserves the existing drainage pattern. See Appendix A for the proposed on-site hydrology map. For the proposed development, all onsite runoff will be directed to the onsite underground infiltration/detention system on the west side of the site. The underground infiltration system is designed to retain and treat runoff through infiltration of the design capture volume. The overflow from the infiltration system will be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue which discharges to the 3rd Street Storm Drain System.



Hydrologic Analysis
A hydrologic analysis was prepared using the methodology outlined in the San Bernardino County Flood Control District (SBCFCD) Hydrology Manual. A rational method analysis was completed for existing and proposed 100-year storm event using Civild software, version 7.1. Unit Hydrograph and Basin Routing analyses were also completed using Civild software.



The 100-year 1-hour storm depth was taken from the isohyetal maps in the County of San Bernardino Hydrology Manual. The site's hydrologic soils type is "B" and was taken from San Bernardino County's Stormwater Facility Mapping Tool. For the proposed development's hydrologic analysis, a commercial land use was used with an AMC of 3. See Appendix D for hydrologic soils type and isohyetal maps.

Discussion
It is our understanding that peak storm mitigation from a developed condition is not required for this project or in this area. Nonetheless, according to the hydrologic and basin routing analysis for existing and proposed conditions, the results indicate the proposed Q100 flow will be reduced by the underground system prior to discharge to the Victoria Avenue Storm Drain System. The design capture volume will be retained onsite through infiltration.

See Appendix B for hydrologic analysis and Appendix C for basin routing summary, unit hydrograph, and basin routing analyses. All proposed drainage and storm drain facilities will be sized adequately for Q100 and calculations will be provided in the final drainage report.

**** CONFLUENCE OF MAIN STREAMS ****
------------------------------------------------------------------------
The following data inside Main Stream is listed:
In Main Stream number: 2
Stream flow area =      3.500(Ac.)
Runoff from this stream =     12.070(CFS)
Time of concentration =    9.48 min.
Rainfall intensity =     3.874(In/Hr)
Area averaged loss rate (Fm) =    0.0440(In/Hr)
Area averaged Pervious ratio (Ap) = 0.1000
Summary of stream data:

Stream Flow rate    Area     TC     Fm       Rainfall Intensity
 No.    (CFS)    (Ac.)       (min) (In/Hr)     (In/Hr)

1     15.33     4.600     10.04    0.044      3.741
2     12.07     3.500      9.48    0.044      3.874
Qmax(1) =
          1.000 *    1.000 *    15.333) +
          0.965 *    1.000 *    12.070) + =      26.985
Qmax(2) =
          1.036 *    0.943 *    15.333) +
          1.000 *    1.000 *    12.070) + =      27.057

Total of 2 main streams to confluence:
Flow rates before confluence point:
      16.333      13.070
Maximum flow rates at confluence using above data:
       26.985       27.057
Area of streams before confluence:
        4.600        3.500
Effective area values after confluence:
        8.100        7.840

Results of confluence:
Total flow rate =     27.057(CFS)
Time of concentration =     9.475 min.
Effective stream area after confluence  =      7.840(Ac.)
Study area average Pervious fraction(Ap) =  0.100
Study area average soil loss rate(Fm) =    0.044(In/Hr)
Study area total =       8.10(Ac.)
End of computations, Total Study Area =            8.10 (Ac.)
The following figures may
be used for a unit hydrograph study of the same area.
Note: These figures do not consider reduced effective area
effects caused by confluences in the rational equation.

Area averaged pervious area fraction(Ap) = 0.100
Area averaged SCS curve number =  56.0
```

7	5.5	1,138.10	5,405	4,385	21,171	0.486	1.19	
8	6.5	1,139.10	5,405	4,237	25,408	0.583	1.19	
9	7.5	1,140.10	5,405	3,903	29,311	0.673	1.19	***Meets WQMP DCV @ 1,139.8**
10	8.5	1,141.10	5,405	3,180	32,492	0.746	1.19	**Soffit of 96" CMP Release overflow modeled at 1142.1 Center of 24" (1141.1 + 1)**
11	9.0	1,141.60	5,405	1,081	33,573	0.771	3.56	**Top of Infiltration/ Detention System**
12	11.00	1,143.60	5,405	0	33,573	0.771	19.72	
13	11.50	1,144.10	5,405	0	33,573	0.771	22.58	
14	12.50	1,145.10	5,405	0	33,573	0.771	27.39	

Infiltration rate per geotechnical report = 56"/hr, Factor of Safety =6.
Unit convert = (56"/hr)/6 x (1'/12") X (1hr/60min) X (1 min/60 sec) = 0.00022 ft/sec
Underground Basin open area is 235' x 23' = 5,405 sf
Therefore, Q out for basin = 5,405 X 0.00022 = 1.19 cfs

*WQMP Design Capture Volume is 27,766 CF

Q OutFlow = 24" Drain Pipe+ Basin Infiltration Q
= (CA x (2gh)^(1/2)) + Basin Infiltration Q
= (0.6A x (64.4xh)^(1/2)) + Basin Infiltration Q
A = 24" drain pipe area
h = Water Height Above half of pipe (12")

Example: WSE @ 1144.1
={0.6 x (3.14 x 1)^2)x [64.4 x (1144.1-1142.1)]^(1/2)} + 1.19
= 22.58 cfs

Basin Routing Summary Table

100 YEAR STORM	
Max. Q Out (CFS)	**21.5**
WSE	**1143.91**

**** RETARDING BASIN ROUTING ****
_____

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 293
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

Is the project screened from VMT assessment? Yes (No)

VMT Screening Justification: The City of Highland does not have VMTguidelines, however based on previous projects in the city it was directed to use SBCTA's VMT guidelines. Per SBCTA's VMT Screening Tool, the project would not screen out of conducting a detailed VMT analysis. Therefore, the project's VMT analysis was conducted using a project specific SBTAM model run. A detailed VMT analysis showing less than significant VMT impact will be included in the project's ISMND.

SITE PLAN GENERAL NOTES

1. THE SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS.
2. GENERAL CONTRACTOR TO REVIEW THE SOILS REPORT AND ALL AMENDMENTS LISTED ON THE TITLE SHEET AND FOLLOW ALL RECOMMENDATIONS.
3. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS AND CURBS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL OR CURB. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER LINE OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR THE FACE OF THE WALL FINISH.
4. REFER TO CIVIL, AND MEP PLANS TO CONFIRM UTILITY INFORMATION SHOWN ON THE ARCHITECTS SITE PLAN AND FOR ADDITIONAL UTILITY INFORMATION. GENERAL CONTRACTOR TO COORDINATE ALL POINTS OF CONNECTION.
5. REFER TO CIVIL DRAWINGS FOR ALL FINISHED GRADES AND SLOPES. ALL FINISHED GRADES TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING. GENERAL CONTRACTOR TO FIELD VERIFY.
6. ALL ACCESSIBLE ROUTES IDENTIFIED ON THE SITE PLAN DRAWINGS SHALL CONFORM TO THE FOLLOWING:
   a) SLOPES IN THE DIRECTION OF TRAVEL DO NOT EXCEED 5%. CROSS SLOPES DO NOT EXCEED 2%.
   b) THE CLEAR WIDTH OF ALL WALKWAYS IS 4'-0" MIN.
   c) CHANGES IN LEVEL UP TO 1/2" COMPLY w/ 11A0.2.1. CHANGES IN LEVEL GREATER THAN 1/2" IF THEY OCCUR ARE RAMPED. SEE PLANS.
   d) THE VERTICAL CLEARANCE ALONG THE ACCESSIBLE ROUTE IS 80" MIN.
7. ALL PAVED AND LANDSCAPED AREAS TO BE BOUND BY A MIN. 6" HIGH, 6" WIDE CONCRETE CURB U.O.N.
8. A CONCRETE MOW STRIP EXTENDING 12" BEYOND EA END OF THE OPENING SHALL BE PROVIDED @ ALL EXTERIOR GLAZING WHERE THE SILL IS WITHIN 3' VERTICAL OF THE FINISHED GRADE. SEE 2/AD1.1
10. PROVIDE PIPE BOLLARD PROTECTION POSTS AS REQUIRED BY UTILITY COMPANIES AND OR FIRE AUTHORITIES AT ALL EXTERIOR ELECTRICAL EQUIPMENT AND FIRE PREVENTION DEVICES. IF PIPE BOLLARD PROTECTION POST DETAILS ARE NOT PROVIDED BY UTILITY COMPANIES AND OR FIRE AUTHORITY SEE DETAIL 3/AD1.1
11. ALL EXPOSED BIORETENSION DEVICE COVERINGS SHALL BE PAINTED FOREST GREEN.
12. WHERE OCCURS, GENERAL CONTRACTOR TO PROVIDE FLUID APPLIED DAMP PROOFING AT ALL RETAINING AND PLANTER WALLS WHERE THE SIDE OF THE WALL OPPOSITE THE SOIL SIDE IS EXPOSED TO VIEW AND ALL EXTERIOR WALLS WHERE THE ADJACENT FLOOR SLAB IS BELOW GRADE. SEE 6/AD1.2
13. PROVIDE A HOSE BIB NEAR THE MAIN ENTRANCE AND IN THE TRASH ENCLOSURE. SEE PLAN FOR LOCATION.

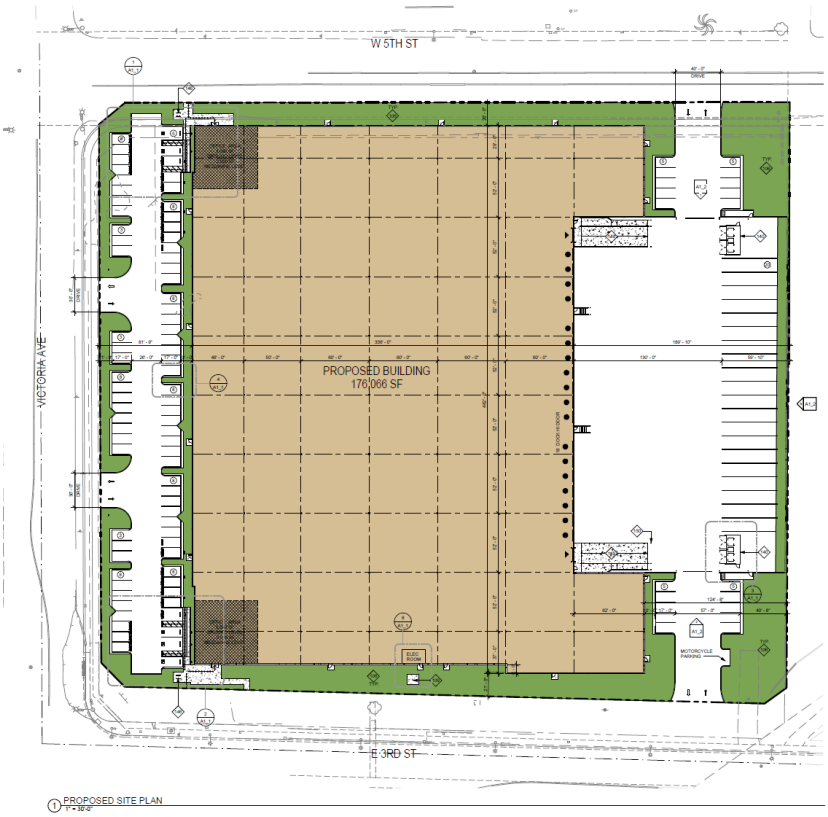
Vehicle Miles Traveled Analysis

February 1, 2023

Ms. Sabita Tewani
Dudek
605 Third Street
Encinitas, CA 92024

PATRIOT PARTNERS 5TH STREET VEHICLE MILES TRAVELED (VMT) ANALYSIS



Ms. Sabita Tewani,

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Analysis for the Patriot Partners 5th Street development (**Project**), which is located on the northeast corner of 3rd Street and Victoria Avenue in the City of Highland.

PROJECT OVERVIEW

It is our understanding that the project is to consist of a single 176,066 square foot industrial warehouse building on 7.23 acres. A preliminary site plan can be found in Exhibit 1.

EXHIBIT 1: PRELIMINARY SITE PLAN

BACKGROUND

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018) (**Technical Advisory**) (1). In February 2020, the San Bernardino County Transportation Authority (SBCTA) released the SBCTA Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (**SBCTA Guidelines**) (2) that address VMT analysis requirements. At the time of this analysis, the City of Highland has yet to formally adopt City VMT guidelines and impact thresholds. However, based on consultation with City planning and engineering staff, this analysis has been prepared utilizing recommendations outlined by the SBCTA Guidelines.

VMT SCREENING

The SBCTA Guidelines provide information on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less than significant impact without the need to conduct a more detailed project level assessment. For the purposes of this analysis, the initial VMT screening process has been conducted with the SBCTA VMT Screening Tool (**Screening Tool**), which uses screening criteria consistent with the screening thresholds recommended in the City Guidelines. The SBCTA recommended screening thresholds are listed below:

- Step 1: TPA screening
- Step 2: Low VMT area screening
- Step 3: Project Type screening

Consistent with SBCTA Guidelines, a land use project needs only to satisfy one of the above screening thresholds to result in a less than significant impact.

TPA SCREENING

As described in the SBCTA Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"[1] or an existing stop along a "high-quality transit corridor"[2]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

[1] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").
[2] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Based on the Screening Tool results presented in Attachment A, the Project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

TPA screening criteria is not met.

LOW VMT AREA SCREENING

Consistent with the SBCTA Guidelines, "Residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area."[3] The Project's physical location based on APN(s) is selected in the Screening Tool to determine project generated VMT as compared to the City's recommended impact threshold. The parcel containing the proposed Project was selected and the Screening Tool was run for the VMT per service population measure of VMT. The Project resides within TAZ 53831303 and was shown to generate 25.9 VMT per service population whereas the City's impact threshold is 26.6 VMT per service population. Based on the Screening Tool results, the Project is located within a low VMT generating zone as compared to the City's recommended threshold of better than City of Highland future buildout VMT per service population (See Attachment A). However, the TAZ for which the Project resides does not include any industrial employment and therefore would not be reflective of the Project's proposed land use.

Low VMT Area screening criteria is not met.

PROJECT TYPE SCREENING

SBCTA Guidelines state that local serving retail projects less than 50,000 square feet may be presumed to have a less than significant impact. In addition to local serving retail, other local serving land uses such as public facilities, day care centers, gas stations, etc. would tend to provide local services and result in reducing overall VMT. The Project does not intend to develop any local serving retail or essential services.

[3] SBCTA Guidelines; Page26

Additionally, SBCTA Guidelines identifies projects that generate fewer than 110 daily trips would not cause a substantial increase in the total citywide or regional VMT and are therefore presumed to have a less than significant impact on VMT. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021 (3). The proposed Project is anticipated to generate a total of 301 vehicle trip-ends per day (see Attachment B). The Project is anticipated to generate more than 110 trips per day. Therefore, the Project would not meet the daily vehicle trips screening threshold.

Project Type screening criteria is not met.

The Project does not meet any of the aforementioned screening criteria and a VMT analysis has been prepared.

VMT ANALYSIS

VMT MODELING

SBCTA Guidelines identify SBTAM as the appropriate tool for conducting VMT analysis for land use projects in San Bernardino County. SBTAM is a useful tool to estimate VMT as it considers interactions between different land uses based on socio-economic data such as population, households, and employment. The calculation of VMT for land use projects is based on the total number of trips generated and the average trip length of each vehicle. SBTAM is also consistent with the model used to develop the City's VMT impact thresholds listed by the SBCTA Guidelines. Therefore, the vehicle trips and average daily trip length for project-related vehicle trips are model derived from SBTAM.

VMT METRIC AND SIGNIFICANCE THRESHOLD

Based on consultation with City Staff, a single employment generating land use project in the City of Highland shall use the VMT metric of VMT per service population (i.e., population plus employment) as the appropriate measure in a VMT analysis. The City Guidelines have identified following recommended threshold:

- The baseline and cumulative project generated VMT per service population exceeds the future City buildout citywide average VMT per service population.

SBCTA provides VMT calculations for each of its member agencies. Urban Crossroads has obtained this published data from SBCTA, which for the City of Highland the citywide future buildout is reported to be **22.54 VMT per service population**.

PROJECT LAND USE CONVERSION

In order to evaluate Project VMT, standard land use information must first be converted into data compatible with SBTAM. The SBTAM model utilizes socio-economic data (SED) (e.g., population, households, employment, etc.) instead of land use information for the purposes of vehicle trip estimation. Project land use information such as building square footages must first be changed to SED (i.e., employment) for input into SBTAM. Employment density factors are derived by the Southern California Association of Governments (SCAG) Employment Density Study (October

2001) (4). Table 1 presents the estimated number of Project employees by land use type used to populate the SBTAM model for the proposed Project.

TABLE 1: EMPLOYMENT ESTIMATES

Land Use	Quantity	Conversion Factor	Employees
Warehouse	176,066	1,195 SF per employee	147

PROJECT GENERATED VMT CALCULATION AND RESULTS

SBTAM was utilized to calculate Project generated VMT for the Project's proposed warehousing land uses. Those values were then divided by the Project's scenario specific service population[4] in estimate to derive project generated VMT per service population. The VMT for all scenarios is then normalized by dividing by the Project TAZ's service population. The project generated VMT and VMT per service population was then calculated for baseline 2022 condition using straight-line interpolation of the base year and cumulative year results. Table 2 identifies the project generated VMT, VMT per service population, and the Project's comparison to the City's threshold.

TABLE 2: PROJECT VMT PER SERVICE POPULATION

	Baseline	Cumulative Year
Service Population	147	147
VMT	2,865	2,589
VMT per Service Population	19.45	17.57
City Threshold	22.54	22.54
Percent Below City Threshold	-13.71%	-22.05%
Potentially Significant?	No	No

The Project would not exceed the threshold future City buildout citywide average VMT per service population for both in the baseline or cumulative Project conditions. The Project VMT impact is therefore considered less than significant.

PROJECT'S CUMULATIVE EFFECT ON VMT

The SBCTA Guidelines consistent with the Technical Advisory states that cumulative impacts on VMT "… metrics such as VMT per capita, VMT per employee, and VMT per service population i.e., metrics framed in terms of efficiency (as recommended below for use on residential and office projects), cannot be summed because they employ a denominator. A project that falls below an efficiency-based threshold that is aligned with long-term goals and relevant plans has no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa. This is similar to the analysis typically conducted for greenhouse gas emissions, air quality impacts, and impacts that utilize plan compliance as a threshold of significance." Since the Project

[4] As the Project only includes employment generating uses, service population (i.e., population plus employment) refers in this case to only employees.

was found to have a less than significant impact at the project level, it is considered to have a less than significant cumulative impact as well.

CONCLUSION

In summary, the Project was evaluated consistent with available screening criteria as presented in the City Guidelines. The Project was found to not meet any available screening criteria and a VMT analysis using SBTAM was performed. The results show that the Project would not exceed the City's impact threshold. The Project has a less than significant impact on VMT.

If you have any questions, please contact me directly at aso@urbanxroads.com.

Respectfully submitted,

URBAN CROSSROADS, INC.

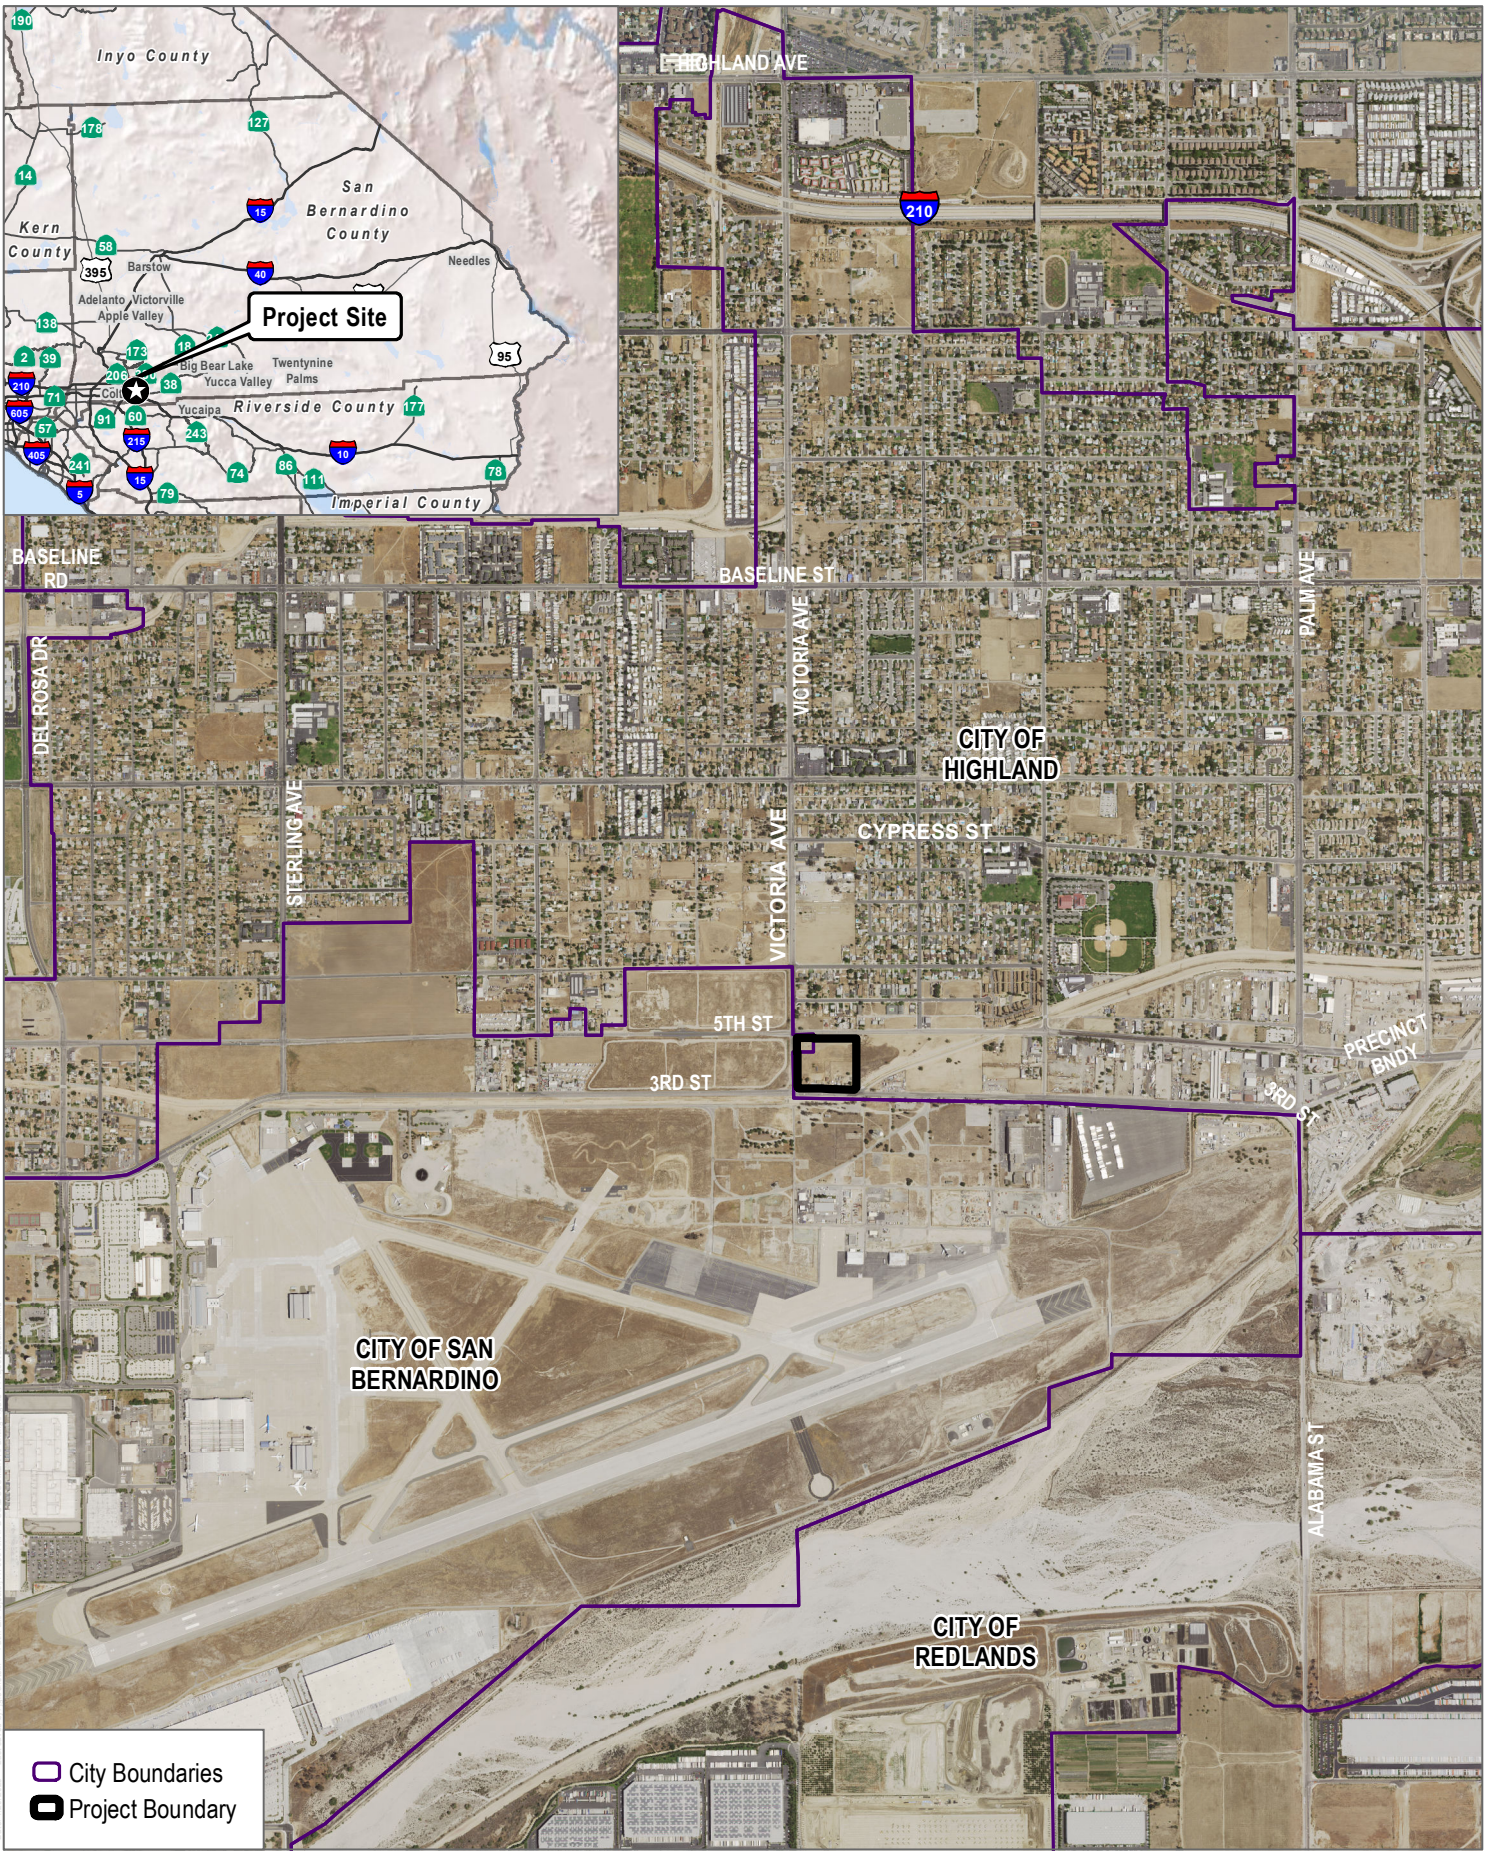
MEMORANDUM

To:	Kim Stater, City of Highland
From:	Sabita Tewani, AICP, PTP, Transportation Planner Dennis Pascua, Transportation Services Manager
Subject:	Parking Study for the 5th Street and Victoria Avenue Warehouse Project, City of Highland
Date:	June 28, 2023
cc:	Alexandra Martini, Project Manager
Attachments:	Attachment A – Site Plan Attachment B – Parking Ratios at Other Patriot Developments Attachment C – Driveway Counts and Parking Demand Worksheets

The following parking study has been prepared for the proposed 5th and Victoria Street Warehouse project (project) in the City of Highland (City). Figure 1 illustrates the regional and project location.



The proposed project is a warehouse located along the southwestern border of the City, north of the San Bernardino International Airport and the City of San Bernardino. Table 16.52.030.A in Section 16.52.030 of the Highland Municipal Code (Code) identifies the following off-street automobile parking space requirements for the following land uses applicable to the project:

- *E.3. Warehouse and distribution: 1 space per 1,000 gross feet of floor area devoted to warehousing plus the required amount of parking for gross square footage devoted to other uses.*
- *B.3.I.i. Offices – Administrative, business, professional: 1 space per 250 gross feet of floor area.*

Furthermore, in the case that the project would not be able to provide the Code's required number of spaces, per Section 16.52.020, a decrease in the number of required spaces may be granted through the approval of a variance:

- *F.2. A decrease in the number of spaces required by the schedules for provision of off-street parking and loading spaces and bicycle facilities contained in HMC 16.52.030 and 16.52.040 may be granted under the circumstances identified in HMC 16.52.050, or by the approval of a variance.*

The purpose of this parking study is to determine whether the project will provide an adequate parking supply based on the City Code's parking requirement. In addition, in the event the project could not meet the City's Code parking requirement, the City is allowing a parking demand analysis to be conducted to determine whether adequate parking would be supplied on site, subject to the City's review and approval. The parking demand analysis is based on the observed parking demand of four existing warehouses that are of similar use and comparable size to the proposed project. Two of the warehouses are located within three miles of the project site

FIGURE 1

Project Location

5th Street and Victoria Avenue Warehouse Project

were surveyed in 2021. Two additional warehouses were surveyed in May 2023 per City's request which was to include additional warehouses in the cities of Ontario and/or San Bernardino to validate the findings of observed low parking demand at these warehouse facilities.

Project Location and Description

The project site is located at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Avenue, south of 5th Street. Regional access to the project area is provided by Interstate (I-) 10 to the south, I-215 to the west, and State Route (SR) 210 to the east. Local access to the project site would be via 5th Street, 3rd Street and Victoria Avenue.

The project proposes to construct a 173,976-square-foot (gross area, inclusive of mezzanine/office spaces), one-story warehouse building on an approximately 7.08-acre site. The warehouse building would be composed of approximately 161,976 square feet of warehouse space and 12,000 square feet of mezzanine/office space. The parking supply for passenger vehicles would be a total of 79 spaces, consisting of 56 standard spaces, 2 accessible spaces compliant with the Americans with Disabilities Act (ADA), 2 van accessible stalls, 1 vanpool parking space, 2 electric vehicle (EV) only parking spaces, 14 future EV charging only spaces, 1 EV charging van ADA space and 1 EV charging ADA space. The site plan is provided in Attachment A.

Municipal Code Parking Requirements

The Code parking requirement for the project was calculated by utilizing the off-street parking requirements established in the Code. Section 16.52.020 of the Highland Municipal Code states that where calculations yield a fractional space, the fraction shall be rounded to the next lower whole number. Table 2 provides the parking requirements for the proposed project per Section 16.52.030 of the Highland Municipal Code.

Table 1. Parking Requirements per Highland Municipal Code

Land Use	Size	City of Highland Parking Rates	Parking Requirement
Warehouse	161,976 SF	1 space per 1,000 SF of floor area	161 spaces
Office/Mezzanine	12,000 SF	1 space per 250 SF of floor area	48 spaces
Total	**173,976 SF**		**209 spaces**

Notes: SF = square foot

As shown in Table 1, the project would require a total of 209 parking spaces per the Code. This results in an aggregate rate of 1 space per 832.4 SF (173,976 SF ÷ 209 spaces). As previously indicated, the parking supply for passenger vehicles would be a total of 79 spaces. Therefore, the project would not meet the City's parking requirements per the Code and would have a shortfall of 130 spaces.

Municipal Code Parking Requirements for Other Cities

Parking requirements established in nearby City Codes are summarized in Table 2 to provide a comparison to those established by the City of Highland. For each jurisdiction analyzed below, according to each jurisdiction's municipal code, where calculations yield a fractional space, the fraction shall be rounded up to the next whole number. As stated above, the City of Highland requires fractional spaces to be rounded to the next lower whole number. As

shown in Table 2, the City of Fontana provides the least conservative parking requirements for warehouse land uses, while the City of Highland provides the most conservative parking requirements.

Table 2. Parking Requirements per Various Cities' Municipal Codes

Jurisdiction	Required Parking Rates per Municipal Code	Estimated Required Parking of Proposed Project[1] in other Jurisdictions
Rancho Cucamonga	**Warehouse/Storage:** 1 per 1,000 sf for first 20,000 sf; 1 per 2,000 sf for the next 20,000 sf; and 1 per 4,000 sf for the remaining sf	61
	Office & administration: 4 per 1,000 sf	48
	Total	**109**
	Required Parking Ratio for Project in Rancho Cucamonga (Spaces/TSF)	**0.627**
Fontana	**Warehouse/Distribution/Logistics:** One parking space is required for each 1,000 square feet of gross floor area for the initial 20,000 square feet; one parking space is required for each 2,000 square feet of additional gross floor area for the next 20,000 square feet; and one parking space is required for each 5,000 square feet of additional gross floor area over 40,000 square feet.	47
	Professional or Unspecified Office: One parking space is required for each 250 square feet of gross floor area	48
	Total	**105**
	Required Parking Ratio for Project in Fontana (Spaces/TSF)	**0.604**
Perris	**Warehousing:** One space per 1,000 square feet of gross floor area for the first 20,000 square feet and one space per 2,000 square feet for that portion over 20,000 square feet	91
	Professional offices: One space for every 300 square feet	40
	Total	**131**
	Required Parking Ratio for Project in Perris (Spaces/TSF)	**0.753**
Moreno Valley	**Warehouse and distribution:** 1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the second 20,000 sq. ft.; 1/ea. 4,000 sq. ft. of gross floor area for areas in excess of the initial 40,000 sq. ft.	61
	Business and professional offices: 1/250 sq. ft. of gross floor area	48
	Total	**109**
	Required Parking Ratio for Project in Moreno Valley (Spaces/TSF)	**0.627**
Ontario	**Warehouse and distribution:** 1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the portion over 20,000 sq. ft.	**91**
	Office area: 1/250 sq. ft. of gross floor area	**48**
	Total	**139**
	Required Parking Ratio for Project in Ontario (Spaces/TSF)	**0.80**
City of San Bernadino	**Industrial/warehousing:** 1 space /250 sq ft for 1-3,000 sq ft; 1 space / 500 sq ft for 3,001 - 5,000 sq ft., 1 space / 750 sq ft for 5,001 - 10,000 sq ft., 1 space / 1000 sq ft for 10,001 - 50,000 sq. ft. and 1 space / 1,250 sq ft for 50,001+ sq ft.	**163**
	Required Parking Ratio for Project in City of San Bernardino (Spaces/TSF)	**0.80**

Table 2. Parking Requirements per Various Cities' Municipal Codes

Jurisdiction	Required Parking Rates per Municipal Code	Estimated Required Parking of Proposed Project[1] in other Jurisdictions
Redlands	**Automated Warehouse:** 1 space/1,000 sq. ft. of gross floor area or 1 space/each employee on the largest shift, whichever is greater (Requirement may be reduced if applicant submits letter justifying reduction of spaces; however, adequate area for expansion of parking shall be provided in case of conversion of use.)	**174**
	Required Parking Ratio for Project (automated) in Redlands (Spaces/TSF)	**1.00**
	Warehouse: 1 space/500 sq. ft. of gross floor area up to 20,000 sq. ft; 1 space per 1,000 sq. ft. over 20,000 sq. ft.	**194**
	Required Parking Ratio for Project in Redlands (Spaces/TSF)	**1.11**
Highland	**Warehouse and distribution:** 1 space per 1,000 gross sq. ft. of floor area devoted to warehousing plus the required amount of parking for gross square footage devoted to other uses	161
	Administrative, business, professional: 1 space per 250 gross ft. of floor area	48
	Total	**209**
	Required Parking Ratio for Project in Highland (Spaces/TSF)	**1.201**

Notes: sf/sq. ft. = square foot; TSF = thousand square feet
[1] The proposed project consists of 161,976 SF warehousing and 12,000 SF office-related uses.

A review of these parking requirements per various cities is provided for informational purposes. The parking demand analysis used in determining the adequacy of project's parking supply is discussed in the next section. Additionally, parking supplies provided for other nearby warehousing projects developed by Patriot Development Partners (Patriot) are summarized in Attachment B.

Parking Demand Analysis

As noted above, in the event the project could not meet the City's Code parking requirement, the City is allowing a parking demand analysis to be conducted to determine whether adequate parking would be supplied on site, subject to the City's review and approval. The following parking demand analysis demonstrates whether the project can accommodate peak parking demand, based on the peak parking demand observed at four existing warehouses similar in capacity and located in the Inland Empire.

Parking Surveys

The following four existing occupied warehouses were chosen to be surveyed for parking demand:

- 1295 Central Avenue, San Bernardino, CA 92408: an approximately 296,725 SF warehouse (Fender Warehouse), located on the southeast corner of Central Avenue/Tippecanoe Avenue. This facility has 197 passenger vehicle parking spaces and is parked at 1 space per 1,506 SF.
- 27081 Almond Avenue, Redlands, CA 92374: an approximately 326,920 SF warehouse (2AM Logistics BMW Parts Distribution Center), located on the southeast corner of Nevada Street/Almond Avenue. This facility has 174 passenger vehicle parking spaces and is parked at 1 space per 1,879 SF.

- 550 S. Campus Avenue, Ontario, CA 91761: an approximately 102,855 SF warehouse, located on the northwest corner of Campus Avenue/Sunkist Street intersection. The parking spaces are not clearly marked in this warehouse site.
- 1455 Research Drive, Redlands CA 92374: an approximately 145,800 SF warehouse located west of Research Drive, north of Lugonia Avenue and south of Almond Avenue. This facility has 133 passenger vehicle parking spaces and is parked at 1 space per 1,096 SF.

It should be noted that the building square footages of the existing warehouses were estimated using aerial photography and were determined to be occupied and in operation based on site observations. Figure 2 shows a close-up view of the 1295 Central Avenue warehouse layout, and Figure 3 shows a close-up view of the 27081 Almond Avenue warehouse layout. Additionally, figure 4 shows a close-up view of the 550 S. Campus Avenue warehouse layout, and Figure 5 shows the close-up view of the 1455 Research Drive warehouse layout.

To determine the on-site parking demands of the warehouses, Dudek contracted with a qualified traffic/ parking data collection firm to conduct hourly vehicle counts at the driveways of the two warehouses. The driveway counts accounted for vehicles entering and exiting all project driveways every 15 minutes, over a 24-hour period for two typical weekdays of a non-holiday week. The driveway counts were conducted at the sites in February 2021 and May 2023. Raw driveway count data collected for the for the warehouses is provided as Attachment C to this memorandum.

The peak parking demand at the 1295 Central Avenue and 27081 Almond Avenue sites was derived by subtracting the number of vehicles exiting the site and adding the number of vehicles entering the site at each driveway for each 15-minute increment over the 24-hour period to the assumed baseline. Baseline parking space occupancy was calculated for the beginning of each survey period (12:00 a.m.) by determining the number of vehicles that would not result in "negative occupied spaces" at any time throughout the survey. For example, the 1295 Central Avenue Warehouse experienced the greatest net loss of vehicles throughout the survey period (31 vehicles) between 12:00 a.m. and 2:30 a.m. on Tuesday, February 2. After 2:30 AM, the rate at which the number of vehicles entering the site begins to exceed those exiting. Therefore, a baseline of 32 vehicles (31 vehicles plus 1 residual) was assumed to already occupy spaces at the project site at the beginning of the survey period. The same methodology was applied to each day at both warehouses.

However, for the warehouses on 550 S. Campus Avenue and 1455 Research Drive, one vehicle was assumed to already occupy space at each warehouse site at the beginning of their survey periods. Worksheets detailing the baseline parking occupancy assumptions, as well as the parking demand calculations, are provided as Attachment C to this memorandum. Table 3 presents the findings of the parking demand analysis.

Table 3. Observed Peak Parking Demand and Rates

Warehouse Site	Size	# of Spaces	Day 1		Day 2	
			Peak Demand	Observed Parking Rate	Peak Demand	Observed Parking Rate
1295 Central Ave	297,860 SF	197	112	1 space per 2,660 SF	111	1 space per 2,684 SF
27081 Almond Ave	326,920 SF	174	55	1 space per 5,416 SF	49	1 space per 6,079 SF
550 S. Campus Ave	102,855 SF	NA	12	1 space per 8,572 SF	12	1 space per 8,572 SF
1455 Research Dr.	145,800 SF	133	30	1 space per 4,860 SF	30	1 space per 4,860 SF
Average Observed Parking Rate[1]			**1 space per 5,377 SF**			
Highest Observed Parking Rate[2]			**1 space per 2,660 SF**			

Notes: Based on parking surveys conducted in 2021 and 2023.
1 Average observed parking rate is based on the averaging the highest day of parking demand of the four observed sites.
2 Highest observed parking rate is based on the highest day of parking demand of the four observed sites.

Based on Table 3, the highest day of observed parking demand at the 1295 Central Avenue warehouse was Tuesday, February 2, 2021, with a peak demand of 112 spaces at 8:15 a.m. This resulted in a peak parking demand rate of 1 space per 2,660 SF. The lowest day of observed parking demand was at the 550 S. Campus Avenue warehouse, with a peak demand of 12 spaces at 11:00 a.m. This resulted in a peak parking demand rate of 1 space per 8,572 SF. Therefore, the average observed parking rate is 1 space per 5,377 SF, and the highest observed parking rate is 1 space per 2,660 SF over the course of both days.

Project Parking Demand

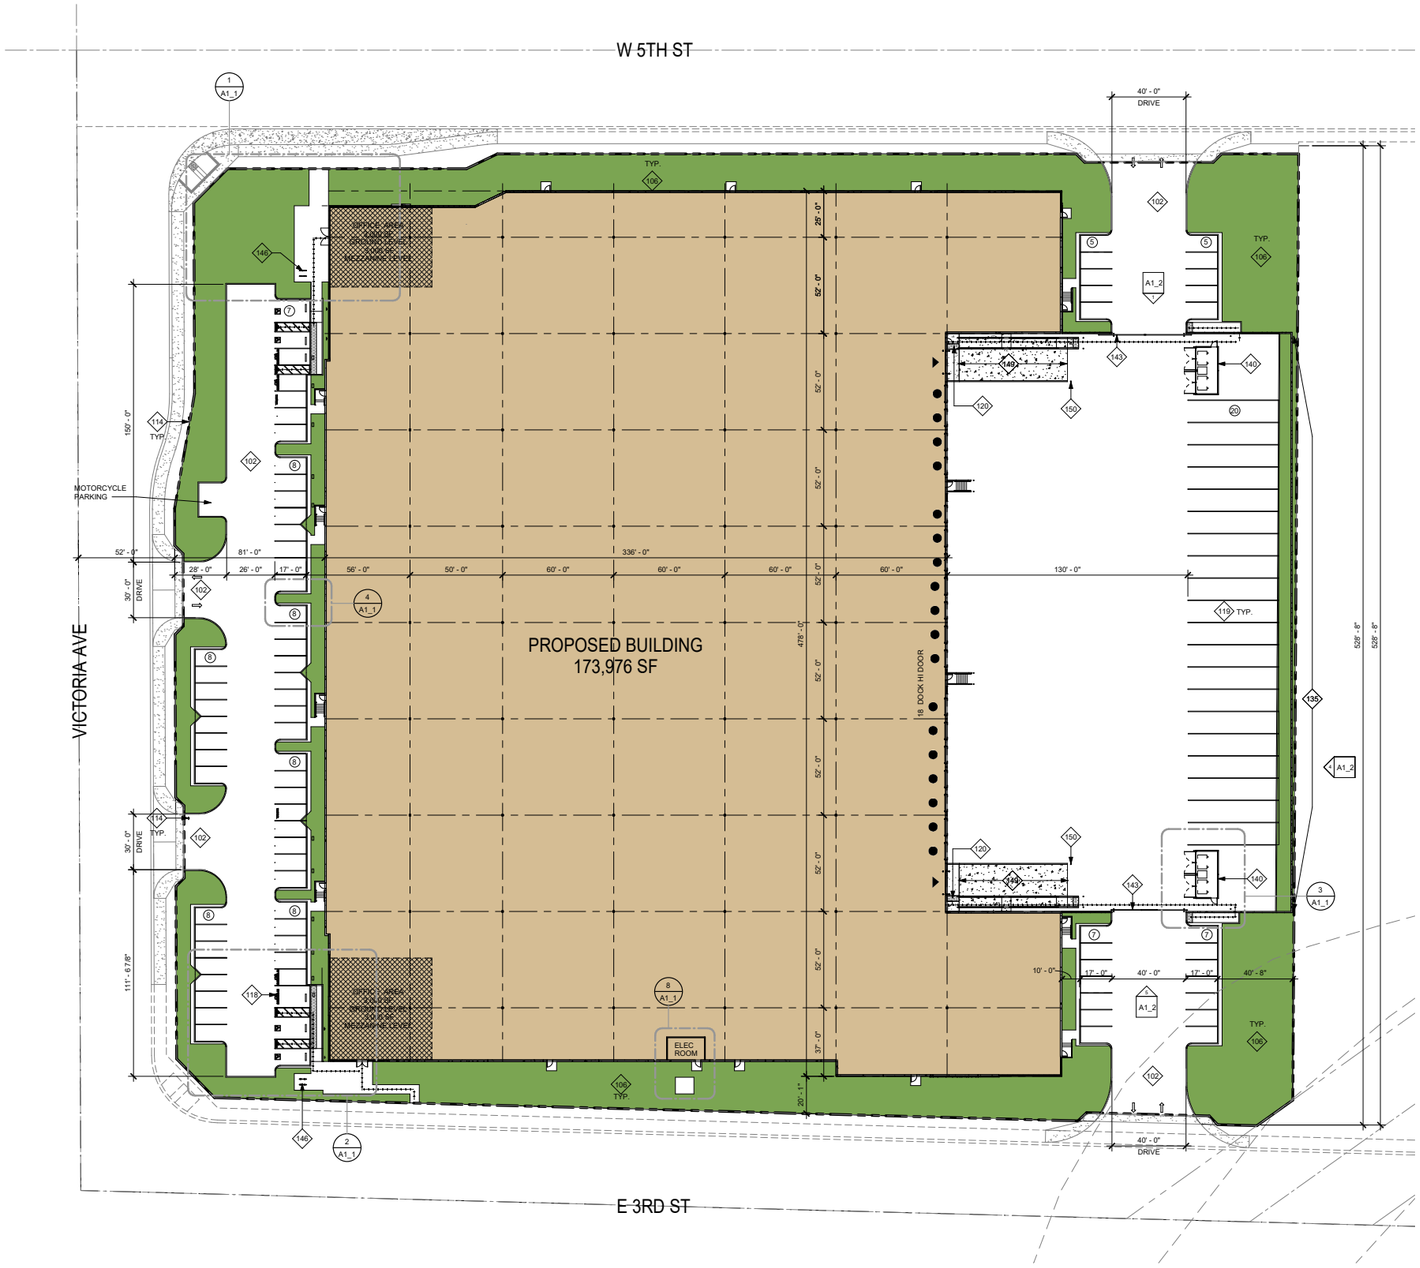
Based on the average observed parking rate of 1 space per 5,377 SF determined from the parking analysis of the four surveyed warehouses, the proposed 173,976 SF warehouse would have a peak parking demand of 33 spaces (173,976 SF ÷ 5,377 SF = 33 spaces). Additionally, the highest parking demand was also calculated to provide a conservative analysis. Using the highest observed parking rate of 1 space per 2,660 SF, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces). These estimates are provided in Table 4 below.

Table 4. Parking Requirements per Observed Rates

Land Use	Size	Observed Parking Rates	Parking Requirement
Warehouse	176,066 SF	1 space per 5,377 SF of floor area[1]	33 spaces
		1 space per 2,660 SF of floor area[2]	66 spaces

Notes: SF = square foot
1 Based on the average observed parking rate noted in Table 3.
2 Based on the highest observed parking rate noted in Table 3.

The proposed project would provide a parking supply of 79 spaces; therefore, assuming the conservative peak parking demand rate of 1 space per 2,660 SF, the project's projected parking demand of 66 spaces would be adequately accommodated within the proposed supply, with a residual of 13 spaces (79 spaces – 66 spaces).



Conclusions

Based on the parking surveys and analysis discussed above, the following conclusions are made for the proposed 5th Street and Victoria Avenue warehouse project:

- Based on the City of Highland Municipal Code parking requirements, the project would require a total of 209 parking spaces.
- Based on the highest observed parking rate of 1 space per 2,660 SF determined from the parking surveys of two existing warehouses near the project site, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces).
- The project's proposed supply of 79 parking spaces can adequately accommodate its forecast parking demand of 66 spaces (based on the highest peak observed parking rate).

SITE PLAN GENERAL NOTES

1. THE SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS.
2. GENERAL CONTRACTOR TO REVIEW THE SOILS REPORT AND ALL AMENDMENTS LISTED ON THE TITLE SHEET AND FOLLOW ALL RECOMMENDATIONS.
3. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS AND CURBS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL OR CURB. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER LINE OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR THE FACE OF THE WALL FINISH.
4. REFER TO CIVIL AND MEP PLANS TO CONFIRM UTILITY INFORMATION SHOWN ON THE ARCHITECT'S SITE PLAN AND FOR ADDITIONAL UTILITY INFORMATION. GENERAL CONTRACTOR TO COORDINATE ALL POINTS OF CONNECTION.
5. REFER TO CIVIL DRAWINGS FOR ALL FINISHED GRADES AND SLOPES. ALL FINISHED GRADES TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING. GENERAL CONTRACTOR TO FIELD VERIFY.
6. ALL ACCESSIBLE ROUTES IDENTIFIED ON THE SITE PLAN DRAWINGS SHALL CONFORM TO THE FOLLOWING:
   a) SLOPES IN THE DIRECTION OF TRAVEL DO NOT EXCEED 5%. CROSS SLOPES DO NOT EXCEED 2%.
   b) THE CLEAR WIDTH OF ALL WALKWAYS IS 4'-0" MIN.
   c) CHANGES IN LEVEL UP TO 1/2" COMPLY w/ 11A\D2.1. CHANGES IN LEVEL GREATER THAN 1/2" IF THEY OCCUR ARE RAMPED. SEE PLANS.
   d) THE VERTICAL CLEARANCE ALONG THE ACCESSIBLE ROUTE IS 80" MIN.
7. ALL PAVED AND LANDSCAPED AREAS TO BE BOUND BY A MIN. 6" HIGH, 4" WIDE CONCRETE CURB U.O.N.
8. A CONCRETE MOW STRIP EXTENDING 12" BEYOND EA END OF THE OPENING SHALL BE PROVIDED @ ALL EXTERIOR GLAZING WHERE THE SILL IS WITHIN 3' VERTICAL OF THE FINISHED GRADE. SEE 2/AD1.1
10. PROVIDE PIPE BOLLARD PROTECTION POSTS AS REQUIRED BY UTILITY COMPANIES AND OR FIRE AUTHORITIES AT ALL EXTERIOR ELECTRICAL EQUIPMENT AND FIRE PREVENTION DEVICES. IF PIPE BOLLARD PROTECTION POST DETAILS ARE NOT PROVIDED BY UTILITY COMPANIES AND OR FIRE AUTHORITY SEE DETAIL 3/AD1.1
11. ALL EXPOSED BIORETENSION DEVICE COVERINGS SHALL BE PAINTED FOREST GREEN.
12. WHERE OCCURS, GENERAL CONTRACTOR TO PROVIDE FLUID APPLIED DAMP PROOFING AT ALL RETAINING AND PLANTER WALLS WHERE THE SIDE OF THE WALL OPPOSITE THE SOIL SIDE IS EXPOSED TO VIEW AND ALL EXTERIOR WALLS WHERE THE ADJACENT FLOOR SLAB IS BELOW GRADE. SEE 6/AD1.2
13. PROVIDE A HOSE BIB NEAR THE MAIN ENTRANCE AND IN THE TRASH ENCLOSURE. SEE PLAN FOR LOCATION.

1 Introduction

1.1 Overview

This report presents the Plan for Service for the annexation of approximately .56 gross acres currently in the City of San Bernardino into the City of Highland to facilitate the development of a 173,976 square foot speculative warehouse/distribution facility on a combined 7.23 acre site that currently overlies both the Cities of Highland and San Bernardino. The Local Agency Formation Commission (LAFCO) of the County of San Bernardino requires a jurisdiction to submit a Plan for Service when the jurisdiction is affected by a proposed change in boundaries, formations, or organization. "The Patriot Partners Project" is located mostly within the City of Highland (6.67 acres) with .56 acres in the City of San Bernardino, proposed for de-annexation. The LAFCO policy states the following:

> "The plan for service shall be prepared and submitted by each local agency affected by a proposed change of organization, regardless whether that proposal is initiated by resolution or petition. In the case of a proposed annexation, the plan for service must demonstrate that the range and level of services currently available within the study area will, at least, be maintained by the annexing agency…."

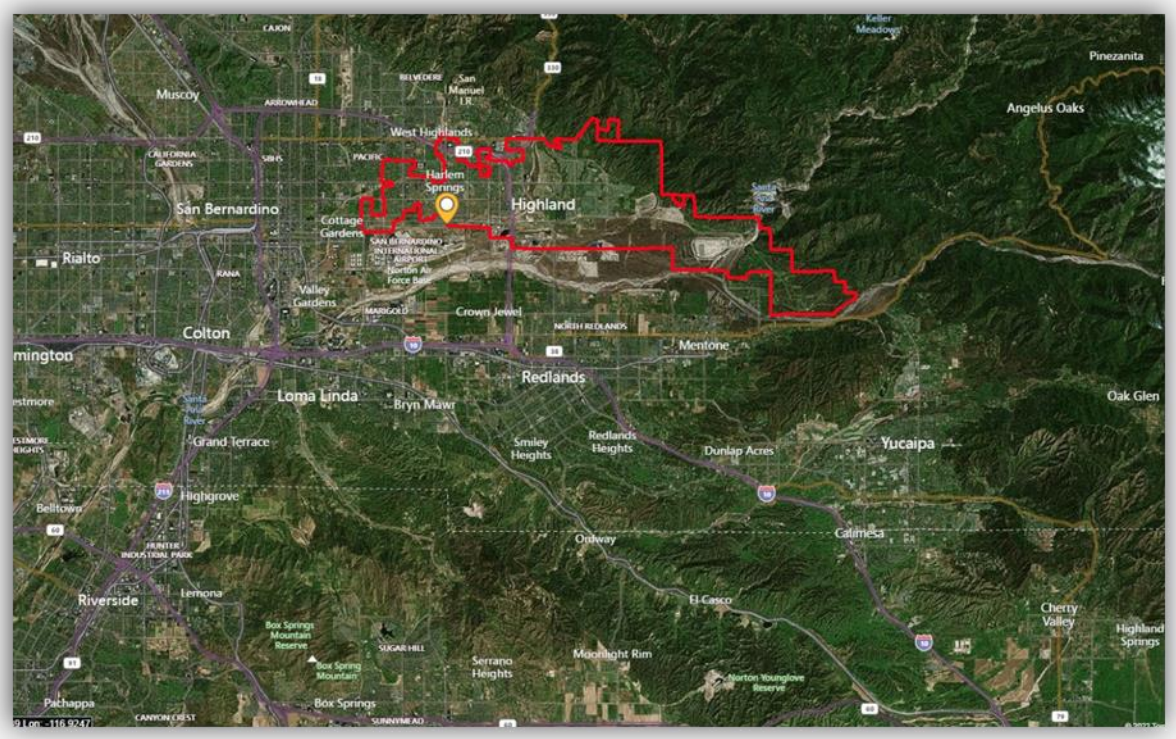
The subject Plan for Service identifies the proposed public facility improvements and services related to roads, fire and emergency medical services, police, libraries, domestic water, wastewater, storm drainage, parks and open space, public utilities, schools, and solid waste management. The Plan shows how public facilities and infrastructure improvements will be implemented. The required development impact fees are also presented. A separate Fiscal Analysis has been prepared for the project development to show impacts of development on public revenues and costs that are used for ongoing operations and maintenance. Fiscal impacts are summarized in Chapter 4.

1.2 Project Overview

The City of Highland, in coordination with the project applicant Patriot USICVI 5th Street, LLC, is proposing annexation of a .56 gross acre site located at the southwest corner of 5th Street and Victoria Avenue, currently in the City of San Bernardino, into the corporate boundaries of the City of Highland, and subsequent development of a 173,976 square foot warehouse/distribution facility. The northern site boundary is defined by 5th Street, the southern site boundary is by 3rd Street and the westerly boundary by Victoria Avenue. Vacant land and City Creek Bypass Flood Control Channel border the property to the east.

Figure (1) shows the regional location map and Figure (2) shows the project site map. The project proposes annexation of .56 acres into the City of Highland as a result of the physical location of the project, which is adjacent to the City of Highland and separated from the City of San Bernardino by Victoria Avenue. LAFCO is the authority for local boundary changes and municipal reorganizations. Municipal reorganization for the project would include detachment of the subject .56 acre parcel from the City of San Bernardino, annexation of the parcel into the City of Highland Sphere of influence (SOI) area, pre-zoning of the said parcel by the City of Highland to Business Park (BP), and annexation of the parcel into the City of Highland. This action would require a General Plan amendment for both the City of Highland and City of San Bernardino. Detachment of the parcel from the City of San Bernardino requires a resolution from the City of San Bernardino City Council accepting the proposed action.

Figure 1 Regional Map



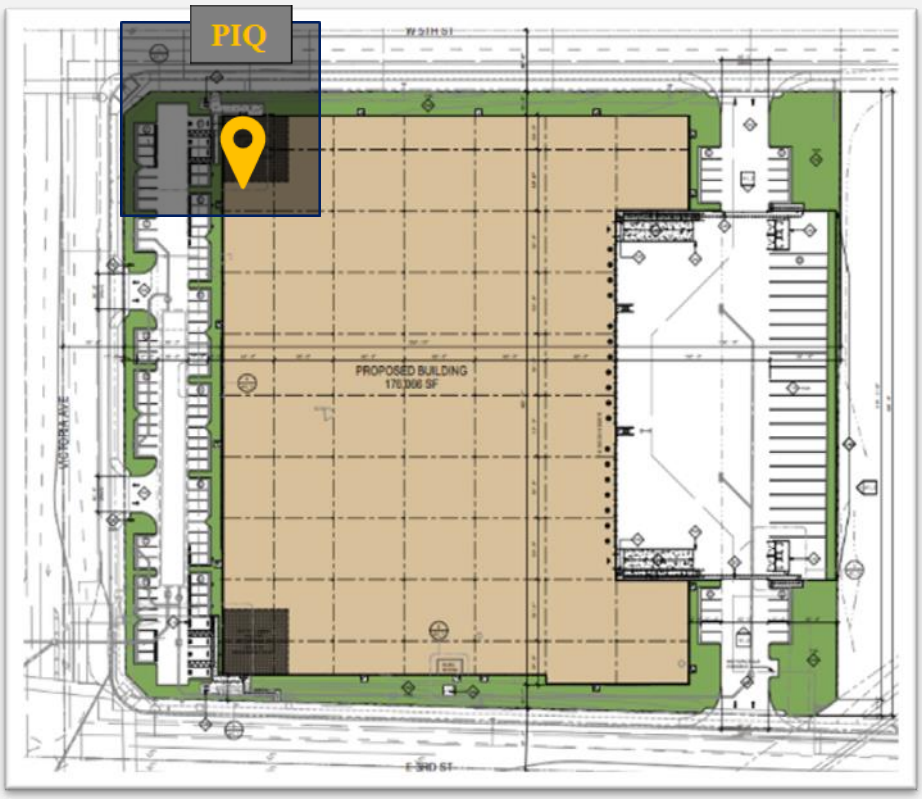


Figure 2 Site Map

As shown below in Table (1-1), the project area encompasses a total of .56 acres proposed for industrial development with a 173,976 square foot warehouse/distribution facility. The project will not result in residential development or increased population.

1.3 Methodology and Resources

Each of the public facilities or services required by the project area was analyzed as to the respective levels of service requirements and existing facilities serving the area after the build-out. The preparation of the Plan for Services involves the analysis of public infrastructure and service requirements of the respective jurisdictions and agencies that have lead responsibility. The Plan for Service demonstrates that the necessary public infrastructure will be provided in a timely manner commensurate with the development of the "Patriot Partners" project area and will not create financial burden on the City of Highland. For each service or improvement area, the following is included:

- -A description of the service provider;
- A description of the level of each service to be provided to the area;
- An identification of any improvement or upgrading of structures, roads, water, and sewer facilities, other infrastructure, or other conditions the affected agency would impose upon the area; and
- A description of how the service or required improvements will be financed.

The necessary facility improvements have been identified through discussions with the agencies that provide the services and through review of the environmental documents. Appendix A presents a listing of Highland's current Development Impact Fees, which represent a sources of funding for capital facilities in the City and which will be charged and collected by Highland to offset the costs associated with the proposed development of "Patriot Partners". A list of agencies contacted as part of the preparation of the Plan for Service is shown in Appendix B.

Operations and Maintenance costs for services are projected in a separate report titled Annexation of ".56 Acres Patriot Partners" Fiscal Analysis, City of Highland (January 2024). This fiscal analysis is summarized in Chapter 4 of this Plan for Service. The fiscal analysis indicates that General Fund recurring revenues are projected to cover projected General Fund recurring operating and maintenance cost estimates after build-out.

Resources used in preparation of the Plan for service include the following:

- Highland General Plan, Highland Municipal Code, and Highland Zoning Map
- City of Highland 2023-2025 Adopted Budget;
- City of Highland Development Impact Fees, Adopted by Resolution No. 2023 -40 and -41.
- Initial Study / Mitigated Negative Declaration by Dudek

2 Plan for Service Summary

2.1 Summary of Service Providers

Table 2-1 shows current service providers in the City of San Berardino and in the City of Highland. Upon annexation, the City of Highland will assume responsibility for several services that were previously provided by the City of San Berardino or other County agencies. The providers shown for the City of Highland will be responsible for the provision of services to the project development after annexation. These services include the basic level of public services that are required to support the projected development in the proposed project and the associated industrial growth.

2.2 Summary of Capital and O&M Funding Sources

Table 2-2 presents a summary of the funding requirements for the facilities and services identified in the Plan for Service. The funding requirements are shown by capital costs and operations & maintenance (O&M) costs. The developer is required to fund the capital costs of construction for the additional local facilities or improvements required as a result of its development; regional facilities usually require a fair-share approach.

Capital costs to provide additional facilities and improvements to serve the project area will be funded by the City's Development Impact Fees (DIFs); a list of these current City fees is shown in Appendix A. The City recently updated its schedule of Development Impact Fees per Resolution Nos. 2023-40 and -41 and is implementing the fee increase effective April 1, 2024.

The City of Highland and other service providers are generally responsible for the O&M costs associated with additional services and facilities and fund these costs through various sources of revenues that might include: property taxes, sales taxes, gas tax, vehicle license fee (VLF), and other General Fund revenues, user charges and landscaping & lighting district assessments. The City of Highland will receive the City of San Bernardino's entire share of the basic 1 percent (1%) property tax levy once the .56 acre is annexed into the City of Highland. The City of Highland will also assume new operations and maintenance costs.

Table 2-1. Annexation of .56 Acres Patriot Partners Plan for Services Service Providers

1 The project area will be annexed into the City's Streets and Drainage Maintenance District once established.
2 The project will be annexed into the City's existing Consolidated Landscaping and Lighting District prior to occupancy approval by the City of Highland which will provide funding for ongoing maintenance of lighting in the project area.

2.3 Project Phasing

The project would be completed in two phases. The first phase encompasses the three-part municipal reorganization for the parcel which includes: 1) detachment of the .56 acre site from the City of San Bernardino; 2) sphere of influence (SOI) change for the parcel from the City of San Bernardino to the City of Highland; and 3) subsequent annexation of this parcel into the City of Highland. The second phase includes development and use of the .56 acre site for the development of a 170,066 square foot warehouse/distribution/logistics facility.

2.4 Summary of Service Requirements

Transportation

The project will be conditioned to construct the public street infrastructure improvements in compliance with the project's Conditions of Approval prepared by the City's Public Works Division. In addition, the project will be served by Omnitrans, the local bus service.

Fire and Paramedic Services

Fire protection and emergency medical services are provided to the City under contract services to the California Department of Forestry and Fire Protection (Cal Fire). Current facilities and staffing levels are adequate to meet the service demands of the .56 acre project area to the project "build-out." Capital costs to provide additional facilities

and improvements to service the project area would be funded by the City's fire facilities and equipment development impact fees. Operations and maintenance costs are the responsibility of the City through the contract with Cal Fire.

Police Protection

The City contracts with the San Berardino County Sheriff to provide police protection services. At project "build-out," the project area will generate a need for police protection and investigative services, the current police resources are sufficient to provide basic police services to the .56 acre project area. Capital costs to provide additional facilities and improvements to service the project area would be funded by the City's DIFs law enforcement facilities and equipment impact fees. Operations and maintenance costs are funded through the City's General Fund.

Domestic Water

Domestic water will be provided to the project site by the East Valley Water District (EVWD/the District). The EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes. A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public right-of-way (ROW) along Victoria Avenue to provide domestic and irrigation water service to the site. Fire suppression water service would be provided via connections to existing lines in both Victoria Avenue and 3rd Street.

Sanitary Sewer

The City's sewer system is maintained by the EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within the EVWD's boundaries. The sewage from the City is treated at the San Bernardino Water Reclamation Plant (WRP), operated by the San Bernardino City Municipal Water District. One new 6-inch sewer line would connect to the existing 21-inch sewer line within 5th Street. Future treatment will take place at the EVWD Sterling Natural Resources Plant, completed recently on January 16, 2024, at the intersections of Del Rosa Drive, between 5th and 6th Streets.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. The project would connect to existing electrical lines within Victoria Avenue. Telecommunication services are provided by various telecommunication service providers. The project would connect to these existing facilities.

Storm Drainage

The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin near the SR-71 and SR-91 interchange.

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions. On-site

stormwater would be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soils. The overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

Solid Waste Management

Solid waste collection is provided under contract with Burrtec Waste Industries. The San Timoteo Waste facility will receive solid waste generated from the proposed project. This disposal site is managed by the San Bernardino County Solid Waste Management Department. The service is paid for through user fees.

INTENTIONALLY LEFT BLANK

3 Service Requirements

3.1 Transportation

Service Provider

Local public transportation via bus service is provided by Omnitrans and will serve the project locations with service lines along 3rd and 5th Street and Victoria Avenue. The City of Highland is responsible for the planning and provision of streets in the City of Highland. Caltrans is responsible for freeways, freeway interchanges and State routes. Caltrans manages highway and freeway lanes, provides inter-city rail service, assists more than 100 public general aviation airports, and works with local agencies. Regional access to the site is provided by SR-210 Freeway.

Improvements

The developer is responsible for the cost of improving local roads within the project area. The roads will be constructed as noted above.

3.2 Fire and Paramedic Services

Service Provider

The City contracts with Cal Fire for fire and paramedic services. The Highland Fire Department (CalFire) provides a full range of fire protection services including pre-fire planning and engineering; fire suppression, rescue and extrication; fire cause investigation; and emergency medical services. They provide fire protection services and respond to medical emergencies.

In addition, the City of Highland participates in the Statewide Mutual Aid agreement with CalFire. The City of Highland has automatic aid agreements with the City of Redlands, the City of San Bernardino (County Fire), as well as the San Manuel Band of Mission Indians Fire Department. Ambulance services are provided by American Medical Response (AMR), a private ambulance service serving the local areas.

Fire Level of Service

The annexation area will be served by the City of Highland Fire Department through a contract with CalFire. The City of Highland operates three (3) fire stations which includes FS#541 (Fire Station No. 1) at 26974 Base Line, FS #542 (Fire Station No.2) at 29507 Base Line, and FS#543 (Fire Station No. 3) at 7649 Sterling Avenue. Fire Station No. 2 and 3 are both located approximately 1.2 miles from the project site. Either station may be dispatched to the project site during an emergency. The City of Highland owns the fire stations and all the equipment and vehicles, but contracts for firefighter personnel through CalFire.

Based on the project's construction type, .56-acre property size, and operational characteristics, it will have a nominal impact and therefore would not generate demand for an additional firefighter.

Improvements

No additional capital funding requirements for the fire facilities have been identified as a result of the proposed project (.56 acre site). The proposed project would be required to pay fire facilities and equipment Development Impact Fees for industrial development, as shown in Appendix A. This would comply with the California Fire Code for industrial development. The City will be responsible for the operations and maintenance costs through the General Fund to provide fire and emergency services to the annexation area (.56 acre site). Services are provided through the contract with CalFire as mentioned above.

3.3 Police Protection

Service Provider

The City of Highland contracts its law enforcement services through the San Bernardino County Sheriff's Department. The Sheriff's Deputies and support staff occupy a City of Highland owned Police Station facility located at 26985 Base Line. As a contract Police Department, it operates under a mutual aide type agreement, allowing the City access to a variety of resources offered by the San Bernardino County Sheriff's Department. The contract may be adjusted as needed to meet staffing needs.

Police Level of Service

The City of Highland's Station is very busy in terms of the ratio of safety personnel to population, calls for services, and arrests per deputy. Police service calls will not increase as a result of the proposed project (.56-acre site). The proposed project will not generate the need for additional officers or equipment.

Improvements

The proposed project does not result in a need for additional officers as a result of annexation and subsequent industrial development. No additional capital funding requirements for facilities have been identified as a result. The project would be required to pay Law Enforcement Facilities and Equipment Development Impact Fees for industrial development, as shown in Appendix A. The City will provide the operations and maintenance costs to provide service to the annexation through its General Fund.

3.4 Domestic Water

Service Provider

Service for domestic water for the project would be provided by East Valley Water District which provides water to an approximately 28 square mile area in San Bernardino County. The District has a service population of approximately 104,000. The District utilizes water from several sources including the Santa Ana River, the Bunker Hill Groundwater Basin and the City of San Bernardino domestic water system. During dry years, the District can obtain water from Northern California through the State Water Project.

Water Level of Service

A of January 16, 2024, EVWD has been operating at the Sterling Natural Resource Center (SNRC) that will recycle up to 8 million gallons of waste water per day that will replenish the local ground water basin which is a source of

waste for 650,000 people. The proposed project (.56 acre site) would increase demand minimally for water. EVWD has indicated to the City of Highland that there is an adequate supply for the proposed development.

Improvements

To accommodate flows to the project site, the project will be required to construct a water system to and from this development. While the specific timing of these improvements is not known, it is assumed that phasing of facilities will be concurrent with the development of the project. EVWD will provide for the necessary operations and maintenance of the water systems needed to serve the project area. EVWD collects no property tax revenues. The operations and maintenance costs are covered primarily through monthly service charges that will be paid by future users within the project development.

3.5 Sanitary Sewer / Wastewater Services

Service Provider

EVWD is the sanitary sewer service provider in the area. The District completed construction of their "Sterling Natural Resources Center" on January 16, 2024.

Sewer Level of Service

A of January 16, 2024, EVWD has been operating at the Sterling Natural Resource Center (SNRC) that will recycle up to 8 million gallons of waste water per day that will replenish the local ground water basin which is a source of waste for 650,000 people. According to EVWD, the sewer system has adequate capacity to serve the development and the project (.56 acre site). They maintain their own sewer lines within the City of Highland. At the time of this report, EVWD still relies on and connects to sewer treatment with the City of San Bernardino, however, that will transition to SNRC. EVWD will provide for the necessary operations and maintenance of the sewer systems needed to serve the project area. Operation and maintenance costs are covered primarily through monthly service charges that will be paid by future users within the project area.

3.6 Flood Control and Drainage

Service Provider

Local drainage facilities are maintained by the City of Highland. All facilities are routinely inspected, and necessary actions are taken to maintain the facilities in compliance with established standards. The San Bernardino County Flood Control District (SBCFCD) is responsible for the design, construction, operation, and maintenance of regional flood control facilities for all of the incorporated and unincorporated areas in San Bernardino County.

Flood Control Level of Service

SBCFCD has developed an extensive system of facilities, including dams, conservation basins, channels, and storm drains. The purpose of these facilities is to intercept and convey flood flows through and away from the major developed areas of the County.

Since the project is proposed for annexation into the City of Highland, it is subject to the storm water discharge requirements of the City's General Construction Permit (GCP). The GCP requires the development and

implementation of a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP contains site maps that show the construction site perimeter, existing and proposed buildings, lots, roadways, storm water collection and discharge points, general topography both before and after construction, and drainage patterns across the site.

Improvements

Storm water runoff generated from within the project site would be managed in accordance with existing laws and regulations established under the National Pollution Discharge Elimination System (NPDES) General Permit for Construction Activities and the associated San Bernardino County Stormwater Program Model Water Quality Management Plan Guidance.

3.7 Public Utilities

Service Provider

The project area will be served by the appropriate local utility companies who have indicated that they will have the ability to service the area. The project site would be connected to existing utility connections in the right-of-way of 3rd and 5th Streets and Victoria Avenue. Service providers to the area include the following:

Cable and Internet Provider: Various Cable Companies provide cable television service and internet services to the project area. These services are all delivered via a single broadband network of coaxial and fiber-optic cable. Cable offers analog and digital video services, high-speed internet access and other advanced services over its broadband networks.

Electricity: Power service to the proposed project will be provided by Southern California Edison Company (SCE). Southern California Edison, through its subsidiaries, is an electric power generator and distributor, and an investor infrastructure and renewable energy projects. The company operates with a power generation portfolio of approximately 14,000 megawatts. The cost and rate structure to the property owners for these services are controlled by the Public Utilities Commission.

Telephone Service: Telephone service to the proposed annexation development area will be provided by various telecom providers. The project area may require the installation of cable wiring from a backbone facility extended to the site.

Natural Gas: Natural gas would be provided by the Southern California Gas Company. There are existing facilities in the project area. The developer is responsible for local connection to existing mains in the area and the installation of any new meters, if required.

Improvements

The project would be connected to existing utility facilities in the right-of-way of adjacent streets. The project developer would coordinate with the applicable agency regarding the location of existing utility lines and hookups in order to finalize improvement plans. Funding of the regional utility facilities is provided to the project by the individual utility company. The developer is responsible for the costs of extending utilities from the backbone facilities to the project site. Funding for the operation and maintenance for specific utilities is the responsibility of the individual utility through user charges. There are no financial cost impacts to the City's General Fund for these utility services.

3.8 Solid Waste Management

Service Provider

The California Integrated Waste Management Board oversees waste disposal for the City of Highland. The Fontana Refuse Disposal (mid-Valley) and San Timoteo Solid Waste Disposal landfill sites in San Bernardino County are currently used by the City of Highland.

The County of San Bernardino Solid Waste Management Division (SWMD) is responsible for the operation and management of the County of San Bernardino's solid waste disposal system. In addition, the Division administers the County's solid waste handling franchise program and the refuse collection permit program which authorizes and regulates trash collection by private haulers in the unincorporated area. The City of Highland contracts with Burrtec Waste Industries for solid waste collection services city wide and they collect recyclables and green waste as part of the City's waste reduction programs (mandated by AB939).

Solid Waste Level of Service

The City of Highland's mandatory trash and recycling ordinance ensures its contact with Burrtec Waste Industries will increase participation in regular trash collection and recycling programs. The San Timoteo Solid Waste Disposal site is managed by the San Bernardino County Solid Waste Management Department and currently will be the waste facility receiving waste generated from the proposed project (.56 acre site). Recyclable material and Construction waste as collected by Burrtec Waste Industries waste is delivered to certified recycling locations throughout southern California in compliance with AB939.

Improvements

The proposed project (.56 acre site) would not generate significant amounts of solid waste. The proposed project area (.56 acre site) is estimated to contribute less than 8 percent (7.7%) of the solid waste generated by the overall development project. The proposed project would generate approximately 47,000 to 57,000 pounds per year of solid waste – predominantly green waste which will be diverted from landfills and composted. Therefore additional landfill space would not be needed.

The City's franchised waste hauler as noted above is Burrtec Waste Industries, Inc. Burrtec operated under the City's franchise contract and mandatory trash collection ordinance to provide weekly solid waste collection services to all residents, commercial, and Industrial businesses. Trash and recycle collection may require daily increased frequency depending on the type of business is being operated. No additional waste collection facilities or equipment will be needed.

INTENTIONALLY LEFT BLANK

4 Fiscal Impacts

This Chapter presents the projected annual fiscal impacts of the proposed development by Patriot Partners on the City of Highland at project "build-out." The project site known as "Patriot" consists of 11 parcels, 7.23 gross acres with .56 acres that will be annexed from the City of San Bernardino into the City of Highland corporate boundaries. The overall development project will consist of a 170,066 square foot speculative industrial building located at the southeast corner of 5th Street and Victoria Avenue.

4.1 Overview of Fiscal Impacts (also see Fiscal Analysis Dated May 2024)

City of Highland General Fund. Fiscal impacts are presented in constant 2023 dollars for the City's General Fund and related funds. The projected impacts are based on the project description provided by Patriot Partners as well as an analysis of the City's Adopted 2023-2025 Budget. Discussions with the City and project team staff have assisted in developing the fiscal factors used for the analysis. After "building-out" of the .56 acre site, a recurring General Fund revenue of $9,487 is projected for the proposed annexation project.

City of Highland Fire Department. The City of Highland has a contract with CalFire to provide personnel and maintain fire related services. The City of Highland fiscal policy is to budget 42% of the property tax general levy property tax to fund the City's Fire Department. This annual amount for the .56 acre site is estimated at $1,787.00 for fire operation and maintenance costs.

City of Highland Assessment and Special Districts. The property will be required to join the Consolidated Landscaping and Lighting district which is based on the estimates prior to final occupancy signoff by the City of Highland.

Paramedic Services. The City of Highland has established a special parcel tax of $38 per commercial and industrial parcel annually that will cover paramedic services.

1 Fiscal Analysis 8

INTENTIONALLY LEFT BLANK

1 Introduction

1.1 Overview

This report presents the Fiscal Analysis for the annexation of approximately .56 gross acres currently in the City of San Bernardino into the City of Highland to facilitate the development of a 173,976 square foot speculative warehouse/distribution facility on a combined 7.23 acre site that currently overlies both the Cities of Highland and San Bernardino. The Local Agency Formation Commission (LAFCO) of the County of San Bernardino requires a jurisdiction to submit a Fiscal Analysis when the jurisdiction is affected by a proposed change in boundaries, formations, or organization.

The subject Analysis identifies the project's valuation and taxable income in addition to costs related to the General Fund, police services, fire services and special districts. The Analysis shows that the annexation will result in nominal fees and costs to the City of Highland given its small size and ultimate industrial build out. The Fiscal Impacts are summarized in Chapter 2.

1.2 Project Location

The development site, in total 7.23 acres, is located in western San Bernardino County at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Street, south of 5th Street, and west of City Creek Bypass Flood Control Channel (Figure 1, Regional Location Map). Regional access to the project area is provided by Interstate I-10 to the south, I-215 to the west, and State Route SR-210 to the east.

The project site is composed of 11 parcels, one in the City of San Bernardino and 10 in the City of Highland (Assessor's Parcel Numbers [APNs] 1192-551-01 [City of San Bernardino], 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15 [City of Highland].

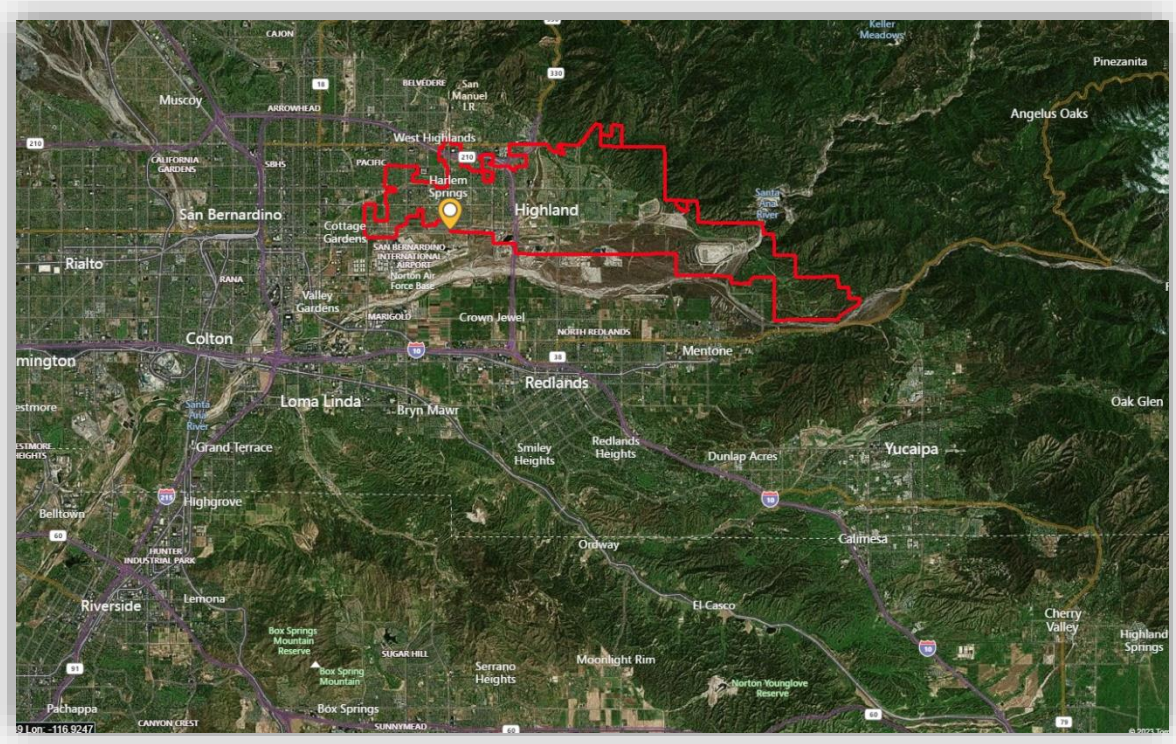
The project proposes to adjust the Sphere of Influence for the City of Highland and to annex APN 1192-551-01 (.56 acre) into the City of Highland, detaching from the City of San Bernardino, which requires formal approval by the Local Agency Formation Commission of San Bernardino County (LAFCO).

1.3 Setting

City of Highland

The City of Highland is a mid-sized California city with approximately 56,000 residents and 18 square miles of territory. Within the City, the pattern of land use transitions from predominantly single and multi-family residential and industrial near the San Bernardino International Airport and Trade Center (SBIA) to predominately single-family residential, commercial, service, and civic center uses to the north. The eastern areas of the City are mostly made up of planned development areas with various residential types, parks, and open space.

Figure 1 Regional Location Map



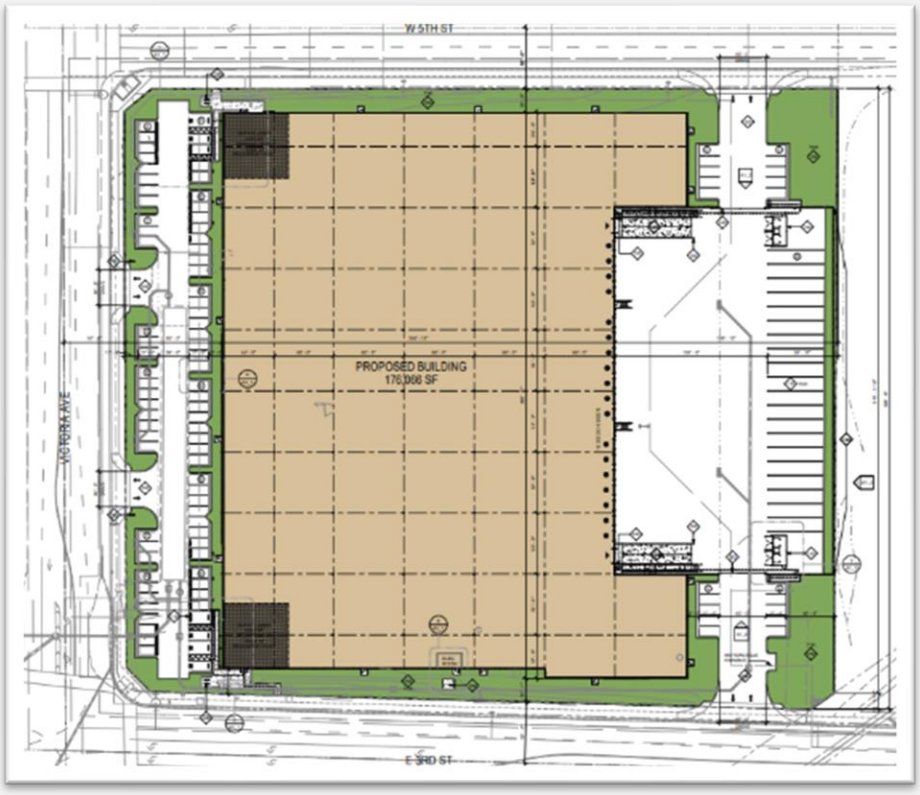


Figure 2. Project Site Map

Parcel to be Annexed

The approximately .56-acre rectangular-shaped parcel is vacant and undeveloped, dominated by disturbed habitat. It is relatively flat and generally slopes down gently from the northeast corner to the southwest corner. The parcel has a City of San Bernardino General Plan Land Use and zoning of Commercial General 1. As part of the Annexation process the City of Highland will pre-zone the subject parcel to Business Park (BP) zoning designation consistent with the overall development project zoning designation.

Surrounding Land Uses

The project site is located within a developed part of the City and is surrounded by a mix of urbanized land uses as depicted below.

Surrounding Land Uses

Direction	Existing Use	General Plan Land Use Designation	Zoning Designation
North	5th Street followed by	City of Highland (Business Park)	City of Highland (Business Park)

Surrounding Land Uses

Direction	Existing Use	General Plan Land Use Designation	Zoning Designation
	industrial uses, vacant parcels, and single-family homes		
East	Vacant land, City Creek Bypass, and commercial/industrial uses including auto repair	City of Highland (Business Park)	City of Highland (Business Park)
South	3rd Street followed by vacant land	City of Highland (Business Park)	City of Highland (Business Park)
West	Victoria Avenue delineating the City of San Bernardino boundary, followed by numerous vacant parcels	City of San Bernardino (Medium Density Residential and Commercial General)	City of San Bernardino (Medium Density Residential and Commercial General)

1.4 Project Description of Future Development

On December 12, 2022, the City of Highland received an application from Patriot Development Partners requesting the following approvals for development of the proposed 5th Street and Victoria Avenue Warehouse/Logistics Project at the subject site including the subject parcel to be annexed and the surrounding property, 7.23 acres in total:

- General Plan Amendment (GPA 23-001)
- Zone Change (ZC 23-001)
- Conditional Use Permit (CUP 22-014)
- Design Review (DRA 22-023)
- Height Variance (No. VAR 22-006)
- Parking Reduction (supported by parking study)
- Tentative Parcel Map 20621 (TPM 23-001)

The application includes land use entitlements and design review for the construction of an approximately one-story industrial/warehouse/logistics facility. The project proposes a 173,976-square-foot, one-story warehouse building composed of approximately 161,976 square feet of warehouse space and 12,000 square feet of mezzanine/office space (Figure 2 – Project Site Plan). The warehouse building would have a maximum height of 45 feet as measured from grade. Given that the City's Municipal Code allows for a maximum height of 35 feet in the Business Park zone, a minor variance (Variance No. VAR 22-006) was requested to accommodate the development project's height. Internally, the project would have a clear height of 36 feet and would not contain any cold storage space. In addition to the building, the project would include landscaped area, passenger vehicle parking spaces, trailer parking spaces, and tractor-trailer loading docks.

On- and Off-Site Improvements

The project includes improvements along the project's street frontage, including landscaping, fencing, street and sidewalk improvements. A variety of trees, shrubs, and groundcovers would be planted within the project frontage's landscape setback area and at project driveways. The .56 acre annexation parcel will contain mostly landscaping and parking field facilities.

Site Access and Parking

Access to the project site would be provided by four driveways: two driveways on the western portion of the site along Victoria Avenue serving passenger cars, and one driveway on the northern portion of the site along 5th Street, and one driveway on the southern portion of the site along 3rd Street serving commercial vehicles. All four driveways would provide both ingress and egress lanes.

Utility Improvements

The project site is currently served by domestic water, sanitary sewer, electrical, natural gas, and telecommunication service. The project would connect to the existing facilities located on and in the immediate vicinity of the project site.

Domestic Water

Domestic water would be provided to the project site by the East Valley Water District (EVWD). The EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes. A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public right-of-way (ROW) along Victoria Avenue to provide domestic and irrigation water service to the site. Fire suppression water service would be provided via connections to existing lines in both Victoria Avenue and 3rd Street.

Sanitary Sewer

The City's sewer system is maintained by the EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within the EVWD's jurisdictional/service boundaries. The sewage from the City is treated at the San Bernardino Water Reclamation Plant (WRP), operated by the San Bernardino City Municipal Water District. One new 6-inch sewer line would connect to the existing 21-inch sewer line within 5th Street. Future treatment will take place at the newly constructed EVWD Sterling Natural Resources Plant, at the intersection of Del Rosa Drive, between 5th and 6th Streets.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. The project would connect to existing electrical lines within Victoria Avenue. Telecommunication services are provided by AT&T. The project would connect to these existing facilities.

Storm Drainage

The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin near the SR-71 and SR-91 interchange.

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions. On-site

stormwater would be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soil. The overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

2 Fiscal Analysis

2.1 Project Valuation

The project site as it relates to this Analysis is the .56 acre of vacant land at the southeast corner of Victoria Avenue and 5th Street. The development of this small parcel will include landscaping, a parking field, and a small portion of the proposed warehouse development. The $1,399,747 estimated price per acre is calculated based on a sample of three (3) new industrial project locations in the City of Highland area and listed below (source: San Bernardino County Assessor's Office).

	APN:	Owner:	Characteristic:	Assessed Value:	Size in acres:	Levy Tax:
1*	1192-551-01 (subject)	Patriot	Vacant	$1,377,000	.56	$1,377
2	1192-261-12	Patriot	Vacant	$1,224,000	1.1	$1,224
3	1192-491-49	Patriot	Vacant	$2,942,000	2.3	$2,942
			Total	**$5,543,000**	**3.96**	—

* The project site is identified with Assessor's Parcel Number 1192-551-01.

2.2 Taxable Income

The taxable income for the proposed .56 acre site is unknown. However, due to the proposed use of the site for landscaping and parking field within the business park zoning district, it is anticipated the taxable sales will be nominal.

2.3 City of Highland General Fund

Fiscal impacts are presented in constant 2023 dollars for the City's General Fund and related funds. The project impacts are based on the project description provided by Patriot as well as an analysis of the City's Adopted 2023-2025 Budget (City Council Resolution No. 2023-036). Discussions with the City and project team staff have assisted in developing the fiscal factors used for the analysis. Exhibit A summarizes the projected fiscal impacts of the annexation to the City. The City of Highland receives an apportionment of approximately 24.8% from San Bernardino County out of the 1% property tax rate. As shown in Exhibit A, after buildout, Revenues are estimated at $3,414.96 (not including the $38/parcel paramedic tax, sales tax, and Vehicle License Fees) and costs are nominal for the proposed .56 acre annexation site.

2.4 City of Highland Fire Department

The City of Highland has a contract with the California Department of Forestry (CALFIRE) to provide personnel and maintain fire related services. The Fire Department receives 41.67 percent of the General property tax levy. The annual amount is estimated at $1,434.28 for this site that would be allocated for fire operation and maintenance costs.

2.5 City of Highland Police Department

The City of Highland contracts with the San Bernardino County Sheriff Department for Highland Police services. Currently, this contract makes up 57% of the City's General Fund Expenditures for FY 2023/24 or $13,195,330.

2.6 City of Highland Assessment and Special Districts

Two (2) special district assessments and taxes have been established that will be levied on the project upon annexation of this parcel into the City of Highland, 1) Paramedic Services (Medic Tax), an annual special tax of $38 per parcel, and 2) A Consolidated Landscaping and Lighting District fee will be estimated and assessed on the property prior to the City issuing a final occupancy for the development.

2.7 City of San Bernardino General Fund

Based on information from the Auditor-Controller with the County of San Bernardino, the existing property valuation is $1,377,000. The property tax is equal to one and a quarter percent (1.25%) of the existing valuation, or $17,165. The City of San Bernardino will currently receive 17.85 (TBD by LAFCO) percent equal to $3,063.95 annually.

2.8 City of Highland Development Impact Fees (DIFs)

The subject parcel (.56 acre site) will be prezoned to Business Park Zoning and Land Use which requires one acre to develop. As noted above, the site will be merged with contiguous parcels for a total of 7.23 acres after annexation. The City of Highland DIFs, a one-time fee, for the 176,066 development will be $2,747,333.86 ($15.604/sq ft effective on April 1, 2024).

Exhibit A. Fiscal Analysis

EXHIBIT A - FISCAL ANALYSIS						
APN:	1192-551-01-0000					
Parcel Size:	0.56	acres				
San Bernardino Assessor's Assessed Value:				$1,377,000	(as of 11/8/23)	
County General Tax Levy %		1%		$13,770	(as of 11/8/23)	
City of Highland Estimated Recurring Annual Revenues:						
General Tax Levy apportionment %		24.8%		$3,414.96		
Vehicle License Fee x Tax Levy		$1.22		$ 4,166.25		
Paramedic Property Tax (com/indust)		$ 38		$ 38.00		
Lighting & Landscaping Assessment		$ -		$ -	(unknown at this time)	
Estimated Total:				**$7,619.21**

INTENTIONALLY LEFT BLANK

1 Introduction

1.1 Introduction

California Public Resources Code Section 21081.6 and CEQA Guidelines Section 15097 authorize the lead agency to adopt a reporting or monitoring program for mitigation measures identified in a Mitigated Negative Declaration (MND). While not explicitly required for an MND, such a program helps ensure that mitigation measures are implemented as specified in order to avoid or reduce potential environmental impacts.

This Mitigation Monitoring and Reporting Program (MMRP) has been prepared in accordance with these provisions and includes the following information:

- A list of mitigation measures
- The timing for implementation of the mitigation measures
- The party responsible for implementing or monitoring the mitigation measures
- The date of completion of monitoring

If the City of Highland approves the proposed Project with the mitigation measures identified in this MND, the City may adopt this MMRP, or an equally effective program, to ensure that the mitigation measures are properly implemented.

2 Mitigation Monitoring and Reporting Program Table

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
Biological Resources				
MM-BIO-1: Focused Burrowing Owl Surveys. The project site contains potentially suitable habitat for burrowing owl and therefore a presence/absence survey should be conducted in accordance with the California Department of Fish and Wildlife's 2012 Staff Report on Burrowing Owl Mitigation. The burrowing owl presence/absence survey requires four crepuscular surveys, with a 500-foot buffer as legally able, using 7–20 meter transects. Four survey passes must be conducted with at least one site visit between February 15 and April 15, and a minimum of three survey visits, spaced at least 3 weeks apart, between April 15 and July 15, with at least one visit after June 15. A pre-construction survey of the project site for the burrowing owl is also recommended within 30 days of ground disturbing activities if suitable habitat exists, regardless of the results of the focused surveys. Surveys should be conducted in all portions of the project site and 500-foot buffer that contain suitable habitat for the species, where legally accessible. Alternatively, instead of conducting focused surveys, the project may also choose to assume presence of the species and prepare a burrowing owl translocation plan that would be implemented if burrowing owl are detected on the project site during the pre-construction survey.	Prior to Construction	Applicant/Qualified Biologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
MM-BIO-2: Pre-Construction Nesting Bird Survey. Trees within the project site may provide nesting habitat for native migratory birds protected by the federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Sections 3500 and 3513. Project construction should be conducted in compliance with the conditions set forth in the MBTA and California Fish and Game Code to protect active bird/raptor nests. To the maximum extent feasible, construction of the warehouse facility and disturbance to the project site should occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the project requires that work be initiated during the breeding season for nesting birds (March 1–September 30) and nesting raptors (February 1–June 30), in order to avoid direct impacts on active nests, a pre-construction survey should be conducted in the study area by qualified Biologists (someone who has more than three years of experience of conducting nesting bird surveys in the project region) for nesting birds and/or raptors within three days prior to project activities. If the Biologist does not find any active nests within or immediately adjacent to the impact areas, the vegetation clearing/construction work should be allowed to proceed. If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist should delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. At	Prior to and during construction	Applicant/Qualified Biologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
the discretion of the biologist, a no-work buffer zone shall be established suitable to the particular bird species and location of the nest until the nest is vacated and juveniles have fledged, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with flagging, fencing, or other appropriate barriers, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, showing the locations of any active nests detected, and documentation of any avoidance measures taken, shall be submitted to the City of Highland to document compliance with applicable state and federal laws.				
Cultural Resources				
MM-CUL-1: Workers Environmental Awareness Program. Prior to the start of construction activities, all construction personnel and monitors shall be trained regarding identification and treatment protocol for inadvertent discoveries of cultural resources (archaeological and tribal) and human remains. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries of cultural resources and human remains. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of materials that may be identified during ground disturbing activities and explain the importance of and legal basis for the protection of human remains and significant cultural resources. Each worker shall also be trained in the proper procedures to follow in the event that cultural resources or human remains	Prior to and during construction	Applicant/Qualified Archaeologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
are uncovered during ground disturbing activities. These procedures include but are not limited to work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitoring staff.				
MM-CUL-2: Retention of an On-Call Qualified Archaeologist. A qualified archaeologist shall be retained and on-call to respond and address any inadvertent discoveries identified project implementation. Additionally, in consideration of the potential to encounter intact cultural deposits beneath fill soils, the qualified archaeologist shall survey the Project site once fill soils have been removed to ensure no cultural deposits underly the fill layer. If is determined, based on the aforementioned survey, that cultural resources are present or may be present and may be impacted during Project construction, monitoring may be warranted. Additionally, any identified cultural resources shall be assessed and evaluated pursuant to CEQA. If it is determined that monitoring is warranted, a qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, shall oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor will be responsible for maintaining daily monitoring logs.	Prior to and during construction	Applicant/Qualified Archaeologist	City of Highland	
MM-CUL-3: Inadvertent Discovery Clause. In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting	During construction (start/end of all ground disturbing activities)	Applicant/Qualified Archaeologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment. If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly. If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.				
Geology and Soils				
MM-GEO-1: Discovery of Paleontological Resources. In the event that paleontological resources (i.e., fossil remains) are exposed during construction activities for the project, all	During construction	Applicant/Qualified Paleontologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
construction work occurring within 50 feet of the find shall immediately stop until a qualitied paleontologist, as defined by the Society of Vertebrate Paleontology's guidelines, can assess the nature and importance of the find. Depending on the significance of the find, the qualified paleontologist may record the find and allow work to continue or may recommend salvage and recovery of the resource. All recommendations shall be made in accordance with the Society of Vertebrate Paleontology's guidelines and shall be subject to review and approval by the City of Highland. Work in the area of the find may only resume upon approval of a qualified paleontologist.				
Tribal Cultural Resources				
MM-TCR-1: Discovery of Tribal Cultural Resources. The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CR-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site. Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead	During construction	Applicant/Qualified Archaeologist	City of Highland	

Table 1. Mitigation Monitoring and Reporting Program

Mitigation Measure	Implementation Timing	Responsible Party	Enforcing Agency	Date of Completion
Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.				

Appendix M
Response to Comments

Responses to Comments

This Chapter of the Final Mitigated Negative Declaration (MND) for the 5th and Victoria (project) includes a copy of all comment letters that were submitted regarding the Draft MND (Draft MND), along with responses to comments in accordance with California Environmental Quality Act (CEQA) Guidelines Section 15088. The 30-day review period for the Draft MND began on October 18, 2024, and ended on November 18, 2024.

The responses amplify or clarify information provided in the Draft MND and/or refer the reader to the appropriate place in the document where the requested information can be found. Comments that are not directly related to environmental issues (e.g., opinions on the merits of the project unrelated to its environmental impacts) are noted for the record. Where text changes in the Draft MND are warranted based on comments received or updated project information, those changes are noted in response to the comment and the reader is directed to the Final MND.

The changes to the analysis contained in the MND do not constitute significant new information. In accordance with CEQA Guidelines Section 15088.5, recirculation of the MND is not required.

All written comment letters received on the MND are listed in Table 1. Each of the written comment letters has been assigned an alphanumeric label to facilitate identification and tracking, and the individual comments within each written comment letter are bracketed and numbered (see Table 1). Individual comments and the responses to them were assigned corresponding numbers (e.g., A1-1, A1-2, A1-3). To aid readers and commenters, electronically bracketed comments have been reproduced in this document, with the corresponding responses provided immediately following the comments.

Subject: Draft Mitigated Negative Declaration, Southeast Corner 5th and Victoria Warehouse Project, State Clearinghouse No. 2024100850, City of Highland, San Bernardino County

Dear Kim Stater:

The California Department of Fish and Wildlife (CDFW) received a Mitigated Negative Declaration (MND) from the City of Highland (City) for the Southeast Corner 5th and Victoria Warehouse Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. A1-1

CDFW is also submitting comments as a **Responsible Agency** under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the project proponent may seek related take authorization as provided by the Fish and Game Code.

PROJECT DESCRIPTION SUMMARY

Proponent: Patriot Development Partners

Description: The Project proposes construction of a one-story industrial warehouse facility, approximately 173,976 square feet on a 7.23-acre property. Primary Project activities include construction of proposed warehouse, on- and off-site improvements, site access and parking, and utility improvements.

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Location: The Project site is located in the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, and west of City Creek bypass flood control channel, in the City of Highland, County of San Bernardino. Assessor's Parcel Numbers [APN] 1192-551-02-07 and 12-15.

A1-1 cont.

Timeframe: Anticipated time frame for constructing the Project would be approximately 8 months. Site preparation would take 5 weeks, followed by grading which would take a month. Building construction would take 4 months, and paving and architectural coating would each take a month.

COMMENTS AND RECOMMENDATIONS

CDFW has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (i.e., biological resources). CDFW offers the comments and recommendations below to assist the City of Highland in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. Editorial comments or other suggestions may also be included to improve the document. Based on the Project's avoidance of significant impacts on biological resources with implementation of mitigation measures, including those CDFW recommends, CDFW concludes that a Mitigated Negative Declaration is appropriate for the Project.

A1-2

I. Environmental Setting and Related Impact Shortcoming

Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or USFWS?

COMMENT 1: Burrowing Owl (*Athene cunicularia*)

IS/MND pages 41-42, Biological Technical Report pages 1-8

Issue: The project may impact burrowing owl (BUOW), a candidate species under the California Endangered Species Act (CESA) and Project activities may result in take as defined in Fish and Game Code section 86.

Specific impact: The IS/MND acknowledges the potential for burrowing owl to occur given historical occurrence within the general area and suitable habitat. No burrowing owls or signs were observed during the field site visit. CDFW notes that only one reconnaissance survey was performed on October 19, 2022 between 11:30 am – 12:30 pm. A focused survey for the species following a CDFW approved guideline, or similar approach, was not conducted and the site supports suitable habitat. Therefore, CDFW is concerned that the City may not have adequately identified potentially significant impacts. Project implementation, including grading, vegetation clearing and construction, may result in direct mortality, population declines, or local extirpation of burrowing owl not previously identified. Additionally, the California Wildlife Habitat Relationships (CWHR) dataset, Burrowing Owl Predicted Habitat (CDFW 2016), displays a high potential for burrowing owl presence within the Project area, and one known BUOW occurrence was observed less than a mile away from the Project site.

A1-3

Why impact would occur: According to the Biological Constraints Analysis, focused burrowing owl surveys were not conducted on the Project site. Burrowing owls have been known to use highly degraded and marginal habitat where existing burrows are available. Burrowing owls are well-adapted to open, relatively flat expanses and vacant lots and prefer habitats with generally short sparse vegetation with few shrubs such as those occurring on the Project site. If BUOW burrows are not properly detected, prior to ground disturbance, site preparation and grading could destroy habitat and result in take of burrowing owl. Occupied site or occupancy means a site that is assumed

occupied if at least one burrowing owl has been observed occupying a burrow within the last three years. Occupancy of suitable burrowing owl habitat may also be indicated by owl sign including its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance or perch site.

Evidence impact would be significant: On October 10, 2024, the California Fish and Game Commission accepted a petition to list Western Burrowing Owl as endangered under CESA, determining the listing "may be warranted" and advancing the species to the candidacy stage of the CESA listing process. As a candidate species, Western Burrowing Owl is granted full protection of a threatened species under CESA. If Project activities could result in take, appropriate CESA authorization (i.e., Incidental Take Permit under Fish and Game Code section 2081) should be obtained prior to commencement of Project activities. Take of any endangered, threatened, or candidate species that results from the Project is prohibited, except as authorized by State law (Fish & G. Code, §§ 86, 2062, 2067, 2068, 2080, 2085; Cal. Code Regs., tit. 14, § 786.9). Take of individual burrowing owls and their nests is defined by Fish and Game Code section 86, and prohibited by sections 3503, 3503.5 and 3513. Inadequate avoidance, minimization, and mitigation measures for impacts to sensitive or special status species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species by CDFW.

A1-3 cont.

Recommended Potentially Feasible Mitigation Measure to reduce impacts to less than significant: CDFW recommends that prior to commencing Project activities for all phases of Project construction, focused and preconstruction surveys for burrowing owl be conducted by a qualified biologist in accordance with the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012 or most recent version). Because appropriate surveys were not conducted prior to circulation of the MND, the MND may not adequately identify potentially significant impacts. CDFW recommends the IS/MND be revised and recirculated following completion of survey so that results and appropriate specific avoidance and minimization measures can be included, to ensure that impacts to burrowing owls are reduced to less than significant. However, if the City chooses not to follow this path, CDFW recommends the following revisions to MM-BIO-1 (edits are in strikethrough and bold) to ensure an adequate assessment is completed and CESA authorization obtained, if needed.

MM BIO-1: Focused and Pre-Construction Surveys for Burrowing Owl

Suitable burrowing owl habitat has been confirmed on the site; therefore, focused burrowing owl surveys shall be conducted by a qualified biologist in accordance with the *Staff Report on Burrowing Owl Mitigation* (2012 or most recent version) prior to vegetation removal or ground-disturbing activities for all phases of Project construction. The Designated Biologist shall provide to CDFW a GIS or KMZ map of BUOW burrow complex(es) and atypical burrows (e.g. culverts, buckled concrete, etc.) The map shall be at a scale of 1:24,000 or finer to show details and shall show locations of all BUOW sightings and labeled if sightings were potential burrows, occupied burrows, satellite burrows, areas of concentrated burrows, and BUOW sign. Locations documented by use of GPS coordinates must be collected in NAD83 datum. The map shall include an outline of the Project Area. The map shall include a title, north arrow, scale bar, and legend.

If burrowing owl occupancy is confirmed, and if Project activities may impact burrowing owl, including burrow exclusion and closure, the Project Proponent shall begin early coordination with CDFW for appropriate CESA authorization (i.e., Incidental Take Permit (ITP) under Fish and Game Code section 2081) prior to commencement of Project activities. The ITP application shall describe, at a minimum, project activities and equipment, proposed avoidance/buffers, temporary and permanent impacts, monitoring, relocation and/or translocation, and minimization and compensatory mitigation actions. ITP compensatory mitigation will be fulfilled by one or more of following options: 1) Permittee-

responsible mitigation land acquisition or 2) Conservation or Mitigation Bank credits (if available).

~~Focused Burrowing Owl Surveys: The project site contains potentially suitable habitat for burrowing owl and therefore a presence/absence survey should be conducted in accordance with the California Department of Fish and Wildlife's 2012 Staff Report on Burrowing Owl Mitigation. The burrowing owl presence/absence survey requires four crepuscular surveys, with a 500-foot buffer as legally able, using 7–20 meter transects. Four survey passes must be conducted with at least one site visit between February 15 and April 15, and a minimum of three survey visits, spaced at least 3 weeks apart, between April 15 and July 15, with at least one visit after June 15. A pre-construction survey of the project site for the burrowing owl is also recommended within 30 days of ground disturbing activities if suitable habitat exists, regardless of the results of the focused surveys. Surveys should be conducted in all portions of the project site and 500-foot buffer that contain suitable habitat for the species, where legally accessible. Alternatively, instead of conducting focused surveys, the project may also choose to assume presence of the species and prepare a burrowing owl translocation plan that would be implemented if burrowing owl are detected on the project site during the pre-construction survey.~~

A1-3 cont.

COMMENT 2: Artificial Nighttime Light

Issue: The MND does not mention in the Project description, or analyze impacts to biological resources from, artificial nighttime lighting, and includes no mitigation measures to avoid or reduce impacts to biological resources.

Specific impact: The proposed Project will result in new sources of artificial nighttime lighting. Impacts to biological resources resulting from the use of artificial nighttime lighting during construction and during operation of the Project are not analyzed, and no mitigation measures are proposed. Designs for lighting to be used during operation of the Project should be included in a revised MND, along with details of artificial nighttime lighting to be used during construction. The direct and indirect impacts of artificial nighttime lighting on biological resources including migratory birds that fly at night, bats, and other nocturnal and crepuscular wildlife should be analyzed, and appropriate avoidance and minimization measures to reduce impacts to less than significant should be included in a revised MND.

A1-4

Evidence impact would be significant: Artificial nighttime lighting often results in light pollution, which has the potential to significantly and adversely affect fish and wildlife. Artificial lighting alters ecological processes including, but not limited to, the temporal niches of species; the repair and recovery of physiological function; the measurement of time through interference with the detection of circadian and lunar and seasonal cycles; the detection of resources and natural enemies; and navigation (Gatson et al. 2013). Many species use photoperiod cues for communication (e.g., bird song; Miller 2006), determining when to begin foraging (Stone et al. 2009), behavior thermoregulation (Beiswenger 1977), and migration (Longcore and Rich 2004). Phototaxis, a phenomenon which results in attraction and movement towards light, can disorient, entrap, and temporarily blind wildlife species that experience it (Longcore and Rich 2004).

Recommended Potentially Feasible Mitigation Measure: Because of the potential for artificial nighttime light to negatively impact wildlife, CDFW recommends the MND be revised to include details of the use of artificial nighttime lighting proposed for construction and operation of the Project and an analysis of impacts to biological resources, as well as specific avoidance and minimization measures to ensure that impacts to wildlife are reduced to less than significant. Absent an analysis, CDFW recommends the City include the following mitigation measure in a revised MND:

MM BIO-[3]: Artificial Nighttime Light

During Project construction and the lifetime operations of the Project, the City and Project proponent shall eliminate all nonessential lighting throughout the Project area and avoid or limit the use of artificial light at night during the hours of dawn and dusk when many wildlife species are most active. The County and Project proponent shall ensure that lighting for Project activities is shielded, cast downward and directed away from surrounding open-space and agricultural areas, reduced in intensity to the greatest extent possible, and does not result in lighting trespass including glare into surrounding areas or upward into the night sky (see the International Dark-Sky Association standards at http://darksky.org/). The City and Project proponent shall ensure use of LED lighting with a correlated color temperature of 3,000 Kelvins or less, proper disposal of hazardous waste, and recycling of lighting that contains toxic compounds with a qualified recycler.

A1-4 cont

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be filled out and submitted online at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

A1-5

ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

A1-6

CONCLUSION

CDFW appreciates the opportunity to comment on the MND to assist City of Highland in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Amelia Viera, Environmental Scientist, at 909-544-2528 or Amelia.Viera@Wildlife.ca.gov.

Response to Comment Letter A1

California Department of Fish and Wildlife
Kim Freeburn, Environmental Program Manager
November 18, 2024

A1-1 The comment acknowledges that CDFW is submitting comments as both a Trustee and Responsible Agency under CEQA. The comment states the project description, project location, and project timeline. No further response is required.

A1-2 The comment is an introduction to comments that follow. No further response is required.

A1-3 The comment provides a summary of the issue, specific impact, why the impact would occur, and recommended potentially feasible mitigation measures for burrowing owls. The comment addresses the IS/MND pages 41-42 and the Biological Technical Report pages 1-8. The comment states the CDFW is concerned that City may not have adequately identified potentially significant impacts to burrowing owls because only one reconnaissance survey was performed for the project, and a focused survey for the species following a CDFW approved guideline, or similar approach, was not conducted. The comment cites the California Wildlife Habitat Relationships dataset, Burrowing Owl Habitat, which displays the project site has high potential for burrowing owl presence and that one BUOW occurrence was observed less than one mile away from the project site. The comment states that a significant impact would occur to burrowing owls and recommends that prior to commencing Project activities for all phases of Project construction, focused and preconstruction surveys for burrowing owl be conducted by a qualified biologist in accordance with the *Staff report on Burrowing Owl Mitigation* (CDFG 2012 or most recent version). Additionally, the comment requests that the IS/MND be revised and recirculated following completion of survey so that results and appropriate specific avoidance and minimization measures can be included. The comment states that if the City does not choose to re-circulate the MND, CDFW recommends revisions to MM-BIO-1, as detailed in the comment letter.

Section 3.4, Biological Resources, threshold a), states that the burrowing owl has moderate potential to occur on-site and states that impacts would be potentially significant to burrowing owls. MM-BIO-1 "Focused Burrowing Owl Surveys" states that presence/absence surveys should be conducted in accordance with the California Department of Fish and Wildlife's 2012 Staff Report on Burrowing Owl Mitigation. However, since the species has been made a candidate for listing under the California Endangered Species Act since the circulation of the IS/MND, the Final EIR will reflect the changes to MM-BIO-1 that CDFW recommends as follows:

MM-BIO-1 Focused Burrowing Owl Surveys and Minimization Measures: Suitable burrowing owl habitat has been confirmed on the site; therefore, focused burrowing owl surveys shall be conducted by a qualified biologist in accordance with the Staff Report on Burrowing Owl Mitigation (2012 or most recent version) prior to vegetation removal or ground-disturbing activities for all phases of Project construction. A City-approved Biologist shall provide to California Department of Fish and Wildlife (CDFW) GIS or KMZ map of burrowing owl burrow complex(es) and atypical burrows (e.g. culverts, buckled concrete, etc.). The map shall be at a scale of 1:24,000 or finer to show details and shall show locations of all burrowing owl sightings

and labeled if sightings were potential burrows, occupied burrows, satellite burrows, areas of concentrated burrows, and burrowing owl sign. Locations documented by use of GPS coordinates must be collected in NAD83 datum. The map shall include an outline of the Project area. The map shall include a title, north arrow, scale bar, and legend.

If burrowing owl occupancy is confirmed, and if Project activities may impact burrowing owl, including burrow exclusion and closure, the Project proponent shall begin early coordination with CDFW for appropriate CESA authorization (i.e., Incidental Take Permit (ITP) under Fish and Game Code section 2081) prior to commencement of Project activities. The ITP application shall describe, at a minimum, project activities and equipment, proposed avoidance/buffers, temporary and permanent impacts, monitoring, relocation and/or translocation, and minimization and compensatory mitigation actions. ITP compensatory mitigation will be fulfilled by one or more of following options: 1) Permittee-responsible mitigation land acquisition or 2) Conservation or Mitigation Bank credits (if available). ~~The project site contains potentially suitable habitat for burrowing owl and therefore a presence/absence survey should be conducted in accordance with the California Department of Fish and Wildlife's 2012 Staff Report on Burrowing Owl Mitigation. The burrowing owl presence/absence survey requires four crepuscular surveys, with a 500-foot buffer as legally able, using 7–20 meter transects. Four survey passes must be conducted with at least one site visit between February 15 and April 15, and a minimum of three survey visits, spaced at least 3 weeks apart, between April 15 and July 15, with at least one visit after June 15. A pre-construction survey of the project site for the burrowing owl is also recommended within 30 days of ground disturbing activities if suitable habitat exists, regardless of the results of the focused surveys. Surveys should be conducted in all portions of the project site and 500-foot buffer that contain suitable habitat for the species, where legally accessible. Alternatively, instead of conducting focused surveys, the project may also choose to assume presence of the species and prepare a burrowing owl translocation plan that would be implemented if burrowing owl are detected on the project site during the pre-construction survey.~~

A1-4 The comment states that the MND does not mention or analyze impacts to biological resources from artificial nighttime lighting. The comment recommends that the MND be revised to include details of the use of artificial nighttime lighting for proposed construction and operation of the Project and an analysis of impacts to biological resources, as well as specific avoidance and minimization measures. Absent an analysis, the comment recommends the City include MM-BIO-3, as detailed in the comment, in a revised MND.

An analysis of lighting and glare is provided in Section 3.1, Aesthetics, threshold d), of the MND. The analysis states that project construction would be limited to daytime hours and nighttime lighting would not be required until the project is operational. For operational purposes, all exterior lighting would comply with Section 16.40.160 of the City's Development Code, all exterior lighting would be shielded/hooded, and a photometrics plan will be prepared by a certified engineer to be approved by the Planning Commission. It was determined that the project would not be considered to result in long-term impacts with light and glare. Additionally, the Project is located in an urban area and adjacent to the San Bernardino International Airport. As such, operation of the Project is not expected to substantially add to the existing nighttime lighting in the vicinity of the Project.

A1-5 The comment requests that special status species and natural communities detected during Project surveys are reported to the California Natural Diversity Database (CNDDB). The comment provides a link to the survey. The comment does not raise an issue related to the adequacy of the Draft EIR. No further response is required.

A1-6 The comment states that environmental document filing fees are necessary because the Project would have an impact on fish and/or wildlife. The comment provides instructions on paying the filing fees. The comment does not raise an issue related to the adequacy of the Draft EIR. No further response is required.

A1-7 The comment provides conclusory remarks. No further response is required.

November 18, 2024

Kim Stater, Assistant Community Development Director
City of Highland
27215 Base Line
Highland, California 92346

Dear Ms. Stater:

Please accept the following comments from the Local Agency Formation Commission for San Bernardino County (LAFCO) on the Notice of Intent (NOI) to Adopt a Mitigated Negative Declaration for the Southeast Corner 5th Street and Victoria Avenue Warehouse Project. LAFCO will be acting as a Responsible Agency under the California Environmental Quality Act (CEQA) for this project, which will require the Commission to review and consider a reorganization proposal and companion spheres of influence amendments. The following are the LAFCO comments, concerns, and/or questions: A2-1

1.1 Project Overview

Page 1: When listing the approvals for the project, it might be appropriate to separate the items related to the City's approval and the items related to LAFCO. Note that this project will require the following LAFCO actions:

- Sphere of influence amendments for the City of Highland (expansion), City of San Bernardino (reduction), and San Bernardino County Fire Protection District (reduction).

- Annexation to the City of Highland and detachments from the City of San Bernardino, the San Bernardino County Fire Protection District (SBCFPD), SBCFPD Valley Service Zone, and SBCFPD Service Zone FP-5. A2-2

Page 1, Paragraph 2: It should be noted that the sphere of influence amendments and the proposed reorganization (annexation/detachments) area not only includes the parcel itself but also its adjacent road right-of-way along 5th Street and Victoria Ave. In addition, because the San Bernardino County Fire Protection District (County Fire) serves the City of San Bernardino, the detachment from the City of San Bernardino will also require the detachment from County Fire since the City of Highland has its own fire service.

It is suggested that the last sentence be revised to say, "A portion of the project—APN 1192-551-01 and its adjacent southerly road right-of-way along 5th Street and its adjacent easterly road right-of-way along Victoria Avenue—is currently within the City of San Bernardino. In order to place this said portion into the City of Highland's jurisdiction, it will require amendments of the spheres of influence for the City of Highland (expansion), the City of San Bernardino (reduction) and the San Bernardino County Fire Protection District (reduction) and a reorganization to include annexation to the City of Highland and detachments from the City of San Bernardino, and the San Bernardino County Fire Protection District and its Service Zones, requiring approval by the Local Agency Formation Commission (LAFCO). APN 1192-551-01 and its adjacent road rights-of-way total approximately 0.95[1] acres."

[1] Note: Verify the actual acreage of the parcel including its adjacent road rights-of-way.

Page 3, Paragraph 2, Line 4: "San Bernardino Airport" should be "San Bernardino International Airport (SBIA)". A2-3

Page 4, Table 1 Footnote: The Airport Gateway Specific Plan is no longer being processed and should probably not be referenced here. A2-4

2.3 Project Characteristics

Sanitary Sewer, Page 5: As noted in the discussion related to wastewater treatment under Utilities and Service Systems (Item c, last paragraph, page 115), the Sterling WWTP is now operational; therefore, the discussion regarding wastewater treatment should be revised. A2-5

Page 6, Paragraph 2: The City Creek Bypass (CCB) does not go directly into the Santa Ana River. CCB flows into Twin Creek and then Twin Creek flows into the Santa Ana River. A2-6

2.4 Project Construction and Phasing

Page 6: The dates identified regarding construction are inaccurate. In addition, Table 3 needs to be revised to reflect current dates. A2-7

2.5 Project Approvals

Page 7: Again, it would be appropriate to separate the items related to the City's approval in this section since the list outlines the approvals by the City as the Lead Agency. Regarding approval of the sphere amendments and the reorganization (annexation/detachments), LAFCO will be acting as Responsible Agency under CEQA. A2-8

Initial Study Checklist

Page 10, Item 10: Other public agencies whose approval is required: The text should clearly identify the LAFCO actions which include the sphere of influence expansion for the City of Highland, sphere of influence reductions for the City of San Bernardino and San Bernardino County Fire Protection District, and the reorganization to include annexation to the City of Highland and detachments from the City of San Bernardino, the San Bernardino County Fire Protection District, its Valley Service Zone, and its Service Zone FP-5. It should also be clearly identified that the sphere of influence amendments and the proposed reorganization area not only includes the parcel itself but also its adjacent road right-of-way along 5th Street and Victoria Avenue. A2-9

Page 59, Item e): Suggest stating that "The proposed project would connect directly to the East Valley Water District sanitary sewer system.." A2-10

Page 70, Item e), Line 7: Replace "San Bernardino Airport…" with "San Bernardino International Airport…" A2-11

Page 71, Item f): Since roadway improvements will be installed within the road right-of-way, it is recommended that the project be required to implement a construction traffic management plan as mitigation to ensure emergency access is maintained. A2-12

Page 73, top Paragraph, Line 5: Change "issues" to "issued." A2-13

Page 73, Paragraph 2: Note that Flood Control owns the CCB channel north of 3rd Street, while the IVDA/SBIAA own the channel south of 3rd Street. If any encroachment occurs south of 3rd, the IVDA/SBIAA must be contacted for an encroachment permit. A2-14

Page 73, Paragraph 3, bottom line: Should the term "redevelopment" be "development"? A2-15

Page 74, bottom paragraph, next to last line: "Norton Air Force Base" no longer exists; therefore, it might be appropriate to insert "former" before Norton. Also, what data is the finding in the paragraph based upon, i.e., what substantiation. A2-16

Page 75, Item c) i), Paragraph 2, line 7: Change "strom" to "storm." A2-17

Page 75, Item c) i), Paragraph 2, Line 9: Insert "that" between "such" and "any." A2-18

Page 75, Paragraph 4: Refer to the comment on Page 6 regarding Twin Creek. A2-19

Page 75, Paragraph 5, Line 2: Change "strom" to "storm." A2-20

Page 75 (bottom of page) to Page 76 (top of page): If ultimate flows are delivered to the south side of 3rd Street, authorization would need to be obtained from the IVDA/SBIAA. A2-21

Page 78, bottom paragraph, Line 4: Delete the first "would." A2-22

Page 79, Paragraph 1: This paragraph needs to again clearly identify the LAFCO actions regarding the sphere of influence amendments (expansion/reductions) and the reorganization that include annexation and detachments. A2-23

Page 95, Fire Protection: A statement should be made here regarding the sphere of influence reduction of San Bernardino County Fire Protection District (County Fire), and the detachment of County Fire and its Service Zones. A2-24

Page 95, Paragraph 1, Line 6: Delete City of San Bernardino since the City is currently served by County Fire. A2-25

Page 97, Item a), Line 5: Change "residential" to "recreational." A2-26

Page 106, Item d): Is a discussion of emergency access to the site during roadway construction needed here? If not, why not? A2-27

Page 114 to Page 115, Item c): The first paragraph and the table should be revised to identify that the East Valley Water District is now the wastewater treatment provider since its Sterling WWTP is now operational, as noted on the second paragraph. A2-28

Page 114, Item c), Line 8: Change "Water District" to "Water Department." A2-29

Page 115, Paragraph 2, Line 1: Change "A" to "As." A2-30

Thank you for allowing LAFCO to provide comments to the NOI. By addressing these comments, LAFCO believes the Initial Study/MND will provide sufficient substantiation to support the LAFCO decisions as a CEQA Responsible Agency.

If you have any questions concerning the information outlined above, please do not hesitate to contact me at (909) 388-0480. Please maintain LAFCO on your distribution list to receive further information related to this process. We look forward to working with the City on its future processing of this project. A2-31

Sincerely,

SAMUEL MARTINEZ
Executive Officer

cc: Tom Dodson, Tom Dodson and Associates, LAFCO Environmental Consultant
Carlos Zamano, City Manager, City of Highland
Rochelle Clayton, City Manager, City of San Bernardino

Bertral Washington, Deputy Chief of Administration, County Fire
Gary Jager, Assistance Chief, Division 1 (East Valley), County Fire

Response to Comment Letter A2

Local Agency Formation Commission
Samuel Martinez, Executive Officer
November 18, 2024

A2-1 The comment introduces the comments to follow and identifies LAFCO as a responsible agency under CEQA for the project. No further response is required.

A2-2 The comment suggests that the MND should separate items related to the City's approval and the items related to LAFCO. The comment states that the project requires the following LAFCO actions:

- Sphere of Influence amendments for the city of Highland (expansion), City of San Bernardino (reduction), and San Bernardino County Fire Protection District (reduction).

- Annexation to the City of Highland and detachments from the City of San Bernardino, the San Bernardino County fire Protection District (SBCFPD) SBCFPD Valley Service Zone, and SBCFPD Service Zone FP-5.

The comment notes that in Section 1,1, Project Overview, Page 1, Paragraph 2, of the MND, the sphere of influence amendments and the proposed reorganization area not only includes the parcel itself but its adjacent road right-of-way along 5th street and Victoria Ave. The comment notes that in the same paragraph the City of San Bernardino will also require the detachment from County Fire, because, the City of Highland has its own fire service.

The comment suggests that the last sentence be revised to say *"A portion of the project – APN 1192-551-01 and its adjacent southerly road right-of-way along 5th Street and its adjacent easterly road right-of-way along Victoria Avenue – is currently within the City of San Bernardino. In order to place this said portion into the City of Highland's jurisdiction, it will require amendments of the spheres of influence for the city of Highland (expansion), the City of San Bernardino (reduction) and the San Bernardino County Fire Protection District (reduction) and a reorganization to include annexation to the City of Highland and detachments from the City of San Bernardino, and the San Bernardino County Fire Protection District and its Service Zones, requiring approval by the Local Agency Formation commission (LAFCO). APN 1192-551-01 and its adjacent road rights-of-way total approximately 0.95 acres."*

A2-3 The comment suggests that Page 3, Paragraph 2, Line 4: "San Bernardino Airport" should be "San Bernardino International Airport (SBIA)". The comment is noted, and revisions will be made to the Final MND.

A2-4 The comment suggests that Page 4, Table 1 Footnote should be removed as the Airport Gateway Specific Plan is no longer being processed and should not be referenced. The comment is noted, and revisions will be made to the Final MND.

A2-5 The comment suggests that in Section 2.3, Project Characteristics, page 5, the wastewater treatment discussion should be revised to reflect that the Sterling WWTP is now operational. The comment is noted, and revisions have been made to the Final MND in strikeout/underline.

A2-6 The comment states that the City Creek Bypass (CBC) does not go directly into the Santa Ana River, instead, CBC flows into Twin Creek and then Twin Creek flows into the Santa Ana River (Page 6, Paragraph 2). This revision has been made in strikeout/underline in the Final MND.

A2-7 The comment suggests that the dates identified regarding construction are inaccurate, and that Table 3 needs to be revised to reflect current dates. The comment is noted, and revisions have been made to the Final MND in strikeout/underline.

A2-8 The comment suggests that approvals related to the City are separated from approvals related to LAFCO.

A2-9 The comment suggests that the text on page 10, Item 10 should clearly identify the LAFCO actions, which include the spere of influence expansion for the City of Highland, sphere of influence for the City of San Bernardino and San Bernardino County Fire Protection District, and the re-organization to include annexation to the City of Highland and detachments from the city of San Bernardino, San Bernardino County Fire Protection District, its Valley Service Zone, and its Service Zone FP-5. It should also be clearly identified that the spere of influence amendments and the proposed reorganization area not only includes the parcel itself but also its adjacent road right-of-way along 5th Street and Victoria Avenue.

A2-10 The comment suggest that Page 59, Item e, be revised to state "*The proposed project would connect directly to the East Valley Water District sanitary sewer system..*" The comment is noted, and revisions have been made to the Final MND in strikeout/underline.

A2-11 The comment suggests that Page 70, item e, line 7, should be revised to state "*The San Bernardino International Airport."* The comment is noted, and revisions have been made to the Final MND in strikeout/underline.

A2-12 The comment suggests that since roadway improvements will be installed within the road right-of-way, it is recommended that the project be required to implement a construction traffic management plan as mitigation to ensure emergency access is maintained (page 71, item f).

Page 71, Item f, specifically addresses *"Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan."* This analysis for this threshold does not apply to traffic impacts within the road right-of-way. Refer to Section 3.17, Transportation, of this MND for the transportation impact analysis. Section 3.17, Item a), states that the project would not conflict with the right-of-way along any of the streets it borders.

A2-13 The comment suggests on Page 73, top paragraph, line 5, to revise the word "issues" to "issued". The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-14 The comment notes that if any encroachment occurs on the south of 3rd, the IVDA/SBIAA must be contacted for an encroachment permit (Page 73, Paragraph 2). The comment does not address inadequacies with the MND, no further comment is required.

A2-15 The comment questions if the term "redevelopment," should be "development" (page 73, paragraph 3). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-16 The comment states that the Norton Air Force Base no longer exists and should be referred to as a former air force base. The comment questions the substantiation on the data the paragraph is based on (Page 74, bottom paragraph). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-17 The comment suggests to change the word "strom" to "storm" (page 75, Item C), i), paragraph 2, line 7). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-18 The comment suggests to insert the word "that" between "such" and "any" (Page 75, Item c), i), Paragraph 2, Line 9). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-19 The comment suggests to refer to the comment on Page 6 regarding Twin Creek (Page 75, Paragraph 4). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-20 The comment suggests to change the word "strom" to "storm" (Page 75, Paragraph 5, Line 2). The comment is noted, and revisions will be made to the Final MND.

A2-21 The comment states that if ultimate flows are delivered to the south side of 3rd Street, authorization would need to be obtained from the IVDA/SBIAA (bottom of page 75 to top of page 76). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-22 The comment suggests to delete the word "would" (Page 78, bottom paragraph, Line 4). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-23 The comment states that the paragraph shall clearly identify the LAFCO actions regarding the spere of influence amendments (expansion/reductions) and the reorganization that include annexation and detachments.

A2-24 The comment suggests a statement should be made on Page 95, Fire Protection, regarding the sphere of influence reduction of San Bernardino County Fire Protection District (County Fire), and the detachment of County Fire and its Service Zones. The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-25 The comment states that the City is currently served by County Fire, and City of San Bernardino should be deleted (Page 95, Paragraph 1, Line 6). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-26 The comment suggests changing the word "residential" to "recreational" (Page 97, Item a), Line 5). The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-27 The comment asks the questions "Is a discussion of emergency access to the site during roadway construction needed here? If not, why not?" (Referring to page 106, Item d). As stated on page 106, under Threshold D, "The project site would be accessible to emergency responders during construction and operation of the project." No further edit or response is required.

A2-28 The comment suggests that the first paragraph and the table on Pages 114 and 115, Item C, be revised to identify that the East Valley Water District is now the wastewater treatment provider since its Sterling WWTP is now operational, as noted on the second paragraph. The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-29 The comment suggest to change the phrase "Water District" to "Water Department" on page 114, Item c, line 8. The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-30 The comment suggests to change the word "A" to "As" on Page 115, Paragraph 2, Line 1. The comment is noted, and revisions have been made to the Final MND strikeout/underline.

A2-31 The comment provides conclusory remarks. No further response is required.

Comment Letter A3

Initial Study/Mitigated Negative Declaration (IS/MND) for the Proposed Southeast Corner 5th and Victoria Warehouse Project (Proposed Project) (SCH No: 2024100850)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of Highland is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments, which are organized by topic of concern.

South Coast AQMD Staff's Summary of Project Information in the IS/MND

A3-1

Based on the information provided in the IS/MND, the Proposed Project involves the construction of an approximately 173,976-square-foot one-story warehouse building on an approximately 7.23-acre site.[1] The Proposed Project is located at the southeastern corner of 5th Street and Victoria Avenue, Highland.[2] There would be 83 truck trips per day associated with the operation,[3] and trucks would be accessed mainly via two driveways along 3rd Street and 5th Street.[4] Based on the aerial photograph review, South Coast AQMD staff (Staff) found that the nearest sensitive receptor (e.g., resident) is 90 feet north of the Proposed Project Site. The Proposed Project construction would take approximately nine months.[5]

South Coast AQMD Staff's Comments on the IS/MND

A3-2

Revision to the Localized Significance Thresholds Analysis During Construction Activities

In section 3.3 Air Quality, the Lead Agency performs localized significance thresholds (LSTs) analysis for a 2.5-acre site within Source Receptor Area 34 with a receptor distance of 70 meters (230 feet) as the nearest sensitive receptor.[6] However, the Lead Agency also identifies the nearest sensitive receptors as residential uses located approximately 90 feet north of the Proposed Project site.[7] Staff has verified the distance and found that the nearest sensitive receptors are about 90 feet away. Hence, the LSTs analysis performed in the IS/MND using 70 meters or 230 feet is inaccurate. The Lead Agency is recommended to revise the LSTs analysis for construction, re-evaluate the level of

[1] IS/MND. Page 4.
[2] *Ibid*. Page 3.
[3] *Ibid*. Page 99. Table 24. Project Trip Generation Summary.
[4] *Ibid*. Page 4.
[5] *Ibid*. Page 6.
[6] *Ibid*. Page 27-28.
[7] *Ibid*. Page 27.

significance, and, in the event that the results are found to be significant, the Lead Agency is suggested to include all feasible mitigation measures to reduce the impacts as applicable. A3-2 cont.

Completion of CEQA Air Quality Impacts Analysis During Operation Activities

Based on the IS/MND, the lead agency has not provided any LSTs analysis for operation. Pursuant to CEQA guidelines section 15064 - Determining the Significance of the Environmental Effects Caused by a project – the Lead Agency is responsible for performing an in-depth and detailed analysis of an estimation of the potential localized and regional air quality impact analysis. Thus, it is recommended that a table be added in the air quality impact section to evaluate the maximum daily on-site operational emissions using CalEEMod[8] land use emissions software and, subsequently, compare these emissions against the South Coast AQMD LSTs for operation. It is important to note that the localized analysis can be conducted using the LST screening tables or by performing dispersion modeling. This analysis will provide us with a preliminary assessment of the potential air quality impacts, both at the regional and localized levels, arising from the Proposed Project. A3-3

Additional Recommended Air Quality and Greenhouse Gases Mitigation Measures and Project Design Considerations

In section 3.3 Air Quality, the Lead Agency conducts health risk assessment (HRA) for construction and operation. The HRA results are determined to be less than significant, with a cancer risk (CR) of 6.73[9] and 9.48[10] in one million for construction and operation, respectively. Although the conclusion is less than significant, the operational CR is relatively high, close to the 10 in one million per South Coast AQMD Air Quality Significance Thresholds.[11] Due to the high result of 9.48 in one million, Staff recommends that the Lead Agency consider all feasible mitigations to reduce the CR impacts on the sensitive receptors.

CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any significant adverse air quality impacts. To further reduce the Proposed Project's air quality impacts, South Coast AQMD recommends incorporating the following mitigation measures and project design considerations into the Final MND. A3-4

Mitigation Measures for Operational Air Quality Impacts

Mobile Sources

1. Require zero-emission (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible.

   Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

[8] CalEEMod is available free of charge at www.caleemod.com.
[9] *Ibid*. Page 32. Table 10. Construction Health Risk Assessment Results – Unmitigated.
[10] *Ibid*. Page 35. Table 12. Operational Health Risk Assessment Results.
[11] South Coast AQMD Air Quality Significance Thresholds. Available at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf.

2. Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.
   Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3. Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final MND. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.

4. Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

   Other Area Sources

   1. Maximize the use of solar energy by installing solar energy arrays.

   2. Use light-colored paving and roofing materials.

   3. Utilize only Energy Star heating, cooling, and lighting devices and appliances.

   Design Considerations for Reducing Air Quality and Health Risk Impacts

   1. Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, daycare centers, etc.).

   2. Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.

   3. Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.

   4. Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.

   5. Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

A3-4 cont.

Lastly, the South Coast AQMD also suggests that the Lead Agency conduct a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the Final MND:

1. State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act[12]

A3-5

[12] State of California – Department of Justice, Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act. Available at: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf

2. South Coast AQMD 2022 Air Quality Management Plan,[13] specifically:
   a) Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures
   b) Appendix IV-B – CARB's Strategy for South Coast
   c) Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measure
3. United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation.[14]

A3-5 cont.

Conclusion

The Lead Agency is recommended to revise the CEQA analysis to address the aforementioned comments and provide the necessary evidence to sufficiently support the conclusions reached. If the requested information and analysis are not included in the final CEQA document, either the Final MND or other type of CEQA document, the Lead Agency should provide reasons for not doing so. Pursuant to California Public Resources Code Section 21092.5(b) and CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process and notify each public agency when any public hearings are scheduled. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided. In addition, if the Lead Agency decides to adopt the Final MND, please provide South Coast AQMD with a notice of any scheduled public hearing(s).

A3-6

Thank you for the opportunity to provide comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

Response to Comment Letter A3

South Coast Air Quality Management District
Sam Want, Program Supervisor, CEQA-IGR
November 13, 2024

A3-1 The comment provides introductory remarks and restates the project description. No further response is required.

A3-2 The comment explains that, in Section 3.3, Air Quality, the analysis is inaccurate because the nearest sensitive receptors are located 90 feet away from the project site, not 230 feet away as stated in the IS/MND. The comment recommends that the analysis and localized significant thresholds (LSTs) analysis are revised to reflect the accurate information, and that in the event the results are found to be significant, the comment suggests that the Lead Agency include all feasible mitigation measures to reduce the impacts if appliable.

This comment is correct. The IS/MND states in Section 3.3, Air Quality, Item c), that the nearest sensitive receptors are residential uses located approximately 90 feet north of the project site. The analysis is contradictory under the Localized Significance Threshold heading in Item c), which states that the nearest sensitive receptor s 230 feet from the project site. This is a minor oversight that incorrectly listed the project screening acreage and distance. The Errata will include the revised acreage and updated Table 8 as shown below. The Errata will also include the revised CalEEMod output file that did not originally include compliance with SCAQMD Rule 403 requiring dust control measures.

IS/MND Page 28-29

This analysis applies the SCAQMD Construction LST values for a ~~2.5~~ 3.5 acre site because that is the maximum acreage that would be graded in a single day within Source-Receptor Area 34 with a receptor distance of ~~70~~ 25 meters (~~230~~ 82 feet), which is the distance to the nearest sensitive receptor.

Table 8. Construction Localized Significance Thresholds Analysis

Year	NO_2	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day (On Site)			
2023	39.8	35.7	10.2	5.67
SCAQMD LST Criteria[a]	*~~243~~ 220*	*~~2,160~~ 1,359*	*~~34~~ 10.5*	*~~9~~ 6.00*
Threshold Exceeded?	**No**	**No**	**No**	**No**

As shown in the revised Table 8, the project would not exceed the SCAQMD LST thresholds during construction and the impact would remain less than significant and no mitigation is required.

A3-3 The comment states that the IS/MND does not provide an LSTs analysis for operational impacts. The comment states that pursuant to CEQA Guidelines section 15064, the Lead

Agency is responsible for preforming an in-depth and detailed analysis of an estimation of the potential localized and regional air quality impact analysis. The comment recommends that a table be added in the air quality impact section that evaluates the maximum daily on-site operational emissions using CALEEMod land use emissions software and compare the results against the South Coast AQMD LSTs for operational impacts. The comment notes that this analysis would provide SCAQMD with a preliminary assessment of the potential air quality impacts, both at the regional and localized levels, arising from the proposed project.

As noted in the SCAQMD Final Localized Significance Threshold, the LST analysis states that the operational analysis does not apply to sites larger than 5 acres. Because operationally, the project exceeds 5 acres an operational LST was not included. To be responsive to SCAQMD's request, a new Table 8A. Operational Localized Significance Threshold Analysis will be included in the Errata as shown below.

IS/MND Page 28:

As noted in the SCAQMD Final Localized Significance Threshold, the LST analysis states that the operational analysis does not apply to sites larger than 5 acres. Although operationally, the project would be greater than 5 acres, an operational LST analysis was prepared. The analysis applies the SCAQMD Construction LST values for a 5 acre site within Source-Receptor Area 34 with a receptor distance of 25 meters (82 feet), which is the distance to the nearest sensitive receptor.

Table 8A. Operational Localized Significance Thresholds Analysis

Year	NO_2	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day (On Site)			
2024	8.76	14.75	0.16	0.12
SCAQMD LST Criteria[a]	*270*	*1,746*	*4*	*2*
Threshold Exceeded?	No	No	No	No

The project would not exceed the SCAQMD operational LST thresholds and the impact would be less than significant.

A3-4 The comment suggests that due to the high result of the operational cancer risk (CR), Staff recommend that the Lead Agency consider all feasible mitigations to reduce the CR impacts on the sensitive receptors. The comment notes the CEQA requires all feasible mitigation measures that go beyond what is required by law to be utilized to minimize any significant adverse air quality impacts. The comment suggests the following mitigation measures are included in the IS/MND:

"*Mitigation Measures for Operational Air Quality Impacts*

Mobile Sources:

1. *Require zero-emission (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy duty trucks with natural gas engines that meet the CARB's adopted optional Nox emission standard at 0.02 grams per brake horsepower-er-hour (g/bhp-hr), if and when feasible.*

   Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and nZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low Nox Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

2. *Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.*

   Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3. *Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final MND. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.*

4. *Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.*

   Other Area Sources

   1. *Maximize the use of solar energy by installing solar energy arrays.*

   2. *Use light-colored paving and roofing materials.*

   3. *Utilize only Energy Star heating, cooling, and lighting devices and appliances.*

   Design Considerations for Reducing Air Quality and Health Risk Impacts

   1. *Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g. residences, schools, daycare centers, etc.)*

   2. *Design the Proposed Project such that truck entrances and exists are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project.*

   3. *Design the Proposed Project such that any truck check-in point is inside the Propsoed Project site to ensure no trucks are queuing outside.*

   4. *Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is far away as feasible from sensitive receptors.*

   5. *Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site. "*

The City appreciates SCAQMD's list of suggested mitigation measures for the project. When imposing mitigation, lead agencies must ensure there is a "nexus" and "rough proportionality" between the measure and the significant impacts of the project. (CEQA Guidelines § 15126.4, subd. (a)(4)(A)–(B), citing Nollan v. Ca. Coastal Commission (1987) 483 U.S. 825,Dolan v. City of Tigard (1994) 512 U.S. 374.) As discussed in the ISMND, the project would not result in any significant impacts related to air quality, accordingly no mitigation measures have been imposed on the project to lessen the impacts as the impacts were determined to be less than significant.

A3-5 The comment suggests that the Lead Agency conducts a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the final IS/MND:

"*Lastly, the South Coast AQMD also suggests that the Lead Agency Conduct a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the Final MND.*

1. *State of California – Department of Justice" Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act".*

2. *South Coast AQMD 2022 Air Quality Management Plan, specifically:*

    a. *Appendix IV-A South Coast AQMD's Stationary and Mobile Source Control Measures*

    b. *Appendix IV-B – CARB's Strategy for South Coast*

    c. *Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measure*

3. *United Staes Environmental Protection Agency (U.S. EPA): Mobile Source Pollution – Environmental Justice and Transportation*

The City appreciates the references provided. Many of these references have already been reviewed and incorporated into the analysis as applicable. As noted above in Response A3-4, the project was determined to have a less than significant impact on air quality, as such there is no nexus to impose mitigation measures,

A3-6 The comment provides conclusory remarks. The comment requests that responses are provided to SCAQMD for all comments and substantial evidence Is used in the record to explain why specific comments and suggestions might not be accepted. The comment requests that SCAQMD is notified of any public hearings if the Lead Agency decides to adopt the Final MND. No further response is required.

RE: PROJECT COMMENT – NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION FOR THE SOUTHEAST CORNER (SEC) 5TH STREET AND VICTORIA AVENUE WAREHOUSE PROJECT.

Dear Ms. Stater:

Thank you for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. **We received this request on October 16, 2024,** and pursuant to our review, the following comments are provided: A4-1

Flood Control Planning/Water Resources/Operations Support Division (Michael Fam, Engineering Manager, (909) 387-8120):

The San Bernardino County Flood Control District (District) possesses fee-owned Right-of-Way along the southeast corner of the Project. A4-2

The District's recommendations are most often made for site specific conditions. Therefore, the recommendations made here are general in nature until more detailed plans become available.

1. According to the most recent Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM), Panel 06071C8701J, dated September 2, 2016, portions of the project parcel lie within Zone AE and X. A4-3
2. We recommend that the most current FEMA regulations for construction within established floodplains be enforced by the City of Highland. A4-4
3. If any encroachment on District's right-of-way is anticipated, a permit shall be obtained from the District's Operations Division, Permits/Operations/Support Section. Other on-site or off-site improvements may be required which cannot be determined at this time. A4-5
4. We recommend that the August 31, 2001 Comprehensive Storm Drain Plan No. 6 for the District, prepared by Exponent Failure Analysis Associates, be utilized in the design of drainage facilities. A4-6

BOARD OF SUPERVISORS
Col. Paul Cook (Ret.) Vice Chairman, First District | Jesse Armendarez Second District | Dawn Rowe Chair, Third District | Curt Hagman Fourth District | Joe Baca, Jr. Fifth District
Luther Snoke Chief Executive Officer

5. A 6-foot block wall, chain link fence, or other Flood Control District approved barrier shall be constructed along the Flood Control District's right-of-way adjacent to the southeast of this site. A4-7

6. The proposed Project may affect storm drains in and around the site. When planning for or altering existing or future storm drains, the Project will be subject to the San Bernardino County's Comprehensive Storm Drain Plan No. 6, dated August 2001. It is to be used as a guideline for drainage in the area and is available in the County's Flood Control District offices. Any revision to the drainage should be reviewed and approved by the jurisdictional agency in which the revision occurs (city). A4-8

7. The District's right-of-way and facilities are located within the proposed Project area (City Creek Channel 2-601-1A). Any encroachments including, but not limited to access for grading, utility crossings, fencing/block wall construction on the District's right-of-way or facilities will require a permit from the District prior to start of construction. Please contact the San Bernardino County Flood Control Permit Section at (909) 387-7995 for further information regarding this process. A4-9

Permits/Operations Support Division (Johnny Gayman, Engineering Manager, (909)387-7995):

8. The proposed Project is located adjacent to District right-of-way for the City Creek Channel. As noted in No. 3 above, an encroachment permit may need to be obtained if any work will occur within District right-of-way. If you have any questions regarding this process, please contact the District's Permit Section at (909) 387-7995. A4-10

We respectfully request to be included on the circulation list for all project notices, public reviews, or public hearings. In closing, I would like to thank you again for allowing the San Bernardino County Department of Public Works the opportunity to comment on the above-referenced project. Should you have any questions or need additional clarification, please directly contact the individuals providing the specific comment, as listed above. A4-11

Sincerely,

Nancy Sansonetti

Nancy J. Sansonetti, AICP
Supervising Planner, Capital Improvement Section

Response to Comment Letter A4

San Bernardino County Department of Public Works
Nancy J. Sansonetti, AICP, Supervising Planner
November 12, 2024

A4-1 The comment introduces the comments that follow. No further response is required.

A4-2 The comment acknowledges that the San Bernardino County Flood Control District possesses fee-owned Right-of-Way along the southeast corner of the proposed project. The comment addresses that the comments to follow are not site specific and more general in nature until more detailed plans are available. The comment does not address inadequacies of the MND, no further response is required.

A4-3 The comment states that according to most recent Federal Emergency Management Agency Flood Insurance Rate Maps, portions of the project line within flood zone AE and X.

Section 3.10, Hydrology and Water Quality, Item c) iii), addresses that the project sites are located within flood zone AE and X zones. No further response is required.

A4-4 The comment recommends that the most current FEMA regulations for construction within established floodplains be enforced by the City of Highland. The comment does not address inadequacies with the MND, no further response is required.

A4-5 The comment suggests that if any encroachment on District's right-of-way is anticipated, the permit shall be obtained from the Districts Operation Division, Permits/Operations/Support Section. The comment states that other on-site or off-site improvements may be required which cannot be determined at this time. The comment does not address inadequacies with the MND, no further response is required.

A4-6 The comment suggests that the August 31st, 2001, Comprehensive Storm Drain Plan No. 6 for the District, prepared by Exponent Failure Analysis Associates, be utilized in the design of drainage facilities. The comment does not address inadequacies with the MND, no further response is required.

A4-7 The comment suggests that a 6-foot block wall, chain link fence, or other Flood Control District approved barrier shall be constructed along the Flood Control District's right-of-way adjacent to the southeast of the project site. The comment does not address inadequacies with the MND, no further response is required.

A4-8 The comment states that the proposed project may affect storm drains in and around the site. The comment suggests that when planning for altering existing or future storm drains, the project will be subject to the San Bernardino County's Comprehensive Storm Drain Plan No. 6, dated August 2001. The comment states the plan is to be used as a guideline for drainage in the area. The comment states that any revision to the drainage should be reviewed and approved by the jurisdictional agency in which the revision occurs. The comment does not address inadequacies with the MND, no further response is required.

A4-9 The comment states that the District's right-of-way facilities are located within the proposed Project Area, specifically (City Creek Channel 2-601-A). The comment suggests that any encroachments including, but not limited to access for grading, utility crossings, fencing/block well construction on the District's right-of-way or facilities will require a permit from the District prior to start of construction. The comment provides the San Bernardino County Flood Control Permit Section contact information for further information regarding the permitting process. The comment does not address inadequacies with the MND, no further response is required.

A4-10 The comment re-states that the proposed Project is located within the right-of-way for City Creek Channel and that encroachment permits may need to be obtained if any work occurs within the district right-of-way. The comment provides the District Permit Section phone number for questions. The comment does not address inadequacies with the MND, no further response is required.

A4-11 The comment includes conclusory remarks and requests that the District is included on the circulation list for all project notices, public reviews, or public hearings. No further response is required.

Hello,

I just reviewed the documents regarding **(GPA 23-001),(ZC 23-001),(CUP 22-014),(DRA 22-023),(No. VAR 22-006),(TPM 23-001/TPM 20621),and Annexation of APN 1192-551-01**

SoCalGas Distribution does have High-Pressure & Medium-Pressure facilities in the area. Please note on case to have Developer contact 811 / USA at DigAlert | Utility Locating California | Underground Wire & Cable Locator prior to any excavation / demolition activities so we can Locate & Mark out our facilities.

If the Developer needs new gas service, please have them contact our Builder Services group to begin the application process as soon as practicable, at https://www.socalgas.com/for-your-business/builder-services.

To avoid delays in processing requests and notifications, please have all Franchise corespondence sent to our Utility Request inbox, at SCGSERegionRedlandsUtilityRequest@semprautilities.com

A5-1

I cover the **Southeast Region – Redlands**

SCGSERegionRedlandsUtilityRequest@semprautilities.com would be your contact for requests in the southeastern ends of LA County, Riverside County, San Bernardino & Imperial Counties.

Southeast Region - Anaheim office which is all of Orange County and the southern ends of Los Angeles County; therefore, any Map and/or Will Serve Letter requests you have in these areas please send them to AtlasRequests/WillServeAnaheim@semprautilities.com

Northwest Region – Compton HQ For West and Central LA County, your Map Request and Will Serve Letters, will go to SCG-ComptonUtilityRequest@semprautilities.com

Northwest Region - Chatsworth

For any requests from the northern most parts of LA County all the way up to Visalia, San Luis Obispo, Fresno and Tulare you would contact NorthwestDistributionUtilityRequest@semprautilities.com

Transmission

For Transmission requests, please contact SoCalGas Transmission, at SoCalGasTransmissionUtilityRequest@semprautilities.com

Letter of Support for the proposed Southeast Corner 5th Street and Victoria Warehouse project

Dear Ms. Stater,

Californians Allied for a Responsible Economy ("CARE CA") is pleased to submit this letter in support of the proposed Southeast Corner 5th Street and Victoria Warehouse project ("Project"). The proposed project includes the construction of an approximately 173,976 square-foot, one-story industrial/warehouse facility.

CARE CA is a nonprofit organization working to ensure a sustainable construction industry in Southern California over the long-term by supporting projects that offer genuine economic and employment benefits and minimize adverse environmental and other impacts on local communities.

Given this mission, we strongly support the Project. This project provides critical employment opportunities for the City and creates many high-quality construction jobs for the local skilled workforce. We applaud the developer for pursuing this opportunity to invest in the local economy and for partnering with the construction trades to build the project.

In addition, the Applicant collaborated with many parties to propose a truly community-oriented project that also respects the environment. The project is designed to safeguard the environment, enrich the neighborhood, contribute to the local community and economy, and have a positive regional economic impact.

For these reasons, we respectfully and enthusiastically support the approval of all entitlements requested to turn the Project into actual community benefits.

O1-A-1

Sincerely,

Jeff Modrzejewski
Executive Director

Re: Request for Immediate Access to Documents Referenced in the Initial Study/Mitigated Negative Declaration – Southeast Corner 5th Street and Victoria Avenue Warehouse Project (SCH No. 2024100850)

Dear Mr. Mainez, Ms. Muñoz, and Ms. Stater:

We are writing on behalf of Californians Allied for a Responsible Economy ("CARE CA") to request ***immediate access*** to any and all documents referenced, incorporated by reference, and relied upon in the Initial Study/Mitigated Negative Declaration ("IS/MND") prepared for the Southeast Corner 5th Street and Victoria Avenue Warehouse Project (SCH No. 2024100850) ("Project"), proposed by Patriot Development Partners ("Applicant"). This request excludes a copy of the IS/MND. *This request excludes a copy of the IS/MND. This request also excludes any documents that are currently available on the City of Highland website, as of today's date*.[1] O1-B-1

The Project proposes the construction of an approximately 173,976-square-foot (SF), one-story industrial/warehouse facility on an approximately 7.23-acre (gross) property located in the southwestern area of the City of Highland and partially within the City of San Bernardino in western San Bernardino County, California. The warehouse building would be composed of approximately 164,066 SF of warehouse space and 12,000 SF of mezzanine/office space. The Project site is located

[1] Accessed https://www.cityofhighland.org/209/Public-Notices on November 7, 2024.

printed on recycled paper

at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Street, south of 5th Street, and west of City Creek Bypass Flood Control Channel. The Project site is composed of 11 parcels, one in the City of San Bernardino (Assessor's Parcel Numbers [APN] 1192-551-01) and 10 in the City of Highland (APNs 1192- 551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15).

Our request for ***immediate access*** to all documents referenced in the IS/MND is made pursuant to the California Environmental Quality Act ("CEQA"), which requires that all documents referenced, incorporated by reference, and relied upon in an environmental review document be made available to the public for the entire comment period.[2]

re: Comments on Mitigated Negative Declaration for Southeast Corner 5th Street and Victoria Avenue Warehouse Project, SCH No. 2024100850

Dear Ms. Stater:

Advocates for the Environment submits the comments in this letter regarding the proposed Southeast Corner 5th Street and Victoria Avenue Warehouse Project (**Project**). We are a non-profit public-interest law firm that uses environmental law to fight to improve the environment in California. This Project proposes to construct a 173,976-square-foot industrial warehouse facility on a 7.23-acre site located at the cross-streets of 5th Street and Victoria Avenue in the City of Highland (**City**) in San Bernardino County.

We have reviewed the Mitigated Negative Declaration released in October 2024 (**MND**) and submit comments regarding the sufficiency of the MND's Greenhouse-Gas (**GHG**) analysis under the California Environmental Quality Act (**CEQA**).

The City Should Require the Project to be Net-Zero

GHG emissions from buildings, including indirect emissions from offsite generation of electricity, direct emissions produced onsite, and from construction with cement and steel, amounted to 21% of global GHG emissions in 2019. (IPCC Sixth Assessment Report, Climate Change 2022, WGIII, Mitigation of Climate Change, p. 9-4.) This is a very large portion of global GHG emissions. It is much less expensive to construct new building projects to be net-zero than to obtain the same level of GHG reductions by retrofitting older buildings. Climate damages will keep increasing until we reach net zero GHG emissions, and there is a California state policy requiring the state to be net-zero by 2045. It therefore makes no sense to construct new buildings that are not net-zero.

O2-B-1

Two of the largest mixed-use development projects in the history of California, Newhall Ranch (now FivePoint Valencia), and Centennial (part of Tejon Ranch) decided, after environmental groups sued and won under CEQA, to move forward as net-zero communities. This proves it is feasible. The Applicant for this project should do the same. We urge the City to adopt net-zero as the GHG significance threshold for this project, and require full fair-share

mitigation. The CARB 2017 Scoping Plan states that "achieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development." (p. 101.) Additionally, the CARB 2022 Scoping Plan reaffirms the necessity of a net zero target by expressing: "it is clear that California must transition away from fossil fuels to zero-emission technologies with all possible speed … in order to meet our GHG and air quality targets." (CARB 2022 Scoping Plan, p. 184.) CARB further encourages a net-zero threshold in its strategies for local actions in Appendix D to the 2022 Scoping Plan. (CARB 2022 Scoping Plan, Appendix D p. 24-26.) The MND fails to show how the Project will do this.

Moving this Project forward as a net-zero project would be the right thing for the City to do and would also help protect the City and the Applicant from CEQA GHG litigation.

The City Cannot Solely Rely on the SCAQMD's Recommendation

The SCAQMD adopted the 10,000 MTCO2e threshold in 2009. It is summarized in a staff proposal that was adopted by motion on December 5, 2008 (the **Staff Proposal**).[1] A single-sheet summary of SCAQMD's Air Quality Significance Thresholds was posted in March 2023,[2] and includes a purported GHG threshold of 10,000 MTCO2e/year for industrial facilities, but cites no source for this threshold, even though the sheet cites the SCAQMD CEQA Handbook as a source for its daily thresholds, and AQMD Rule 1303 and Rule 403 as sources for criteria air pollutants and ambient air quality standards. The Staff Proposal is therefore the only available authority supporting the Threshold. O2-B-1

The City failed to analyze or provide its own support for why the SCAQMD GHG threshold of 10,000 MTCO2e/year (the **Threshold**) is valid for this Project. The Threshold is not applicable to this Project because:

- the SCAQMD has no authority to set CEQA thresholds for projects for which it is not the lead agency;
- the rationale the SCAQMD used in establishing the 10,000 MTCO2e threshold is not applicable to the Project;
- the City provides no substantial evidence supporting the Threshold in the DEIR.

[1] http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/ghg-significance-thresholds - Board Letter and attachments

[2] https://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf?sfvrsn=25

CEQA GHG Significance Analysis

The MND derived its GHG significance thresholds from the CEQA Appendix G Guidelines Thresholds, whether the Project would: 1) "Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment;" and 2) "Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 60.) The MND used CalEEMod to quantify the Project's emissions at 2,928 metric tons of carbon dioxide equivalent (**MTCO2e**) per year. (MND, p. 65.) Under both thresholds, the City concluded that the Project's GHG emissions would be less than significant.

The SCAQMD Has no Authority to Set CEQA Thresholds for Other Agencies

The DEIR assumes, with no explanation, that the SCAQMD's 3,000 MTCO2e/year threshold is applicable to the Project. But the SCAQMD has no legal authority allowing it to set CEQA thresholds to be used by other agencies.

The SCAQMD's enabling statute (Health & Safety Code §§ 40400-40540) provides no authority to the agency to issue CEQA regulations or thresholds for other agencies. CEQA Guidelines § 15064.7(b) encourages each agency to develop thresholds of significance for the agency itself to use but provides no authority for the SCAQMD to develop CEQA thresholds for other agencies to use. The Staff Report itself limits the application of the Threshold to "projects where the AQMD is the lead agency." (Staff Report, p. 3.) O2-B-1

The SCAQMD does not have the authority to prescribe significance thresholds for which it is not the lead agency. Lead agencies may choose their own significance thresholds, but they must be supported by substantial evidence, which means "facts, reasonable assumptions predicated on facts, and expert opinion supported by facts." (14 CCR § 15064.7(b).) The burden is on the City to provide substantial evidence for the threshold that they chose, but merely adopting the SCAQMD threshold without providing supporting evidence is not sufficient. The City cannot rely on the SCAQMD's evidence supporting the threshold because the evidence that the SCAQMD used, which itself is inadequate and insufficient to provide substantial evidence, does not apply to this Project.

Furthermore, the SCAQMD document the MND cites in support of the 3,000 MTCO2e/year threshold[3] is just a PowerPoint presentation for the September 28, 2010 meeting of the agency's Greenhouse Gas CEQA Significance Threshold Stakeholder Working Group Meeting #15. This group has no authority to adopt a threshold for the SCAQMD, let alone one to be used by other agencies. The last page of the PowerPoint says that the topic of

[3] http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-main-presentation.pdf

thresholds may be considered by the SCAQMD Board in December 2010, but there is no evidence in the record that the Board adopted the proposed threshold.

Furthermore, it makes no sense for different thresholds to apply in the various air districts; global warming is a global phenomenon, and a ton of GHGs emitted in Los Angeles has the same impact as a ton emitted in Madera County. Other districts have adopted much lower thresholds, such as the 1,100 MTCO2e threshold recommended by the Sacramento Metro Air Quality Management District,[4] or the County of San Bernardino's 3,000 MTCO2e per year screening level.[5] The DEIR did not explain why the Threshold is more appropriate for the Project than these lower thresholds adopted by other air districts.

The Chosen Threshold Is Not Supported by Substantial Evidence

The City of Highland's reliance on the purported SCAQMD 3,000 MTCO2e/year threshold is misplaced because the SCAQMD's purported support for this threshold does not constitute substantial evidence that the threshold is appropriate for this project. A lead agency must support its chosen threshold by substantial evidence. (CEQA Guidelines § 15064.7(b).) The City has not done so here. CEQA also requires that significance determinations be based on scientific knowledge and current regulations. (CEQA Guidelines §§ 15064.4(b).) The California Air Resources Board (**CARB**) has emphasized that thresholds not aligned with California's current reduction goals are outdated under CEQA. (*See* California Air Resources Board 2022 Climate Change Scoping Plan, Appendix D, p. 26.)

O2-B-1

The SCAQMD's threshold of 3,000 MTCO2e does not address Senate Bill 32 (**SB 32**). (*See* California Air Resources Board 2022 Climate Change Scoping Plan, Appendix D, p. 26, footnote 67 [noting that the only air quality districts that are in alignment with SB 32 are the recommendations from the Bay Area Air Quality Management District and Sacramento Metropolitan Air Quality Management District].) Consequently, the SCAQMD guidelines are not aligned with California's current regulatory scheme and are an outdated threshold not supported by substantial evidence. The City failed to justify its use in this instance.

Consistency with Identified Applicable Plans

The MND also analyzed consistency with applicable plans, policies or regulations adopted for the purpose of reducing GHG emissions by including a discussion of San

[4] See Greenhouse Gas Thresholds for Sacramento County, SMAQMD https://www.airquality.org/LandUseTransportation/Documents/SMAQMDGHGThresholds2020-03-04v2.pdf

[5] See County of San Bernadino Greenhouse Gas Emissions Development Review Process Screening Tables, available at: https://www.sbcounty.gov/uploads/LUS/GreenhouseGas/GHG_2021/GHG%20Revised%20Screening%20Tables%20-%20Adopted%209-20-2021.pdf

Bernardino County Regional GHG Reduction Plan, CARB's Scoping Plans, and the 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (**RTP/SCS**). When discussing details of the Project, the MND should be accurate and not misleading. This significance analysis violates CEQA by being misleading and incomplete in several areas, as discussed below.

Consistency with SCAG's 2020-2045 RTP/SCS

The MND states that the Project does not conflict with the 2020-2045 RTP/SCS, but the analysis overlooks issues regarding transit accessibility and vehicle miles traveled (**VMT**) reduction. (MND, P. 67.) The Project is located 4.6 miles from the San Bernardino Transit Center, and while there is a nearby Omnitrans bus stop at 0.51 miles offering service on Route 15, the 60-minute peak frequency of the route limits its viability for daily employee commuting. (MND, p. 67.) The infrequent service makes public transit less reliable and will potentially discourage its use, increasing reliance on single-occupancy vehicles, which is contrary to the 2020-2045 RTP/SCS goals. Without additional employee transportation options, the Project is unlikely to fully support the 2020-2045 RTP/SCS objectives of reducing VMT and fostering transit-oriented development. Therefore, the Project should be re-evaluated to ensure greater alignment with the goals of the RTP/SCS. O2-B-1

Consistency with the 2017 and 2022 CARB Scoping Plans

The MND blends the 2008, 2014, 2017, and 2022 Scoping Plans from the California Air Resources Board (**CARB Scoping Plan**) together in a single vague line. This lack of clarity misleads the public by failing to provide a detailed analysis, especially of the 2017 and 2022 updates, which have different strategies and goals. By lumping these multiple updates together in a single line, the document obscures the differences between the plans, making it appear as though the Project complies with all versions of the Scoping Plan without actually evaluating their respective implications.

The 2017 Scoping Plan was developed to help California comply with SB 32, which mandates a 40% reduction in GHG emissions below 1990 levels by 2030 (Health & Safety Code § 38566). The MND does not explain how the Project aligns with these objectives or the 2050 goal of reducing emissions by 80% below 1990 levels. Moreover, the 2017 Scoping Plan sets statewide per capita GHG emissions targets of 6 MTCO2e by 2030 and 2 MTCO2e by 2050 (CARB Scoping Plan, p. 99). With the Project's per-service population GHG emissions of 16.8 MTCO2e/capita the Project significantly overshoots the 2050 target.[7] Given that this reduction must be achieved within the Project's operational lifespan, it is evident that the Project will remain inconsistent with the 2017 Scoping Plan's long-term goals.

[7] $2{,}928\ MTCO2e \div 174\ employees = 16.82\ MTCO2e/service\ population$

The 2022 Scoping Plan sets a goal for 50% of all industrial energy demand to be electrified by 2045 (2022 CARB Scoping Plan, p. 77).[8] However, the MND provides no analysis or evidence demonstrating how the Project would support or comply with this statewide goal. The 2022 CARB Scoping Plan emphasizes the need for industrial facilities to decarbonize by "displacing fossil fuel use with a mix of electrification, solar thermal heat, biomethane, low- or zero-carbon hydrogen, and other low-carbon fuels to provide energy for heat and reduce combustion emissions" (2022 CARB Scoping Plan, p. 208). Again, the MND does not demonstrate how the Project would achieve these objectives, nor does it include any commitments to incorporate these technologies or fuels into its operations. The Project creates a conflict with the 2022 Scoping Plan by relying on fossil fuels in its operations, including diesel fuel in transportation and natural gas from SoCalGas. (MND, p. 54.)

Therefore, the Project's GHG impact is significant under the second threshold because it directly conflicts with established plans for reducing GHG emissions.

The MND should have Analyzed All Applicable Plans

The City chose, as its second GHG threshold, whether the Project would "[c]onflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases." (MND, p. 66.) This language requires that the MND analyze the Project's consistency with *all* other applicable plans, not just the plans that the City prefers to analyze. O2-B-1

An agency must consider a project's GHG impact over the project's lifespan to reasonably evaluate the full extent of environmental impact as CEQA requires. The MND assumes a building lifespan of 30 years when amortizing the construction emissions, which reflects the anticipated operational lifespan of the project. (MND, p. 62.) Therefore, to comply with CEQA, the Project must show consistency with long-term State GHG goals, including Executive Order B-55-18 (**EO B- 55-18**) which the City did not demonstrate here.

EO B-55-18 requires the State of California to achieve carbon neutrality—net zero GHG emissions—by 2045. The Project is inconsistent with EO B-55-18 because it does not prohibit the use of gasoline, diesel, and natural gas. Southern California Edison (**SCE**) has been identified as the electricity provider for the Project. (MND, p. 54). Nearly a quarter of the 2022 SCE Power Mix is sourced from fossil fuels.[9] The burning of these non-renewable fuels results in substantial GHG emissions, preventing the Project from ever achieving carbon neutrality.

[8] 2022 Scoping Plan located at: https://ww2.arb.ca.gov/sites/default/files/2023-04/2022-sp.pdf
[9] SCE 2022 Power Content Label. https://www.sce.com/sites/default/files/custom-files/PDF_Files/SCE_2022_Power_Content_Label_B%26W.pdf

The City Should Have Drafted an EIR and Mitigated to the Fair Share Level

No mitigation measures were considered for GHGs due to the erroneous determination of less-than-significant impact. However, because the City should have found significant impact for GHG emissions, it must update its findings accordingly and would therefore be required to prepare a full Environmental Impact Report (**EIR**) and mitigate to the extent required by CEQA.

The City Must Prepare an EIR to Comply with CEQA

If the City had used appropriate significant thresholds and accurate analysis, it would have concluded that the Project's GHG emissions are significant. Inconsistency with applicable plans for the reduction of GHG emissions supports a fair argument that the Project would have a significant environmental effect. Because the above discussion provides a fair argument that the Project may have significant GHG impacts, the City must prepare an EIR. Therefore, the City was mistaken in its decision to prepare an MND for a Project that would likely result in considerable GHG impacts.

O2-B-1

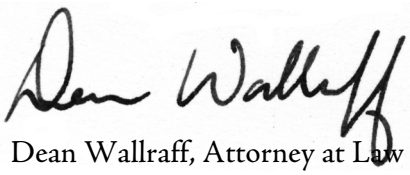
Feasible Mitigation

Several feasible mitigation measures could be adopted to further reduce the Project's greenhouse gas (GHG) emissions. In addition to complying with Title 24 energy efficiency standards—which the Project has already committed to—the City could enhance emissions reductions by incorporating additional energy-generating features. For example, installing rooftop solar panels or sponsoring local renewable energy programs could offset some of the Project's emissions. (MND, p. 67.)

Since 72%[10] of the Project's GHG impact originates from mobile emissions, mitigation measures targeted at reducing mobile sources of GHGs are essential to reduce the Project's significant GHG impact. The Project could enter into agreements with future tenants to enroll in the U.S. Environmental Protection Agency's SmartWay program[11] for trucking carries and to use electric equipment and vehicles to the extent possible—including requiring heavy-duty drayage trucks to be electric—and strictly prohibit idling on the premises. Lastly, we propose that the Project incorporate vehicle/truck charging stations proportionate to the number of loading dock stations. The applicant should be required to disclose the number of chargers and be required to install the maximum amount feasible.

[10] $\left(\frac{2{,}108\ \text{MTCO2e}}{2{,}928\ \text{MTCO2e}}\right) \times 100 = 71.99\%$

[11] Learn About Smart Way, https://www.epa.gov/smartway/learn-about-smartway



Conclusion

The City should not have prepared an MND for this Project, but rather should have concluded that there was a likelihood of significant impact on GHG emissions, requiring an EIR with full analysis in accordance with CEQA guidelines to be prepared. The chosen threshold of 3,000 MTCO2e was compared with project emissions without providing substantial evidence for how it applies to a project in which the lead agency is not the SCAQMD. And the Project was not consistent with applicable plans, policies, and regulations for the reduction of GHGs. Thus, an MND was not appropriate for this case because there is a fair argument that the Project may have significant GHG impacts.

O2-B-1

Please put Advocates for the Environment on the list of interested parties to receive updates about the progress of this potential project approval. We make this request under Public Resources Code, section 21092.2.

Sincerely,

Dean Wallraff, Attorney at Law
Executive Director, Advocates for the Environment

Re: Southeast Corner 5th and Victoria Warehouse Project IS/MND (SCH NO. 2024100850)

Dear Ms. Stater:

On behalf of the Golden State Environmental Justice Alliance ("GSEJA"), I am writing to you regarding the Southeast Corner 5th and Victoria Warehouse Project IS/MND (SCH NO. 2024100850) ("Project").

GSEJA is withdrawing its comment letter, appeal, and/or opposition on/to the Project. The Project's developer has addressed GSEJA's concerns about environmental mitigation.

Subject: Comments on Southeast Corner 5th and Victoria Warehouse Project IS/MND (SCH NO. 2024100850)

Dear Ms. Stater,

Thank you for the opportunity to comment on the Mitigated Negative Declaration (MND) for the proposed Southeast Corner 5th and Victoria Warehouse Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

1.0 Summary

The project proposes the construction and operation of one approximately 173,976 square-foot (sf), one-story industrial warehouse/distribution facility on an approximately 7.23-acre (gross) project site. The warehouse building consists of approximately 164,066 square feet of warehouse area and 12,000 square feet of mezzanine/office area. Per the project plans attached to the MND, the building includes 18 truck/trailer dock doors, 20 truck/trailer parking spaces, and 98 passenger car parking spaces. The project site is composed of 11 parcels, one in the City of San Bernardino and 10 in the City of Highland. The project proposes to adjust the Sphere of Influence for the City of Highland and to annex APN 1192-551-01 into the City of Highland, detaching from the City of San Bernardino, requiring approval by the Local Agency Formation Commission (LAFCO). This parcel is approximately 0.56 acres.

The project requires approval of the following discretionary applications in order to proceed:

O3-B-1

1. General Plan Amendment (GPA 23-001): To change the land use designation for the project site to Business Park (BP) from the City of San Bernardino's Commercial General-1.
2. Zone Change (ZC 23-001): Prezone the project site to Business Park (BP) from the City of San Bernardino's Commercial General-1.
3. Conditional Use Permit (CUP 22-014): To permit the construction of a warehouse in the BP Zoning District.
4. Design Review Application (DRA 22-023)
5. Variance (No. VAR 22-006): To construct the project at a maximum height of 45 feet measured from grade, which exceeds the maximum height of 35 feet in the Business Park zone.
6. Parking Reduction
7. Tentative Parcel Map (TPM 23-001/TPM 20621)
8. Annexation of APN 1192-551-01 (LAFCO No. to be determined).

2.1 Project Piecemealing

The MND does not accurately or adequately describe the project, meaning "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (CEQA § 15378). The proposed project is a piecemealed portion of a larger overall project in the immediate vicinity developed by Patriot Partners.

O3-B-1

The MND misleads the public and decision makers by circumventing adequate and accurate environmental analysis for the whole of the action - construction and operation of all Patriot Partners buildings as a whole. At minimum, there are at least six piecemealed projects including: CUP 21-007[1] (NWC Victoria & 6th St.) 305,617 sf warehouse, CUP 22-002[2] (NWC 3rd St. & Central Ave.) 54,330 sf warehouse, CUP 22-003[3] (Grape St south of Cypress St.) 90,532 sf warehouse, CUP 22-004[4] (SEC Victoria & Cypress) 187,870 sf warehouse, CUP 22-011[5] (South side of Del Rosa west of 6th St.) 47,899 sf warehouse, and CUP 23-003[6] (South side of 5th St. west of Central Ave.) 53,665 sf warehouse. Including the proposed project (CUP 22-014), the development footprint in the City is 913,889 sf of industrial warehouse buildings. The immediate succession of project entitlement numbers demonstrates that they were submitted simultaneously or within a short timeframe. This indicates that all projects were simultaneously known to the Lead Agency and Applicant.

[1] https://ceqanet.opr.ca.gov/2021110112
[2] https://ceqanet.opr.ca.gov/2022070212
[3] https://ceqanet.opr.ca.gov/2022080461
[4] https://ceqanet.opr.ca.gov/2022080147
[5] https://ceqanet.opr.ca.gov/2023030640
[6] https://ceqanet.opr.ca.gov/2023070268

The MND misleads the public and decision makers by circumventing adequate and accurate environmental analysis for the whole of the action - construction and operation of all Patriot Partners Buildings as a whole. A project EIR must be prepared that accurately represents the whole of the action without piecemealing the project into separate, smaller development projects to present unduly low environmental impacts. CEQA Section 15161 describes project EIRs as examining "the environmental impacts of a specific development project. This type of EIR should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation." The specific development project is the construction and operation of all Patriot Partners buildings.

Additionally, CEQA Section 15146 requires that the degree of specificity in an EIR "will correspond to the degree of specificity involved in the underlying activity which is described in the EIR. (a) An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy." Because there are multiple proposed buildings as part of a single project, the project EIR must be more detailed in the specific effects of the project. A project EIR must be prepared which accurately represents the whole of the action without piecemealing the project into separate, smaller development projects or development areas to present unduly low environmental impacts. O3-B-1

3.3 Air Quality, 3.6 Energy, and 3.8 Greenhouse Gas Emissions

The MND does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project, and the environmental analysis that it tiers from also excludes this information. This is in conflict with CEQA Guidelines Section 15131 (c), which requires that "Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project." This is especially significant as the surrounding community is highly burdened by pollution and the project census tract is designated as an SB 535 Disadvantaged Community. According to CalEnviroScreen 4.0[7], CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project's census tract (6071007601) ranks worse than 82% of the rest of the state overall. The surrounding community bears the impact of multiple sources of pollution and is more polluted than average on every pollution indicator measured by CalEnviroScreen. For example, the project

[7] CalEnviroScreen 4.0 https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40

census tract ranks in the 100th percentile for ozone burden and the 57th percentile for PM 2.5 burden, which is typically attributed to heavy truck activity in the area. The census tract also experiences more impacts from cleanup sites than 71% of the state and more drinking water impacts than 85% of the state.

Further, the project's census tract is a diverse community including 67% Hispanic, 12% African-American, and 7% Asian-American residents, which are especially vulnerable to the impacts of pollution. The community has a high rate of linguistic isolation, meaning 83% of households speak little to no English. The community has a high rate of low educational attainment, meaning 92% of the census tract over age 25 has not attained a high school diploma. The community also has a high rate of poverty, meaning 95% of the households in the census tract have a total income before taxes that is less than the poverty level. Income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care[8]. Poor communities are often located in areas with high levels of pollution[9]. Poverty can cause stress that weakens the immune system and causes people to become ill from pollution[10]. Living in poverty is also an indication that residents may lack health insurance or access to medical care. The community is especially vulnerable as it ranks in the 71st percentile for incidence of asthma and 76th percentile for incidence of cardiovascular disease, which can be attributed to high levels of pollution.

O3-B-1

Additionally, the project's census tract (6071007601) is identified as a SB 535 Disadvantaged Community[11], which is not discussed or presented for analysis in the MND. Census tracts adjacent to the project site (6071007603 (east); 6071006402 (west); 6071006500 (west); and 6071980100 (south)) are also identified as SB 535 Disadvantaged Communities. This indicates that cumulative impacts of development and negative environmental impacts in the City and surrounding area are disproportionately effecting these communities. The MND does not discuss that the project site and surrounding area are disadvantaged communities and does not utilize this information in its analysis. The negative environmental, health, and quality of life impacts of the warehousing and logistics industry in the area have become distinctly inequitable. The severity of impacts particularly on these Disadvantaged Communities must be included for analysis as part of an EIR.

[8] OEHHA Poverty https://oehha.ca.gov/calenviroscreen/indicator/poverty
[9] Ibid.
[10] Ibid.
[11] OEHHA SB 535 Census Tracts https://oehha.ca.gov/calenviroscreen/sb535

The State of California lists three approved compliance modeling softwares[12] for non-residential buildings: CBECC-Com, EnergyPro, and IES VE. CalEEMod is not listed as an approved software. The CalEEMod modeling does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project's significant Energy impacts and fuel consumption to the public and decision makers. Since the MND did not accurately or adequately model the energy impacts in compliance with Title 24, a finding of significance must be made. An EIR with modeling using one of the approved software types must be prepared and circulated for public review in order to adequately analyze the project's significant environmental impacts. This is vital as the MND utilizes CalEEMod as a source in its methodology and analysis, which is clearly not an approved software.

3.9 Hazards and Hazardous Materials

The MND identifies that, "The SBIA is located immediately south of the project site" and states that, "The San Bernardino Airport Land Use Plan is currently being drafted and was not available at the time of this report. Nonetheless, the Federal Aviation Administration Regulations Title 14 Part 77 determines restrictions to obstructions and height limitations for structures taller than 200 feet or within 20,000 feet of an airport. The proposed project would be consistent with the general land use of the area," resulting in less than significant impacts. Development of a project that is consistent with the "general land use of the area" is not adequate justification to demonstrate that the project will not result in a safety hazard or excessive noise for people residing or working in the project area due to the site's proximity to the San Bernardino International Airport (SBIA). Notably, the project requires a GPA, ZC, Annexation, Variance for height, and parking reduction to proceed, which indicates that the project is not consistent with the general area.

O3-B-1

If a ALUCP for the SBIA has not been adopted, PUC Section 21675.1(b)[13] requires that, "Until a commission adopts an airport land use compatibility plan, a city or county shall first submit all actions, regulations, and permits within the vicinity of a public airport to the commission for review and approval." The California Airport Land Use Planning Handbook[14] also states that Airport Land Use Commission review is required "Prior to the amendment of a general plan or specific plan, or the adoption of a zoning ordinance or building regulation within the ALUCP planning boundary, the ALUC shall review the plan, ordinance, or regulation for consistency with the ALUCP (PUC Section 21676(b))." Given that the proposed project includes a Sphere of Influence Amendment, Annexation, General Plan Amendment, Zone Change, Variance for height,

[12] California Energy Commission 2022 Energy Code Compliance Software https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency-1
[13] Ibid.
[14] California Airport Land Use Planning Handbook https://dot.ca.gov/-/media/dot-media/programs/aeronautics/documents/californiaairportlanduseplanninghandbook-a11y.pdf

and parking reduction to proceed, San Bernardino County Airport Land Use Commission review is required. Also, delaying the San Bernardino County ALUC review until after the MND has been published for public comment is implementation of the project prior to CEQA review and deferred mitigation in violation of CEQA. Since the San Bernardino County ALUC has not reviewed the project, an EIR must be prepared to include a finding of significance as there is no meaningful evidence presented to support a less than significant finding.

3.11 Land Use and Planning

The project site's General Plan Land Use designation of Business Park (BP) is listed as a Commercial land use within the City's General Plan[15]. The BP designation in the General Plan permits a maximum intensity of 0.45 floor area ratio (FAR). The project proposes a 0.56 FAR, which exceeds the maximum intensity of the General Plan. The MND does not provide this information for analysis. An EIR must be prepared to include a finding of significance due to this inconsistency with the General Plan, which also sets maximum buildout assumptions as determined by FAR and square footage. Notably, Table 2.2 - Nonresidential Buildout Estimates of the Land Use Element assumes a probable intensity of 0.30 FAR, and the project is proposed at a 50% increase above the development scenario from which the project tiers in addition to increases resulting from the SOI Amendment and Annexation as discussed below.

O3-B-1

The MND does not provide a consistency analysis for any applicable General Plan goals, policies, and programs. The MND is inadequate as an informational document and an EIR must be prepared with a consistency analysis with all General Plan goals, policies, and actions, including the following:

1. Land Use Goal 2.6 - Policy 1: Require that new development be at an appropriate density or intensity based upon compatibility with surrounding existing and planned land uses.
2. Airport Element Goal 11.1:- Policy 3: Ensure compliance of new development with noise standards in the Code of Federal Regulations and California Airport Noise Regulations.
3. Airport Element Goal 11.1:- Policy 4: Ensure adherence to standards in the California Building Code (CBC) that govern acceptable interior noise levels associated with exterior airport noise sources.
4. Airport Element Goal 11.2: Reduce the risk to people and property by limiting the type and intensity of development in identified impact areas, ensuring adequate emergency response facilities within or adjacent to airport uses, and requiring adequate public notification of safety policies and procedures.

[15] Highland General Plan Land Use Element
https://www.cityofhighland.org/DocumentCenter/View/154/Land-Use-Element-PDF

5. Airport Element Goal 11.2:- Policy 1: Evaluate land use compatibility and safety issues in designated Airport Influence Areas (AIAs) by: Coordinated planning with regional planning authorities; Compliance with applicable Airport Master Plans, Federal Aviation Administration (FAA) requirements and the California Airport Land Use Planning Handbook.
6. Airport Element Goal 11.2:- Policy 2: Limit the type and intensity of development in designated Airport Influence Areas (AIAs).
7. Airport Element Goal 11.2:- Policy 3: Avoid siting sensitive uses, especially residences, schools and hospitals, nearby airport runways or along approved flight paths.
8. Airport Element Goal 11.2:- Policy 4: Encourage the development of open space areas in Highland adjacent to designated airport safety zones.
9. Airport Element Goal 11.2:- Action 1: Establish occupancy requirements (i.e., noise mitigation and height restrictions) within established airport easement or overflight areas as a condition of approval for new development.
10. Airport Element Goal 11.3 - Policy 3: Provide adequate transitions and/or buffers between existing residential neighborhoods and industrial and other incompatible land uses.
11. Public Health & Safety Element Goal 6.7 - Policy 1: Require the review of all new development in proximity to the San Bernardino International Airport for compliance with Federal Aviation Administration (FAA) requirements and the California Airport Land Use Planning Handbook with adopted plans. O3-B-1
12. Public Health & Safety Element Goal 6.7 - Policy 2: Evaluate the compatibility of airport uses, activities, and operations with all new development in proximity to the San Bernardino International Airport prior to approval and protect sensitive uses, such as residences, schools, hospitals, and libraries from overflight areas.
13. Conservation and Open Space Element Goal 5.7 - Policy 6: Ensure that required biological assessments are conducted in cooperation with the California Department of Fish and Game and the U.S. Fish and Wildlife Service.
14. Circulation Element Goal 3.1 - Policy 2: Ensure that all intersections operate at LOS “D” or better during the peak hours of traffic.
15. Circulation Element Goal 3.1 - Policy 7: Monitor the intensity of land use to keep traffic on any arterial in balance with roadway capacity.
16. Circulation Element Goal 3.1 - Policy 8: Require development proposals with the potential to generate traffic volumes or other impacts not adequately evaluated in the Circulation Element and the General Plan Program EIR to prepare a traffic analysis consistent and compatible with the City’s Master General Plan Traffic Model.
17. Circulation Element Goal 3.1 - Policy 9: Restrict the number of access points and intersections along arterials to preserve mid block and intersection capacities and to maintain public safety.

Additionally, the MND does not provide any information regarding the buildout conditions of the City's General Plan. Table 2.2: Nonresidential Buildout Estimates of the General Plan notes that the Business Park designation supports the development of 2,407,126 sf of building space through the document's 2040 horizon year. The project's proposed 173,976 sf of building space is 7.2% of the total Business Park space permitted over the 30 year General Plan period, which represents a significant amount of growth for a single project. In tandem with the piecemealed Patriot Partners developments (913,889 total sf of industrial buildings), the whole of the action accounts for 37.96% of the total Business Park space permitted over the 30 year General Plan period. An EIR must be prepared to provide a cumulative analysis discussion of projects approved since General Plan adoption and projects "in the pipeline" in order to provide an adequate and accurate environmental analysis.

The MND states that, "As part of the City's site-plan review process, the City has determined that the project would be consistent with all development standards required for the BP zone, with the exception of Section 16.24.040. Employment District Development Standards, of the City's Municipal Code, which states that building heights are not to exceed 35 feet within the BP district. The project proposes a building height of 45 feet. However, the procedures outlined in Section 16.08.870 states that the City may permit such modification of the height regulations as are necessary to secure an appropriate improvement on a lot. As such, upon approval of Variance No. 22-006, the project's height could be allowed within in the BP district." However, the MND has excluded the City's determination and review of the project in accordance with the development standards required for the BP zone. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). The MND has not provided any meaningful information to support its less than significant finding, such as a list of the BP zone requirements and whether the project does or does not comply with each item. Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the City's determination and review of the project in accordance with the BP zone development standards contributes directly to analysis of the problem at hand. An EIR must be prepared to include the City's determination and review of the project in accordance with the BP zone development standards for review, analysis, and comment by the public and decision makers.

O3-B-1

Further, the MND does not provide any meaningful analysis of the project's requested height variance. The MND states that the Municipal Code qualifies the modification of a height limit only if they "are necessary to secure an appropriate improvement on a lot." The MND has not provided any statements or analysis regarding why the additional 10 feet in height above the maximum height limit are necessary to secure an improvement on a lot. The MND also excludes any discussion and analysis of the project's proposed parking reduction below the Municipal Code

requirements. An EIR must be prepared to include a finding of significance as the MND has not provided any meaningful evidence to support a less than significant finding.

The MND broadly concludes that, "the project would be consistent with local plans, policies, and regulations governing land use decisions." The MND has not meaningfully considered the project's required SOI Amendment, Annexation, GPA, and ZC for analysis here. Amending the City's SOI to include a single parcel within another incorporated City and annexing it into the City boundaries conflicts with the basis of the City's General Plan and its EIR that the MND attempts to tier from. The project will increase the quantity of land within the City and by nature exceed the assumptions, analysis, and conclusions of the General Plan EIR. This is a conflict with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect and an EIR must be prepared to include a finding of significance.

3.14 Population and Housing

The MND utilizes SCAG's Employment Density Study to calculate that the project will generate 147 employees. However, local data for employment generation is available and must be utilized for analysis. Employee generation estimates are provided by the City's 2012 General Plan Land Use Element. Table 2.2 - Nonresidential Buildout Estimates of the Land Use Element[16] states that the Business Park Land Use designation will generate 1 employee for every 600 square feet of building area. Application of this ratio results in the following calculation: O3-B-1

173,976 sf building / 600 = 290 employees

The MND utilizes uncertain language and does not provide any meaningful analysis or supporting evidence to substantiate the conclusion that there will be no significant impact to population and housing. The MND states that, "the project's temporary and permanent employment requirements *could likely* be met by the *City's* existing labor force without the need for people to relocate to the project region." However, the MND does not provide any City-specific information to support this claim and provides statements about the greater Inland Empire region. The MND states that the July 2022 unemployment rate in the Riverside-San Bernardino-Ontario Metropolitan Statistical Area is 3.9%, which does not substantiate the MND's claims that impacts will be less than significant. The MND does not provide any information regarding the City's available workforce, such as their interest in or qualifications for work in the industrial sector. Relying on the unemployed workforce population of the surrounding Inland Empire region will increase project related VMT and emissions during all phases of construction and operations and an EIR must be prepared to account for longer worker trip distances.

[16] https://www.cityofhighland.org/DocumentCenter/View/3216/Land-Use-Element-PDF

The MND provides a broad conclusion utilizing uncertain language that, "The project-related increase in employment would be *minimal* in comparison to the anticipated increase in the SCAG Demographics and Growth Forecast." There is no analysis of projects approved, proposed, or "in the pipeline" within the City to demonstrate that the combined workforce and population of all projects does not exceed the growth estimates of the City's General Plan or SCAG's RTP/SCS. SCAG's Connect SoCal Demographics and Growth Forecast[17] notes that Highland will add 4,200 jobs between 2016 - 2045. Utilizing the City's General Plan buildout calculation of 290 employees, the project represents 6.9% of Highland's employment growth from 2016 - 2045. A single project accounting for this amount of the projected employment and/or population over 29 years represents a significant amount of growth. An EIR must be prepared to include this information for analysis. Additionally, an EIR must provide demographic and geographic information on the location of qualified workers to fill these positions in order to provide an accurate environmental analysis.

An EIR must also be prepared with a cumulative analysis discussion of projects approved since General Plan adoption, 2016 (SCAG), and projects "in the pipeline." For example, other recent projects such as Crow Holdings West[18] (146,670 sf warehouse; 245 employees), Patriot Warehouse 6th & Victoria[19] (305,617 sf warehouse; 510 employees), Patriot Warehouse 3rd & Central[20] (54,330 sf warehouse; 91 employees), Patriot Warehouse Grape Street[21] (90,532 sf warehouse; 151 employees), Patriot Warehouse Victoria & Cypress[22] (187,870 sf warehouse; 314 employees), Patriot Warehouse 6th & Del Rosa[23] (47,899 sf warehouse; 80 employees), Patriot Warehouse 5th & Central[24] (176,066 sf warehouse; 294 employees), Lovett Industrial (284,917 sf warehouse; 285 employees), and Crow Holdings Industrial (243,323 sf warehouse; 406 employees) combined with the proposed project will generate at minimum 2,666 employees utilizing the General Plan employment factors for the applicable land use designations. This is 63.5% of the City's SCAG employment growth forecast over 29 years accounted for by only recent industrial projects. This number increases exponentially when the City's commercial development activity is added to this brief list of recent industrial activity. An EIR must be prepared to include a cumulative analysis on this topic.

O3-B-1

[20] Patriot Warehouse 3rd & Central https://www.cityofhighland.org/DocumentCenter/Index/356
[21] Patriot Warehouse Grape Street https://www.cityofhighland.org/DocumentCenter/Index/366
[22] Patriot Warehouse Victoria & Cypress https://www.cityofhighland.org/DocumentCenter/Index/365
[23] Patriot Warehouse 6th & Del Rosa https://ceqanet.opr.ca.gov/2023030640
[24] Patriot Warehouse 5th & Central https://www.cityofhighland.org/DocumentCenter/Index/568

The MND also states that, "The project would not stimulate population growth or a population concentration above what is assumed in local and regional land use plans." The MND has not considered the project's required Annexation for analysis here. Annexing a portion of the project site into the City boundaries will increase the quantity of land within the City and by nature increase population growth beyond the assumptions or calculations of the City's General Plan and SCAG. The entirety of the project site was not included for analysis by the City's General Plan nor SCAG in regards to Highland. There is no possible mitigation for the project's impacts to population growth and an EIR must be prepared to include a finding of significance.

3.17 Transportation

The MND has exempted itself from preparing a project specific Traffic Analysis as it concludes the project generates less than 1,000 ADT per the City's Traffic Study Parameters[25]. However, as stated above regarding project piecemealing, the proposed building is only one in a series of Patriot industrial buildings and the combined ADT of all proposed buildings vastly exceeds 1,000 ADT. The proposed project combined with Patriot 6th and Victoria[26] (535 ADT) and Patriot Cypress and Victoria[27] (321 ADT) will generate 1,157 ADT and adding the four other piecemealed Patriot projects further adds to the calculation and need for a project-specific Traffic Analysis for all proposed Patriot projects, including the proposed project. O3-B-1

The MND concludes that the project will generate less than significant levels of VMT. Appendix J: VMT Analysis states that, "SBTAM was utilized to calculate Project generated VMT for the Project's proposed warehousing land uses." However, the MND has not included the modeling parameters utilized or the input/output sheets provided by the software. This do not comply with CEQA's requirements for meaningful disclosure (CEQA § 15121 and 21003(b)). An EIR must be prepared to include the modeling parameters utilized and the input/output sheets provided by the SBTAM Model.

Further, the MND has underreported the quantity VMT generated by the proposed project operations. The operational nature of industrial/warehouse uses involves high rates of truck/trailer/delivery van VMT due to traveling from large import hubs to regional distribution centers to smaller industrial parks and then to their final delivery destinations. Once employees arrive at work at the proposed project, they will conduct their jobs by driving trucks/delivery vans

[25] https://www.cityofhighland.org/DocumentCenter/View/231/90---Traffic-PDF
[26] Table 26 Project Trip Generation Summary https://www.cityofhighland.org/DocumentCenter/View/1982/DRAFT-Initial-Study---Mitigated-Negative-Declaration-PDF
[27] Table 1 Trip Generation https://www.cityofhighland.org/DocumentCenter/View/2773/Appendix-J-VMT-PDF

across the region as part of the daily operations as a warehouse, which will drastically increase project-generated VMT. The project's truck/trailer and delivery van activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude this activity from VMT analysis. The project's total operational VMT generated is not consistent with the significance threshold and legislative intent of SB 743 to reduce greenhouse gas emissions by reducing VMT. An EIR must be prepared to reflect a quantified VMT analysis that includes all truck/trailer and delivery van activity.

The MND has not adequately analyzed the project's potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project's potential to result in inadequate emergency access. The MND has not provided any exhibits depicting the available truck/trailer turning radius at the intersection of the project driveways to determine if there is enough space available to accommodate heavy truck maneuvering. Further, there are no exhibits providing on-site analysis regarding available space on the property to accommodate heavy truck maneuvering. Notably, truck/trailer parking stalls are adjacent to the truck/trailer loading docks on the east side of the building. These parking stalls that may be in use at any time and further restrict truck/trailer movement on the site. Additionally, heavy truck/trailers that enter the site from Third Street or Fifth Street will traverse passenger car parking areas and create further possibility of conflict between onsite vehicles. The MND also does not provide any queuing analysis of the streets adjacent to the project site. An EIR must be prepared to include this information for analysis in order to provide an adequate and accurate environmental analysis. O3-B-1

The MND states that, "During site plan review, the internal roadway and driveway widths and curb radii to facilitate passenger car and truck turning and movement would be reviewed, designed, and constructed per City standards and applicable street design requirements. For on-site construction and any improvements required within the public ROW, the proposed project would be required to comply with standards set forth by the City to ensure that the project does not introduce an incompatible design feature that would impede traffic flow on roadway facilities." The MND has not provided any details regarding the requirements for these items or meaningful analysis of the project's compliance or noncompliance with these requirements. Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate informational documents. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). An EIR must be prepared to include a finding of significance as the MND has not provided any meaningful evidence to support a less than significant finding.

There are also no exhibits depicting emergency vehicle access. Similar broad statements are made regarding emergency vehicle access, in that "Emergency vehicle access will be available at all driveways and facilitated within the entirety of the project site. The project site would be accessible to emergency responders during construction and operation of the project." The MND has not provided any details regarding the requirements for emergency access or meaningful analysis of the project's compliance or noncompliance with these requirements. Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate informational documents. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). An EIR must be prepared to include a finding of significance as the MND has not provided any meaningful evidence to support a less than significant finding.

3.21 Mandatory Findings of Significance

The MND also excludes that the Business Park (BP) designation in the General Plan[28] permits a maximum intensity of 0.45 floor area ratio (FAR). The project proposes a 0.56 FAR, which exceeds the maximum intensity of the General Plan. An EIR must be prepared to include a finding of significance due to this inconsistency with the General Plan, which also sets maximum buildout assumptions as determined by FAR and square footage. Notably, Table 2.2 - Nonresidential Buildout Estimates of the Land Use Element assumes a probable intensity of 0.30 FAR, and the project is proposed at a 50% increase above the development scenario from which the project tiers in addition to increases resulting from the SOI Amendment and Annexation as discussed below.

O3-B-1

The MND has not provided an adequate or accurate cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. The MND has not provided any information or analysis on the buildout conditions of the General Plan. Table 2.2: Nonresidential Buildout Estimates of the General Plan notes that the Business Park designation supports the development of 2,407,126 sf of building space through the document's 2040 horizon year. The project's proposed 173,976 sf of building space is 7.2% of the total Business Park space permitted over the 30 year General Plan period, which represents a significant amount of growth for a single project. In tandem with the piecemealed Patriot Partners developments (913,889 total sf of industrial buildings), the whole of the action accounts for 37.96% of the total Business Park space permitted over the 30 year General Plan period. Other projects such as Crow Holdings West[29] (146,670 sf warehouse) and Crow Holdings Industrial[30] (243,323 sf warehouse) combined

[28] Highland General Plan Land Use Element https://www.cityofhighland.org/DocumentCenter/View/154/Land-Use-Element-PDF
[29] Crow Holdings West https://www.cityofhighland.org/DocumentCenter/Index/509
[30] https://ceqanet.opr.ca.gov/2023100255

with the Patriot projects will generate 1,303,882 sf of building area, which is 54.1% of the total Business Park space permitted over the 30 year General Plan period. An EIR must be prepared to provide a cumulative analysis discussion of projects approved since General Plan adoption and projects "in the pipeline" to analyze the project in accordance with City's General Plan growth estimates. As the project includes a SOI Amendment, Annexation, GPA, and ZC, it is clear that the project was not included in the City's General Plan EIR and its buildout assumptions and other analysis, and a finding of significance must be included in an EIR.

Further, employment generation has not been adequately analyzed as other recent industrial projects such as Crow Holdings West[31] (146,670 sf warehouse; 245 employees), Patriot Warehouse 6th & Victoria[32] (305,617 sf warehouse; 510 employees), Patriot Warehouse 3rd & Central[33] (54,330 sf warehouse; 91 employees), Patriot Warehouse Grape Street[34] (90,532 sf warehouse; 151 employees), Patriot Warehouse Victoria & Cypress[35] (187,870 sf warehouse; 314 employees), Patriot Warehouse 6th & Del Rosa[36] (47,899 sf warehouse; 80 employees), Patriot Warehouse 5th & Central[37] (176,066 sf warehouse; 294 employees), Lovett Industrial (284,917 sf warehouse; 285 employees), and Crow Holdings Industrial (243,323 sf warehouse; 406 employees) combined with the proposed project will generate at minimum 2,666 employees utilizing the General Plan employment factors for the applicable land use designations. This is 63.5% of the City's SCAG employment growth forecast over 29 years accounted for by only recent industrial projects. This number increases exponentially when the City's commercial development activity is added to this brief list of recent industrial activity. An EIR must be prepared to include a cumulative analysis on this topic. O3-B-1

The MND has not meaningfully considered the project's required SOI Amendment, Annexation, GPA, and ZC for analysis here. Amending the City's SOI to include a single parcel within another incorporated City and annexing it into the City boundaries conflicts with the basis of the City's General Plan and its EIR that the MND attempts to tier from. The project will increase the quantity of land within the City and by nature exceed the assumptions, analysis, and conclusions of the General Plan EIR. While this may be an individually limited impact, it is cumulatively considerable in that the incremental effects of the project are considerable when viewed in connection with the effects of past projects (approved piecemealed Patriot projects and other development), the effects of other current projects (pending piecemealed Patriot projects and other

[31] Crow Holdings West https://www.cityofhighland.org/DocumentCenter/Index/509

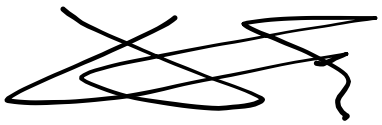
[37] Patriot Warehouse 5th & Central https://www.cityofhighland.org/DocumentCenter/Index/568



development), and the effects of probable future projects (the project's precedent-setting action for single parcel amendments to the City's SOI to annex a parcel that is part of another incorporated City; GPA and ZC). The MND has not provided any of this information for analysis or discussion and an EIR must be prepared to include a finding of significance.

O3-B-1

Conclusion

For the foregoing reasons, GSEJA believes the MND is flawed and an EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Sincerely,

Gary Ho

Subject: **Comments on the Southeast Corner 5th Street and Victoria Avenue Warehouse Project (SCH No. 2024100850)**

Dear Mr. Ho,

We have reviewed the October 2024 Initial Study/Mitigated Negative Declaration ("IS/MND") for the Southeast Corner 5th Street and Victoria Avenue Warehouse Project ("Project") located in the City of Highland ("City"). The Project proposes to construct a 173,976-square-foot ("SF") warehouse building and 79 parking spaces on the 7.23-acre site.

Our review demonstrates that the IS/MND fails to adequately evaluate the Project's hazards, hazardous materials, air quality, health risk, and greenhouse gas ("GHG") impacts. We therefore conclude that emissions and health risk impacts associated with construction and operation of the proposed Project may be underestimated and inadequately addressed. An Environmental Impact Report ("EIR") should be prepared to adequately assess and mitigate the existing onsite hazards and hazardous materials, as well as address the potential air quality, health risk, and GHG impacts the Project may have.

Hazards and Hazardous Materials

Inadequate Disclosure and Analysis of Impacts

A Phase I Environmental Site Assessment (ESA) was not prepared for the Project site. A review of Figure 2 (below) shows debris and soil piles to be located the site. A Phase I ESA is necessary to evaluate these features as potential recognized environmental conditions (RECs).

The preparation of a Phase I ESA is a common practice in CEQA matters to aid in the identification of hazardous materials issues that may pose a risk to the public, workers, or the environment, and which may require further investigation through the conduct of a Phase II ESA.

Standards for performing a Phase I ESA have been established by the US EPA and the American Society for Testing and Materials Standards (ASTM).[1] Phase I ESAs are conducted to identify conditions indicative of releases of hazardous substances and include:

- a review of all known sites in the vicinity of the subject property that are on regulatory agency databases undergoing assessment or cleanup activities;
- an inspection;
- interviews with people knowledgeable about the property; and
- recommendations for further actions to address potential hazards.

Phase I ESAs conclude with the identification of any "recognized environmental conditions" (RECs) and recommendations to address such conditions. A REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. If RECs are identified, then a Phase II ESA generally follows, which includes the collection of soil, soil vapor and groundwater samples, as necessary, to identify the extent of contamination and the need for cleanup to reduce exposure potential to the public.

[1] http://www.astm.org/Standards/E1527.htm

The preparation of a Phase I ESA for the Project site is especially needed because of the presence of the soil piles and debris at the Project site. Stockpiled soil may necessitate sampling to determine if the soil contains hazardous constituents such as heavy metals or petroleum hydrocarbons. Similarly, any stained soils associated with the debris may require sampling.

Any contamination that is identified above regulatory screening levels, including California Office of Environmental Health Hazard Assessment's Soil Screening Numbers[2], should be further evaluated and cleaned up, if necessary, in coordination with the Regional Water Quality Control Board and the California Department of Toxics Substances Control. Consistent with professional due diligence procedures commonly used in CEQA proceedings, a Phase I ESA, completed by a licensed environmental professional is necessary for inclusion in an EIR to identify recognized environmental conditions, if any, at the proposed Project site.

Air Quality

Failure to Provide Complete CalEEMod Output Files

Land use development projects under the California Environmental Quality Act ("CEQA") typically evaluate air quality impacts and calculate potential criteria air pollutant emissions using the California Emissions Estimator Model ("CalEEMod").[3] CalEEMod provides recommended default values based on site-specific information, however, if more specific project information is known, the user can change the default values and input project-specific values. CEQA requires that such changes be justified by substantial evidence. [4] After entering all relevant data into the model, the Project's construction and operational emissions are calculated, and "output files" are generated. These files outline the parameters used in the emissions calculations and highlight any modifications made to the default values, along with justifications for each change.

According to the IS/MND, CalEEMod Version 2022.1 is relied upon to estimate Project emissions (p. 22). Review of the CalEEMod model indicates the currently available version of CalEEMod 2022.1 fails to provide complete output files.[5] Specifically, the "User Changes to Default Data" table no longer provides the quantitative counterparts to the changes to the default values (see excerpt below) (Appendix A-1, pp. 119):

[2] https://dtsc.ca.gov/wp-content/uploads/sites/31/2022/02/HHRA-Note-3-June2020-Revised-May2022A.pdf
[3] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide.
[4] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 13, 14.
[5] "CalEEMod California Emissions Estimator Model Soft Release." CAPCOA, 2022, *available at:* https://caleemod.com/.

Screen	Justification
Construction: Construction Phases	Based on the construction schedule provided by the project applicant and including paving/architectural coating phases.
Construction: Off-Road Equipment	Assuming the use of Tier 2 construction equipment.
Operations: Vehicle Data	The proposed project would generate a total of 2,840 average daily trips.
Operations: Energy Use	PDF-GHG-1 would require the proposed project to be all-electric.
Operations: Hearths	PDF-AQ-1 requires the installation of only electric fireplaces in future residential construction. Future residential units are prohibited from having wood-burning fireplaces or stoves.
Land Use	The total project site encompasses approximately 35.4 acres.

Previous CalEEMod Versions, such as 2020.4.0, include the specific numeric changes to the model's default values (see example excerpt below):

Table Name	Column Name	Default Value	New Value
tblConstructionPhase	NumDays	230.00	167.00
tblConstructionPhase	PhaseEndDate	11/22/2023	8/25/2023
tblConstructionPhase	PhaseEndDate	9/27/2023	6/30/2023
tblConstructionPhase	PhaseEndDate	10/25/2023	7/28/2023
tblConstructionPhase	PhaseStartDate	10/26/2023	7/29/2023
tblConstructionPhase	PhaseStartDate	9/28/2023	7/1/2023
tblLandUse	LandUseSquareFeet	160,000.00	160,371.00
tblLandUse	LandUseSquareFeet	119,000.00	41,155.00
tblLandUse	LotAcreage	3.67	3.68
tblLandUse	LotAcreage	2.73	2.74

The output files associated with CalEEMod Version 2022.1 fail to present the exact parameters used to calculate Project emissions. To remedy this omission, the IS/MND should have provided access to the model's ".JSON" files, which allow third parties to review the model's revised input parameters.[6] Without access to the complete output files, including the specific numeric changes to the default values, we cannot verify that the IS/MND's air modeling and subsequent analysis is an accurate reflection of the proposed Project. As a result, an EIR should be prepared to include an updated air quality analysis that correctly provides the complete output files for CalEEMod Version 2022.1, or includes an updated air model using an older release of CalEEMod.[7]

Unsubstantiated Input Parameters Used to Estimate Project Emissions

The IS/MND relies on CalEEMod Version 2022.1 to estimate the Project's air quality emissions and fails to provide the complete output files required to adequately evaluate model's analysis (p. 22). Regardless, when reviewing the Project's CalEEMod output files, provided in the Air Quality, Greenhouse Gas Emission, and Energy Emissions Modeling Inputs and Outputs ("AQ & GHG Report") as Appendix A to the IS/MND, we were able to identify several model inputs related to Project construction that are inconsistent with information disclosed in the IS/MND. The impacts of these unsubstantiated changes are quantified in the section of this letter titled "Updated Analysis Indicates a Potentially Significant Air

[6] "Video Tutorials for CalEEMod Version 2022.1." CAPCOA, May 2022, *available at:* https://www.caleemod.com/tutorials.
[7] "CalEEMod Version 2020.4.0." CAPCOA, May 2021, *available at:* http://www.aqmd.gov/caleemod/download-model.

Quality Impact." An EIR should be prepared to include an updated air quality analysis that adequately evaluates the impacts that construction and operation of the Project will have on local and regional air quality.

Unsubstantiated Changes to Individual Construction Phase Lengths

Review of the CalEEMod output files show that the "5th & Victoria Unmitigated" model includes changes to the default construction schedule (see excerpt below) (Appendix A-1, pp. 77 – 78):

Screen	Justification
Land Use	Lot acreage includes landscape area. Total acreage = 7.23 User defined industrial set for HD trucks
Construction: Construction Phases	Applicant provided schedule - Feb 2023 through October 2023
Operations: Vehicle Data	Trip rate under warehouse for passenger vehicles only. User defined industrial trip rate for trucks.
Operations: Fleet Mix	Fleet mix adjusted for passenger vehicles for workers at warehouse and for truck trips at warehouse.
Operations: Off-Road Equipment	Assumed every day use
Construction: Trips and VMT	Assumed even number of one-way trips. Assumed on-site water truck that waters 2x per day.
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	No cold storage

As a result of these changes, the model includes the following construction schedule (see excerpt below) (Appendix A-1, pp. 66):

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase
Demolition	Demolition	2/1/2023	3/1/2023	5.00	20.0
Site Preparation	Site Preparation	3/2/2023	3/16/2023	5.00	10.0
Grading	Grading	3/17/2023	4/27/2023	5.00	30.0
Building Construction	Building Construction	4/28/2023	8/23/2023	5.00	84.0
Paving	Paving	8/24/2023	9/20/2023	5.00	20.0
Architectural Coating	Architectural Coating	9/21/2023	10/18/2023	5.00	20.0

As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[8] The "User Changes to Default Data" table above provides the following justification for these changes:

> "Applicant provided schedule – Feb 2023 through October 2023" (Appendix A-1, pp. 77).

Regarding the Project's construction duration, the IS/MND states:

> "The project applicant intends to commence construction on or around June 1, 2024. It is anticipated that construction would take approximately 9 months, ending in February 2025. Table 3 provides a tentative project construction schedule, as used in air quality and greenhouse gas (GHG) emissions impact analyses (refer to Section 3.3, Air Quality, and Section 3.8, Greenhouse Gas Emissions, of this IS/MND; also see Appendix A, Air Quality, Greenhouse Gas Emission, and Energy Modeling Inputs and Outputs)" (p. 6).

[8] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 1, 14.

As indicated above, the IS/MND includes the following construction schedule (see excerpt below) (p. 6, Table 3).

Table 3. Anticipated Project Construction Schedule

Construction Phase	Duration	Phase Start Date	Phase End Date
Site Preparation	1 month	July 2, 2024	July 16, 2024
Grading	1 month	July 17, 2024	August 27, 2024
Building Construction	4 months	August 28, 2024	December 23, 2024
Paving	1 month	December 24, 2024	January 20, 2024
Architectural Coating	1 month	January 21, 2025	February 18, 2025

Although the IS/MND justifies the total 9-month duration of Project construction, it fails to provide an adequate source to support the length of each individual construction phase. The changes to the individual construction phase lengths therefore remain unsubstantiated. The construction schedule "used in [the] air quality and greenhouse gas (GHG) emissions impact analyses" is insufficient and the individual phase lengths should be substantiated by the Project Applicant instead (p. 6). Until then, we cannot verify that the purported schedule is an accurate representation of the actual construction phase lengths.

CalEEMod uses construction phase lengths to calculate the Project's construction emissions. Each construction phase is associated with different emissions activities (see excerpt below).[9]

> *Demolition* involves removing buildings or structures.
>
> *Site Preparation* involves clearing vegetation (grubbing and tree/stump removal) and removing stones and other unwanted material or debris prior to grading.
>
> *Grading* involves the cut and fill of land to ensure that the proper base and slope is created for the foundation.
>
> *Building Construction* involves the construction of the foundation, structures and buildings.
>
> *Architectural Coating* involves the application of coatings to both the interior and exterior of buildings or structures, the painting of parking lot or parking garage striping, associated signage and curbs, and the painting of the walls or other components such as stair railings inside parking structures.
>
> *Paving* involves the laying of concrete or asphalt such as in parking lots, roads, driveways, or sidewalks.

By altering and extending some of the individual construction phase lengths without proper justification, the model assumes there are a greater number of days to complete the construction activities required by the prolonged phases. There will be less construction activities required per day and, consequently, less pollutants emitted per day. Until we are able to verify the revised construction schedule, the model may underestimate the peak daily emissions associated with some phases of construction and should not be relied upon to determine Project significance.

[9] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 32.

Unsubstantiated Changes to Architectural Coating Emission Factors

Review of the CalEEMod output files demonstrates that the "5th & Victoria Unmitigated" model includes changes to the default construction architectural coating emission factors (see excerpt below) (Appendix A-1, pp. 77 – 78).

Screen	Justification
Land Use	Lot acreage includes landscape area. Total acreage = 7.23 User defined industrial set for HD trucks
Construction: Construction Phases	Applicant provided schedule - Feb 2023 through October 2023
Operations: Vehicle Data	Trip rate under warehouse for passenger vehicles only. User defined industrial trip rate for trucks.
Operations: Fleet Mix	Fleet mix adjusted for passenger vehicles for workers at warehouse and for truck trips at warehouse.
Operations: Off-Road Equipment	Assumed every day use
Construction: Trips and VMT	Assumed even number of one-way trips. Assumed on-site water truck that waters 2x per day.
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	No cold storage

As stated in the "User Changes to Default Data" table, the justification provided for these changes is:

> "SCAQMD Rule 1113" (Appendix A-1, pp. 77).

Regarding the application of architectural coatings, the IS/MND states:

> "The application of architectural coatings, such as exterior/interior paint and other finishes, and the application of asphalt pavement would also produce VOC emissions; however, the contractor is required to procure architectural coatings that comply with the requirements of SCAQMD's Rule 1113, Architectural Coatings" (p. 23).

The reductions to the architectural coating emission factors, however, are unsubstantiated for three reasons.

First, we are unable to verify the accuracy of the revised architectural coating emission factors based on the South Coast Air Quality Management District ("SCAQMD") Rule 1113 alone. The IS/MND itself states that the Project is required to procure architectural coatings that comply with the requirements of SCAQMD's Rule 1113. The SCAQMD Rule 1113 Table of Standards provides the required volatile organic compound ("VOC") limits (in grams of VOC per liter of coating) for 57 different coating categories.[10] The VOC limits for each coating varies from a minimum value of 50 g/L to a maximum value of 730 g/L. As such, we cannot verify that SCAQMD Rule 1113 substantiates reductions to the default coating values without more information regarding what category of coating will be used. As the IS/MND fails to explicitly require the use of a specific type of coating which would adhere to a specific VOC limit, we are unable to verify the model's revised coating emission factors.

[10] "SCAQMD Rule 1113 Advisory Notice." SCAQMD, February 2016, *available at:* http://www.aqmd.gov/docs/default-source/rule-book/reg-xi/r1113.pdf?sfvrsn=24, p. 1113-14, Table of Standards 1.

Second, as previously discussed, the output files for CalEEMod 2022.1 do not present the numeric changes to any model defaults. While Table 5.5 contains the only mention of architectural coatings, it only provides the square footage of area to be coated (see excerpt below) (Appendix F, pp. 67):

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	840,059	280,020	35,182

Since the output files fail to present the architectural coating emission factors that the model relies on, we cannot verify that the values included in the model are accurate. The IS/MND should have provided access to the model's ".JSON" files, which allow third parties to review the model's revised input parameters.[11]

Lastly, the assumption that the Project's architectural coating values would comply with SCAQMD Rule 1113 remains unsupported, as the IS/MND fails to explicitly require these standards through a formal mitigation measure. According to the Association of Environmental Professionals *CEQA Portal Topic Paper* on mitigation measures:

> "While not 'mitigation', a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact" (emphasis added).[12]

Measures that are not formally included in the mitigation monitoring and reporting program may be eliminated from the Project's design altogether. As the implementation specific low VOC coatings pursuant to Rule 1113 is not formally included as a mitigation measure, we cannot guarantee that these standards would be implemented, monitored, and enforced on the Project site.

CalEEMod uses the architectural coating emission factors to calculate the Project's reactive VOC emissions.[13] By including unsubstantiated reductions to the default architectural coating emission factors, the model may underestimate the Project's construction-related VOC emissions and should not be relied upon to determine Project significance.

Updated Analysis Indicates a Potentially Significant Air Quality Impact

We developed an updated model to more accurately estimate the Project's construction-related emissions, using Project-specific information from the IS/MND. In our updated model, we proportionately altered the construction phase lengths to fit the purported construction schedule and omitted the unsubstantiated changes to the architectural coating emission factors.[14] All other values are consistent with the IS/MND's model.

Our updated analysis estimates that the Project's construction-related and operational VOC emissions would exceed the applicable SCAQMD thresholds of 75 pounds per day ("lbs/day"), as referenced by the IS/MND (p. 24, Table 6) (see table below).[15]

SWAPE Criteria Air Pollutant Emissions	
Construction	**VOC** (lbs/day)
IS/MND	42
SWAPE	152
% Increase	262%
SCAQMD Threshold	**75**
Exceeds?	**Yes**

The Project's construction-related VOC emissions, as estimated by SWAPE, increase by approximately 262% and exceed the applicable SCAQMD significance thresholds. The updated model reveals that the Project would result in a potentially significant air quality impact that was not previously identified or addressed in the IS/MND. An EIR should be prepared to adequately assess and mitigate the potential air quality impacts that the Project may have on the environment.

Disproportionate Health Risk Impacts of Warehouses on Surrounding Communities

We have determined that the development of the proposed Project may contribute to disproportionate health risk impacts that warehouses pose on community members living, working, and going to school within the immediate area of the Project site. According to the SCAQMD:

> "Those living within a half mile of warehouses are more likely to include communities of color, have health impacts such as higher rates of asthma and heart attacks, and a greater environmental burden."[16]

[14] See Attachment A for proportionately altered construction phase lengths and Attachment B for updated air modeling.
[15] "South Coast AQMD Air Quality Significance Thresholds." SCAQMD, April 2019, *available at*: http://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf?sfvrsn=25.
[16] "South Coast AQMD Governing Board Adopts Warehouse Indirect Source Rule." SCAQMD, May 2021, *available at:* http://www.aqmd.gov/docs/default-source/news-archive/2021/board-adopts-waisr-may7-2021.pdf?sfvrsn=9.

In particular, the SCAQMD found that more than 2.4 million people live within a half mile radius of at least one warehouse, and that those areas not only experience increased rates of asthma and heart attacks, but are also disproportionately Black and Latino communities below the poverty line.[17] Another study indicates "neighborhoods with lower household income levels and higher percentages of minorities are expected to have higher probabilities of containing warehousing facilities."[18] Additionally, a report authored by the Inland Empire-based People's Collective for Environmental Justice and University of Redlands states:

> "As the warehouse and logistics industry continues to grow and net exponential profits at record rates, more warehouse projects are being approved and constructed in low-income communities of color and serving as a massive source of pollution by attracting thousands of polluting truck trips daily. Diesel trucks emit dangerous levels of nitrogen oxide and particulate matter that cause devastating health impacts including asthma, chronic obstructive pulmonary disease (COPD), cancer, and premature death. As a result, physicians consider these pollution-burdened areas 'diesel death zones.'"[19]

The continued development of industrial warehouses within these communities poses a significant environmental justice challenge. The acceleration of warehouse development is nonetheless increasing despite the consequences for public health. The Inland Empire alone has already added approximately 14.2 million SF of new industrial space in the first half of 2024.[20]

San Bernardino County, the setting of the proposed Project, has long borne a disproportionately high pollution burden.[21] The Data Visualization Tool for Mates V, a monitoring and evaluation study conducted by SCAQMD, demonstrates that the County already exhibits a heightened residential carcinogenic risk from exposure to air toxics.[22] Specifically, the location of the Project site is

in the 78th percentile of highest cancer risks in the South Coast Air Basin, with a cancer risk of 439 in one million (see excerpt below).[23]

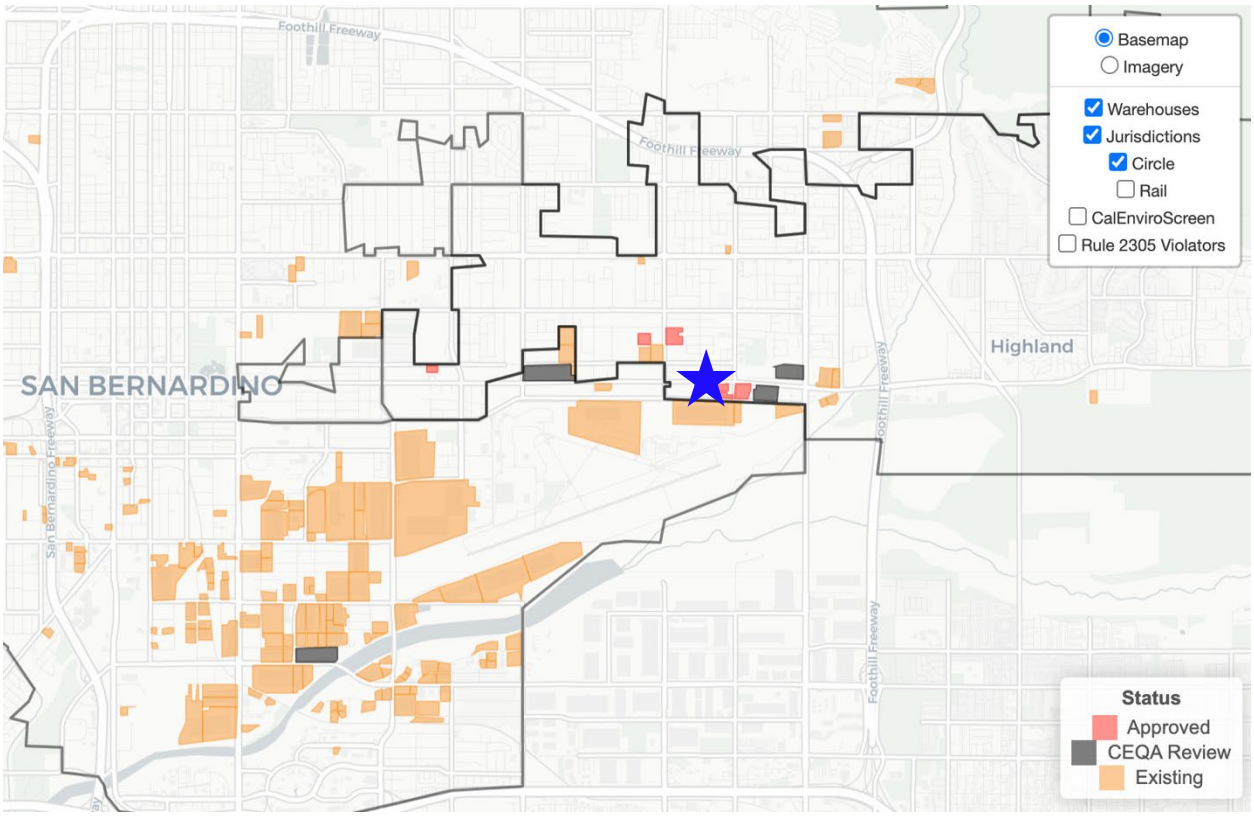
Additionally, according to CalEnviroScreen's Senate Bill ("SB") 535 Disadvantaged Communities Map, the Project site is identified as a designated disadvantaged community (see excerpt below).[24]

[23] "Gridded Cancer Risk." SCAQMD, *available at:* https://experience.arcgis.com/experience/79d3b6304912414bb21ebdde80100b23/page/Main-Page/?data_id=dataSource_112-7c8f2a4db79b4a918d46b4e8985a112b%3A20315&views=Click-tabs-for-other-data%2CGridded-Cancer-Risk.

[24] "SB 535 Disadvantaged Communities (2022 Update)." California Environmental Protection Agency, *available at:* https://experience.arcgis.com/experience/1c21c53da8de48f1b946f3402fbae55c/page/SB-535-Disadvantaged-Communities/

SB 535 provides funding for development projects that provide a benefit to disadvantaged communities. The California Environmental Protection Agency is responsible for identifying those communities based on "geographic, socioeconomic, public health, and environmental hazard criteria."[25] As the Project site is within a disadvantaged community, and the Project's census tract exhibits a high cancer risk, the proposed Project may contribute to the disproportionate health impacts warehouses impose on nearby residents.

The proposed Project may exacerbate disproportionate health risks for community members within the immediate area, a concern underscored by the mandates of SB 1000. SB 1000, enacted to address environmental justice considerations, requires local governments to integrate environmental justice elements into their planning processes, particularly focusing on reducing health risks for disadvantaged communities.[26] The IS/MND notes the proposed Project site is located 70 meters (230 feet) from the nearest sensitive receptor (p. 28). The Project should comply with the objectives of SB 1000, which aim to address environmental justice challenges by incorporating policies to reduce the unique health risks faced by disadvantaged communities.



[25] "Final Designation of Disadvantaged Communities." California Environmental Protection Agency, *available at:* https://calepa.ca.gov/wp-content/uploads/sites/6/2022/05/Updated-Disadvantaged-Communities-Designation-DAC-May-2022-Eng.a.hp_-1.pdf?emrc=e05e10.
[26] "Environmental Justice in Local Land Use Planning." CA DOJ, *available at:* https://oag.ca.gov/environment/sb1000.

In accordance with the California Department of Justice ("CA DOJ") guidelines, the effects of GHG emissions and air pollutants from warehouses should be evaluated cumulatively. The CA DOJ states:

> "When analyzing cumulative impacts, thoroughly considering the project's incremental impact in combination with past, present, and reasonably foreseeable future projects, even if the project's individual impacts alone do not exceed the applicable significance thresholds."[27]

To accurately assess the Project's impact on disadvantaged communities, both existing and anticipated warehouse developments should be considered during the environmental review process.

The Warehouse Cumulative Impact Tool for Community dashboard ("Warehouse CITY"), developed by the Redford Conservancy at Pitzer College and Radical Research LLC, is a tool that visualizes and quantifies existing, potential, and approved warehouse locations across Southern California. Review of Warehouse CITY reveals that there are 222 existing warehouses currently in Highland and the surrounding city of San Bernadino (see excerpt below).[28]

[27] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." CA DOJ, available at: https://oag.ca.gov/sites/all/files/agweb/pdfs/environment/warehouse-best-practices.pdf, p. 6.

[28] "Warehouse and Air Quality Mapping." Pitzer College & Radical Research LLC, *available at*: https://radicalresearch.shinyapps.io/WarehouseCITY/.

As the Project site is located in an SB 535 disadvantaged community with numerous existing warehouses, the Project's cumulative health risks should be reevaluated to more effectively align with CA DOJ guidelines and SB 1000 environmental justice requirements.

In June 2024, the American Lung Association ranked San Bernadino County as the worst for ozone pollution in the nation.[29] The Los Angeles Times also reported that San Bernardino County had 130 bad air days for ozone pollution in 2020, violating federal health standards on nearly every summer day.[30] Downtown Los Angeles, by comparison, had 22 ozone violation days in 2020. This year, the County continues to face the worst ozone pollution, as it has seen the highest recorded Air Quality Index ("AQI") values for ground-level ozone in California.[31] The U.S. Environmental Protection Agency ("U.S. EPA") indicates that ozone, the main ingredient in "smog," can cause several health problems, which includes aggravating lung diseases and increasing the frequency of asthma attacks. The U.S. EPA states:

> "Children are at greatest risk from exposure to ozone because their lungs are still developing and they are more likely to be active outdoors when ozone levels are high, which increases their exposure. Children are also more likely than adults to have asthma."[32]

Regarding the increased sensitivity of early-life exposures to inhaled pollutants, the California Air Resources Board ("CARB") states:

> "Children are often at greater risk from inhaled pollutants, due to the following reasons:
>
> - Children have unique activity patterns and behavior. For example, they crawl and play on the ground, amidst dirt and dust that may carry a wide variety of toxicants. They often put their hands, toys, and other items into their mouths, ingesting harmful substances. Compared to adults, children typically spend more time outdoors and are more physically active. Time outdoors coupled with faster breathing during exercise increases children's relative exposure to air pollution.
>
> - Children are physiologically unique. Relative to body size, children eat, breathe, and drink more than adults, and their natural biological defenses are less developed. The protective barrier surrounding the brain is not fully developed, and children's nasal passages aren't as effective at filtering out pollutants. Developing lungs, immune, and metabolic systems are also at risk.

[29] "State of the Air 2024." American Lung Association, June 2024, *available at:* https://www.lung.org/research/sota/key-findings/most-polluted-places.
[30] "Southern California warehouse boom a huge source of pollution. Regulators are fighting back." Los Angeles Times, May 2021, *available at:* https://www.latimes.com/california/story/2021-05-05/air-quality-officials-target-warehouses-bid-to-curb-health-damaging-truck-pollution.
[31] "High Ozone Days." American Lung Association, 2022, *available at:* https://www.lung.org/research/sota/city-rankings/states/california.
[32] "Health Effects of Ozone Pollution." U.S. EPA, May 2021, *available at:* https://www.epa.gov/ground-level-ozone-pollution/health-effects-ozone-pollution.

- Children are particularly susceptible during development. Environmental exposures during fetal development, the first few years of life, and puberty have the greatest potential to influence later growth and development."[33]

A Stanford-led study also reveals that children exposed to high levels of air pollution are more susceptible to respiratory and cardiovascular diseases in adulthood.[34] Given that children are more susceptible to the negative health impacts of air pollutants, and that warehouses release more smog-forming pollution than any other sector, it is necessary to evaluate the specific health risk that warehouses pose to children in the nearby community.

A revised EIR should therefore be prepared to evaluate the Project's contribution to the disproportionate impacts warehouses pose on the surrounding communities, including an analysis of the impact on children and people of color who live in the surrounding area.

Diesel Particulate Matter Emissions Inadequately Evaluated

The IS/MND concludes that the proposed Project would result in a less-than-significant health risk impact based on a quantified construction and operational health risk assessment ("HRA"). Specifically, the IS/MND estimates that the maximum incremental cancer risk posed to nearby, existing residential sensitive receptors associated with exposure to diesel particulate matter ("DPM") emissions during Project construction and operation would be 6.73- and 9.48-in one million, which would not exceed the SCAQMD significance threshold of 10 in one million, respectively (see excerpts below) (p. 32, Table 10; p. 35, Table 12).

Table 10. Construction Health Risk Assessment Results – Unmitigated

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk–Residential	Per Million	6.73	10	Less than Significant
Maximum Individual Cancer Risk–Student (Head Start Preschool @ 5th and Central Avenue)	Per Million	1.00	10	Less than Significant
Chronic Hazard Index–Residential	Index Value	0.0089	1.0	Less than Significant

Source: SCAQMD 2019.
Notes: CEQA = California Environmental Quality Act.

Table 12. Operational Health Risk Assessment Results

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk–Residential	Per Million	9.48	10	Less than Significant
Maximum Individual Cancer Risk–Student (Head Start Preschool @ 5th and Central Avenue)	Per Million	0.21	10	Less than Significant
Chronic Hazard Index–Residential	Index Value	0.0026	1.0	Less than Significant

Source: SCAQMD 2019.
Notes: CEQA = California Environmental Quality Act.

The IS/MND's evaluation of the Project's potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is unsupported for two reasons.

First, the IS/MND's HRAs are unsubstantiated, as the IS/MND fails to provide the input parameters and modeling assumptions. The IS/MND states:

> "Cancer risk parameters, such as age-sensitivity factors, daily breathing rates, exposure period, fraction of time at home, and cancer potency factors were based on the values and data recommended by OEHHA as implemented in the Hotspots Analysis and Reporting Program Version 2 (HARP2)" (p. 30).

Upon further review of the HRA, however, we found that the exposure parameters, such as age sensitivity factors and fraction of time at home values, are not disclosed. Until the IS/MND substantiates the use of correct exposure assumptions, the HRA may underestimate the cancer risk posed to nearby, existing sensitive receptors as a result of Project construction and operation. In addition, according to the *Risk Assessment Guidelines* provided by the Office of Environmental Health Hazard Assessment ("OEHHA"), the organization responsible for providing guidance on conducting HRAs in California, the IS/MND's models should have used the following equation:[35]

A. **Equation 8.2.4 A:** $RISK_{inh\text{-}res} = DOSE_{air} \times CPF \times ASF \times ED/AT \times FAH$

7. $RISK_{inh\text{-}res}$ = Residential inhalation cancer risk
8. $DOSE_{air}$ = Daily inhalation dose (mg/kg-day)
9. CPF = Inhalation cancer potency factor ($mg/kg\text{-}day^{-1}$)
10. ASF = Age sensitivity factor for a specified age group (unitless)
11. ED = Exposure duration (in years) for a specified age group
12. AT = Averaging time for lifetime cancer risk (years)
13. FAH = Fraction of time spent at home (unitless)

[35] "Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments." OEHHA, February 2015, available at: https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf, p. 8-7 Equation 8.2.4.

The IS/MND and associated documents fail to include a dose and risk equation to calculate the Project's construction and operational cancer risks. As such, we cannot verify that the IS/MND's HRAs are accurate, and the Project's cancer risks may be underestimated.

Second, while the IS/MND conducts both construction-related and operational HRAs, the IS/MND fails to evaluate the combined lifetime cancer risk to nearby receptors as a result of Project construction and operation together. The CA DOJ recommends that all warehouse projects prepare a quantitative HRA in accordance with OEHHA, which states that "the excess cancer risk is calculated separately for each age grouping and then summed to yield cancer risk at the receptor location."[36] As the IS/MND fails to sum the total cancer risks, to evaluate the combined cancer risk over the course of Project construction and operation, the IS/MND is inconsistent with OEHHA guidance. An EIR should be prepared to quantify the Project's total construction and operational cancer risks to compare to the SCAQMD threshold of 10 in one million, as referenced by the IS/MND (p. 32, Table 10; p. 35, Table 12).

Failure to Identify a Significant Health Risk Impact

The IS/MND estimates that the maximum incremental cancer risk posed to nearby, existing sensitive receptors as a result of Project construction and operation would be 6.73- and 9.48-in one million, respectively, neither of which individually exceed the SCAQMD significance threshold of 10 in one million (p. 32, Table 10; p. 35, Table 12). As stated above, the IS/MND should have evaluated the combined cancer risk of Project construction and operation. To correctly evaluate the Project's health risk impact, we summed the IS/MND's construction-related and operational cancer risk estimates and found that the resulting cancer risk exceeds the SCAQMD threshold of 10 in one million (see table below).

IS/MND Cumulative Cancer Risk	
HRA	**Cancer Risk** (in one million)
Construction	6.73
Operation	9.48
SWAPE	16.21
SCAQMD Threshold	**10**
Exceeds?	***Yes***

The resulting combined cancer risk estimate exceeds the SCAQMD threshold of 10 in one million, indicating a potentially significant health risk impact not previously identified or addressed by the IS/MND. The IS/MND is required under CEQA to implement all feasible mitigation to reduce impacts to a less-than-significant level. According to CEQA Guidelines § 15096(g)(2):

> "When an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures

[36] "Guidance Manual for preparation of Health Risk Assessments." OEHHA, February 2015, *available at:* https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf p. 8-4.

within its powers that would substantially lessen or avoid any significant effect the project would have on the environment."

The proposed Project should not be approved until all feasible mitigation has been considered and incorporated where feasible, such as those suggested in the section of this letter titled "Feasible Mitigation Measures Available to Reduce Emissions." An EIR should be prepared, incorporating all feasible mitigation to reduce emissions to the greatest extent feasible.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The IS/MND estimates that the Project would generate net annual GHG emissions of 2,928 metric tons of carbon dioxide equivalents per year ("MT CO_2e/year") (see excerpt below) (p. 65, Table 17).

Table 17. Estimated Annual Operational Greenhouse Gas Emissions

Emission Source	CO_2	CH_4	N_2O	R	CO_2e
		metric tons per year			
Area	3.57	<0.005	<0.005	–	3.58
Energy	373	0.03	<0.005	–	374
Mobile	2,027	0.14	0.25	2.78	2,108
Solid waste	14.8	1.48	0.00	–	51.7
Water supply and wastewater	57.4	1.33	0.03	–	100
Off-road equipment (Forklifts)	278	0.01	<0.005	–	279
				Project Total	**2,916**
				Amortized Construction Emissions	*12*
				Operation + Amortized Construction Total	**2,928**

Source: Appendix A.
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; R= refrigerants, CO_2e = carbon dioxide equivalent.

The IS/MND concludes:

> "As shown in Table 17, estimated annual generated GHG emissions would be approximately 2,916 MT CO_2e per year as a result of project operation. Estimated annual project-generated operational emissions in 2024 and amortized project construction emissions of approximately 12 MT CO2e per year would be approximately 2,928 MT CO_2e per year. Annual operational GHG emissions with amortized construction emissions would not exceed the SCAQMD recommended threshold of 3,000 MT CO_2e per year" (p. 65).

The IS/MND's analysis, as well as the subsequent less-than-significant impact conclusion, is unsupported for the following two reasons:

(1) The IS/MND's quantitative GHG analysis relies upon an outdated threshold; and
(2) The IS/MND's unsubstantiated air model indicates a potentially significant impact.

1) Reliance on an Outdated Quantitative GHG Threshold

The IS/MND compares the Project-generated net annual GHG emissions to the SCAQMD bright-line threshold of 3,000 MT CO_2e/year (p. 65). The guidance that provided the 3,000 MT CO_2e/year threshold,

the SCAQMD's 2008 Interim CEQA GHG Significance Threshold for Stationary Sources, Rules, and Plans Report, however, was developed when the Global Warming Solutions Act of 2006, commonly known as "AB 32", was the governing statute for GHG reductions in California. AB 32 requires California to reduce GHG emissions to 1990 levels by 2020.[37] The Association of Environmental Professionals' guidance states:

> "[F]or evaluating projects with a post 2020 horizon, the threshold will need to be revised based on a new gap analysis that would examine 17 development and reduction potentials out to the next GHG reduction milestone."[38]

As it is currently November 2024, thresholds should be revised to reflect the current GHG reduction target. The SCAQMD bright-line threshold of 3,000 MT CO_2e/year is therefore outdated and inapplicable to the proposed Project, and the IS/MND's less-than-significant GHG impact conclusion should not be relied upon. We recommend that the Project apply the SCAQMD 2035 service population efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population ("SP") per year ("MT CO_2e/SP/year"), which was calculated by applying a 40% reduction to the 2020 targets.[39]

2) Failure to Identify a Potentially Significant GHG Impact

To quantitatively evaluate the Project's GHG emissions, we compared the Project's GHG emissions, as estimated by the IS/MND, to the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year. When applying the updated threshold, the Project's unsubstantiated air model indicates a potentially significant GHG impact.

According to California Air Pollution Control Officers Association ("CAPCOA")'s CEQA & Climate Change report, an SP is defined as "the sum of the number of residents and the number of jobs supported by the project."[40] The IS/MND estimates that the Project would support an SP of 147 people (p. 104). When dividing the Project's net annual GHG emissions of 2,928, as estimated by the IS/MND, by an SP of 147, we find that the Project would emit approximately 19.9 MT CO_2e/SP/year (p. 65, Table 17) (see table below).[41]

[41] Calculated: (2,911.8 MT CO_2e/year) / (466.1 service population) = (6.2 MT CO_2e/SP/year).

Project Greenhouse Gas Emissions	
Annual Emissions (MT CO_2e/year)	2,928
Service Population	147
Service Population Efficiency (MT CO_2e/SP/year)	19.9
SCAQMD 2035 Target	**3.0**
Exceeds?	**Yes**

The Project's service population efficiency value exceeds the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year, indicating a potentially significant impact not previously identified or addressed by the IS/MND. As the IS/MND's less-than-significant GHG impact conclusion is unreliable, an EIR should be prepared, including an updated GHG analysis and incorporating additional mitigation measures to reduce the Project's GHG emissions to the greatest extent feasible.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

According to CEQA Guidelines § 15096(g)(2), the IS/MND is required under CEQA to implement all feasible mitigation to reduce the Project's potential impacts. As demonstrated in the sections above, the Project would result in potentially significant air quality, health risk, and GHG impacts that should be mitigated further.

To reduce the VOC emissions associated with Project construction and operation, we recommend the IS/MND consider incorporating the following mitigation measure from the CA DOJ:[42]

- Require the use of super compliant, low-VOC paints less than 10 g/L during the architectural coating construction phase and during Project maintenance.

Los Angeles County recommends:[43]

- If paints and coatings with VOC content of 0 grams/liter to less than 10 grams/liter cannot be utilized, the developer shall avoid application of architectural coatings during the peak smog season: July, August, and September.

To reduce the DPM emissions associated with Project construction and operation, we recommend the IS/MND consider several mitigation measures. CARB recommends: [44]

- Ensuring the cleanest possible construction practices and equipment are used. This includes eliminating the idling of diesel-powered equipment and providing the necessary infrastructure (e.g., electrical hookups) to support zero and near-zero equipment and tools;
- Require all off-road diesel-powered equipment used during construction to be equipped with Tier 4 or cleaner engines, except for specialized construction equipment in which Tier 4 engines are not available. In place of Tier 4 engines, off-road equipment can incorporate retrofits, such that, emission reductions achieved are equal to or exceed that of a Tier 4 engine;
- Require all heavy-duty trucks entering the construction site during the grading and building construction phases be model year 2014 or later. All heavy-duty haul trucks should also meet CARB's lowest optional low-oxides of nitrogen (NOx) standard starting in the year 2022;
- Require all construction equipment and fleets to be in compliance with all current air quality regulations;
- Requiring all service equipment (e.g., yard hostlers, yard equipment, forklifts, and pallet jacks) used within the project site to be zero-emission;
- Requiring future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans;
- Include contractual language in tenant lease agreements restricting trucks and support equipment from idling longer than two minutes while on site; and
- Require the installing of vegetative walls or other effective barriers that separate loading docks and people living or working nearby.

To reduce the GHG emissions associated with the Project, we recommend several mitigation measures (see list below). The Southern California Association of Governments ("SCAG") 2020 *RTP/SCS* Program Environmental Impact Report ("PEIR") recommends the following Greenhouse Gas Project Level Mitigation Measures ("PMM-GHG-1"), which are applicable to the Project: [45]

- Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:
    - Promote transit-active transportation coordinated strategies,
    - Increase bicycle carrying capacity on transit and rail vehicles,
    - Improve or increase access to transit,
    - Increase access to common goods and services, such as groceries, schools, and day care,
    - Incorporate the neighborhood electric vehicle network,
    - Orient the project toward transit, bicycle and pedestrian facilities,

[44] "Recommended Air Pollution Emission Reduction Measures for Warehouses and Distribution Centers." CARB, August 2023, *available at*: https://ww2.arb.ca.gov/sites/default/files/2023-08/CARB%20Comments%20-%20NOP%20for%20the%20%20Oak%20Valley%20North%20Project%20DEIR.pdf; Attachment A, p. 5 – 8.
[45] "4.0 Mitigation Measures." Connect SoCal Program Environmental Impact Report Addendum #1, September 2020, available at: https://scag.ca.gov/node/6995; See also: "Certified Final Connect SoCal Program Environmental Impact Report." SCAG, May 2020, *available at:* https://scag.ca.gov/peir.

    - Provide bicycle parking,
    - Limit or eliminate park supply,
    - Unbundle parking costs,
    - Provide parking cash-out programs, and
    - Implement or provide access to commute reduction program;
- Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations; and
- Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;
- Require at least five percent of all vehicle parking spaces include electric vehicle charging stations, or at a minimum, require the appropriate infrastructure to facilitate sufficient electric charging for passenger vehicles and trucks to plug-in.
- Implement preferential parking permit program
- Encourage telecommuting and alternative work schedules, such as:
    - Staggered starting times,
    - Flexible schedules,
    - Compressed work weeks,
    - Implement commute trip reduction marketing, such as:
    - New employee orientation of trip reduction and alternative mode options,
    - Event promotions, and
    - Publications;
- Adopting employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, providing end-of-trip facilities, and telecommuting programs including but not limited to measures that:
    - Provide car-sharing, bike sharing, and ride-sharing programs,
    - Provide transit passes,
    - Shift single occupancy vehicle trips to carpooling or vanpooling, for example providing ride-matching services,
    - Provide incentives or subsidies that increase that use of modes other than single-occupancy vehicle,
    - Provide on-site amenities at places of work, such as priority parking for carpools and vanpools, secure bike parking, and showers and locker rooms,
    - Provide employee transportation coordinators at employment sites, and
    - Provide a guaranteed ride home service to users of non-auto modes.

The CA DOJ recommends: [46]

[46] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, September 2022, *available at*: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf, p. 8 – 10.

- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers;
- Designing all project building roofs to accommodate the maximum future coverage of solar panels and installing the maximum solar power generation capacity feasible;
- Oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability;
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel;
- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking; and
- Designing to LEED green building certification standards.

CEQA Guidelines 15126.4 (c)(3) include "[o]ffsite measures, including offsets that are not otherwise required, to mitigate a project's emissions" as an option for GHG mitigation.[47] An example of this was in the case of the Oakland Sports and Mixed-Use Project, where off-site reduction measures in the neighboring communities were recommended.[48] We recommend consideration of local carbon offset programs to reduce the Project's GHG impacts as a measure of last result.

We have provided several mitigation measures that would reduce Project-related VOC, DPM, and GHG emissions developed from sources including CARB, SCAG, the CA DOJ and others. These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently reduce emissions released during Project construction and operation.

An EIR should be prepared that includes all feasible mitigation measures, as well as updated air quality, health risk and GHG analyses, to ensure that the Project's potentially significant emissions are minimized to the maximum extent possible.

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Unrefrigerated Warehouse-No Rail	0.00	0%
Parking Lot	0.70	100%
Other Asphalt Surfaces	1.24	100%
Other Non-Asphalt Surfaces	0.10	0%
User Defined Industrial	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	532	0.03	< 0.005
2025	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

Screen	Justification
Land Use	Consistent with the IS/MND's model.
Construction: Construction Phases	See SWAPE comment regarding "Unsubstantiated Changes to Individual Construction Phase Lengths." Phase lengths proportionately altered to match total construction duration as indicated in the IS/MND.
Construction: Trips and VMT	Changes based on the IS/MND's assumption of an even number of one-way trips and assumed on-site water truck that waters 2x per day.

SWAPE Technical Consultation, Data Analysis and Litigation Support for the Environment

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

A	Fiacal Analysis Development Summary	10

INTENTIONALLY LEFT BLANK

1 Introduction

1.1 Overview

This report presents the Fiscal Analysis for the annexation of approximately .56 gross acres currently in the City of San Bernardino into the City of Highland to facilitate the development of a 173,976 square foot speculative warehouse/distribution facility on a combined 7.23 acre site that currently overlies both the Cities of Highland and San Bernardino. The Local Agency Formation Commission (LAFCO) of the County of San Bernardino requires a jurisdiction to submit a Fiscal Analysis when the jurisdiction is affected by a proposed change in boundaries, formations, or organization.

The subject Analysis identifies the project's valuation and taxable income in addition to costs related to the General Fund, police services, fire services and special districts. The Analysis shows that the annexation will result in nominal fees and costs to the City of Highland given its small size and ultimate industrial build out. The Fiscal Impacts are summarized in Chapter 2.

1.2 Project Location

The development site, in total 7.23 acres, is located in western San Bernardino County at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Street, south of 5th Street, and west of City Creek Bypass Flood Control Channel (Figure 1, Regional Location Map). Regional access to the project area is provided by Interstate I-10 to the south, I-215 to the west, and State Route SR-210 to the east.

The project site is composed of 11 parcels, one in the City of San Bernardino and 10 in the City of Highland (Assessor's Parcel Numbers [APNs] 1192-551-01 [City of San Bernardino], 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15 [City of Highland].

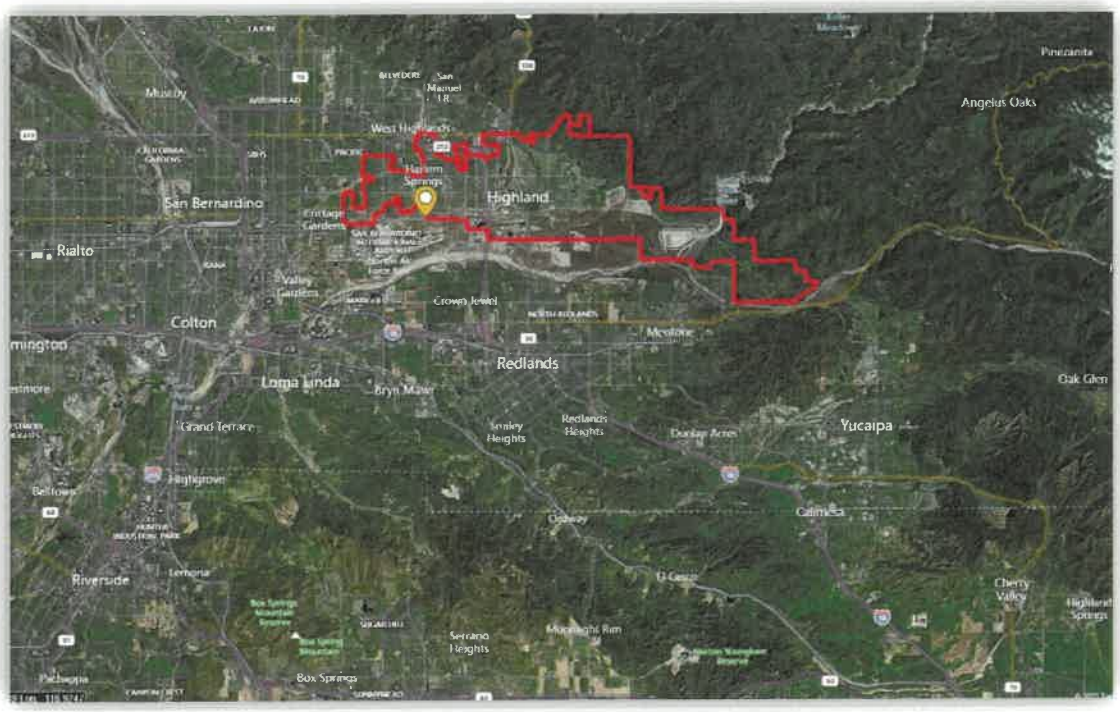
The project proposes to adjust the Sphere of Influence for the City of Highland and to annex APN 1192-551-01 (.56 acre) into the City of Highland, detaching from the City of San Bernardino, which requires formal approval by the Local Agency Formation Commission of San Bernardino County (LAFCO).

1.3 Setting

City of Highland

The City of Highland is a mid-sized California city with approximately 56,000 residents and 18 square miles of territory. Within the City, the pattern of land use transitions from predominantly single and multi-family residential and industrial near the San Bernardino International Airport and Trade Center (SBIA) to predominately single-family residential, commercial, service, and civic center uses to the north. The eastern areas of the City are mostly made up of planned development areas with various residential types, parks, and open space.

Figure 1 – Regional Location Map



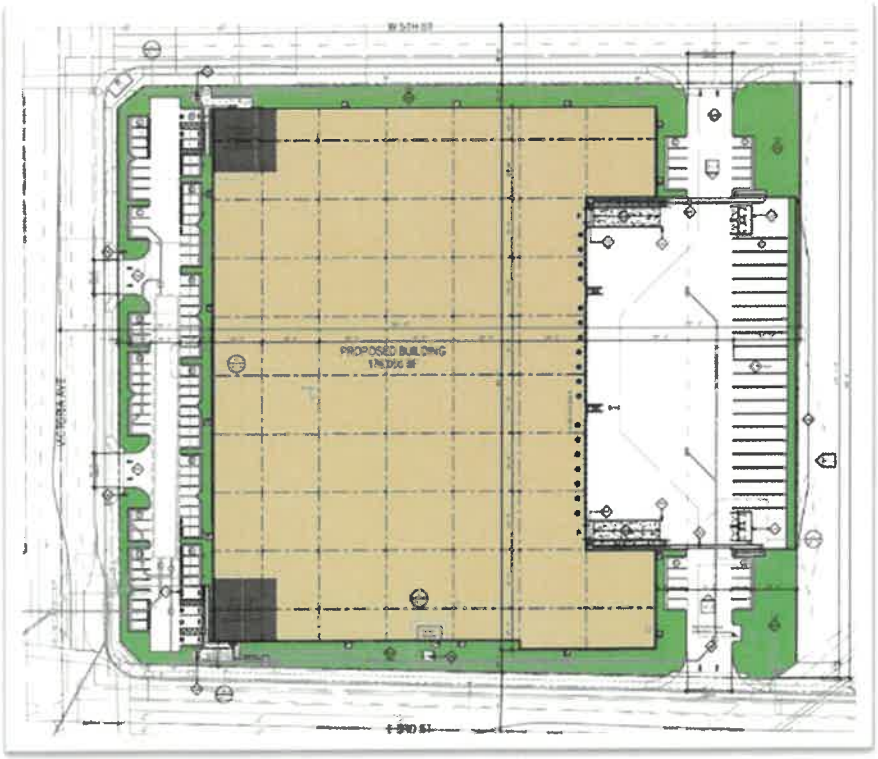


Figure 2 – Project Site Map

Parcel to be Annexed

The approximately .56-acre rectangular-shaped parcel is vacant and undeveloped, dominated by disturbed habitat. It is relatively flat and generally slopes down gently from the northeast corner to the southwest corner. The parcel has a City of San Bernardino General Plan Land Use and zoning of Commercial General 1. As part of the Annexation process the City of Highland will pre-zone the subject parcel to Business Park (BP) zoning designation consistent with the overall development project zoning designation.

Surrounding Land Uses

The project site is located within a developed part of the City and is surrounded by a mix of urbanized land uses as depicted below.

Surrounding Land Uses

Direction	Existing Use	General Plan Land Use Designation	Zoning Designation
North	5th Street followed by industrial uses, vacant parcels, and single-family homes	City of Highland (Business Park)	City of Highland (Business Park)
East	Vacant land, City Creek Bypass, and commercial/industrial uses including auto repair	City of Highland (Business Park)	City of Highland (Business Park)
South	3rd Street followed by vacant land	City of Highland (Business Park)	City of Highland (Business Park)
West	Victoria Avenue delineating the City of San Bernardino boundary, followed by numerous vacant parcels	City of San Bernardino (Medium Density Residential and Commercial General)	City of San Bernardino (Medium Density Residential and Commercial General)

1.4 Project Description of Future Development

On December 12, 2022, the City of Highland received an application from Patriot Development Partners requesting the following approvals for development of the proposed 5th Street and Victoria Avenue Warehouse/Logistics Project at the subject site including the subject parcel to be annexed and the surrounding property, 7.23 acres in total:

- General Plan Amendment (GPA 23-001)
- Zone Change (ZC 23-001)
- Conditional Use Permit (CUP 22-014)
- Design Review (DRA 22-023)
- Height Variance (No. VAR 22-006)
- Parking Reduction (supported by parking study)
- Tentative Parcel Map 20621 (TPM 23-001)

The application includes land use entitlements and design review for the construction of an approximately one-story industrial/warehouse/logistics facility. The project proposes a 173,976-square-foot, one-story warehouse building composed of approximately 161,976 square feet of warehouse space and 12,000 square feet of mezzanine/office space (Figure 2 – Project Site Plan). The warehouse building would have a maximum height of 45 feet as measured from grade. Given that the City's Municipal Code allows for a maximum height of 35 feet in the Business Park zone, a minor variance (Variance No. VAR 22-006) was requested to accommodate the development project's height. Internally, the project would have a clear height of 36 feet and would not contain any cold storage space. In addition to the building, the project would include landscaped area, passenger vehicle parking spaces, trailer parking spaces, and tractor-trailer loading docks.

On- and Off-Site Improvements

The project includes improvements along the project's street frontage, including landscaping, fencing, street and sidewalk improvements. A variety of trees, shrubs, and groundcovers would be planted within the project frontage's landscape setback area and at project driveways. The .56 acre annexation parcel will contain mostly landscaping and parking field facilities.

Site Access and Parking

Access to the project site would be provided by four driveways: two driveways on the western portion of the site along Victoria Avenue serving passenger cars, and one driveway on the northern portion of the site along 5th Street, and one driveway on the southern portion of the site along 3rd Street serving commercial vehicles. All four driveways would provide both ingress and egress lanes.

Utility Improvements

The project site is currently served by domestic water, sanitary sewer, electrical, natural gas, and telecommunication service. The project would connect to the existing facilities located on and in the immediate vicinity of the project site.

Domestic Water

Domestic water would be provided to the project site by the East Valley Water District (EVWD). The EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes. A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public right-of-way (ROW) along Victoria Avenue to provide domestic and irrigation water service to the site. Fire suppression water service would be provided via connections to existing lines in both Victoria Avenue and 3rd Street.

Sanitary Sewer

The City's sewer system is maintained by the EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within the EVWD's jurisdictional/service boundaries. The sewage from the City is treated at the San Bernardino Water Reclamation Plant (WRP), operated by the San Bernardino City Municipal Water District. One new 6-inch sewer line would connect to the existing 21-inch sewer line within 5th Street. Future treatment will take place at the newly constructed EVWD Sterling Natural Resources Plant, at the intersection of Del Rosa Drive, between 5th and 6th Streets.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. The project would connect to existing electrical lines within Victoria Avenue. Telecommunication services are provided by AT&T. The project would connect to these existing facilities.

Storm Drainage

The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin near the SR-71 and SR-91 interchange.

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions. On-site stormwater would be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soil. The overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

2 Fiscal Analysis

2.1 Project Valuation

The project site as it relates to this Analysis is the .56 acre of vacant land at the southeast corner of Victoria Avenue and 5th Street. The development of this small parcel will include landscaping, a parking field, and a small portion of the proposed warehouse development. The $1,399,747 estimated price per acre is calculated based on a sample of three (3) new industrial project locations in the City of Highland area and listed below (source: San Bernardino County Assessor's Office).

	APN:	Owner:	Characteristic:	Assessed Value:	Size in acres:	Levy Tax:
1*	1192-551-01 (subject)	Patriot	Vacant	$1,377,000	.56	$1,377
2	1192-261-12	Patriot	Vacant	$1,224,000	1.1	$1,224
3	1192-491-49	Patriot	Vacant	$2,942,000	2.3	$2,942
				$5,543,000	3.96	

* The project site is identified with Assessor's Parcel Number 1192-551-01.

2.2 Taxable Income

The taxable income for the proposed .56 acre site is unknown. However, due to the proposed use of the site for landscaping and parking field within the business park zoning district, it is anticipated the taxable sales will be nominal.

2.3 City of Highland General Fund

Fiscal impacts are presented in constant 2023 dollars for the City's General Fund and related funds. The project impacts are based on the project description provided by Patriot as well as an analysis of the City's Adopted 2023-2025 Budget (City Council Resolution No. 2023-036). Discussions with the City and project team staff have assisted in developing the fiscal factors used for the analysis. Exhibit A summarizes the projected fiscal impacts of the annexation to the City. The City of Highland receives an apportionment of approximately 24.8% from San Bernardino County out of the 1% property tax rate. As shown in Exhibit A, after buildout, Revenues are estimated at $3,414.96 (not including the $38/parcel paramedic tax, sales tax, and Vehicle License Fees) and costs are nominal for the proposed .56 acre annexation site.

2.3 City of Highland Fire Department

The City of Highland has a contract with the California Department of Forestry (CALFIRE) to provide personnel and maintain fire related services. The Fire Department receives 41.67 percent of the General property tax levy. The annual amount is estimated at $1,434.28 for this site that would be allocated for fire operation and maintenance costs.

2.4 City of Highland Police Department

The City of Highland contracts with the San Bernardino County Sheriff Department for Highland Police services. Currently, this contract makes up 57% of the City's General Fund Expenditures for FY 2023/24 or $13,195,330.

2.5 City of Highland Assessment and Special Districts

Two (2) special district assessments and taxes have been established that will be levied on the project upon annexation of this parcel into the City of Highland, 1) Paramedic Services (Medic Tax), an annual special tax of $38 per parcel, and 2) A Consolidated Landscaping and Lighting District fee will be estimated and assessed on the property prior to the City issuing a final occupancy for the development.

2.6 City of San Bernardino General Fund

Based on information from the Auditor-Controller with the County of San Bernardino, the existing property valuation is $1,377,000. The property tax is equal to one and a quarter percent (1.25%) of the existing valuation, or $17,165. The City of San Bernardino will currently receive 17.85 (TBD by LAFCO) percent equal to $3,063.95 annually.

2.7 City of Highland Development Impact Fees (DIFs)

The subject parcel (.56 acre site) will be prezoned to Business Park Zoning and Land Use which requires one acre to develop. As noted above, the site will be merged with contiguous parcels for a total of 7.23 acres after annexation. The City of Highland DIFs, a one-time fee, for the 176,066 development will be $2,747,333.86 ($15.604/sq ft effective on April 1, 2024).

EXHIBIT A - FISCAL ANALYSIS						
APN:	1192-551-01-0000					
Parcel Size:	0.56	acres				
San Bernardino Assessor's Assessed Value:				$1,377,000	(as of 11/8/23)	
County General Tax Levy %		1%		$13,770	(as of 11/8/23)	
City of Highland Estimated Recurring Annual Revenues:						
General Tax Levy apportionment %		24.8%		$3,414.96		
Vehicle License Fee x Tax Levy		$1.22		$ 4,166.25		
Paramedic Property Tax (com/indust)		$ 38		$ 38.00		
Lighting & Landscaping Assessment		$ -		$ -	(unknown at this time)	
Estimated Total:				**$7,619.21**

INTENTIONALLY LEFT BLANK

1 Introduction

1.1 Overview

This report presents the Plan for Service for the annexation of approximately .56 gross acres currently in the City of San Bernardino into the City of Highland to facilitate the development of a 173,976 square foot speculative warehouse/distribution facility on a combined 7.23 acre site that currently overlies both the Cities of Highland and San Bernardino. The Local Agency Formation Commission (LAFCO) of the County of San Bernardino requires a jurisdiction to submit a Plan for Service when the jurisdiction is affected by a proposed change in boundaries, formations, or organization. "The Patriot Partners Project" is located mostly within the City of Highland (6.67 acres) with .56 acres in the City of San Bernardino, proposed for de-annexation. The LAFCO policy states the following:

> *"The plan for service shall be prepared and submitted by each local agency affected by a proposed change of organization, regardless whether that proposal is initiated by resolution or petition. In the case of a proposed annexation, the plan for service must demonstrate that the range and level of services currently available within the study area will, at least, be maintained by the annexing agency…."*

The subject Plan for Service identifies the proposed public facility improvements and services related to roads, fire and emergency medical services, police, libraries, domestic water, wastewater, storm drainage, parks and open space, public utilities, schools, and solid waste management. The Plan shows how public facilities and infrastructure improvements will be implemented. The required development impact fees are also presented. A separate Fiscal Analysis has been prepared for the project development to show impacts of development on public revenues and costs that are used for ongoing operations and maintenance. Fiscal impacts are summarized in Chapter 4.

1.2 Project Overview

The City of Highland, in coordination with the project applicant Patriot USICVI 5th Street, LLC, is proposing annexation of a .56 gross acre site located at the southwest corner of 5th Street and Victoria Avenue, currently in the City of San Bernardino, into the corporate boundaries of the City of Highland, and subsequent development of a 173,976 square foot warehouse/distribution facility. The northern site boundary is defined by 5th Street, the southern site boundary is by 3rd Street and the westerly boundary by Victoria Avenue. Vacant land and City Creek Bypass Flood Control Channel border the property to the east.

Figure (1) shows the regional location map and Figure (2) shows the project site map. The project proposes annexation of .56 acres into the City of Highland as a result of the physical location of the project, which is adjacent to the City of Highland and separated from the City of San Bernardino by Victoria Avenue. LAFCO is the authority for local boundary changes and municipal reorganizations. Municipal reorganization for the project would include detachment of the subject .56 acre parcel from the City of San Bernardino, annexation of the parcel into the City of Highland Sphere of influence (SOI) area, pre-zoning of the said parcel by the City of Highland to Business Park (BP), and annexation of the parcel into the City of Highland. This action would require a General Plan amendment for both the City of Highland and City of San Bernardino. Detachment of the parcel from the City of San Bernardino requires a resolution from the City of San Bernardino City Council accepting the proposed action.

Figure 1 – Regional Map

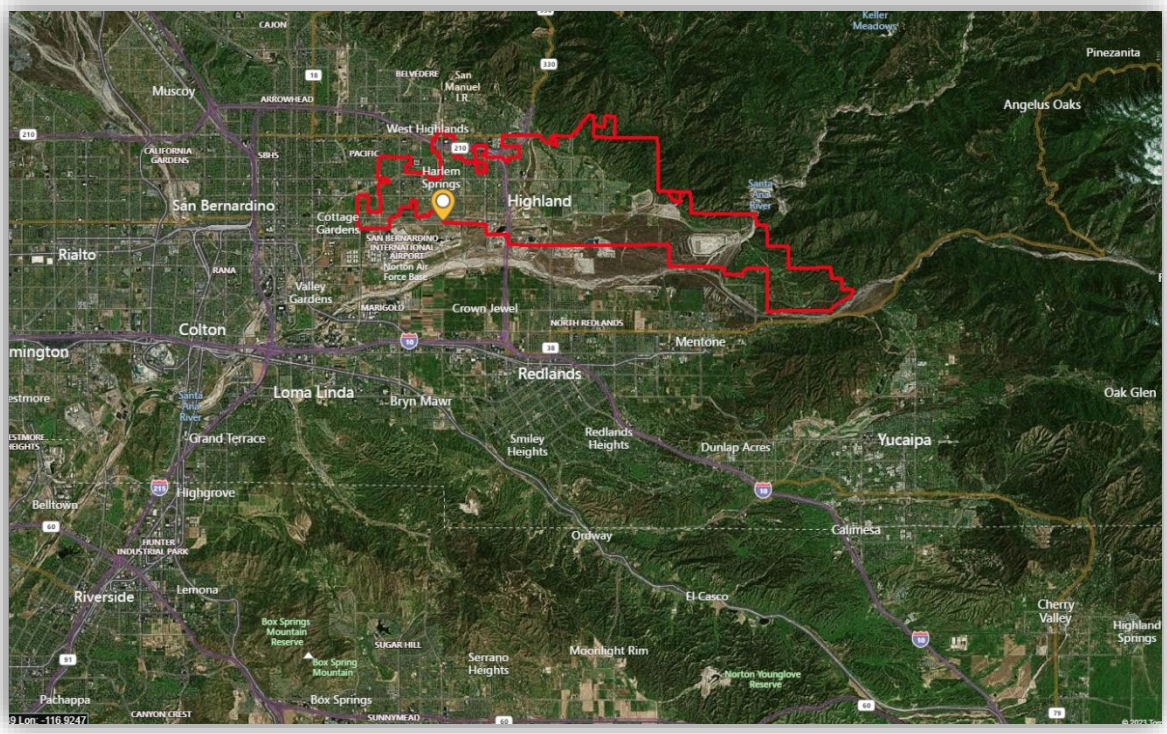

Figure 2 - Site Map

As shown below in Table (1-1), the project area encompasses a total of .56 acres proposed for industrial development with a 173,976 square foot warehouse/distribution facility. The project will not result in residential development or increased population.

Land Use	Development
Warehouse/Distribution	173,976 square feet
Estimated Employment	147 employees

Source: Dudek - SEC 5th Street and Victoria Avenue Warehouse Project Initial Study/ Mitigated Negative Declaration

1.3 Methodology and Resources

Each of the public facilities or services required by the project area was analyzed as to the respective levels of service requirements and existing facilities serving the area after the build-out. The preparation of the Plan for Services involves the analysis of public infrastructure and service requirements of the respective jurisdictions and agencies that have lead responsibility. The Plan for Service demonstrates that the necessary public infrastructure will be provided in a timely manner commensurate with the development of the "Patriot Partners" project area and will not create financial burden on the City of Highland. For each service or improvement area, the following is included:

- A description of the service provider;
- A description of the level of each service to be provided to the area;
- An identification of any improvement or upgrading of structures, roads, water, and sewer facilities, other infrastructure, or other conditions the affected agency would impose upon the area; and
- A description of how the service or required improvements will be financed.

The necessary facility improvements have been identified through discussions with the agencies that provide the services and through review of the environmental documents. Appendix A presents a listing of Highland's current Development Impact Fees, which represent a sources of funding for capital facilities in the City and which will be charged and collected by Highland to offset the costs associated with the proposed development of "Patriot Partners". A list of agencies contacted as part of the preparation of the Plan for Service is shown in Appendix B.

Operations and Maintenance costs for services are projected in a separate report titled Annexation of ".56 Acres Patriot Partners" Fiscal Analysis, City of Highland (January 2024). This fiscal analysis is summarized in Chapter 4 of this Plan for Service. The fiscal analysis indicates that General Fund

recurring revenues are projected to cover projected General Fund recurring operating and maintenance cost estimates after build-out.

Resources used in preparation of the Plan for service include the following:

- Highland General Plan, Highland Municipal Code, and Highland Zoning Map
- City of Highland 2023-2025 Adopted Budget;
- City of Highland Development Impact Fees, Adopted by Resolution No. 2023 -40 and -41;
- Initial Study / Mitigated Negative Declaration by Dudek

2 Plan for Service Summary

2.1 Summary of Service Providers

Table 2-1 shows current service providers in the City of San Berardino and in the City of Highland. Upon annexation, the City of Highland will assume responsibility for several services that were previously provided by the City of San Berardino or other County agencies. The providers shown for the City of Highland will be responsible for the provision of services to the project development after annexation. These services include the basic level of public services that are required to support the projected development in the proposed project and the associated industrial growth.

2.2 Summary of Capital and O&M Funding Sources

Table 2-2 presents a summary of the funding requirements for the facilities and services identified in the Plan for Service. The funding requirements are shown by capital costs and operations & maintenance (O&M) costs. The developer is required to fund the capital costs of construction for the additional local facilities or improvements required as a result of its development; regional facilities usually require a fair-share approach.

Capital costs to provide additional facilities and improvements to serve the project area will be funded by the City's Development Impact Fees (DIFs); a list of these current City fees is shown in Appendix A. The City recently updated its schedule of Development Impact Fees per Resolution Nos. 2023-40 and -41 and is implementing the fee increase effective April 1, 2024.

The City of Highland and other service providers are generally responsible for the O&M costs associated with additional services and facilities and fund these costs through various sources of revenues that might include: property taxes, sales taxes, gas tax, vehicle license fee (VLF), and other General Fund revenues, user charges and landscaping & lighting district assessments. The City of Highland will receive the City of San Bernardino's entire share of the basic 1 percent (1%) property tax levy once the .56 acre is annexed into the City of Highland. The City of Highland will also assume new operations and maintenance costs.

1. The project area will be annexed into the City's Streets and Drainage Maintenance District once established.
2. The project will be annexed into the City's existing Consolidated Landscaping and Lighting District prior to occupancy approval by the City of Highland which will provide funding for ongoing maintenance of lighting in the project area.

2.3 Project Phasing

The project would be completed in two phases. The first phase encompasses the three-part municipal reorganization for the parcel which includes: 1) detachment of the .56 acre site from the City of San Bernardino; 2) sphere of influence (SOI) change for the parcel from the City of San Bernardino to the City of Highland; and 3) subsequent annexation of this parcel into the City of Highland. The second phase includes development and use of the .56 acre site for the development of a 173,976 square foot warehouse/distribution/logistics facility.

2.4 Summary of Service Requirements

Transportation

The project will be conditioned to construct the public street infrastructure improvements in compliance with the project's Conditions of Approval prepared by the City's Public Works Division. In addition, the project will be served by Omnitrans, the local bus service.

Fire and Paramedic Services

Fire protection and emergency medical services are provided to the City under contract services to the California Department of Forestry and Fire Protection (Cal Fire). Current facilities and staffing levels are adequate to meet the service demands of the .56 acre project area to the project "build-out." Capital costs to provide additional facilities and improvements to service the project area would be funded by the City's fire facilities and equipment development impact fees. Operations and maintenance costs are the responsibility of the City through the contract with Cal Fire.

Police Protection

The City contracts with the San Berardino County Sheriff to provide police protection services. At project "build-out," the project area will generate a need for police protection and investigative services, the current police resources are sufficient to provide basic police services to the .56 acre project area. Capital costs to provide additional facilities and improvements to service the project area would be funded by the City's DIFs law enforcement facilities and equipment impact fees. Operations and maintenance costs are funded through the City's General Fund.

Domestic Water

Domestic water will be provided to the project site by the East Valley Water District (EVWD/the District). The EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes. A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public right-of-way (ROW) along Victoria Avenue to provide domestic and irrigation water service to the site. Fire suppression water service would be provided via connections to existing lines in both Victoria Avenue and 3rd Street.

Sanitary Sewer

The City's sewer system is maintained by the EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within the EVWD's boundaries. The sewage from the City is treated at the San Bernardino Water Reclamation Plant (WRP), operated by the San Bernardino City Municipal Water District. One new 6-inch sewer line would connect to the existing 21-inch sewer line within 5th Street. Future treatment will take place at the EVWD Sterling Natural Resources Plant, completed recently on January 16, 2024, at the intersections of Del Rosa Drive, between 5th and 6th Streets.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. The project would connect to existing electrical lines within Victoria Avenue. Telecommunication services are provided by various telecommunication service providers. The project would connect to these existing facilities.

Storm Drainage

The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow

discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin near the SR-71 and SR-91 interchange.

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions. On-site stormwater would be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soils. The overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

Solid Waste Management

Solid waste collection is provided under contract with Burrtec Waste Industries. The San Timoteo Waste facility will receive solid waste generated from the proposed project. This disposal site is managed by the San Bernardino County Solid Waste Management Department. The service is paid for through user fees.

3 Service Requirements

3.1 Transportation

Service Provider

Local public transportation via bus service is provided by Omnitrans and will serve the project locations with service lines along 3rd and 5th Street and Victoria Avenue. The City of Highland is responsible for the planning and provision of streets in the City of Highland. Caltrans is responsible for freeways, freeway interchanges and State routes. Caltrans manages highway and freeway lanes, provides inter-city rail service, assists more than 100 public general aviation airports, and works with local agencies. Regional access to the site is provided by SR-210 Freeway.

Improvements

The developer is responsible for the cost of improving local roads within the project area. The roads will be constructed as noted above.

3.2 Fire and Paramedic Services

Service Provider

The City contracts with Cal Fire for fire and paramedic services. The Highland Fire Department (CalFire) provides a full range of fire protection services including pre-fire planning and engineering; fire suppression, rescue and extrication; fire cause investigation; and emergency medical services. They provide fire protection services and respond to medical emergencies.

In addition, the City of Highland participates in the Statewide Mutual Aid agreement with CalFire. The City of Highland has automatic aid agreements with the City of Redlands, the City of San Bernardino (County Fire), as well as the San Manuel Band of Mission Indians Fire Department. Ambulance services are provided by American Medical Response (AMR), a private ambulance service serving the local areas.

Fire Level of Service

The annexation area will be served by the City of Highland Fire Department through a contract with CalFire. The City of Highland operates three (3) fire stations which includes FS#541 (Fire Station No. 1) at 26974 Base Line, FS #542 (Fire Station No.2) at 29507 Base Line, and FS#543 (Fire Station No. 3) at 7649 Sterling Avenue. Fire Station No. 2 and 3 are both located approximately 1.2 miles from the project site. Either station may be dispatched to the project site during an emergency. The City of Highland owns the fire stations and all the equipment and vehicles, but contracts for firefighter personnel through CalFire.

Based on the project's construction type, .56 acre property size, and operational characteristics, it will have a nominal impact and therefore would not generate demand for an additional firefighter.

Improvements

No additional capital funding requirements for the fire facilities have been identified as a result of the proposed project (.56 acre site). The proposed project would be required to pay fire facilities and equipment Development Impact Fees for industrial development, as shown in Appendix A. This would comply with the California Fire Code for industrial development. The City will be responsible for the operations and maintenance costs through the General Fund to provide fire and emergency services to the annexation area (.56 acre site). Services are provided through the contract with CalFire as mentioned above.

3.3 Police Protection

Service Provider

The City of Highland contracts its law enforcement services through the San Bernardino County Sheriff's Department. The Sheriff's Deputies and support staff occupy a City of Highland owned Police Station facility located at 26985 Base Line. As a contract Police Department, it operates under a mutual aide type agreement, allowing the City access to a variety of resources offered by the San Bernardino County Sheriff's Department. The contract may be adjusted as needed to meet staffing needs.

Police Level of Service

The City of Highland's Station is very busy in terms of the ratio of safety personnel to population, calls for services, and arrests per deputy. Police service calls will not increase as a result of the proposed project (.56 acre site). The proposed project will not generate the need for additional officers or equipment.

Improvements

The proposed project does not result in a need for additional officers as a result of annexation and subsequent industrial development. No additional capital funding requirements for facilities have been identified as a result. The project would be required to pay Law Enforcement Facilities and Equipment Development Impact Fees for industrial development, as shown in Appendix A. The City will provide the operations and maintenance costs to provide service to the annexation through its General Fund.

3.4 Domestic Water

Service Provider

Service for domestic water for the project would be provided by East Valley Water District which provides water to an approximately 28 square mile area in San Bernardino County. The District has a service population of approximately 104,000. The District utilizes water from several sources including the Santa Ana River, the Bunker Hill Groundwater Basin and the City of San Bernardino domestic water system. During dry years, the District can obtain water from Northern California through the State Water Project.

Water Level of Service

A of January 16, 2024, EVWD has been operating at the Sterling Natural Resource Center (SNRC) that will recycle up to 8 million gallons of waste water per day that will replenish the local ground water basin which is a source of waste for 650,000 people. The proposed project (.56 acre site) would increase demand minimally for water. EVWD has indicated to the City of Highland that there is an adequate supply for the proposed development.

Improvements

To accommodate flows to the project site, the project will be required to construct a water system to and from this development. While the specific timing of these improvements is not known, it is assumed that phasing of facilities will be concurrent with the development of the project. EVWD will provide for the necessary operations and maintenance of the water systems needed to serve the project area. EVWD collects no property tax revenues. The operations and maintenance costs are covered primarily through monthly service charges that will be paid by future users within the project development.

3.5 Sanitary Sewer / Wastewater Services

Service Provider

EVWD is the sanitary sewer service provider in the area. The District completed construction of their “Sterling Natural Resources Center” on January 16, 2024.

Sewer Level of Service

A of January 16, 2024, EVWD has been operating at the Sterling Natural Resource Center (SNRC) that will recycle up to 8 million gallons of waste water per day that will replenish the local ground water basin which is a source of waste for 650,000 people. According to EVWD, the sewer system has adequate capacity to serve the development and the project (.56 acre site). They maintain their own sewer lines within the City of Highland. At the time of this report, EVWD still relies on and connects to sewer treatment with the City of San Bernardino, however, that will transition to SNRC. EVWD will provide for the necessary operations and maintenance of the sewer systems needed to serve the project area. Operation and maintenance costs are covered primarily through monthly service charges that will be paid by future users within the project area.

3.6 Flood Control and Drainage

Service Provider

Local drainage facilities are maintained by the City of Highland. All facilities are routinely inspected, and necessary actions are taken to maintain the facilities in compliance with established standards. The San Bernardino County Flood Control District (SBCFCD) is responsible for the design, construction, operation, and maintenance of regional flood control facilities for all of the incorporated and unincorporated areas in San Bernardino County.

Flood Control Level of Service

SBCFCD has developed an extensive system of facilities, including dams, conservation basins, channels, and storm drains. The purpose of these facilities is to intercept and convey flood flows through and away from the major developed areas of the County.

Since the project is proposed for annexation into the City of Highland, it is subject to the storm water discharge requirements of the City's General Construction Permit (GCP). The GCP requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). The SWPPP contains site maps that show the construction site perimeter, existing and proposed buildings, lots, roadways, storm water collection and discharge points, general topography both before and after construction, and drainage patterns across the site.

Improvements

Storm water runoff generated from within the project site would be managed in accordance with existing laws and regulations established under the National Pollution Discharge Elimination System (NPDES) General Permit for Construction Activities and the associated San Bernardino County Stormwater Program Model Water Quality Management Plan Guidance.

3.7 Public Utilities

Service Provider

The project area will be served by the appropriate local utility companies who have indicated that they will have the ability to service the area. The project site would be connected to existing utility connections in the right-of-way of 3rd and 5th Streets and Victoria Avenue. Service providers to the area include the following:

Cable and Internet Provider: Various Cable Companies provide cable television service and internet services to the project area. These services are all delivered via a single broadband network of coaxial and fiber-optic cable. Cable offers analog and digital video services, high-speed internet access and other advanced services over its broadband networks.

Electricity: Power service to the proposed project will be provided by Southern California Edison Company (SCE). Southern California Edison, through its subsidiaries, is an electric power generator and distributor, and an investor infrastructure and renewable energy projects. The company operates with a power generation portfolio of approximately 14,000 megawatts. The cost and rate structure to the property owners for these services are controlled by the Public Utilities Commission.

Telephone Service: Telephone service to the proposed annexation development area will be provided by various telecom providers. The project area may require the installation of cable wiring from a backbone facility extended to the site.

Natural Gas: Natural gas would be provided by the Southern California Gas Company. There are existing facilities in the project area. The developer is responsible for local connection to existing mains in the area and the installation of any new meters, if required.

Improvements

The project would be connected to existing utility facilities in the right-of-way of adjacent streets. The project developer would coordinate with the applicable agency regarding the location of existing utility lines and hookups in order to finalize improvement plans. Funding of the regional utility facilities is provided to the project by the individual utility company. The developer is responsible for the costs of extending utilities from the backbone facilities to the project site. Funding for the operation and maintenance for specific utilities is the responsibility of the individual utility through user charges. There are no financial cost impacts to the City's General Fund for these utility services.

3.8 Solid Waste Management

Service Provider

The California Integrated Waste Management Board oversees waste disposal for the City of Highland. The Fontana Refuse Disposal (mid-Valley) and San Timoteo Solid Waste Disposal landfill sites in San Bernardino County are currently used by the City of Highland.

The County of San Bernardino Solid Waste Management Division (SWMD) is responsible for the operation and management of the County of San Bernardino's solid waste disposal system. In addition, the Division administers the County's solid waste handling franchise program and the refuse collection permit program which authorizes and regulates trash collection by private haulers in the unincorporated area. The City of Highland contracts with Burrtec Waste Industries for solid waste collection services city wide and they collect recyclables and green waste as part of the City's waste reduction programs (mandated by AB939).

Solid Waste Level of Service

The City of Highland's mandatory trash and recycling ordinance ensures its contact with Burrtec Waste Industries will increase participation in regular trash collection and recycling programs. The San Timoteo Solid Waste Disposal site is managed by the San Bernardino County Solid Waste Management Department and currently will be the waste facility receiving waste generated from the proposed project (.56 acre site). Recyclable material and Construction waste as collected by Burrtec Waste Industries waste is delivered to certified recycling locations throughout southern California in compliance with AB939.

Improvements

The proposed project (.56 acre site) would not generate significant amounts of solid waste. The proposed project area (.56 acre site) is estimated to contribute less than 8 percent (7.7%) of the solid waste generated by the overall development project. The proposed project would generate approximately 47,000 to 57,000 pounds per year of solid waste – predominantly green waste which will be diverted from landfills and composted. Therefore additional landfill space would not be needed.

The City's franchised waste hauler as noted above is Burrtec Waste Industries, Inc. Burrtec operated under the City's franchise contract and mandatory trash collection ordinance to provide weekly solid waste collection services to all residents, commercial, and Industrial businesses. Trash and recycle collection may require daily increased frequency depending on the type of business is being operated. No additional waste collection facilities or equipment will be needed.

4 Fiscal Impacts

This Chapter presents the projected annual fiscal impacts of the proposed development by Patriot Partners on the City of Highland at project "build-out." The project site known as "Patriot" consists of 11 parcels, 7.23 gross acres with .56 acres that will be annexed from the City of San Bernardino into the City of Highland corporate boundaries. The overall development project will consist of a 173,976 square foot speculative industrial building located at the southeast corner of 5th Street and Victoria Avenue.

4.1 Overview of Fiscal Impacts (also see Fiscal Analysis dated May 2024)

City of Highland General Fund. Fiscal impacts are presented in constant 2023 dollars for the City's General Fund and related funds. The projected impacts are based on the project description provided by Patriot Partners as well as an analysis of the City's Adopted 2023-2025 Budget. Discussions with the City and project team staff have assisted in developing the fiscal factors used for the analysis. After "building-out" of the .56 acre site, a recurring General Fund revenue of $9,487 is projected for the proposed annexation project.

City of Highland Fire Department. The City of Highland has a contract with CalFire to provide personnel and maintain fire related services. The City of Highland fiscal policy is to budget 42% of the property tax general levy property tax to fund the City's Fire Department. This annual amount for the .56 acre site is estimated at $1,787.00 for fire operation and maintenance costs.

City of Highland Assessment and Special Districts. The property will be required to join the Consolidated Landscaping and Lighting district which is based on the estimates prior to final occupancy signoff by the City of Highland.

Paramedic Services. The City of Highland has established a special parcel tax of $38 per commercial and industrial parcel annually that will cover paramedic services.

Appendix A – City of Highland Development Impact Fees

CITY OF HIGHLAND
DEVELOPMENT IMPACT FEES
Effective 4/1/24
Non-Subdivided Development

	Detached Dwelling	Attached Dwelling	Mobile Home	Commercial Lodging	Commercial/ Office	Industrial
Law Enforcement Facilities	$87	$137	$77	$58	$0.049	$0.003

LAFCO Application

(FOR LAFCO USE ONLY)

SAN BERNARDINO LAFCO
APPLICATION AND PRELIMINARY
ENVIRONMENTAL DESCRIPTION FORM

INTRODUCTION: The questions on this form and its supplements are designed to obtain enough data about the application to allow the San Bernardino LAFCO, its staff and others to adequately assess the proposal. By taking the time to fully respond to the questions on the forms, you can reduce the processing time for your proposal. You may also include any additional information which you believe is pertinent. Use additional sheets where necessary, or attach any relevant documents.

GENERAL INFORMATION

1. NAME OF PROPOSAL:

Detachment and Annexation of APN 1192-551-01 and associated right-of-way (0.95 acre total) at the southeast corner of 5th Street and Victoria Avenue

2. NAME OF APPLICANT: City of Highland

APPLICANT TYPE: ☐ Landowner ☒ Local Agency
☐ Registered Voter ☐ Other

MAILING ADDRESS:
27215 Base Line, Highland, CA 92346

PHONE: (909) 864-6861
FAX: (909) 862-3180
E-MAIL ADDRESS: kstater@cityofhighland.org

3. GENERAL LOCATION OF PROPOSAL:

A 0.56 acre parcel located at the southeast corner of 5th Street and Victoria Avenue, Highland (San Bernardino), CA and the associated right-of-way along the parcel's ~~Victoria Avenue and 5th Street frontage (0.39 acre), 0.95 acre total. The location is within the jurisdictional boundaries of the City of San Bernardino, but has a Highland mailing~~ address.

4. Does the application possess 100% written consent of each landowner in the subject territory?
YES ☒ NO ☐ If YES, provide written authorization for change.

5. Indicate the reason(s) that the proposed action has been requested.

The .56 acre parcel in question is approximately 8% of a 7.23 acre site proposed to be developed with a 173,976 square foot concrete tilt-up warehouse and associated ~~improvements. The project straddles two local agencies; the City of San Bernardino and~~ Highland. To create a more cohesive project, it would be prudent to annex the parcel into Highland where it would be subject to a single set of development standards, municipal ~~services and public safety services.~~

(FOR LAFCO USE ONLY)

LAND USE AND DEVELOPMENT POTENTIAL

1. Total land area of subject territory (defined in acres): .095 acre vacant parcel

2. Current dwelling units within area classified by type (single-family residential, multi-family [duplex, four-plex, 10-unit], apartments) 0 dwelling units

3. Approximate current population within area: 0

4. Indicate the General Plan designation(s) of the affected city (if any) and uses permitted by this designation(s):
The parcel's current General Plan designation in the City of San Bernardino is Commercial General (CG-1) which permits general retail, commercial, professional office, ~~medical and certain residential uses. Highland proposes to designate the parcel as~~ Business Park (BP) which permits manufacturing, wholesale, warehousing, commercial services and office uses.

San Bernardino County General Plan designation(s) and uses permitted by this designation(s):

N/A

5. Describe any special land use concerns expressed in the above plans. In addition, for a City Annexation or Reorganization, provide a discussion of the land use plan's consistency with the regional transportation plan as adopted pursuant to Government Code Section 65080 for the subject territory: The San Bernardino parcel is surrounded on three sides, north, south and east by the City of Highland. All three sides are zoned Business Park , which permits warehousing. The fourth side, its westerly perimeter is bound by Victoria Avenue. There are no land use concerns related to the application. The proposed use as a warehouse is compliant with the current transportation plans recognized by SBCTA with truck routes along both 3rd and 5th Streets adjacent to the SBIA.

6. Indicate the existing use of the subject territory.

The .56-acre San Bernardino parcel proposed to be annexed into Highland is currently vacant and the adjacent right-of-way is being used as a public street.

What is the proposed land use?

The proposed use is a warehouse/distribution facility, approximately 173,976 square feet in area.

7. Will the proposal require public services from any agency or district which is currently operating at or near capacity (including sewer, water, police, fire, or schools)? YES ☐ NO ☒ If YES, please explain.

(FOR LAFCO USE ONLY)

8. On the following list, indicate if any portion of the territory contains the following by placing a checkmark next to the item: None.

☐ Agricultural Land Uses ☐ Agricultural Preserve Designation

☐ Williamson Act Contract ☐ Area where Special Permits are Required

☐ Any other unusual features of the area or permits required: _____

9. Provide a narrative response to the following factor of consideration as identified in §56668(p):
The extent to which the proposal will promote environmental justice. As used in this subdivision, "environmental justice" means the fair treatment of people of all races, cultures, and incomes with respect to the location of public facilities and the provision of public services:

Highland adopted the Environmental Justice Element of its General Plan in January 2023. To reduce the noise incompatibility and safety risks associated with airports, the City has used careful land use planning relative to adjacent land. Goal 6.7 of the Public Health, Safety, and Environmental Justice Element and its related policies specifically look to reduce land use types and development intensity and to inform residents of aircraft activities in aircraft potential zones and overflight areas. Airport overlay zones, specified within the Municipal Code, provide greater safety by establishing requirements for land use compatibility reviews within designated areas close to airports.

ENVIRONMENTAL INFORMATION

1. Provide general description of topography.

The site is relatively flat, sloping to from the northeast to the southwest (1151 to 1145'). The proposed project will require approximately 13,680 cubic yards of fill dirt to satisfy final grading.

2. Describe any existing improvements on the subject territory as % of total area.

Residential	0 %	Agricultural	0 %
Commercial	0 %	Vacant	59 %
Industrial	0 %	Other	41% right-of-way roadway, curb, gutter, sidewalk %

3. Describe the surrounding land uses:

NORTH: 5th Street with vacant parcels and commercial uses to the north

EAST: A vacant parcel and City Creek Overflow Flood Control Channel

SOUTH: 3rd street with industrial facilities and San Bernardino Int'l Airport south of that

WEST: Victoria Avenue with vacant parcels west of that (Forner NAFB housing)

4. Describe site alterations that will be produced by improvement projects associated with this proposed action (installation of water facilities, sewer facilities, grading, flow channelization, etc.).

A concrete tilt-up warehouse measuring approximately 173,976 square feet with related water quality, parking, and landscaping, as well as associated utility extensions and improvements.

(FOR LAFCO USE ONLY)

5. Will service extensions accomplished by this proposal induce growth on this site? YES ☐ NO ☒ Adjacent sites? YES ☐ NO ☒ Unincorporated ☐ Incorporated ☐

This project is located in an urbanized area.

6. Are there any existing out-of-agency service contracts/agreements within the area? YES ☒ NO ☐ If YES, please identify.

San Bernardino County Fire provides fire protection service to the parcel by contract. If annexed, it would change to the California Dept. of Forestry and Fire Protection (CalFire).

7. Is this proposal a part of a larger project or series of projects? YES ☒ NO ☐ If YES, please explain.

The .56 acre vacant parcel would be part of a larger, 7.23 acre site proposed to be developed with a 173,796 square foot warehouse.

NOTICES

Please provide the names and addresses of persons who are to be furnished mailed notice of the hearing(s) and receive copies of the agenda and staff report.

CERTIFICATION

As a part of this application, the City/Town of Highland, or the _____ District/Agency, _____ (the applicant) and/or the Patriot Partners, LLC (real party in interest - landowner and/or registered voter of the application subject property) agree to defend, indemnify, hold harmless, promptly reimburse San Bernardino LAFCO for all reasonable expenses and attorney fees,

(FOR LAFCO USE ONLY)

and release San Bernardino LAFCO, its agents, officers, attorneys, and employees from any claim, action, proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it.

This indemnification obligation shall include, but not be limited to, damages, penalties, fines and other costs imposed upon or incurred by San Bernardino LAFCO should San Bernardino LAFCO be named as a party in any litigation or administrative proceeding in connection with this application.

As the person signing this application, I will be considered the proponent for the proposed action(s) and will receive all related notices and other communications. I understand that if this application is approved, the Commission will impose a condition requiring the applicant and/or the real party in interest to indemnify, hold harmless and reimburse the Commission for all legal actions that might be initiated as a result of that approval.

I hereby certify that the statements furnished above and in the attached supplements and exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

SUPPLEMENT
SPHERE OF INFLUENCE AMENDMENT

INTRODUCTION: The questions on this form are designed to obtain data about the specific sphere of influence amendment application to allow the Commission, staff and others to adequately assess the application. You may also include any additional information that you believe is pertinent. Use additional sheets where necessary, and/or include any relevant documents.

1. Please provide an identification of the agencies involved in the proposed sphere of influence change(s):

SPHERE EXPANSION	SPHERE REDUCTION
City of Highland	City of San Bernardino

2. Provide a narrative description of the following factors of consideration as outlined in Government Code Section 56425. (If additional room for response is necessary, please attach additional sheets to this form.)

The present and planned land uses in the area, including agricultural and open-space lands.

The .56 acre parcel is currently vacant and the associated right-of-way is mostly improved with roadway, curb, gutter and sidewalk. The parcel is proposed to be included as part of a 7.23 acre site to be developed with a 173,976 square foot tilt-up warehouse and related on and off-site improvements. The Sphere Change is within a fully urbanized area. It is not land used for agriculture, passive or active open space.

The present and probable need for public facilities and services in the area.

The immediate area is developed with commercial and residential uses within 130 feet of the parcel in question. Public facilities and services are available. Concurrent with the site's development, the landowner will widen Victoria Avenue, 3rd and 5th Streets, install curb, gutter, sidewalk, water quality and drainage features, and extend water and sewer services as needed from East Valley Water District. Electric and gas service are also both in proximity to the parcel and will be extended in coordination with Southern California Edison and the Gas Company.

The present capacity of public facilities and adequacy of public services that the agency to be expanded provides or is authorized to provide.

The City of Highland has the capacity provides municipal services to an additional .95 acre.

The existence of any social or economic communities of interest in the area.

The California Office of Environmental Health Hazard Assessment identifies the area as a Disadvantaged Community (https://oehha.ca.gov/calenviroscreen/sb535)

The present and probable need for public facilities or services related to sewers, municipal and industrial water, or structural fire protection for any disadvantaged unincorporated community, as defined by Govt. Code Section 56033.5, within the existing sphere of influence.

The proposed warehouse facility will result in the need for public facilities and services related to sewer, water, and fire protection, however, not within an unincorporated ~~community. The parcel is located within the City of San Bernardino and is proposed for~~ annexation into the City of Highland.

3. If the sphere of influence amendment includes a city sphere of influence change, provide a written statement of whether or not agreement on the sphere change between the city and county was achieved as required by Government Code Section 56425. In addition, provide a written statement of the elements of agreement (such as, development standards, boundaries, zoning agreements, etc.) (See Government Code Section 56425)

The sphere of influence amendment will occur between the Cities of San Bernardino ~~and Highland. Both cities have adopted resolutions requesting the sphere changes. No~~ other agreements have been made.

4. If the sphere of influence amendment includes a special district sphere of influence change, provide a written statement: (a) specifying the function or classes of service provided by the district(s) and (b) specifying the nature, location and extent of the functions or classes of service provided by the district(s). (See Government Code Section 56425(i))

The sphere of influence amendment will include the reduction of the San Bernardino County Fire Protection District, detachment from the San Bernardino County Fire ~~FProect District (SBCFPD), SBCFPD Valley Service Zone and SBCFPD Service~~ Zone FP-5.

5. For any sphere of influence amendment either initiated by an agency or individual, or updated as mandated by Government Code Section 56425, the following service review information is required to be addressed in a narrative discussion, and attached to this supplemental form (See Government Code Section 56430):

   a. Growth and population projections for the affected area.

b. Location and characteristics of disadvantaged unincorporated communities within or contiguous to the sphere of influence.

c. Present and planned capacity of public facilities and adequacy of public services, including infrastructure needs or deficiencies, including those associated with a disadvantaged unincorporated community.

d. Financial ability of agencies to provide services.

e. Status of, and opportunities for, shared facilities.

f. Accountability for community service needs, including governmental structure and operational efficiencies.

If additional sheet are submitted or a separate document provided to fulfill Item #5, the narrative description shall be signed and certified by an official of the agency(s) involved with the sphere of influence review as to the accuracy of the information provided. If necessary, attach copies of documents supporting statements.

CERTIFICATION

As a part of this application, the City/Town of _____, or the _____ District/Agency, _____ (the applicant) and/or the _____ (real party in interest - landowner and/or registered voter of the application subject property) agree to defend, indemnify, hold harmless, promptly reimburse San Bernardino LAFCO for all reasonable expenses and attorney fees, and release San Bernardino LAFCO, its agents, officers, attorneys, and employees from any claim, action, proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it.

This indemnification obligation shall include, but not be limited to, damages, penalties, fines and other costs, imposed upon or incurred by San Bernardino LAFCO should San Bernardino LAFCO be named as a party in any litigation or administrative proceeding in connection with this application.

As the person signing this application, I will be considered the proponent for the proposed action(s) and will receive all related notices and other communications. I understand that if this application is approved, the Commission will impose a condition requiring the applicant and/or the real party in interest to indemnify, hold harmless and reimburse the Commission for all legal actions that might be initiated as a result of that approval.

I hereby certify that the statements furnished above present the data and information required to the best of my ability, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

DATE _____ _____
SIGNATURE

_____
Printed Name of Applicant or Real Property in Interest
(Landowner/Registered Voter of the Application Subject Property)

_____
Title and Affiliation (if applicable)

5. For any sphere of influence amendment either initiated by an agency or individual, or updated as mandated by Government Code Section 56425, the following service review information is required to be addressed in a narrative discussion, and attached to this supplemental form (See Government Code Section 56430):

a. Growth and population projections for the affected area.

The affected area, APN 1192-551-01 and surrounding site comprises 7.23 acres of vacant land zoned for business park and commercial use. If the detachment and annexation are approved, the landowner proposes to develop a 173,976 square foot tilt-up industrial warehouse and associated on- and off-site improvements. It is not residential in nature. The proposal is for warehousing and distribution, with no residential component. The annexation and subsequent development will not affect population projections in the area.

b. Location and characteristics of disadvantaged unincorporated communities within or contiguous to the sphere of influence.

Parcels contiguous to the site on the north, east and south are within the City of Highland. Continuous parcels to the west are within the City of San Bernardino. The site is neither within nor contiguous to an unincorporated community.

c. Present and planned capacity of public facilities and adequacy of public services, including infrastructure needs or deficiencies, including those associated with a disadvantaged unincorporated community.

See Plan for Service attached.

d. Financial ability of agencies to provide services.

See Fiscal Analysis attached.

e. Status of, and opportunities for, shared facilities.

Municipal facilities including public safety (police and fire) facilities are in place in vicinity of the site. The proposed annexation of .56 acre of vacant land and .39 acre of right-of-way (.95 acre total) and subject warehouse development are not anticipated to create a significant need for additional facilities exceeding those in place. See Plan for Service attached.

f. Accountability for community service needs, including governmental structure and operational efficiencies.

See Plan for Service attached.

(FOR LAFCO USE ONLY)

SUPPLEMENT
ANNEXATION, DETACHMENT, REORGANIZATION PROPOSALS

INTRODUCTION: The questions on this form are designed to obtain data about the specific annexation, detachment and/or reorganization proposal to allow the San Bernardino LAFCO, its staff and others to adequately assess the proposal. You may also include any additional information which you believe is pertinent. Use additional sheets where necessary, and/or include any relevant documents.

1. Please identify the agencies involved in the proposal by proposed action:

ANNEXED TO	DETACHED FROM
City of Highland	City of San Bernardino
	San Bernardino Co Fire Protection District (SBCFPD)
	~~SBCFPD Valley Service Zone~~
	SBCFPD Service Zone FP-5

2. For a city annexation, State law requires pre-zoning of the territory proposed for annexation. Provide a response to the following:

   a. Has pre-zoning been completed? YES ☒ NO ☐
   b. If the response to "a" is NO, is the area in the process of pre-zoning? YES ☐ NO ☐

   Identify below the pre-zoning classification, title, and densities permitted. If the pre-zoning process is underway, identify the timing for completion of the process.

   The property will be pre-zoned Business Park (BP) classified as an 'Employment District in Highland. BP permits a maximum lot coverage of 60% and a maximum Floor Area Ratio of .45. An Ordinance to Pre-Zone the property was adopted on March 10, 2026.

3. For a city annexation, would the proposal create a totally or substantially surrounded island of unincorporated territory?
   YES ☐ NO ☒ If YES, please provide a written justification for the proposed boundary configuration.
   This project proposes to do just the opposite. It would result in eliminating an island that currently exists.

4. Will the territory proposed for change be subject to any new or additional special taxes, any new assessment districts, or fees?

   The parcel will be subject to the standard taxes commensurate with the surrounding Highland parcels.

(FOR LAFCO USE ONLY)

5. Will the territory be relieved of any existing special taxes, assessments, district charges or fees required by the agencies to be detached?

Reference Fiscal Analysis attached.

6. If a Williamson Act Contract(s) exists within the area proposed for annexation to a City, please provide a copy of the original contract, the notice of non-renewal (if appropriate) and any protest to the contract filed with the County by the City. Please provide an outline of the City's anticipated actions with regard to this contract.

N/A

7. Provide a description of how the proposed change will assist the annexing agency in achieving its fair share of regional housing needs as determined by SCAG.

The parcel is approximately .56 acres. It is surrounded by existing Business Park uses and proposed to be zoned Business Park. It is currently vacant. The parcel is currently zoned Commercial General by the City of San Bernardino. Residential development at this location would be incompatible with the current zoning, future zoning and existing land uses such as the adjacent Amazon fulfillment center and San Bernardino International Airport located to the south.

8. **PLAN FOR SERVICES**:

For each item identified for a change in service provider, a narrative "Plan for Service" (required by Government Code Section 56653) must be submitted. This plan shall, at a minimum, respond to each of the following questions and be signed and certified by an official of the annexing agency or agencies.

A. A description of the level and range of each service to be provided to the affected territory.

B. An indication of when the service can be feasibly extended to the affected territory.

C. An identification of any improvement or upgrading of structures, roads, water or sewer facilities, other infrastructure, or other conditions the affected agency would impose upon the affected territory.

D. The Plan shall include a Fiscal Impact Analysis which shows the estimated cost of extending the service and a description of how the service or required improvements will be financed. The Fiscal Impact Analysis shall provide, at a minimum, a five (5)-year projection of revenues and expenditures. A narrative discussion of the sufficiency of revenues for anticipated service extensions and operations is required.

(FOR LAFCO USE ONLY)

E. An indication of whether the annexing territory is, or will be, proposed for inclusion within an existing or proposed improvement zone/district, redevelopment area, assessment district, or community facilities district.

F. If retail water service is to be provided through this change, provide a description of the timely availability of water for projected needs within the area based upon factors identified in Government Code Section 65352.5 (as required by Government Code Section 56668(k)).

CERTIFICATION

As a part of this application, the City/Town of _____, or the _____ District/Agency, _____ (the applicant) and/or the _____ (real party in interest - landowner and/or registered voter of the application subject property) agree to defend, indemnify, hold harmless, promptly reimburse San Bernardino LAFCO for all reasonable expenses and attorney fees, and release San Bernardino LAFCO, its agents, officers, attorneys, and employees from any claim, action, proceeding brought against any of them, the purpose of which is to attack, set aside, void, or annul the approval of this application or adoption of the environmental document which accompanies it.

This indemnification obligation shall include, but not be limited to, damages, penalties, fines and other costs imposed upon or incurred by San Bernardino LAFCO should San Bernardino LAFCO be named as a party in any litigation or administrative proceeding in connection with this application.

As the person signing this application, I will be considered the proponent for the proposed action(s) and will receive all related notices and other communications. I understand that if this application is approved, the Commission will impose a condition requiring the applicant and/or the real party in interest to indemnify, hold harmless and reimburse the Commission for all legal actions that might be initiated as a result of that approval.

As the proponent, I acknowledge that annexation to the City/Town of _____ or the _____ District/Agency may result in the imposition of taxes, fees, and assessments existing within the (city or district) on the effective date of the change of organization. I hereby waive any rights I may have under Articles XIIIC and XIIID of the State Constitution (Proposition 218) to a hearing, assessment ballot processing or an election on those existing taxes, fees and assessments.

I hereby certify that the statements furnished above and the documents attached to this form present the data and information required to the best of my ability, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

SITE PLAN GENERAL NOTES

1. THE SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS.
2. GENERAL CONTRACTOR TO REVIEW THE SOILS REPORT AND ALL AMENDMENTS LISTED ON THE TITLE SHEET AND FOLLOW ALL RECOMMENDATIONS.
3. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS AND CURBS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL OR CURB. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER LINE OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR THE FACE OF THE WALL FINISH.
4. REFER TO CIVIL, AND MEP PLANS TO CONFIRM UTILITY INFORMATION SHOWN ON THE ARCHITECT'S SITE PLAN AND FOR ADDITIONAL UTILITY INFORMATION. GENERAL CONTRACTOR TO COORDINATE ALL POINTS OF CONNECTION.
5. REFER TO CIVIL DRAWINGS FOR ALL FINISHED GRADES AND SLOPES. ALL FINISHED GRADES TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING. GENERAL CONTRACTOR TO FIELD VERIFY.
6. ALL ACCESSIBLE ROUTES IDENTIFIED ON THE SITE PLAN DRAWINGS SHALL CONFORM TO THE FOLLOWING:
   a) SLOPES IN THE DIRECTION OF TRAVEL DO NOT EXCEED 5%. CROSS SLOPES DO NOT EXCEED 2%.
   b) THE CLEAR WIDTH OF ALL WALKWAYS IS 4'-0" MIN.
   c) CHANGES IN LEVEL UP TO 1/2" COMPLY w/ 11/A0.2.1. CHANGES IN LEVEL GREATER THAN 1/2" IF THEY OCCUR ARE RAMPED. SEE PLANS.
   d) THE VERTICAL CLEARANCE ALONG THE ACCESSIBLE ROUTE IS 80" MIN.
7. ALL PAVED AND LANDSCAPED AREAS TO BE BOUND BY A MIN. 6" HIGH, 6" WIDE CONCRETE CURB U.O.N.
8. A CONCRETE MOW STRIP EXTENDING 12" BEYOND EA END OF THE OPENING SHALL BE PROVIDED @ ALL EXTERIOR GLAZING WHERE THE SILL IS WITHIN 3" VERTICAL OF THE FINISHED GRADE. SEE 2/AD1.1
10. PROVIDE PIPE BOLLARD PROTECTION POSTS AS REQUIRED BY UTILITY COMPANIES AND OR FIRE AUTHORITIES AT ALL EXTERIOR ELECTRICAL EQUIPMENT AND FIRE PREVENTION DEVICES. IF PIPE BOLLARD PROTECTION POST DETAILS ARE NOT PROVIDED BY UTILITY COMPANIES AND OR FIRE AUTHORITY SEE DETAIL 3/AD1.1
11. ALL EXPOSED BIORETENSION DEVICE COVERINGS SHALL BE PAINTED FOREST GREEN.
12. WHERE OCCURS, GENERAL CONTRACTOR TO PROVIDE FLUID APPLIED DAMP PROOFING AT ALL RETAINING AND PLANTER WALLS WHERE THE SIDE OF THE WALL OPPOSITE THE SOIL SIDE IS EXPOSED TO VIEW AND ALL EXTERIOR WALLS WHERE THE ADJACENT FLOOR SLAB IS BELOW GRADE. SEE 6/AD1.2
13. PROVIDE A HOSE BIB NEAR THE MAIN ENTRANCE AND IN THE TRASH ENCLOSURE. SEE PLAN FOR LOCATION.

KEYNOTES

LEGAL DESCRIPTION

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 PAGE 22, OF MAP, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

LISTED AS FOLLOWS:
PARCEL 1: APN: 1192-151-06

PARCEL 2: APN: 1192-151-07

PARCEL 3: APN: 1192-151-04

PARCEL 4: APN: 1192-151-05

PARCEL 5: APN: 1192-151-02

PARCEL 7: APN: 1192-151-01

PARCEL 8: APN: 1192-151-03

PARCEL 6 IS DESCRIBED AS:

PARCELS 1, 2, 3 AND 4 OF PARCEL MAP NO. 4244, IN THE CITY OF HIGHLAND, SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 41, PAGE 12 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

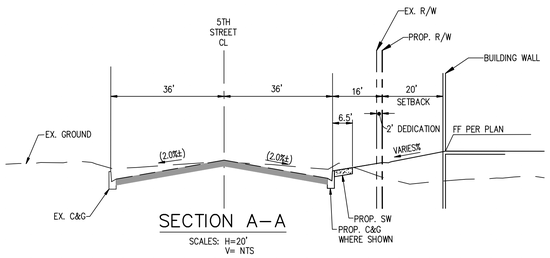
PARCEL 6: APN: 1192-151-12, APN: 1192-151-13, APN 1192-151-14 AND 1192-151-15

SURVEY NOTES AND SUMMARY

BASIS OF BEARINGS: BEARINGS SHOWN HEREON ARE BASED ON THE CENTERLINE OF EAST 3RD STREET BEING NORTH 88°47'21" WEST ON RECORD OF SURVEY 97-0077, R.S.B. 113/15-22.

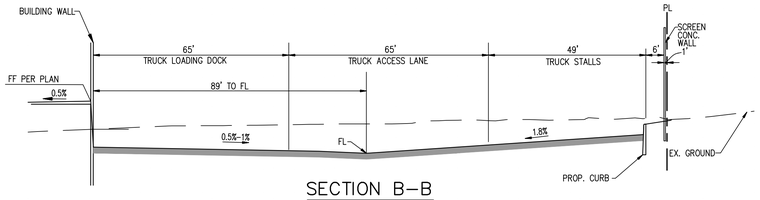
2. ASSESSOR'S PARCEL NO. = 1192-551-06, 1192-551-07, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-02, 1192-551-12, 1192-551-13, 1192-551-14, 1192-551-15 AND 1192-551-01 (ASSESSOR'S PARCEL NUMBERS SHOWN HEREON ARE PER THE CURRENT TAX ASSESSOR'S ROLLS AS PROVIDED BY COMMONWEALTH LAND TITLE COMPANY.

3. DATE OF FIELD SURVEY: JUNE 20, 2022



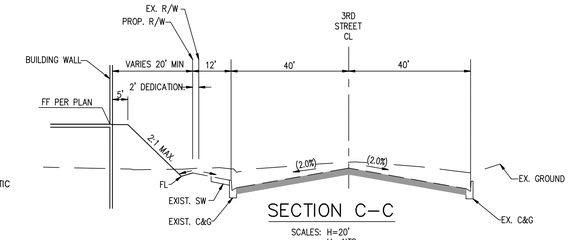
4. LANDSCAPED AREAS MAY CONTAIN IRRIGATION SPRINKLER SYSTEMS.

5. SITE ADDRESS: SOUTHEAST CORNER OF 5TH STREET AT VICTORIA AVENUE, NEC 3RD ST AND VICTORIA AVE, 26530, 26540, 26552 AND 26562 3RD ST., HIGHLAND, CA



6. THE PROPERTY SHOWN HEREON IS LOCATED WITHIN FLOOD ZONE X. FLOOD ZONE X IS DEFINED AS "AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN" AND WITHIN FLOOD ZONE A, DEFINED AS AREAS WITHOUT BASE FLOOD ELEVATIONS ON FEDERAL EMERGENCY MANAGEMENT AGENCY FIRM (FLOOD INSURANCE RATE MAP) MAP NO. 06071C8701J, EFFECTIVE DATE SEPTEMBER 2, 2016.

7. THE PROPERTY DESCRIBED AND SHOWN HEREON CONTAINS 8.14 ACRES GROSS, MORE OR LESS, AND 7.45 ACRES EX. NET AND 7.23 NET AFTER DEDICATION, MORE OR LESS.



8. AERIAL PHOTOGRAPHY WAS COMPILED BY ROBERT J. LUNG & ASSOCIATES, DATED JUNE 23, 2022 AND COMPLIES WITH NATIONAL MAPPING ACCURACY STANDARDS.

TENTATIVE PARCEL MAP NO. 20621

IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA

SEPTEMBER 2022

LEGAL DESCRIPTION

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL 1: APN: 1192-551-06

THE EAST 40 FEET OF THE FOLLOWING DESCRIBED PROPERTY: PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 PAGE 22, OF MAP, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE (NOW VICTORIA AVENUE) WITH THE CENTER LINE OF FOURTH STREET, (NOW EAST THIRD STREET); THENCE NORTH ALONG THE CENTER LINE OF SAID PEPPER AVENUE, A DISTANCE OF 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 330 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 130 FEET TO THE CENTER LINE OF SAID FOURTH STREET; THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

ALSO THAT PORTION OF SAID LOT 33 DESCRIBED AS COMMENCING AT A POINT ON THE SOUTH LINE OF SAID LOT, 330 FEET EAST OF THE CENTER LINE OF PEPPER STREET, ALSO KNOWN AS VICTORIA AVENUE; THENCE NORTH 280 FEET, MORE OR LESS TO A POINT 330 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33; THENCE EAST 50 FEET PARALLEL WITH THE NORTH LINE OF SAID LOT; THENCE SOUTH 280 FEET TO THE SOUTH LINE OF SAID LOT 33; THENCE WEST 50 FEET, MORE OR LESS, TO THE POINT OF BEGINNING.

PARCEL 2: APN: 1192-551-07

THAT PORTION OF LOT 33, CUNNINGHAM SUBDIVISION, OF A PORTION OF BLOCK 62 AND 63, RANCHO SAN BERNARDINO, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT ON THE SOUTH LINE OF SAID LOT, 330 FEET EAST OF THE CENTER LINE OF PEPPER STREET, ALSO KNOWN AS VICTORIA AVENUE, THENCE NORTH 280 FEET, MORE OR LESS, TO A POINT 330 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33; THENCE EAST 330 FEET PARALLEL WITH THE NORTH LINE OF SAID LOT, TO THE EAST LINE OF SAID LOT 33, THENCE SOUTH ALONG THE EAST LINE OF SAID LOT 33 TO THE SOUTHEAST CORNER THEREOF, THENCE WEST 330 FEET, MORE OR LESS, TO THE POINT OF THE BEGINNING.

SAVING AND EXCEPTING THE WEST 50 FEET THEREOF.

ALSO EXCEPTING THEREFROM THAT PORTION OF SAID LOT 33, LYING WITHIN AN 80 FOOT WIDE STRIP OF LAND BEING 40 FEET ON EACH SIDE OF MEASURED AT RIGHT ANGLES TO THE FOLLOWING DESCRIBED CENTER LINE:

BEGINNING AT A POINT IN THE CENTER LINE OF THIRD STREET (82.5 FEET WIDE) AS SAID STREET IS SHOWN ON PLAT OF RANCHO SAN BERNARDINO, RECORDED IN BOOK 7 OF MAPS, PAGE 2, RECORDS OF SAID COUNTY, SAID POINT BEING DISTANT SOUTH 88° 14' 59" EAST, 631.30 FEET FROM THE INTERSECTION OF THE CENTER LINE OF SAID THIRD STREET WITH THE CENTER LINE OF VICTORIA AVENUE (82.5 FEET WIDE), THENCE NORTH 54° 44' 39" EAST, 151.37 FEET; THENCE NORTHEASTERLY, 440.32 FEET ALONG A TANGENT CURVE CONCAVE TO THE SOUTHEAST HAVING A RADIUS OF 1529.63 FEET AND A CENTRAL ANGLE OF 16° 29' 35"; THENCE NORTH 71° 14' 14" EAST, A DISTANCE OF 1069.50 FEET TO THE POINT OF TERMINATION IN THE CENTER LINE OF FIFTH STREET (82.5 FEET WIDE), SAID POINT OF TERMINATION BEING DISTANT NORTH 89° 48' 14" WEST, 469.24 FEET FROM THE INTERSECTION OF THE CENTER LINE OF SAID FIFTH STREET WITH THE CENTER LINE OF CENTRAL AVENUE AS SHOWN ON PLAT OF TRACT NO. 2060, BLUE RIBBON FARMS, RECORDED IN MAP BOOK 29, PAGE 65, RECORDS OF SAID COUNTY.

THE OUTSIDE BOUNDARIES SHALL BE PROLONGED OR SHORTENED AS NECESSARY TO BEGIN AND END IN THE SAME LINES AS SAID CENTER LINE BEGINS AND ENDS.

EXCEPTING THEREFROM THE INTEREST IN THE SOUTH 8.75 FEET, AS CONVEYED TO THE COUNTY OF SAN BERNARDINO, FOR PUBLIC HIGHWAYS, AS CONTAINED IN THE INSTRUMENT RECORDED NOVEMBER 7, 1929, IN BOOK 559 OF OFFICIAL RECORDS, PAGE 126.

PARCEL 3: APN: 1192-551-04

THE WEST 70 FEET OF THE EAST 180 FEET OF THE FOLLOWING DESCRIBED PROPERTY:

A PORTION OF LOT 33 OF SUBDIVISION OF A PORTION BLOCKS 62 AND 63, RANCH SAN BERNARDINO, COMMONLY KNOWN AS CUMMINGHAM'S SUBDIVISION, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH (NOW EAST THIRD STREET);
THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET;
THENCE EAST AT RIGHT ANGLES, A DISTANCE OF 330 FEET;
THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE 130 FEET TO THE CENTERLINE LINE OF SAID FOURTH STREET;
THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

EXCEPTING THEREFROM THAT PORTION CONVEYED TO THE COUNTY OF SAN BERNARDINO, BY DEED RECORDED SEPTEMBER 22, 1980 AS INSTRUMENT NO. 80-212971, OFFICIAL RECORDS.

PARCEL 4: APN: 1192-551-05

THE EAST 70 FEET OF THE WEST 140 FEET OF THE EAST 180 FEET OF THE FOLLOWING DESCRIBED PROPERTY:

PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2, PAGE 22 OF MAPS, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH STREET (NOW EAST THIRD STREET);
THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET;
THENCE EAST AT RIGHT ANGLES, A DISTANCE OF 330 FEET;
THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 130 FEET TO THE CENTER LINE OF SAID FOURTH STREET;
THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

PARCEL 5: APN: 1192-551-02

THAT PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH STREET (NOW EAST THIRD STREET); THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 142 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE A DISTANCE OF 12 1/2 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 8 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 117 1/2 FEET TO THE CENTER LINE OF SAID FOURTH STREET; AND THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET/A DISTANCE OF 150 FEET TO THE POINT OF BEGINNING.

EXCEPT THEREFROM THAT PORTION CONVEYED TO COUNTY OF SAN BERNARDINO, A BODY CORPORATE AND POLITIC BY DOCUMENT RECORDED SEPTEMBER 22, 1980 AS INSTRUMENT NO. 80- 212971 OF OFFICIAL RECORDS.

PARCEL 6: APN: 1192-551-12, APN: 1192-551-13, APN 1192-551-14 AND 1192-551-15

PARCELS 1, 2, 3 AND 4 OF PARCEL MAP NO. 4244, IN THE CITY OF HIGHLAND, SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 41, PAGE 12 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 7: APN: 1192-551-01

A PARCEL OF LAND SITUATED IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, BEING THAT PORTION OF LOT 33 OF CUNNINGHAM SUBDIVISION, AS SHOWN ON MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE EAST LINE OF VICTORIA AVENUE (PEPPER STREET) 82.5 FEET WIDE, WITH THE SOUTH LINE OF EAST FIFTH AVENUE, 82.5 FEET WIDE;
THENCE EAST PARALLEL WITH THE NORTH LINE OF SAID LOT 33, A DISTANCE OF 62 FEET;
THENCE SOUTH PARALLEL WITH THE WEST LINE OF SAID LOT, A DISTANCE OF 145.48 FEET;
THENCE WEST PARALLEL WITH SAID NORTH LINE 62 FEET;
THENCE NORTH ALONG SAID WEST LINE 145.48 FEET TO THE POINT OF BEGINNING.

TOGETHER WITH THAT PORTION OF THE EAST 1/2 OF SAID VICTORIA AVENUE ADJOINING SAID PARCEL OF LAND ON THE WEST AND ALL THAT PORTION OF THE SOUTH 1/2 OF SAID EAST FIFTH STREET ADJOINING SAID PARCEL OF LAND ON THE NORTH CONTAINING 0.44 ACRES, MORE OR LESS, INCLUDING 0.23 ACRES, MORE OR LESS IN STREETS.

CONTINUOUS WITH THAT PORTION OF LOT 33 OF CUNNINGHAM SUBDIVISION, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK, STATE OF CALIFORNIA, AS SHOWN ON MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE EAST LINE OF VICTORIA AVENUE (PEPPER STREET) 82.5 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33;
THENCE EAST PARALLEL WITH SAID NORTH LINE 62 FEET TO THE TRUE POINT OF BEGINNING;
THENCE CONTINUING EAST, PARALLEL WITH SAID NORTH LINE, 107 FEET;
THENCE SOUTH PARALLEL WITH THE WEST LINE OF SAID LOT, A DISTANCE OF 145.48 FEET;
THENCE WEST PARALLEL WITH SAID NORTH LINE, 107 FEET;
THENCE NORTH PARALLEL WITH SAID WEST LINE, 145.48 FEET TO THE TRUE POINT OF BEGINNING.

TOGETHER WITH THAT PORTION OF THE SOUTH 1/2 OF EAST FIFTH STREET, 82.5 FEET WIDE, ADJOINING THE ABOVE DESCRIBED LAND ON THE NORTH.

PARCEL 8: 1192-551-03

THAT PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS SHOWN ON A MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE (NOW VICTORIA AVENUE) WITH THE CENTER LINE OF 4TH STREET (NOW EAST 3RD STREET); THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 142 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 12.5 FEET; THENCE EAST PARALLEL WITH THE CENTER LINE OF 4TH STREET, 8 FEET; THENCE NORTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 12.5 FEET; THENCE WEST PARALLEL WITH THE CENTER LINE OF 4TH STREET, 8 FEET TO THE POINT OF BEGINNING.

TITLE REPORT INFORMATION

ITEM NUMBERS AND LEGAL DESCRIPTION SHOWN HEREON CORRESPOND TO COMMONWEALTH LAND TITLE COMPANY PRELIMINARY TITLE REPORT NO. 1909651A, DATED MAY 17, 2022. NO RESPONSIBILITY FOR COMPLETENESS, ACCURACY OR CONTENT OF SAID REPORT IS ASSUMED BY THIS MAP.

ITEM NUMBERS INDICATED WITH A HEXAGON ( ) REFLECT ITEMS WHICH ARE PLOTTED HEREON:

(3) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY
RECORDING DATE: NOVEMBER 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS
(AFFECTS PARCELS 1, 2 AND 4)

(4) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 409 OF OFFICIAL RECORDS

(5) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: PACIFIC BELL TELEPHONE COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: JUNE 27, 2005
RECORDING NO: AS INSTRUMENT NO. 2005-0456148 OF OFFICIAL RECORDS

(6) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: JUNE 29, 2005
RECORDING NO: AS INSTRUMENT NO. 2005-0463987 OF OFFICIAL RECORDS

(8) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: CITY OF HIGHLAND, A MUNICIPAL CORPORATION
PURPOSE: FOR ROADS, DRAINAGE, AND PUBLIC UTILITY PURPOSES
RECORDING DATE: JANUARY 10, 2019
RECORDING NO: AS INSTRUMENT NO. 2019-0009522 OF OFFICIAL RECORDS

(10) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY RECORDING DATE:NOV. 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS

(17) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: O. G. BREWSTER
PURPOSE: PIPE LINES RECORDING DATE: DECEMBER 18, 1950
RECORDING NO: IN BOOK 2689, PAGE 369 OF OFFICIAL RECORDS

(18) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: AN ELECTRIC LINE
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 406 OF OFFICIAL RECORDS

(19) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: HIGHWAY AND ROAD PURPOSES
RECORDING DATE: JULY 24, 1968
RECORDING NO: IN BOOK 7065, PAGE 129 OF OFFICIAL RECORDS

(22) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: O. G. BREWSTER
PURPOSE: PIPE LINES RECORDING DATE: DECEMBER 18, 1950
RECORDING NO: IN BOOK 2689, PAGE 369 OF OFFICIAL RECORDS

(23) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: AN ELECTRIC LINE
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 406 OF OFFICIAL RECORDS

(24) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: HIGHWAY AND ROAD PURPOSES
RECORDING DATE: JULY 24, 1968
RECORDING NO: IN BOOK 7065, PAGE 129 OF OFFICIAL RECORDS AFFECTS: THE SOUTH 50 FEET OF SAID LAND

(26) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO, A BODY CORPORATE AND POLITIC
PURPOSE: PUBLIC HIGHWAY RECORDING DATE: NOVEMBER 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS
(AFFECTS SUBJECT PROPERTY BUT DOES NOT AFFECT PARCEL 5)

(28) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
PURPOSE: STREET, HIGHWAY AND PUBLIC UTILITIES
RECORDING DATE: JUNE 1, 2015
RECORDING NO: AS INSTRUMENT NO. 2015-0224285 OF OFFICIAL RECORDS

(31) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: POLELINES
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 407 OF OFFICIAL RECORDS.

(32) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: POLELINES
RECORDING DATE: AUGUST 29, 1949
RECORDING NO: IN BOOK 2453, PAGE 361 OF OFFICIAL RECORDS.

(38) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: THE COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY RECORDING DATE: OCTOBER 4, 1947
RECORDING NO: 53, IN BOOK 2126, PAGE 463 OF OFFICIAL RECORDS AFFECTS: THE NORTH 82 1/2 FEET OF LOT 33

SURVEY NOTES AND SUMMARY

1. BASIS OF BEARINGS: BEARINGS SHOWN HEREON ARE BASED ON THE CENTERLINE OF EAST 3RD STREET BEING NORTH 88°47'21" WEST ON RECORD OF SURVEY 97-0077, R.S.B. 113/15-22.
2. ASSESSOR'S PARCEL NO. = 1192-551-06, 1192-551-07, 1192-551-04, 1192-551-03 1192-551-05, 1192-551-02, 1192-551-12, 1192-551-13, 1192-551-14, 1192-551-15 AND 1192-551-01 (ASSESSOR'S PARCEL NUMBERS SHOWN HEREON ARE PER THE CURRENT TAX ASSESSOR'S ROLLS AS PROVIDED BY COMMONWEALTH LAND TITLE COMPANY.
3. DATE OF FIELD SURVEY: JUNE 20, 2022
4. LANDSCAPED AREAS MAY CONTAIN IRRIGATION SPRINKLER SYSTEMS.
5. SITE ADDRESS: SOUTHEAST CORNER OF 5TH STREET AT VICTORIA AVENUE, NEC 3RD ST AND VICTORIA AVE, 26530, 26540, 26552 AND 26562 3RD ST., HIGHLAND, CA
6. THE PROPERTY SHOWN HEREON IS LOCATED WITHIN FLOOD ZONE X, FLOOD ZONE X IS DEFINED AS "AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN" AND WITHIN FLOOD ZONE A, DEFINED AS AREAS WITHOUT BASE FLOOD ELEVATIONS ON FEDERAL EMERGENCY MANAGEMENT AGENCY FIRM (FLOOD INSURANCE RATE MAP) MAP NO. 06071C8701J, EFFECTIVE DATE SEPTEMBER 2, 2016.
7. THE PROPERTY DESCRIBED AND SHOWN HEREON CONTAINS 8.140 ACRES GROSS, MORE OR LESS, AND 7.450 ACRES NET, MORE OR LESS.
8. AERIAL PHOTOGRAPHY WAS COMPILED BY ROBERT J. LUNG & ASSOCIATES, DATED JUNE 23, 2022 AND COMPLIES WITH NATIONAL MAPPING ACCURACY STANDARDS.
9. ZONING INFORMATION: BP – BUSINESS PARK

SOLID STATE AREA LIGHTING

RAZAR WALLMOUNT-LED

SPECIFICATIONS

PROJECT NAME:

PROJECT TYPE:

OPTICAL HOUSING
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly with integral cooling fins. The Optical Panel mounting surface is milled flat (surface variance <± .003" over 12") to facilitate thermal transfer of heat to housing and cooling fins. The Optical Housing bolts to the Electrical Housing forming a unified assembly.The minimum wall thickness is .188".

ELECTRICAL HOUSING
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly. Minimum wall thickness is .188". Fixture Mounting Plate affixes to mounting surface over a recessed J-box. Electrical Housing anchors on the top edge of the Mounting Plate and stainless steel recessed socket head screws tighten the Electrical Housing to the Mounting Plate from the bottom.

PLED® OPTICAL MODULES
Emitters (LED's) are arrayed on a metal core PCB panel with each emitter located on a copper thermal transfer pad and enclosed by an LED refractor. LED optics completely seal each individual emitter to meet an IP66 rating. In asymmetric distributions, a micro-reflector inside the refractor re-directs the house side emitter output towards the street side and functions as a house side shielding element. Refractors are injection molded H12 acrylic. Each LED refractor is sealed to the PCB over an emitter and all refractors are retained by an aluminum frame. Any one Panel, or group of Panels in a luminaire, have the same optical pattern. LED refractors produce Type II, III, and Type IV site/area distributions as well as other specialty asymmetric distributions. Panels are field replaceable and field rotatable in 90° increments.

LED DRIVER(S)
Constant current electronic with a power factor of > .90 and a minimum operating temperature of -40°F/-40°C. Driver(s) is/are UL and cUL recognized and mounted directly against the Electrical Housing to facilitate thermal transfer, held down by universal clamps to facilitate easy removal. In-line terminal blocks facilitate wiring between the driver and optical arrays. Drivers accept an input of 120-277V, 50/60Hz or 347V-480V, 50,60Hz. (0 - 10V dimmable driver is standard. Driver has a minimum of 3KV internal surge protection. Luminaire supplied with 20KV surge protector for field accessible installation.)

LED EMITTERS
High output LED's are utilized with drive currents ranging from 350mA to 1050mA. 70CRI Minimum. LED's are available in standard Neutral White (4000K), or optional Cool White (5000K) or Warm White (3000K). Consult Factory for other LED options.

AMBER LED's
PCA (Phosphor Converted Amber) LED's utilize phosphors to create color output similar to LPS lamps and have a slight output in the blue spectral bandwidth. **TRA** (True Amber) LED's utilize material that emits light in the amber spectral bandwidth only without the use of phosphors.

FINISH
Electrostatically applied TGIC Polyester Powder Coat on substrate prepared with 20 PSI power wash at 140°F. Four step media blast and iron phosphate pretreatment for protection and paint adhesion. 400°F bake for maximum hardness and durability.

SOLID STATE AREA LIGHTING

VALULUME SERIES-PLED

SPECIFICATIONS

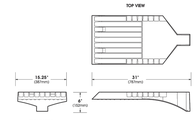
PROJECT NAME:

FIXTURE TYPE:

OPTICAL HOUSING
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly with integral cooling fins. The Optical Panel mounting surface is milled flat (surface variance <± .003" over 12") to facilitate thermal transfer of heat to housing and cooling fins. Solid barrier wall separates optical and electrical compartments. The optical and electrical compartments are integrated to create one assembly.Minimum wall thickness is .188".

ELECTRICAL HOUSING w/ INTEGRATED ARM
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly with integral cooling ribs surrounding the electrical compartment and a flat surface on the top of the arm to accommodate a photocell receptacle. Solid barrier wall separates optical and electrical compartments. The optical compartment and electrical compartment with the integrated support arm combine to create one assembly. Minimum wall thickness is .188". Cast and hinged driver assembly cover is integrated with wiring compartment cover.

PLED® OPTICS
Emitters (LED's) are arrayed on a metal core PCB panel with each emitter located on a copper thermal transfer pad and enclosed by an LED refractor. LED optics completely seal each individual emitter to meet an IP66 rating. In asymmetric distributions, a micro-reflector inside the refractor re-directs the house side emitter output towards the street side and functions as a house side shielding element. Refractors are injection molded H12 acrylic. Each LED refractor is sealed to the PCB over an emitter and all refractors are retained by an aluminum frame. Any one Panel, or group of Panels in a luminaire, have the same optical pattern. LED refractors produce standard site/area distributions. Panels are field replaceable and field rotatable in 90° increments.



LED DRIVER(S)
Constant current electronic with a power factor of > 90 and a minimum operating temperature of -40°F/-40°C. Driver(s) is/are UL and cUL recognized and mounted directly against the Electrical Housing to facilitate thermal transfer, held down by universal clamps to facilitate easy removal. "Exhibit 10"

Conditions of Approval for the CUP, DRA and TTM

CITY OF HIGHLAND

PLANNING DIVISION CONDITIONS OF APPROVAL

Date:	January 20, 2025
Applicant:	Patriot USICV Victoria, LLC
File/Index:	**Conditional Use Permit CUP 22-014** **Design Review Application DRA 22-023** **Tentative Parcel Map 23-001, TPM 20621**
Proposal:	Conditional Use Permit (CUP 22-014) to construct a 173,976 square foot tilt-up warehouse and associated improvements. Design Review Application (DRA 22-023) for the Site Plan, Building Elevations, Landscaping and Grading Plans related to the warehouse development; and Tentative Parcel Map No. 20621, (TTM 23-001) to consolidate eleven (11) parcels into one (1) parcel. Associated Applications related to the project include the annexation of Assessor's Parcel Number 192-551-01, a .56 acre parcel within the project footprint, into Highland and detached from San Bernardino; General Plan Amendment (GPA 23-001) to amend the City's Sphere of Influence and designate as Business Park (BP), Pre-zone/Zone Change (ZC 23-001) for Parcel Number 192-551-01 as Business Park (BP); and application to the San Bernardino County Local Agency Formation Commission (LAFCO) for a reorganization.
Location:	The project site is located on 7.23 acres at the southeastern corner of 5th Street and Victoria Avenue and is composed of eleven (11) parcels within the City of Highland and San Bernardino including APN 1192-551-01 in the City of San Bernardino, and APNs 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15 in the City of Highland.

PLANNING CONDITIONS OF APPROVAL

Note: These conditions represent Planning Division conditions only and are meant to be only one part of the Project's overall conditions that include environmental mitigation measures (MMRP), Building and Safety, Engineering, Public Services and Fire Marshal conditions of approval. All required on-site and off-site improvements shall be completed and approved prior to final inspection for occupancy, except where noted.

1. Approval of this project and all related entitlements and permits cited above are valid only if the San Bernardino County Local Agency Formation Commission (LAFCO) approves the reorganization related to APN 1192-551-01.

2. Indemnity, Duty to Defend and Obligation to Pay Judgments and Defense Costs, Including Attorneys' Fees, Incurred by the City. The Applicant shall defend, indemnify, and hold harmless the City, its elected officials, officers, employees, volunteers, agents, and those City agents serving as independent contractors in the role of City officials (collectively "Indemnitees") from and against any claims,

damages, actions, causes of actions, lawsuits, suits, proceedings, losses, judgments, costs, and expenses (including, without limitation, attorneys' fees or court costs) in any manner arising out of or incident to the Planning Commission's actions, the City Council's actions, related entitlements, or the City's environmental review thereof. The Applicant shall pay and satisfy any judgment, award or decree that may be rendered against City or the other Indemnitees in any such suit, action, or other legal proceeding. The City shall promptly notify the Applicant of any claim, action, or proceeding and the City shall reasonably cooperate in the defense. If the City fails to promptly notify the Applicant of any claim, action, or proceeding, or if the City fails to reasonably cooperate in the defense, the Applicant shall not thereafter be responsible to defend, indemnify, or hold harmless the City or the Indemnitees. The City shall have the right to select counsel of its choice. The Applicant shall reimburse the City, and the other Indemnitees, for any and all legal expenses and costs incurred by each of them in connection therewith or in enforcing the indemnity herein provided. Nothing in this condition shall be construed to require the Applicant to indemnify Indemnitees for any claim arising from the sole negligence or willful misconduct of the Indemnitees. In the event such a legal action is filed challenging the City's determinations herein or the issuance of the approval, the City shall estimate its expenses for the litigation. The Applicant shall deposit said amount with the City within thirty days of being notified of the estimate cost or, at the discretion of the City, enter into an agreement with the City to pay such expenses as they become due.

CONDITIONAL USE PERMIT CUP 22-014

The Conditional Use Permit is conditionally approved, subject to compliance with the requirements as specified below. The Conditions listed below are continuing Conditions; failure of the Applicant and/or operator to comply with any or all Conditions at any time, shall result in initiating revocation of the subject permit.

3. Conditional Use Permit CUP-22-014 shall become null and void and shall expire without further action by the City of Highland unless all conditions have been complied with and the occupancy or use of the land or structures authorized by this application have occurred within thirty-six (36) months from the approval date this application.

    a. Where circumstances beyond the control of the Applicant cause delays which do not permit compliance within the time limitation established in this Section, the Planning Commission may grant an extension of time for a period of time not to exceed an additional thirty-six (36) months. An application for an extension of time must be set forth in writing, stating the reasons for the extension, and must be filed with the community development department no less than 30 calendar days nor more than 90 calendar days prior to the expiration date of the permit or approval. Such application shall be filed together with the City's processing fee, as established by the City Council.

4. The proposed Entitlement permits the construction and operation of an approximately 173,976 square foot speculative warehouse / distribution facility and associated improvements including loading docks, passenger vehicle parking, a stormwater detention/infiltration basin, landscaping and off-site improvements along the project frontage.

5. Project plans, as approved by the City Council on January ___ , 2026 include a Site Plan, Building Elevations, Floorplan, Building/Wall Plan, and Landscape Plan prepared by Herdman Architecture Design, dated April 18, 2023 and Tentative Parcel Map 20621 by Huitt Zollars dated September 2022 (12 pages total).

6. Revisions, modification, or deletions of associated plans must be submitted to the Planning Division for review and approval. Revisions may require additional review by the Community Development Director and/or Planning Commission.

7. The project site has been reviewed and approved for warehouse/distribution/ logistics use with no outdoor storage of materials. Any change of use of this project site, the occupancy, or tenant change in the building, or portion thereof, may require a revised plot plan and business narrative be submitted to the City for review and approval, which identifies operational characteristics, circulation and parking requirements.

8. No outdoor storage facilities may be constructed or placed onsite for either permanent or temporary use. This includes, but is not limited to open storage, fenced storage, storage sheds, cargo containers, tents, canopies, or similar structures.

9. There shall be no long-term on-site parking of semi-trailer trucks unrelated to the warehouse business in operation. Off-site parking on public streets within the City's right-of-way is prohibited.

10. The operator and record owner of the property shall submit to the Planning Division written evidence of agreement with all conditions of this approval before the approval becomes effective.

11. No final inspection or clearances shall be given until all relevant conditions of approval, by each City Division and responsible agency are met. Each condition of approval is separately enforced, and if one of the conditions of approval is found to be invalid by a court of law, all the other conditions shall remain valid and enforceable.

12. Pursuant to provisions of California Public Resources Code Section 21089 (b), this Application shall not be operative, vested or final, nor will building permits be issued, until: (1) the Notice of Determination (NOD) regarding the associated environmental action is filed and posted with the Clerk of the Board of Supervisors

of the County of San Bernardino, and; (2) any and all required filing fees assessed pursuant to California Fish and Game Code Section 711.4, together with any required handling charges, are paid to the Clerk of the Board of Supervisors of the County of San Bernardino.

a. The Applicant shall provide the Planning Division with a check for the appropriate fee, made payable to the Clerk of the Board of Supervisors, no later than 24 hours after receiving approval of the project. The City or Project Representative will file the NOD and fee payment with the County/State and will provide the Applicant with a copy of the receipt and filed NOD.

b. Construction and operation of the proposed project shall be in compliance with the project's CEQA Mitigation Monitoring and Reporting Program, dated November 2025, prepared by Dudek.

13. Development Impact Fees shall be paid in accordance with City policy.

DESIGN REVIEW APPLICATION DRA 22-023

14. The Design Review entitlement includes approval of a Site Plan, Building Elevations, Conceptual Grading Plan and Conceptual Landscape Plan for the construction and operation of an approximate 173,976 square foot speculative industrial warehouse and associated improvements including loading docks, passenger vehicle parking, a stormwater detention/infiltration basin, landscaping and off-site improvements as illustrated in project plans.

a. The approved site plan, building elevations, conceptual grading plan, conceptual landscape plan, color and material samples are on file with the Planning Division and included herein by reference.

15. A copy of the utility plan shall be submitted with or prior to the submittal of a grading plan to the Community Development Director and City Engineer for review and approval. The utility plan shall show the location of all proposed above ground electrical transformers, utility cabinets, back flow devices, detector check valves, etc. both on site and in the public right-of-way.

16. Prior to issuance of a certificate of occupancy by the City, all on and off-site landscaping, irrigation or other improvements shown on the approved landscaping and irrigation plans, including any walls and fences, shall be installed.

17. All permanent parking areas shall be paved and permanently maintained with asphalt or concrete and designated with clearly painted lines. The number of parking spaces, including disabled parking, shall comply with the approved Site Plan.

18. All ground mounted, as well as wall mounted mechanical, electrical, or gas equipment shall be screened from public view by the use of landscaping and/or architectural treatments compatible with the adjoining building's architectural design.

19. All rooftop mounted mechanical equipment, with the exception of solar panels, shall be screened from public view. This can be accomplished by architectural treatments of parapets equal in height to the tallest piece of roof-mounted equipment, but not to exceed an overall height of 55 feet as measured from the adjacent grade.

20. The photometric plan shall be provided to the Planning Department for review and approval prior to issuance of a grading plan in compliance with Municipal Code Sections 16.40.160 Lighting and 16.48.080 Light and glare.

    a) The amount of illumination projected onto a residentially zoned property or use should not exceed 0.1 foot-candle at the property line. Illumination should not exceed 0.5 foot-candles measured at the property line adjacent to non-residential properties.

    b) Lights shall be shielded and directed away from surrounding properties and right-of-way.

    c) Parking lot light standards shall not exceed twenty-five feet (25') in height measured from grade.

    d) Parking lot light standards shall be located at a distance from parking lot trees, so the trees do not interfere with the lighting pattern or the light fixture. Lighting standards shall be shown on the landscape plans and appropriately positioned so as not to displace the intended location of trees in parking lot planters.

21. The design and installation of the Signs shall be in accordance with Chapter 16.56, Sign Regulations, of the Highland Municipal Code.

Landscaping Conditions for DRA 22-023

22. Building main entrances are located on 5th and 3rd Street frontages with passenger car parking adjacent off Victoria. The Landscape Plan must show no landscape gaps between the back of walk and right of way area.

23. The planting plan shall include many taller/columnar plant species that would create a foundation and/or transition for the tall structure and offer screening to adjacent properties. Add additional species during plan check if requested.

25. Clarify perimeter barrier treatment. Show the location of the perimeter block wall and note how it will be maintained and how vandalism be corrected.

TENTATIVE PARCEL MAP 20621 (TTM 23-001)

26. Tentative Parcel Map No. 20621 approves the merging of eleven (11) parcels into one (1) parcel. The site is approximately 7.23 acres.

27. Revisions, modifications, and/or deletions to the Tentative Parcel Map must be submitted to the Planning Division for review and approval by the Community Development Director, City Engineer or Planning Commission.

28. Easements of Record not shown on the Tentative Parcel Map shall be relinquished or relocated. Lots affected by Easements or Easements of Records, which cannot be relinquished or relocated, shall be redesigned subject to review and approval of the Community Development Director or City Engineer.

29. The site lies within a Business Park (BP) Zone and all future development shall occur in accordance with the zone and all other related Highland Municipal Code provisions.

30. Prior to recordation of the Tentative Parcel Map, the new legal description and plat map shall be submitted for review and approval with the Engineering Division. Prior to recordation of the parcel map the owner/applicant shall pay all applicable plan check fees.

Conditions Related to AB 98 and SB 415

The proposed project shall comply with Government Code section 65098.1(d) which includes, but is not limited to the following:

31. Provide conduits at loading bays equal to one truck per loading bay serving cold storage and prohibit idling or the use of auxiliary truck engine power to power climate control equipment if the truck is capable of plugging in at the loading bay and sufficient power is available. (Gov. Code § 65098.1(d)(5)(A)-(B).

32. Ensure that any heating, ventilation, and air-conditioning used in is high efficiency. (Gov. Code § 65098.1(d)(6)).

Responsible Agency Conditions

35. Coordinate with the San Bernardino County Department of Public Works as noted in their correspondence of November 12, 2024.

36. Coordinate with Southern California Gas as noted in their correspondence of October 21, 2024.

City of Highland

Engineering Department
Conditions of Approval
CUP 22-014, DRA 22-023, VAR 22-006, TPM No. 20621
Patriot Partners Warehouse – 3rd Street/5th Street/Victoria Avenue

---

A - Required Prior to Map Approval
B - Required Prior to Building Permit/Construction
C - Required Prior to Building Occupancy
D - Ongoing
E - Required Prior to Grading Permit
* - Non Standard Conditions

Grading

1. E Submit rough and/or precise grading plans to the City Engineer for review and approval, prepared by a registered Civil Engineer licensed in the State of California. All grading shall conform to California Building Code and comply with the City of Highland grading standards and regulations as shown on the grading plan checklist.

2. E Design grading and landscaping plans to comply with the City's clear sight triangle criteria at public street intersections and at private driveways. Walls, fencing, monument signs, slope, and landscaping, within the clear sight triangle, must not exceed thirty inches in height measured from the flowline of the street, unless a sight distance analysis that demonstrates sight distance is adequately maintained is submitted to and approved by the City Engineer.

3. E Submit a final soils report, prepared by a licensed Geotechnical Engineer, for review and approval by the City Engineer. The report shall be no older than one year. Comply with the recommendations contained in the report and any amendments thereof as approved by the City Engineer.

4. E All walls shall require a separate permit from the Building Department. Construct concrete v-ditches and drainage system at the back of retaining walls in accordance with the Grading Plan Checklist and as required by the City Engineer.

5. E Submit an erosion control plan to minimize potential increases in erosion and sediment transport during construction activity for City Engineer approval. Place erosion control measures during or after grading work as required by the City Engineer.

6. E Design short-term erosion control in accordance with Best Management Practices such as, hydroseeding, mulching, jute matting or plastic sheeting to protect slopes; silt fencing to control site perimeter; and straw bale barriers, sand bag barriers, rock filters or sediment basins to control internal erosion, or other methods to stabilize disturbed areas, as approved by the City Engineer.

7. D Implement dust control measures during construction activities including, but not limited to, daily watering of construction area as frequently as necessary during active and inactive periods, utilizing soil emulsions, limiting construction vehicle speed to 10 miles per hour, stabilizing construction entrances to prevent trackout of sediments, and street sweeping.

8. E Design grading to intercept and conduct off-site tributary drainage flow around or through the project site in a manner that does not adversely affect adjacent properties. Conveyance of on-site and off-site tributary flows shall be maintained by the underlying property owner.

9. E Design grading to drain the entire area of the project to the proposed Water Quality Management Plan (WQMP) infiltration basins and to accommodate overflows as necessary.

10. E* Plot all existing and proposed easements on grading plan and note disposition of any existing utilities, appurtenances, fences, and access roads.

11. D* Construct temporary sedimentation basins for use during the grading and construction period of the project. Do not start using the proposed infiltration basins until the site is stabilized for erosion and sedimentation.

12. E Submit a haul route permit for material to and from the project site. Said permit shall include limitations of haul route, haul hours, number of loads per day and posting of traffic personnel where required. Material from the site shall be hauled to a site approved by the City Engineer. The developer and developer's contractor shall be responsible for determining the City's haul limitations.

13. B Submit original wet signed and stamped rough grading certifications from the soils engineer and the grading engineer, along with compaction reports, to the City Engineer.

14. C Submit original, wet signed and stamped final grading certification from the grading engineer to the City Engineer.

STREET IMPROVEMENT

1. C Construct new street improvements along 5th Street project frontage including, but not limited to:
   - Parkway landscape improvements.
   - Construct new street improvements of 8" curb and gutter located 44' south of centerline per City Std. 203.
   - Construct new 6-foot wide curb-adjacent sidewalk per City Std. 208 Type B.
   - Construct new asphalt concrete pavement and class II aggregate base per TI=9 from existing edge of pavement to curb and gutter.
   - Construct one 40-foot wide commercial drive approach per City Std. 213 as shown per the Conceptual Grading Plan.
   - Install onsite traffic control signs to permit left-in, right-in, and right-out movements for trucks through the proposed driveway. Passenger vehicles are permitted full-access movements.
   - Construct a 35-foot radius curb return and curb ramp per City Std. 207B.

- Relocate existing traffic signal pole, mast arm, streetlight, and appurtenances as required per street improvements to provide a fully operational traffic signal system subject to approval by the City Engineer.
- Relocate existing fire hydrant and utilities as required.
- Remove existing improvements along south side of 5th Street to construct a bus bay, east of Victoria Avenue, per City Std. 110A and join existing curb and sidewalk.

2. C Construct new street improvements along Victoria Avenue project frontage including, but not limited to:
   - Parkway landscape improvements.
   - Construct new street improvements of 8" curb and gutter located 40' east of centerline per City Std. 203.
   - Construct new 6-foot wide curb-adjacent sidewalk per City Std. 208 Type B.
   - Construct a north bound right turn lane per City Std. 111.
   - Construct new asphalt concrete pavement and class II aggregate base per TI=9 from existing edge of pavement to curb and gutter. Construct a 4" mill & fill from centerline to new pavement.
   - Relocate existing utilities as required per street improvements.
   - Construct two 30-foot wide commercial drive approaches per City Std. 213 as shown per the Conceptual Grading Plan.

3. C Construct new street improvements along 3rd Street project frontage including, but not limited to:
   - Parkway landscape improvements.
   - Construct new street improvements of 8" curb and gutter located 40' north of centerline per City Std. 203 and join existing.
   - Reconstruct curb-adjacent sidewalk where damaged.
   - Remove existing drive approaches and sidewalk on 3rd Street project frontage and construct 8" curb and gutter with 6-foot wide curb-adjacent sidewalk.
   - Construct one 40-foot wide commercial drive approach per City Std. 213.

4. E Submit street improvement plans, including signing and striping, for review and approval by the City Engineer. Indicate location of existing utilities that affect construction of said improvements. Comply with all City design standards as shown on the street and storm drain improvement checklist. Include ADA access from into the site from right-of-way. Pay to the City street lighting energy and maintenance charges for the initial 12 months.

5. C* Install new LS3 metered streetlight system along project frontages of 5th Street and Victoria Avenue. New streetlights, conduits, wiring, and meter (etc.) will be owned and maintained by the City. Streetlights shall be Light Emitting Diode (LED) luminaire on a marbelite pole with types and at the location specified by the City Engineer.

6. C Submit "Record Revisions" to all plans to reflect improvements as constructed, and any changes made during construction.

WATER QUALITY/DRAINAGE

1. E Obtain approval by the City Engineer of a Final Water Quality Management Plan (F-WQMP), prepared in accordance with the City's National Pollutant Discharge Elimination System

(NPDES) permit requirements in effect at the time the Conceptual Water Quality Management Plan was approved unless subsequent City NPDES permits require otherwise. The F-WQMP shall (1) be prepared, signed, and sealed by a licensed Civil Engineer, (2) include Site Design Low Impact Development and Source Control Best Management Practices (BMPs) appropriate for residential development, (3) include a BMP implementation, operation, and funding mechanism, and (4) be certified by the property owner. The property owner shall also enter into a Stormwater BMP Transfer, Access, and Maintenance Agreement with the City on standard City form. Include a copy of the recorded agreement in the F-WQMP. Construct BMPs in accordance with the approved F-WQMP.

2. C Construct and implement site design BMPs specified in the project approved F-WQMP including, but not limited to, pretreatment devices approved at time of C-WQMP approval, underground infiltration systems, and raised curb landscaped areas and parking lot islands. Runoff from the proposed entrance road shall be captured and conveyed to the proposed pretreatment system, and from there to the underground infiltration system. Alternate site design BMPs which are equally effective may be submitted for review and approval by the City Engineer.

3. E Include the project grading plan, landscape plan, and utility plan with the first submittal of the F-WQMP.

4. C Submit two sets of WQMP BMP Exhibits with a "WQMP BMP As-Built Certificate" wet signed and sealed by the Engineer of Record. The Certificate shall state:

   "I hereby certify that the Water Quality Management Plan Best Management Practices have been constructed under my supervision in accordance with the approved plans and are functional to the best of my knowledge."

5. B At each underground infiltration system proposed by the Final WQMP, conduct at least two new infiltration tests using a double-ring infiltrometer. The tests shall be conducted at the proposed chamber system subgrade elevation, prior to the submittal of the F-WQMP. After obtaining the results from the two tests, the engineer and geotechnical engineer shall determine if additional testing is required.

6. C Register the underground chambers with EPA as a Class V Injection Well.

7. B Construct on-site private drainage using HDPE, or other pipe material as approved by the City Engineer, to drain the project site to the proposed WQMP BMPs in accordance with the approved F-WQMP. Construct necessary inlets and overflow facilities. Overflow conveyance shall be directed towards fronting streets. Demonstrate adequate drainage away from proposed buildings, walls, and fences.

8. E Submit a comprehensive hydrology study per San Bernardino County Hydrology Manual that includes, but is not limited to the following:
   - Pre- and post- development analysis for 10-year and 100-year storms.
   - Hydrology maps of pre- and post- development conditions.
   - Proposed method of flow conveyance and proposed improvements to mitigate project impacts with supporting calculations.
   - Hydraulic calculations to determine the size and type of all drainage facilities.

9. E Submit engineering plans for public and private drainage systems to the City Engineer for review and approval. Indicate the location of any existing utility facility which would affect construction on plans and profiles. Comply with the City design standards as shown on the street and storm drain improvement checklist.

DEDICATION/ ANNEXATION

1. C Apply to the City to annex the project into the City's Consolidated Landscape District (LMD) for potential City maintenance of parkway and frontage landscaping along 3rd Street, 5th Street, and Victoria Avenue. Sign the ballots prepared by the City agreeing to the annexation, and the potential future amount of assessment. The City will maintain parkway and frontage landscaping utilizing LMD revenue only if the City determines that adequate maintenance is not being provided by the property owner. The potential future amount of assessment will include the estimated on-going maintenance cost and one-time construction cost to convert the privately maintained system to the City-maintained system.

2. A* Dedicate an irrevocable offer of dedication for ultimate right-of-way of 52 feet from centerline each for the south half of 5th Street, and the east half of Victoria Avenue.

3. A Dedicate an irrevocable offer of dedication, (1) a 10-foot wide minimum landscape easement across the 3rd Street, 5th Street, and Victoria Avenue frontages. This being in addition to the required half-street right-of-way for said streets, and sidewalk easements at the proposed commercial drive approaches. (2) Additional right-of-way for a northbound Victoria Avenue dedicated right turn only lane per City Std. 111. (3) Additional right-of-way for a westbound bus bay on 5th Street.

4. C Apply to the City to annex the project into the City's Public Safety Community Facilities District (CFD).

5. A Dedicate corner property line cutoffs for all corner lots in accordance with City Std. 207D.

6. D* If the site is subdivided in the future, the Project will be required to grant a reciprocal private easement in favor of the parcels created for vehicular access, including emergency access.

7. D* If the site is subdivided in the future, record a reciprocal private easement for drainage and utilities.

8. B Record a Final Map with the San Bernardino County Recorder pursuant to the provisions of the State Subdivision Map Act, Submit a duplicate photo mylar of the recorded map.

9. A At the time of Final Map submittal, include traverse calculation sheets which show error of closure, copies of record maps, and deeds used as reference showing original land division, tie notes and benchmarks referenced, and a current title report. Inverse calculations will not be accepted for plan check.

10. A Include an Improvement Certificate/Statement on the Parcel Map in accordance with Section 66411.1 of the Subdivision Map Act.

FEES/PERMITS

1. C Pay City processing fee for application of Development Impact Fee (DIF) credits for street, and drainage improvements pursuant to adopted City Council DIF Credit Policy.

2. D Pay appropriate Engineering fees for district annexation, plan check, WQMP review, traffic report review, improvement bond processing, hydrology study review, structural calculation review, on-site and off-site inspection, utility excavation permits, GIS plan update, microfilming and storage of plans, and other required fees.

3. D Obtain a permit from Engineering prior to any on-site construction or construction within the public right-of-way. Also obtain permit/ permission from EVWD, MWD, and SCE prior to any construction within or impacting their easement areas or facilities where applicable.

4. E Post a deposit for erosion control which shall not be released prior to completion of all on-site construction.

5. A Post a deposit for monumentation based on an estimate of the cost to perform the work by the project surveyor or engineer. The deposit shall not be released prior to written verification from the surveyor or engineer that the monuments have been set and payment for the work has been received.

6. A Bond for all required street, grading, water, sewer, on-site landscaping, and landscape maintenance district improvements in accordance with the City Development Code.

7. A Enter into an agreement for construction of improvements with the City of Highland using the adopted City form.

UTILITIES/ CONSTRUCTION

1. E Obtain written permission from the adjoining property owners for offsite grading and/or construction, if any.

2. B Install construction fencing and screening in accordance with Building and Safety Division Policy 335.

3. C Reconstruct existing public improvements removed or damaged during construction. Pavement repair, which may include A.C. overlay, T-cut trench repair, and/or slurry seal after removal of existing striping shall be across all or a portion of damaged pavement caused by this project as determined by the City Engineer.

4. C Coordinate, and where necessary, pay for the relocation of any existing public utilities, as necessary. Reserve by separate instrument the required easements for those relocated public utilities.

5. C Provide all utility services to each building, including sanitary sewers, water, electric power, gas (if required), cable TV, internet, and telephone. All utilities listed under Highland Municipal Code Section 16.40.380 (A) are to be underground per Ordinance 315.

6. E Comply with applicable requirements of the National Pollutant Discharge Elimination System (NPDES) permit program. Provide written verification from the Regional Water Quality Control Board specifying the project's WDID number.

7. B Destroy any abandoned wells on the property or similar structures that might result in contamination of underground waters in a manner approved by the City Engineer.

8. B All underground structures, except those desired to be retained, must be broken in, backfilled, and inspected before covering.

9. D Comply with the prevailing City design and construction standards and requirements at the time of permit issuance.

10. B Design and construct a trash enclosure per City Std. 700.

11. B Install telephone, cable television, and internet enclosures underground whenever the underground installation is an available option offered by the utility companies. If the underground installation is not an available option and utility enclosures must be installed above ground, install the above-ground utility enclosures and any flush mount utility enclosures at locations where construction of retaining walls will not be necessary for compliance with the setback requirements of the utility companies.

12. C Submit a Composite Utility Plan indicating the location of all above ground and flush mount water, electric, cable TV, internet, and telephone utility structures prior to City issuance of utility permits.

Building and Safety Division Conditions of Approval

Date:	January 16, 2023
Project:	176,066 sq/ft warehouse building
Applicant:	Patriot USICVI 5th Street, LLC
Site Location:	East Side of Victoria between 3rd and 5th St.
Project Numbers:	**CUP:** 22-014 **DRA:** 22-022, **VAR:** 22-006, **TPM:** 20621
APN(s):	1192-551-01 to 07 and 1192-551-12 to 15

1. Please provide the following number of construction plans and documents listed below for the first review of the proposed project. The initial plan review time will take two weeks on most projects. The applicant will receive an application number at the time plans are submitted for Building & Safety's plan review. This number is needed to obtain information regarding your project.

    (3) Architectural Plans
    (3) Condition of Approval from all departments:
    To be included in Architectural plan set at plan submittal
    (3) Structural Plans
    (2) Structural Calculations
    (3) Plot/Site Plans
    (3) Electrical Plans
    (3) Electrical Load Calculations
    (3) Exiting Plans
    (3) Plumbing Plans/Isometrics
    (3) Mechanical Plans
    (3) HVAC Duct Layout Plans
    (2) Roof and Floor Truss Plans
    (2) Title 24 Energy Calculations
    (2) Soils Report
    (3) Precise Grading Plans
    * Grading, Photometric, or Landscape Plans:
    Please mark "FOR REFERENCE ONLY"
    (3) Site Disabled Access Plan
    (3) Temporary Fence Plan
    (1) Approved Health Department Plans (as applicable)
    (1) Fire Flow Test - with hydrant location dimensioned on the site plan
    (2) Energy Commissioning Plan

2. All structures shall be designed in accordance with the current version of the California Building Codes (2022), including the California Green Building

Standards Code. Design all structures to Risk Category II at exposure "C" (ASCE7-16), and Energy Climate Zone 10.

3. All onsite utilities are to be underground. As approved by the Planning Division, utility cabinets and transformers are exempt.

4. Construction projects requiring fire permits must apply and submit fire plans prior to the issuance of the building permit, including fire sprinkler submittals.

5. Building and Safety does not release all meters until final approvals are obtained from all agencies and departments. Policy 295.

6. It has come to the City's attention that premature failures have occurred in copper piping when used within the City of Highland, particularly east of City Creek. Property Owners, Contractors and Developers are advised to analyze soil and water compositions when considering the type of pipe material to be utilized. City staff makes no recommendations on which Plumbing Code approved products or methods to be utilize, this is the responsibility of the property owner or contractor. Alternate unapproved code materials may be submitted for City approval at the time of plan submittal via an alternate material and methods application.

7. The Developer/Owner is responsible for the coordination of releasing any Deferral of Development Impact Fees or Bonds after such fees have been paid. The Developer/Owner should be aware, once the deferral notice is sent to the San Bernardino County Recorder's Office; the release process takes two to three weeks. This process will delay final Certificates of Occupancy.

8. The Developer/Owner is responsible for the coordination of the final occupancy. The Developer/Owner shall request clearances from each department and/or agency at least two weeks prior to requesting a final building inspection from Building and Safety. Each agency shall sign the back of the Building and Safety Job Card, or provide agency approved signed documentation, and provide a copy of the signatures to Building and Safety at the time the final inspection is requested.

9. Building and Safety inspection requests must be made by 4:00 pm. on the previous City working day to receive a next business day inspection. Please contact (909) 864-2136, Ext 228.

10. Construction activities shall not commence prior to 7:00 a.m. and shall terminate no later than 7:00 p.m. Monday through Saturday with no construction activities preformed during city or Federal Holidays. (Ordinance 420 HMC) unless restricted further by environmental review mitigation.

11. A security fence with screening shall protect all construction sites. The fencing and screening shall be maintained at all times to protect pedestrians. All development projects shall submit a construction fencing plan with the construction design plans. Construction projects that have phased occupancy shall be completely separated by a construction fence that is screened and show the adjusted fence locations at each phase.

12. On site toilet facilities shall be provided for construction workers and such facilities shall be maintained in a sanitary condition. Construction toilet facilities of the non-sewer type shall conform to ANSI ZA.3 and on site per NPDES stormwater requirements.

13. All construction materials, which are not used, shall be recycled pursuant to the requirements set forth by Ordinance No. 269. Receipts from the recycle company responsible for picking up the materials shall be kept in the construction office. After the construction is complete and before final occupancy, the trash receipts shall be forwarded to the City Public Services division.

14. Construction projects, requiring temporary electrical power, shall obtain an electrical permit from Building and Safety. No temporary electrical power will be granted to a project unless the following item is in place and approved by Building and Safety and the Planning Division.

    a) Installation of a construction trailer through the "Temporary Occupancy Permit", alternatively, a security fenced area where the electrical power will be located. Installation of construction/sales trailers must be located on private property. No trailers can be located in the street unless a permit from the Engineering Department is obtained.

15. Prior to the issuance of Building Permits, on site water service shall be installed and approved by the responsible agency. On site fire hydrants shall be approved by the Fire Department. No flammable materials will be allowed on the site until the fire hydrants are established and approved. No flammable construction materials shall be placed on the site without approvals by the Fire Department. All street and access roadways around the project shall be paved for emergency response vehicles before flammable materials are placed on the project. Fire flow tests shall be obtained by East Valley Water District.

16. The building is to be connected to the public sewer system, when provided. When the public system is not available, an onsite septic system is to be installed. Please provide Building Staff with a will-not/sewer not available letter from EVWD and an approved septic system design from the Santa ana Regional Water Quality Control Board (please contact Susan Beeson at (951) 782-4902). An approved design with percolation test will be required to

be submitted to Building & Safety for separate review and permitting prior to issuance of a building Permit.

17. Prior to issuance of building permits, site-grading certifications, compaction reports, and survey report shall be submitted to Building and Safety or to Public Works, as applicable.

18. Prior to issuance of building permits, provide a receipt from the appropriate Unified School District stating that all school fees have been paid. (San Bernardino Unified School Districts)

19. Prior to final inspection, provide Building & Safety with a flash disk of the approved plans and documents.

20. Final approvals from all applicable outside agencies and internal departments and divisions are required prior to Building and Safety permit final and occupancy approval.

21. All construction projects shall comply with the NPDES Stormwater Best Management Program. Prior to building permit issuance submit copy of the Water Quality Management Program Report. (WQMP)

22. All deferred plan items are to be identified on the plans cover sheet.

23. Site development and grading shall be designed to provide access to all entrances and exterior ground floor exits and access to normal paths of travel. The accessible route(s) of travel shall be the most practical direct route.

24. All dead and removed trees and foliage is to be properly removed from the site.

25. The City enforces the State of California provisions of the California Building Code disabled access requirements. The Federal Americans with Disabilities Act (ADA) standards may differ in some cases from the California State requirements; therefore, it is the building owner's responsibility to be aware of those differences and comply accordingly.

26. At the time of submittal for plan review, projects meeting the requirements under Section 5.410.2 and Section 5.410.2.3 of the California Green Building Standards Code shall submit a Commissioning Plan.

27. Prior to final inspection, provide Building & Safety with a flash disk of the final approved amended plans and documents.

Comments pertaining to the project/ preliminary drawing plans:

28. Demolition permits shall be obtained for all structures to be demolished.

29. For the removal of any storage tanks, or other excavations involving backfill, a compaction shall be filed with the Building Division. Any Fuel storage tank removal would require notification of San Bernardino County Fire, Hazardous Materials and San Bernardino County Environmental Health Department.

30. Building Permits may not be issued for any construction until annex of parcel APN 1192-551-01-0000 is approved by Local Agency Formation Commission. (LAFCO)

City of Highland, **FIRE PREVENTION DIVISION,** Conditions of Approval.

DATE : **January 9, 2023**

APPLICANT : **Patriot USICVI 5th Street, LLC**

ADDRESS : **E Victoria Ave Between 3rd & 5th Street**

SITE LOCATION: 1192-551-01, 02, 03, 04, 05, 06, 07, 12, 13, 14,15.

FILE / INDEX No.: CUP #22-014/DRA #22-023/VAR #22-006/ TPM #20621

A tiered level of mitigation options has been developed and listed below are the systems and/or modifications required for your project. Compliance of the following items are a condition of **FINAL OCCUPANCY APPROVAL**. These conditions are required as acceptable solutions to the adverse fire conditions impacting firefighting and emergency operations accompanying the site/area. They will either assist in detection and extinguishment of the fire and/or facilitate the anticipated emergency operations.

This project is protected by the City of Highland Fire Department / Cal-Fire / California Department of Forestry and Fire Protection. Prior to any construction occurring on any parcel, the applicant shall contact the city of highland fire marshal office for verification of current fire protection development requirements. All new construction shall comply with the currently adopted California Fire Code and all applicable statutes, appendices, codes, ordinances, standards and policies of the City of Highland Fire Department/ Fire Prevention Division / Cal-Fire / California Department of Forestry and Fire Protection.

Fire Department Review of all projects is required.

ALL CONSTRUCTION (New and renovations to existing) SHALL COMPLY WITH THE CALIFORNIA FIRE CODE Along with amendments as adopted within the Highland Municipal Code (Ord. #411).

Note: All weather access roads (CFC) and fire hydrant/water system installations shall be in place, inspected and approved, **PRIOR** to combustible material being brought on site.

Note: The City of Highland has 2 areas within the **'FIRE SAFETY OVERLAY DISTRICT'** designated as **FR-1** and **FR-2**. Both areas may border or overlap areas identified by the State/CalFire as **'High Fire Severity Zone'** or **'Very High Fire Severity Zone'**. See **HMC** for construction requirements.

GENERAL.

1. **HF3:** A fuel break of one hundred (100) feet (brush and weed clearance) is required prior to construction. The clearance shall be maintained on a year-round basis. **CFC & HMC**

2. **HF6:** Prior to delivery of combustible building materials, the entire fuel modification zone, as approved by the fire department shall be completed. Any phased implementation of the fuel modification zone shall be done only with **prior** approval of the fire department. **CFC / CBC / HMC**

3. **HF31:** Approved fire hydrant pavement markers (blue dots) shall be installed at every hydrant.

4. **HF40:** Where an automatic extinguishing system or standpipe system is in place, system shall be serviced and maintained in operating condition according to NFPA and California State Fire Marshal requirements. **T19; CFC; NFPA**

5. **HF51:** The main electrical panel and all sub-panel(s) shall be labeled on inside cover for all circuits. **CEC**

6. **HF52:** Water heater (fuel fired), shall be properly vented to exterior of structure. Water heater shall be seismic strapped to wall and be located 18" above a garage floor. **CBC**

7. **HF55:** Commercial exit requirements:
   - A. Required exit doors shall be maintained in an operable condition at all times
   - B. Required exit doors shall swing outward and away in the direction of exit travel.
   - C. Obstructions shall not be placed in the required width of an exit. Exits shall not be blocked or locked shut or obstructed in any manner during business hours.
   - D. Exit paths shall be illuminated when structure is occupied.
   - E. Exit path illumination shall be supplied from two (2) sources of power when occupant load is one hundred (100) persons or more.
   - F. When exit way/exit pathway and/or exit doorway is not easily identified, additional exit signs shall be installed.
   - G. Exit signs shall be internally or externally illuminated by two lamps or shall be of the self-luminous type. **CFC; CBC**

8. **HF60:** Additional plans for access, fire safety systems, fire lanes and signage, gates, storage, or other special conditions may be requested for review, conditioning and approval by the fire marshal.

9. **HF56:** All flammable and combustible liquid storage and dispensing shall be in accordance with applicable sections of the **CFC, T-19** and city codes and ordinances.

ACCESS:

10. **HF7:** Fire department **access** roads shall meet the fire dept. minimum unobstructed width of twenty (20) feet. (twenty-six (26) feet within FR-1&2 zones). **This standard shall not lessen other agency requirements.** Access roads shall be paved (asphalt/concrete) and in place **prior** to delivery of combustible building materials on site. Roads shall be designed and constructed to meet adopted city standards. **CFC**

11. **HF10:** Driveways exceeding 150 feet shall have a fire department approved turn-around at the terminus. **CFC / APPENDIX D**

12. **HF11:** Fire department access roadway(s) and/or public/private street(s) exceeding one hundred fifty **(150)** feet in length shall provide an approved turn-around at the terminus (**cul-de-sac**). Minimum radius shall be **not less than forty (40)** feet. Or as approved by the fire marshal. Cul-de-sacs providing access to perimeter emergency access roads shall have a minimum radius of forty four **(44)** feet. **CFC / APPENDIX D, SBCO TRANSPORTATION STD**

13. **HF12:** Fire department access roadway(s); public/private street(s) and driveways shall not exceed 12% grade. **CBC / APPENDIX D, HMC**

14. **HF13:** Fire department access roadway(s); shall extend to within one hundred fifty (150) feet of and shall give reasonable access to all portions of the exterior walls of the first story of any building.
    An access road, approved by the fire dept., shall be provided to within fifty (50) feet of all structures when the natural grade between access road and structure is in excess of 30%.
    Where an approved access road cannot be provided, a fire protection system shall be required and approved by the fire department. **CFC**

15. **HF15:** "Phased" projects may be required to provide a minimum of two (2) remote points of approved access during construction. A secondary access, for fire and other emergency equipment and for routes of escape, which will safely handle evacuations. **CFC - APPENDIX D**

16. **HF19:** **Manually** operated gates across fire department access roadways, public and/or private streets and driveways, shall be equipped with approved emergency key-operated **"KNOX"** padlock or box containing key to open the private lock. For **automatic** gates, a "KNOX" emergency access switch, shall be installed, at location determined by fire department, and shall over-ride all command functions and open gate automatically upon activation. All automatic

gates shall have a manual over-ride for use during loss of electric power. "KNOX BOX" request form is available from the fire marshal or may be ordered directly from www.knoxbox.com (specify City of Highland, CA) **CFC – Appendix D Note: The city of Highland also requires an electronic "H" key system (Ord. #320) for multi-family, gated communities or secured storage facilities. HMC**

17. **HF24:** "NO PARKING – FIRE LANE" signs shall be posted at locations designated by fire marshal. Fire lane curbs shall be painted red, with white letters stating, "NO PARKING – FIRE LANE" on top, not face. **CFC - APPENDIX D**

18. **HF54:** commercial and industrial structures-occupancies and gated complexes shall have a **"KNOX BOX"** system installed on the exterior of the building(s) or complex. location of device to be determined by the fire department. The box shall contain keys necessary to gain access and may contain pre-plans and MSDS information as required by the fire department. New and existing multi-tenant commercial buildings shall provide a 'KNOX' box large enough to contain keys to access each individual tenant space. Installation location(s) to be determined by the fire marshal. The box shall contain clearly marked keys to each tenant space or other areas as determined by the fire marshal. **CFC**

19. **HF61:** Aerial fire apparatus access roads. **Where required:** buildings or facilities **exceeding 30-feet** in height above the lowest level of fire dept. Vehicle access shall be provided access roads capable of accommodating aerial apparatus. **Width:** aerial apparatus access roads shall provide a minimum unobstructed width of **26-feet** in the immediate vicinity of any building exceeding 30-feet in height. **Proximity to buildings:** aerial apparatus access roads shall be located a minimum of 15-feet to a maximum of 30-feet from the building, and shall be positioned parallel to one entire side of the structure, as approved by the fire code official. **CFC APPENDIX D**

WATER:

20. **HF25:** Minimum required fire flow, as determined by i.s.o. formula, is as follows: **COMMERCIAL**; GPM = 3000; at 20 psi residual; for 3 hour duration.
System shall be looped with minimum eight (8) inch mains; six (6) inch laterals, six (6) inch risers; six (6) inch dia. Hydrants with two 2 ½" outlet(s) and one 4" outlet. **CFC APPENDIX B AND C**

Note: Hydrants shall meet EVWD standards.

Note: Existing fire hydrants (off-site) can be included if they meet spacing requirements. Hydrants shall not be located at the 'bulb' end of cul-de-sacs.

21. **HF26:** Two sets of water delivery system plans, designed to meet the required fire flow for this project and/or development, shall be submitted to the fire department for review and approval. **CFC**

22. **HF27:** Applicant-developer shall provide a letter from the water company serving the project-development, verifying financial arrangements have been made and bonded for the required water improvements. **CFC**

23. **HF28:** Fire hydrants shall be installed, inspected and operational as per approved water system delivery plans **prior** to any framing, construction or delivery of combustible materials to project site. **CFC / CFC**

24. **HF30:** Private, on site fire hydrant(s) – yard hydrant(s)- capable of supplying required fire flow shall be installed at location(s) identified by the fire department. System shall be looped with minimum eight (8) inch mains; six (6) inch laterals, six (6) inch risers; six (6) inch dia. hydrants with one 2 ½" outlet and one 4" outlet. **CFC / APPENDIX B AND C**

25. **HF32:** A temporary water storage and delivery system for use during grading and foundation work (no combustible material), meeting fire dept. Fire flow requirements shall be installed prior to framing construction or delivery of combustible materials to project site. **CFC; NFPA – 1142**

26. **HF33:** In areas without water-serving utilities, a water storage and delivery system for permanent use, shall be based on nfpa-1142 and the California Fire Ccode. The system shall be a minimum storage capacity of 5,000 gallons or an approved nfpa-13. 13d or 13r automatic fire sprinkler system with 10 minute storage. Fire suppression system shall be installed prior to construction and shall be maintained as a condition of occupancy. **NFPA – 1142**

27. **HF38:** Approved fire hydrant(s) capable of supplying required fire flow, shall be provided to all premises upon which facilities, buildings or portions of buildings are constructed or moved within the jurisdiction. When any portion of the facility or building protected is in excess of 150 feet from a fire hydrant on a public street, as measured by an approved route around the exterior of the facility or building, additional fire hydrants or on-site fire hydrants, meeting the required fire flow, shall be provided. **CFC APPENDIX B AND C**

ADDRESSING – IDENTIFICATION:

28. **HF21:** **Commercial** and **multi-family residential** address numbers shall be displayed on all **new and existing** structures in such a manner as to be plainly visible and legible from the access roadway or street. Numerals shall be of a contrasting color to the building and electrically illuminated.

Minimum size of the numerals shall be **8"** height, 3/4" stroke, or as approved by the fire marshal.
Industrial occupancies shall have address numbers of 12" height, 1" stroke and shall be electrically illuminated so as to be visible and legible from access roadway or street.
Note: Depending on height and setback of a building, larger numerals may be required and at additional locations on the building, as determined by a case-by-case review.
HMC

29. **HF22:** Commercial-retail structures with rear access shall display address numbers on rear entry doorways, **4"** in height, 1/2" stroke, on contrasting background. **CFC**

FIRE PROTECTION & ALARM SYSTEMS:

30. **HF36:** Automatic fire sprinklers shall be installed according to **NFPA 13** and fire dept. requirements. Submit three **(3)** sets of shop plans with material cut sheets and hydraulic calculations, indicating the type of occupancy, type of materials to be stored (if any), for fire dept. review and approval prior to any installation. Submit copy of California C-16 license. **CFC; CBC; HMC**

31. **HF37:** Automatic fire sprinkler control devices (P.I.V & O.S.&Y.) Shall be visible from fire dept. access roadway, and identify system being controlled and address of structure.
Fire Dept. Connection (FDC) shall be located no closer than forty (40) feet and not to exceed one hundred fifty (150) from structure. Required fire hydrant shall have a maximum distance from FDC of thirty (30) feet. FDC shall identify address and system of structure being protected. **CFC**

32. **HF41:** A minimum of one 2A-10BC fire extinguisher shall be installed for each 3,000 sq.ft. of floor area. Travel distance to any one fire extinguisher shall not exceed 75 feet. Additional fire extinguishers, size and class to be determined by fire department, may be required. Fire extinguishers shall be serviced bi-annually and shall have a current State Fire Marshall service tag attached. Fire extinguishers are to be serviced every two years and inspected & tagged every year. **CFC; NFPA**

33. **HF43:** An automatic fire detection and alarm system meeting the requirements of CFC 907, CBC and NFPA 72 shall be installed. Three (3) sets of shop plans with material cut sheets and calculations shall be submitted to the fire department for review and approval prior to installation. **CFC; CBC; NFPA**

34. **HF58:** A class I standpipe system and/or fire hose cabinet(s) shall be installed on all levels of parking structures. Standpipes/cabinets shall be installed in such a manner that no portion of each level will exceed the reach of the hose stream.

35. **HF59:** Commercial and industrial buildings, in excess of 20,000 square feet, and with an interior area more than 150 feet from exterior exit, shall be equipped with a class I standpipe system. Standpipe connections shall be configured to reach any portion of interior space within 150 feet in any direction of travel. This system shall be calculated to provide 500 GPM from an adjacent automatic fire sprinkler riser at 100-psi nozzle pressure for two hand lines flowing.

36. **HF60:** California Fire Code, **FIRE SAFETY DURING CONSTRUCTION AND DEMOLITION**, shall apply to this project. it is the responsibility of the project manager to meet with the fire marshal to discuss requirements specific to this project.

37. **HF63**: Submit to fire marshal's office: **one copy** of building and/or structure plans for fire department review.

Craig Sanchez, Fire Marshal

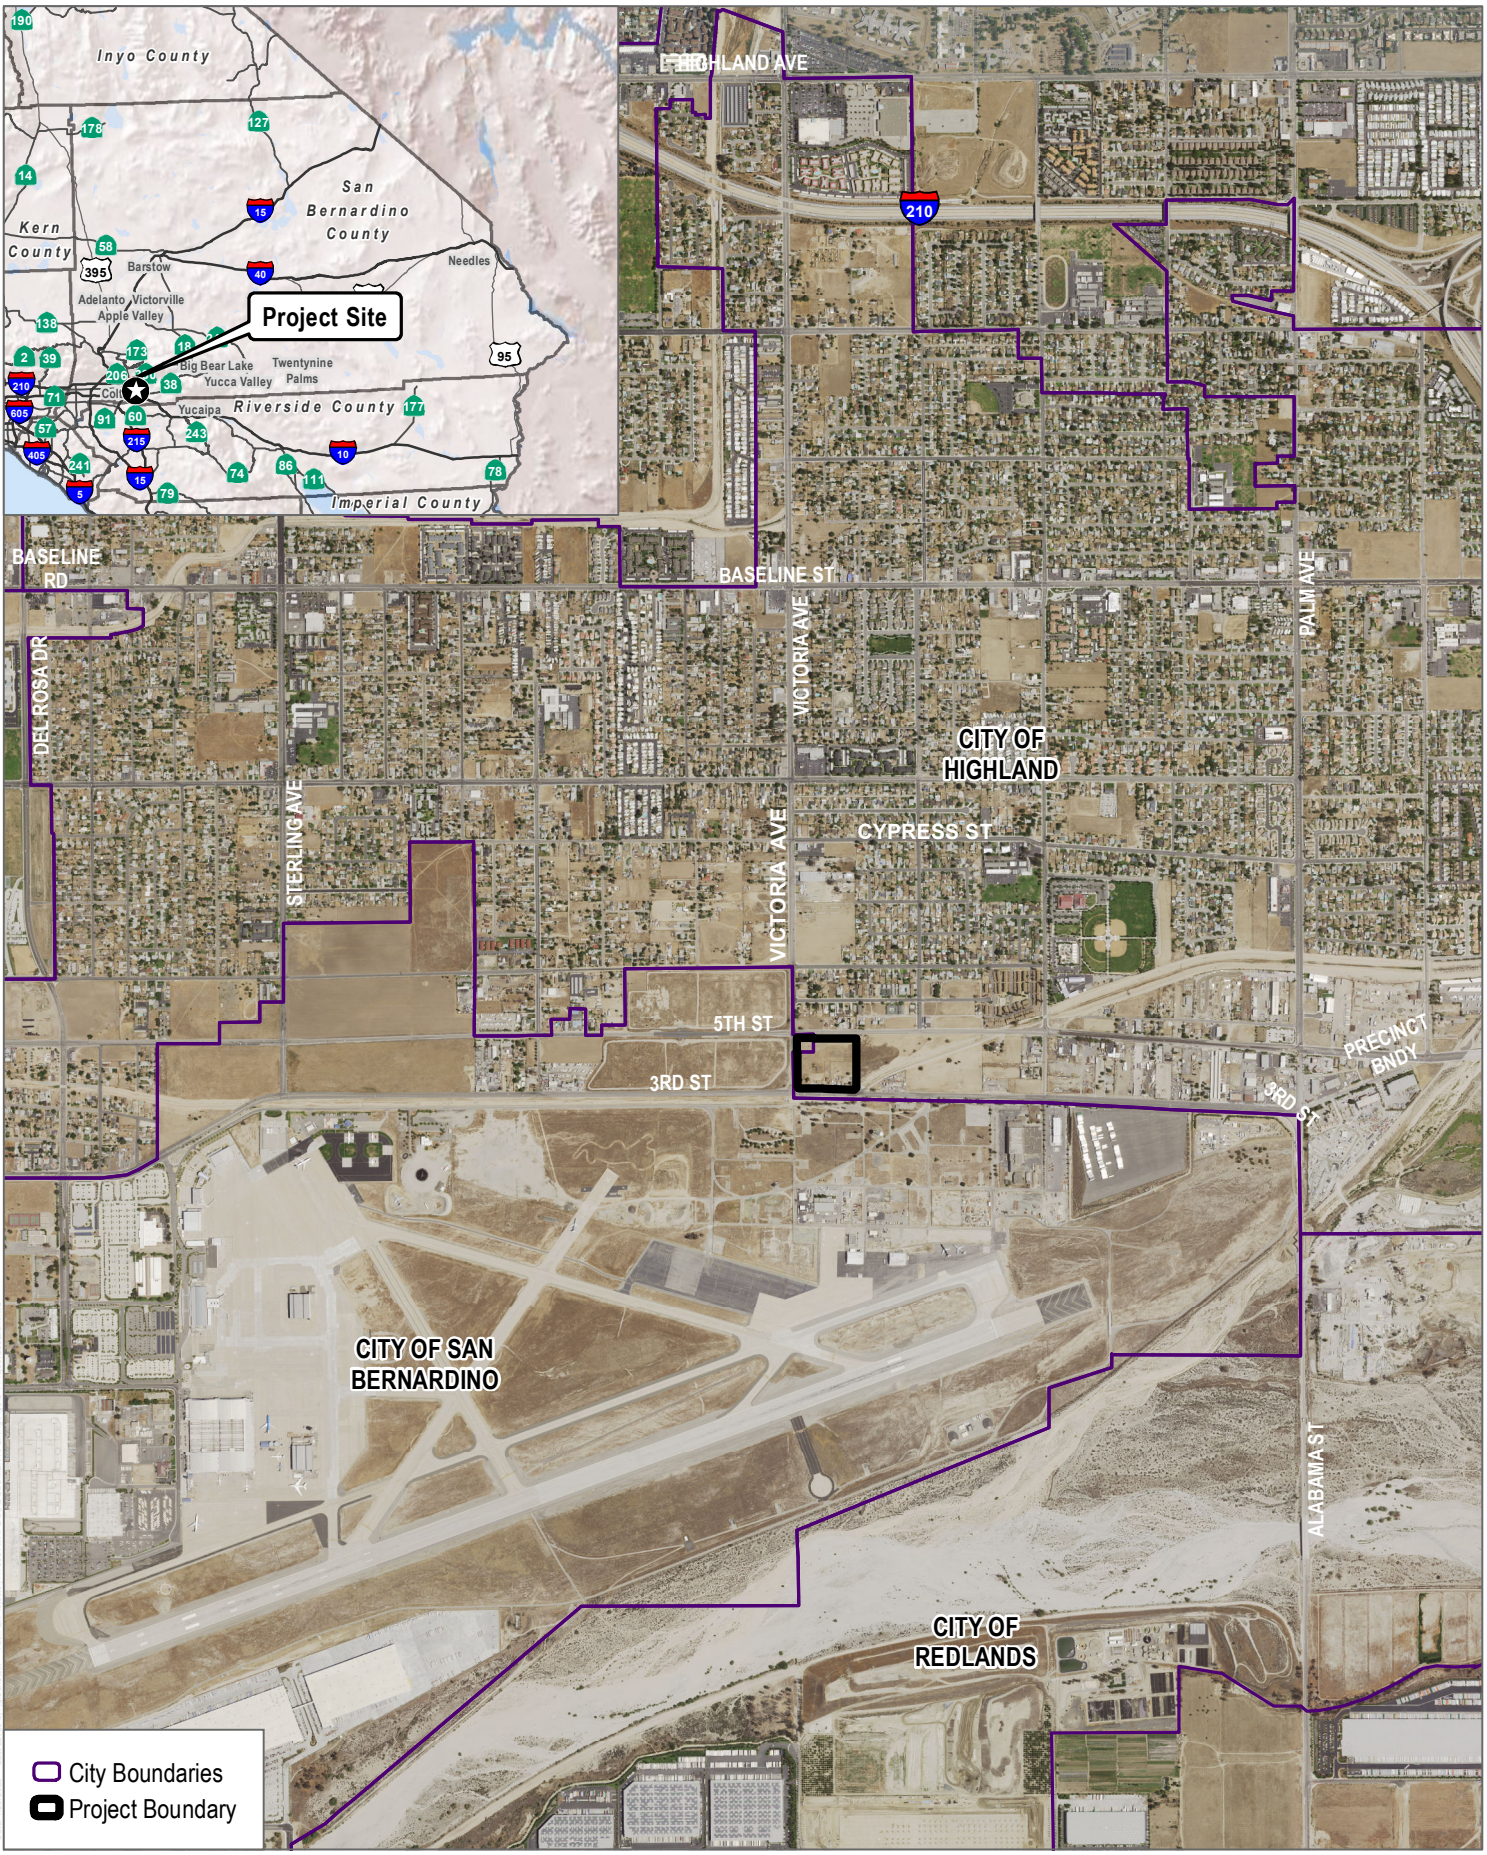
MEMORANDUM

To:	Kim Stater, City of Highland
From:	Sabita Tewani, AICP, PTP, Transportation Planner Dennis Pascua, Transportation Services Manager
Subject:	Parking Study for the 5th Street and Victoria Avenue Warehouse Project, City of Highland
Date:	June 28, 2023
cc:	Alexandra Martini, Project Manager
Attachments:	Attachment A – Site Plan Attachment B – Parking Ratios at Other Patriot Developments Attachment C – Driveway Counts and Parking Demand Worksheets

The following parking study has been prepared for the proposed 5th and Victoria Street Warehouse project (project) in the City of Highland (City). Figure 1 illustrates the regional and project location.



The proposed project is a warehouse located along the southwestern border of the City, north of the San Bernardino International Airport and the City of San Bernardino. Table 16.52.030.A in Section 16.52.030 of the Highland Municipal Code (Code) identifies the following off-street automobile parking space requirements for the following land uses applicable to the project:

- *E.3. Warehouse and distribution: 1 space per 1,000 gross feet of floor area devoted to warehousing plus the required amount of parking for gross square footage devoted to other uses.*
- *B.3.I.i. Offices – Administrative, business, professional: 1 space per 250 gross feet of floor area.*

Furthermore, in the case that the project would not be able to provide the Code's required number of spaces, per Section 16.52.020, a decrease in the number of required spaces may be granted through the approval of a variance:

- *F.2. A decrease in the number of spaces required by the schedules for provision of off-street parking and loading spaces and bicycle facilities contained in HMC 16.52.030 and 16.52.040 may be granted under the circumstances identified in HMC 16.52.050, or by the approval of a variance.*

The purpose of this parking study is to determine whether the project will provide an adequate parking supply based on the City Code's parking requirement. In addition, in the event the project could not meet the City's Code parking requirement, the City is allowing a parking demand analysis to be conducted to determine whether adequate parking would be supplied on site, subject to the City's review and approval. The parking demand analysis is based on the observed parking demand of four existing warehouses that are of similar use and comparable size to the proposed project. Two of the warehouses are located within three miles of the project site

FIGURE 1

Project Location

5th Street and Victoria Avenue Warehouse Project

were surveyed in 2021. Two additional warehouses were surveyed in May 2023 per City's request which was to include additional warehouses in the cities of Ontario and/or San Bernardino to validate the findings of observed low parking demand at these warehouse facilities.

Project Location and Description

The project site is located at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Avenue, south of 5th Street. Regional access to the project area is provided by Interstate (I-) 10 to the south, I-215 to the west, and State Route (SR) 210 to the east. Local access to the project site would be via 5th Street, 3rd Street and Victoria Avenue.

The project proposes to construct a 173,976-square-foot (gross area, inclusive of mezzanine/office spaces), one-story warehouse building on an approximately 7.08-acre site. The warehouse building would be composed of approximately 161,976 square feet of warehouse space and 12,000 square feet of mezzanine/office space. The parking supply for passenger vehicles would be a total of 79 spaces, consisting of 56 standard spaces, 2 accessible spaces compliant with the Americans with Disabilities Act (ADA), 2 van accessible stalls, 1 vanpool parking space, 2 electric vehicle (EV) only parking spaces, 14 future EV charging only spaces, 1 EV charging van ADA space and 1 EV charging ADA space. The site plan is provided in Attachment A.

Municipal Code Parking Requirements

The Code parking requirement for the project was calculated by utilizing the off-street parking requirements established in the Code. Section 16.52.020 of the Highland Municipal Code states that where calculations yield a fractional space, the fraction shall be rounded to the next lower whole number. Table 2 provides the parking requirements for the proposed project per Section 16.52.030 of the Highland Municipal Code.

Table 1. Parking Requirements per Highland Municipal Code

Land Use	Size	City of Highland Parking Rates	Parking Requirement
Warehouse	161,976 SF	1 space per 1,000 SF of floor area	161 spaces
Office/Mezzanine	12,000 SF	1 space per 250 SF of floor area	48 spaces
Total	**173,976 SF**		**209 spaces**

Notes: SF = square foot

As shown in Table 1, the project would require a total of 209 parking spaces per the Code. This results in an aggregate rate of 1 space per 832.4 SF (173,976 SF ÷ 209 spaces). As previously indicated, the parking supply for passenger vehicles would be a total of 79 spaces. Therefore, the project would not meet the City's parking requirements per the Code and would have a shortfall of 130 spaces.

Municipal Code Parking Requirements for Other Cities

Parking requirements established in nearby City Codes are summarized in Table 2 to provide a comparison to those established by the City of Highland. For each jurisdiction analyzed below, according to each jurisdiction's municipal code, where calculations yield a fractional space, the fraction shall be rounded up to the next whole number. As stated above, the City of Highland requires fractional spaces to be rounded to the next lower whole number. As

shown in Table 2, the City of Fontana provides the least conservative parking requirements for warehouse land uses, while the City of Highland provides the most conservative parking requirements.

Table 2. Parking Requirements per Various Cities' Municipal Codes

Jurisdiction	Required Parking Rates per Municipal Code	Estimated Required Parking of Proposed Project[1] in other Jurisdictions
Rancho Cucamonga	**Warehouse/Storage:** 1 per 1,000 sf for first 20,000 sf; 1 per 2,000 sf for the next 20,000 sf; and 1 per 4,000 sf for the remaining sf	61
	Office & administration: 4 per 1,000 sf	48
	Total	**109**
	Required Parking Ratio for Project in Rancho Cucamonga (Spaces/TSF)	**0.627**
Fontana	**Warehouse/Distribution/Logistics:** One parking space is required for each 1,000 square feet of gross floor area for the initial 20,000 square feet; one parking space is required for each 2,000 square feet of additional gross floor area for the next 20,000 square feet; and one parking space is required for each 5,000 square feet of additional gross floor area over 40,000 square feet.	47
	Professional or Unspecified Office: One parking space is required for each 250 square feet of gross floor area	48
	Total	**105**
	Required Parking Ratio for Project in Fontana (Spaces/TSF)	**0.604**
Perris	**Warehousing:** One space per 1,000 square feet of gross floor area for the first 20,000 square feet and one space per 2,000 square feet for that portion over 20,000 square feet	91
	Professional offices: One space for every 300 square feet	40
	Total	**131**
	Required Parking Ratio for Project in Perris (Spaces/TSF)	**0.753**
Moreno Valley	**Warehouse and distribution:** 1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the second 20,000 sq. ft.; 1/ea. 4,000 sq. ft. of gross floor area for areas in excess of the initial 40,000 sq. ft.	61
	Business and professional offices: 1/250 sq. ft. of gross floor area	48
	Total	**109**
	Required Parking Ratio for Project in Moreno Valley (Spaces/TSF)	**0.627**
Ontario	**Warehouse and distribution:** 1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the portion over 20,000 sq. ft.	**91**
	Office area: 1/250 sq. ft. of gross floor area	**48**
	Total	**139**
	Required Parking Ratio for Project in Ontario (Spaces/TSF)	**0.80**
City of San Bernadino	**Industrial/warehousing:** 1 space /250 sq ft for 1-3,000 sq ft; 1 space / 500 sq ft for 3,001 - 5,000 sq ft., 1 space / 750 sq ft for 5,001 - 10,000 sq ft., 1 space / 1000 sq ft for 10,001 - 50,000 sq. ft. and 1 space / 1,250 sq ft for 50,001+ sq ft.	**163**
	Required Parking Ratio for Project in City of San Bernardino (Spaces/TSF)	**0.80**

Table 2. Parking Requirements per Various Cities' Municipal Codes

Jurisdiction	Required Parking Rates per Municipal Code	Estimated Required Parking of Proposed Project[1] in other Jurisdictions
Redlands	**Automated Warehouse:** 1 space/1,000 sq. ft. of gross floor area or 1 space/each employee on the largest shift, whichever is greater (Requirement may be reduced if applicant submits letter justifying reduction of spaces; however, adequate area for expansion of parking shall be provided in case of conversion of use.)	**174**
	Required Parking Ratio for Project (automated) in Redlands (Spaces/TSF)	**1.00**
	Warehouse: 1 space/500 sq. ft. of gross floor area up to 20,000 sq. ft; 1 space per 1,000 sq. ft. over 20,000 sq. ft.	**194**
	Required Parking Ratio for Project in Redlands (Spaces/TSF)	**1.11**
Highland	**Warehouse and distribution:** 1 space per 1,000 gross sq. ft. of floor area devoted to warehousing plus the required amount of parking for gross square footage devoted to other uses	161
	Administrative, business, professional: 1 space per 250 gross ft. of floor area	48
	Total	**209**
	Required Parking Ratio for Project in Highland (Spaces/TSF)	**1.201**

Notes: sf/sq. ft. = square foot; TSF = thousand square feet
[1] The proposed project consists of 161,976 SF warehousing and 12,000 SF office-related uses.

A review of these parking requirements per various cities is provided for informational purposes. The parking demand analysis used in determining the adequacy of project's parking supply is discussed in the next section. Additionally, parking supplies provided for other nearby warehousing projects developed by Patriot Development Partners (Patriot) are summarized in Attachment B.

Parking Demand Analysis

As noted above, in the event the project could not meet the City's Code parking requirement, the City is allowing a parking demand analysis to be conducted to determine whether adequate parking would be supplied on site, subject to the City's review and approval. The following parking demand analysis demonstrates whether the project can accommodate peak parking demand, based on the peak parking demand observed at four existing warehouses similar in capacity and located in the Inland Empire.

Parking Surveys

The following four existing occupied warehouses were chosen to be surveyed for parking demand:

- 1295 Central Avenue, San Bernardino, CA 92408: an approximately 296,725 SF warehouse (Fender Warehouse), located on the southeast corner of Central Avenue/Tippecanoe Avenue. This facility has 197 passenger vehicle parking spaces and is parked at 1 space per 1,506 SF.
- 27081 Almond Avenue, Redlands, CA 92374: an approximately 326,920 SF warehouse (2AM Logistics BMW Parts Distribution Center), located on the southeast corner of Nevada Street/Almond Avenue. This facility has 174 passenger vehicle parking spaces and is parked at 1 space per 1,879 SF.

- 550 S. Campus Avenue, Ontario, CA 91761: an approximately 102,855 SF warehouse, located on the northwest corner of Campus Avenue/Sunkist Street intersection. The parking spaces are not clearly marked in this warehouse site.
- 1455 Research Drive, Redlands CA 92374: an approximately 145,800 SF warehouse located west of Research Drive, north of Lugonia Avenue and south of Almond Avenue. This facility has 133 passenger vehicle parking spaces and is parked at 1 space per 1,096 SF.

It should be noted that the building square footages of the existing warehouses were estimated using aerial photography and were determined to be occupied and in operation based on site observations. Figure 2 shows a close-up view of the 1295 Central Avenue warehouse layout, and Figure 3 shows a close-up view of the 27081 Almond Avenue warehouse layout. Additionally, figure 4 shows a close-up view of the 550 S. Campus Avenue warehouse layout, and Figure 5 shows the close-up view of the 1455 Research Drive warehouse layout.

To determine the on-site parking demands of the warehouses, Dudek contracted with a qualified traffic/ parking data collection firm to conduct hourly vehicle counts at the driveways of the two warehouses. The driveway counts accounted for vehicles entering and exiting all project driveways every 15 minutes, over a 24-hour period for two typical weekdays of a non-holiday week. The driveway counts were conducted at the sites in February 2021 and May 2023. Raw driveway count data collected for the for the warehouses is provided as Attachment C to this memorandum.

The peak parking demand at the 1295 Central Avenue and 27081 Almond Avenue sites was derived by subtracting the number of vehicles exiting the site and adding the number of vehicles entering the site at each driveway for each 15-minute increment over the 24-hour period to the assumed baseline. Baseline parking space occupancy was calculated for the beginning of each survey period (12:00 a.m.) by determining the number of vehicles that would not result in "negative occupied spaces" at any time throughout the survey. For example, the 1295 Central Avenue Warehouse experienced the greatest net loss of vehicles throughout the survey period (31 vehicles) between 12:00 a.m. and 2:30 a.m. on Tuesday, February 2. After 2:30 AM, the rate at which the number of vehicles entering the site begins to exceed those exiting. Therefore, a baseline of 32 vehicles (31 vehicles plus 1 residual) was assumed to already occupy spaces at the project site at the beginning of the survey period. The same methodology was applied to each day at both warehouses.

However, for the warehouses on 550 S. Campus Avenue and 1455 Research Drive, one vehicle was assumed to already occupy space at each warehouse site at the beginning of their survey periods. Worksheets detailing the baseline parking occupancy assumptions, as well as the parking demand calculations, are provided as Attachment C to this memorandum. Table 3 presents the findings of the parking demand analysis.

Table 3. Observed Peak Parking Demand and Rates

Warehouse Site	Size	# of Spaces	Day 1		Day 2	
			Peak Demand	Observed Parking Rate	Peak Demand	Observed Parking Rate
1295 Central Ave	297,860 SF	197	112	1 space per 2,660 SF	111	1 space per 2,684 SF
27081 Almond Ave	326,920 SF	174	55	1 space per 5,416 SF	49	1 space per 6,079 SF
550 S. Campus Ave	102,855 SF	NA	12	1 space per 8,572 SF	12	1 space per 8,572 SF
1455 Research Dr.	145,800 SF	133	30	1 space per 4,860 SF	30	1 space per 4,860 SF
Average Observed Parking Rate[1]			**1 space per 5,377 SF**			
Highest Observed Parking Rate[2]			**1 space per 2,660 SF**			

Notes: Based on parking surveys conducted in 2021 and 2023.
1 Average observed parking rate is based on the averaging the highest day of parking demand of the four observed sites.
2 Highest observed parking rate is based on the highest day of parking demand of the four observed sites.

Based on Table 3, the highest day of observed parking demand at the 1295 Central Avenue warehouse was Tuesday, February 2, 2021, with a peak demand of 112 spaces at 8:15 a.m. This resulted in a peak parking demand rate of 1 space per 2,660 SF. The lowest day of observed parking demand was at the 550 S. Campus Avenue warehouse, with a peak demand of 12 spaces at 11:00 a.m. This resulted in a peak parking demand rate of 1 space per 8,572 SF. Therefore, the average observed parking rate is 1 space per 5,377 SF, and the highest observed parking rate is 1 space per 2,660 SF over the course of both days.

Project Parking Demand

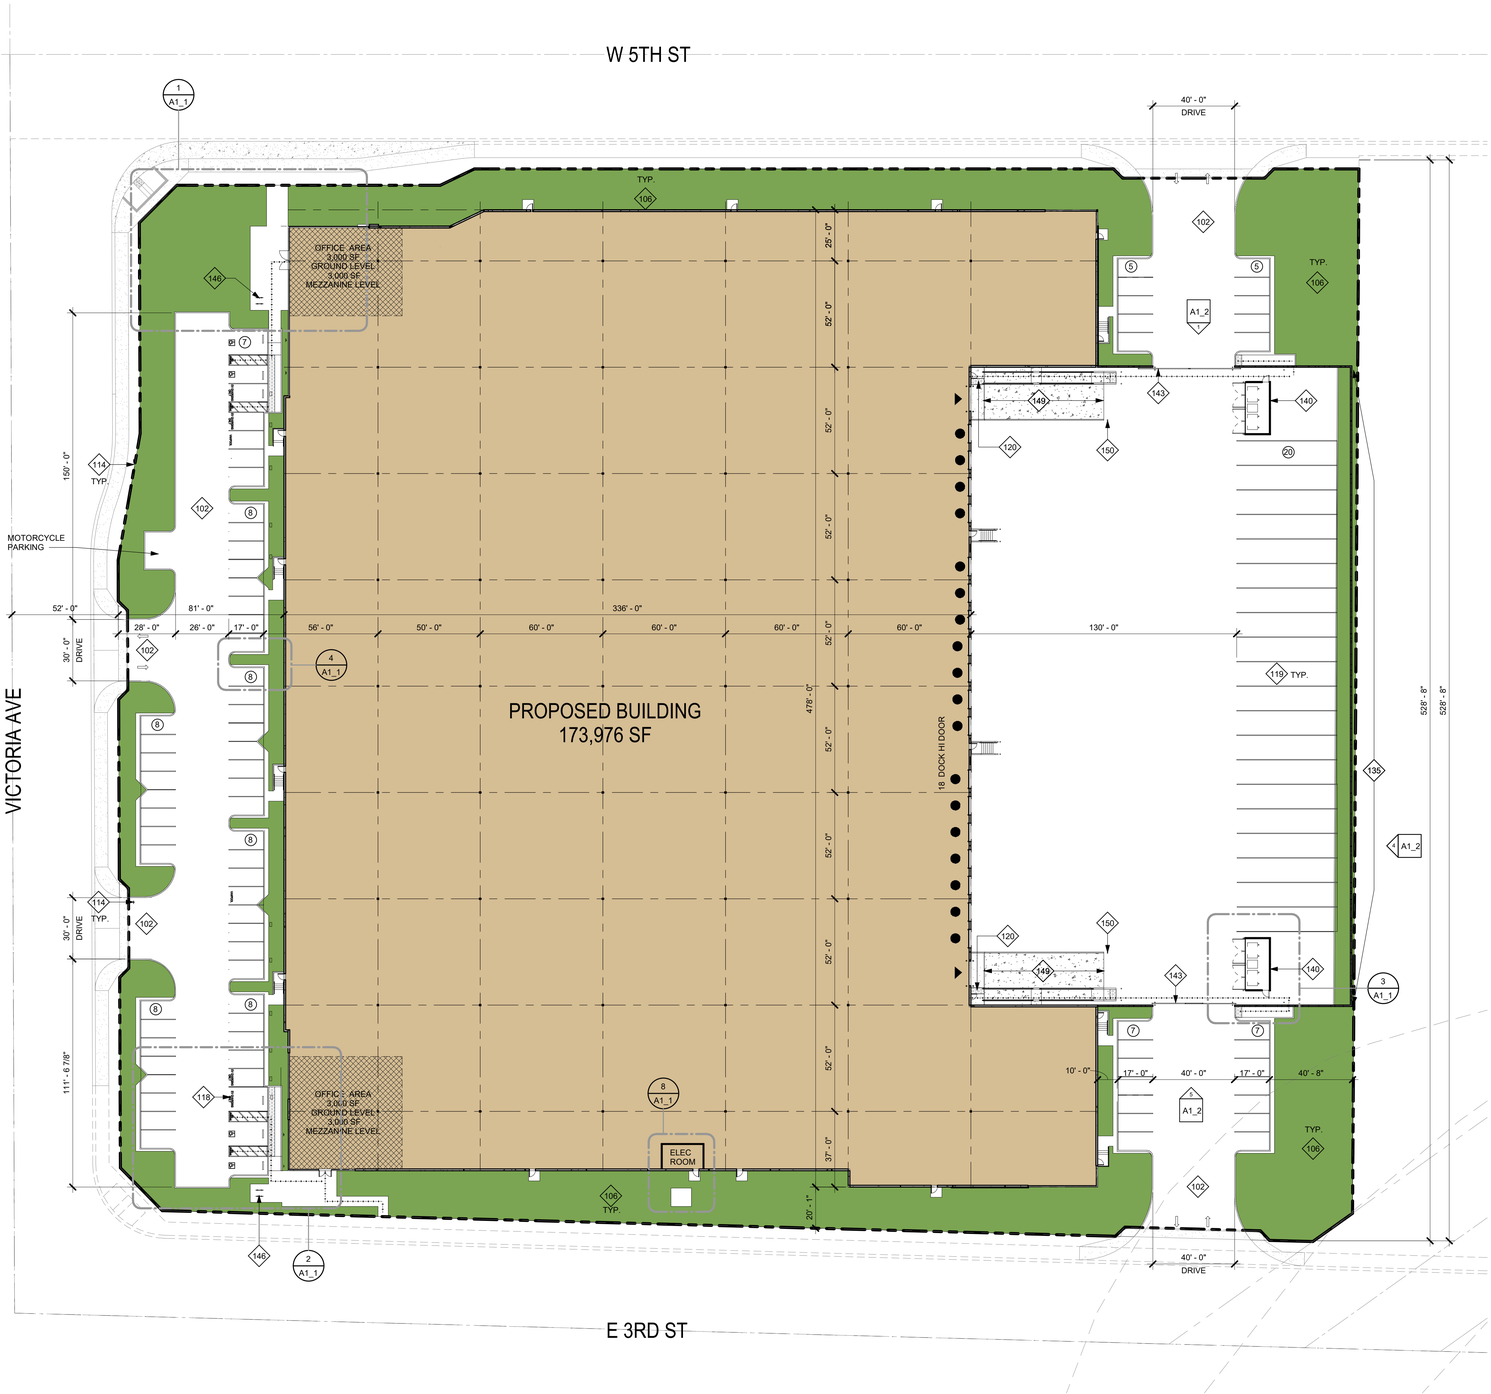
Based on the average observed parking rate of 1 space per 5,377 SF determined from the parking analysis of the four surveyed warehouses, the proposed 173,976 SF warehouse would have a peak parking demand of 33 spaces (173,976 SF ÷ 5,377 SF = 33 spaces). Additionally, the highest parking demand was also calculated to provide a conservative analysis. Using the highest observed parking rate of 1 space per 2,660 SF, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces). These estimates are provided in Table 4 below.

Table 4. Parking Requirements per Observed Rates

Land Use	Size	Observed Parking Rates	Parking Requirement
Warehouse	176,066 SF	1 space per 5,377 SF of floor area[1]	33 spaces
		1 space per 2,660 SF of floor area[2]	66 spaces

Notes: SF = square foot
1 Based on the average observed parking rate noted in Table 3.
2 Based on the highest observed parking rate noted in Table 3.

The proposed project would provide a parking supply of 79 spaces; therefore, assuming the conservative peak parking demand rate of 1 space per 2,660 SF, the project's projected parking demand of 66 spaces would be adequately accommodated within the proposed supply, with a residual of 13 spaces (79 spaces – 66 spaces).



Conclusions

Based on the parking surveys and analysis discussed above, the following conclusions are made for the proposed 5th Street and Victoria Avenue warehouse project:

- Based on the City of Highland Municipal Code parking requirements, the project would require a total of 209 parking spaces.
- Based on the highest observed parking rate of 1 space per 2,660 SF determined from the parking surveys of two existing warehouses near the project site, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces).
- The project's proposed supply of 79 parking spaces can adequately accommodate its forecast parking demand of 66 spaces (based on the highest peak observed parking rate).

SITE PLAN GENERAL NOTES

1. THE SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS.
2. GENERAL CONTRACTOR TO REVIEW THE SOILS REPORT AND ALL AMENDMENTS LISTED ON THE TITLE SHEET AND FOLLOW ALL RECOMMENDATIONS.
3. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS AND CURBS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL OR CURB. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER LINE OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR THE FACE OF THE WALL FINISH.
4. REFER TO CIVIL, AND MEP PLANS TO CONFIRM UTILITY INFORMATION SHOWN ON THE ARCHITECT'S SITE PLAN AND FOR ADDITIONAL UTILITY INFORMATION. GENERAL CONTRACTOR TO COORDINATE ALL POINTS OF CONNECTION.
5. REFER TO CIVIL DRAWINGS FOR ALL FINISHED GRADES AND SLOPES. ALL FINISHED GRADES TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING. GENERAL CONTRACTOR TO FIELD VERIFY.
6. ALL ACCESSIBLE ROUTES IDENTIFIED ON THE SITE PLAN DRAWINGS SHALL CONFORM TO THE FOLLOWING:
   a) SLOPES IN THE DIRECTION OF TRAVEL DO NOT EXCEED 5%. CROSS SLOPES DO NOT EXCEED 2%.
   b) THE CLEAR WIDTH OF ALL WALKWAYS IS 4'-0" MIN.
   c) CHANGES IN LEVEL UP TO 1/2" COMPLY w/ 11/A0.2.1. CHANGES IN LEVEL GREATER THAN 1/2" IF THEY OCCUR ARE RAMPED. SEE PLANS.
   d) THE VERTICAL CLEARANCE ALONG THE ACCESSIBLE ROUTE IS 80" MIN.
7. ALL PAVED AND LANDSCAPED AREAS TO BE BOUND BY A MIN. 6" HIGH, 6" WIDE CONCRETE CURB U.O.N.
8. A CONCRETE MOW STRIP EXTENDING 12" BEYOND EA END OF THE OPENING SHALL BE PROVIDED @ ALL EXTERIOR GLAZING WHERE THE SILL IS WITHIN 3" VERTICAL OF THE FINISHED GRADE. SEE 2/AD1.1
10. PROVIDE PIPE BOLLARD PROTECTION POSTS AS REQUIRED BY UTILITY COMPANIES AND OR FIRE AUTHORITIES AT ALL EXTERIOR ELECTRICAL EQUIPMENT AND FIRE PREVENTION DEVICES. IF PIPE BOLLARD PROTECTION POST DETAILS ARE NOT PROVIDED BY UTILITY COMPANIES AND OR FIRE AUTHORITY SEE DETAIL 3/AD1.1
11. ALL EXPOSED BIORETENSION DEVICE COVERINGS SHALL BE PAINTED FOREST GREEN.
12. WHERE OCCURS, GENERAL CONTRACTOR TO PROVIDE FLUID APPLIED DAMP PROOFING AT ALL RETAINING AND PLANTER WALLS WHERE THE SIDE OF THE WALL OPPOSITE THE SOIL SIDE IS EXPOSED TO VIEW AND ALL EXTERIOR WALLS WHERE THE ADJACENT FLOOR SLAB IS BELOW GRADE. SEE 6/AD1.2
13. PROVIDE A HOSE BIB NEAR THE MAIN ENTRANCE AND IN THE TRASH ENCLOSURE. SEE PLAN FOR LOCATION.

Staff Report

To the Planning Commission

Date:	January 20, 2026
From:	Lawrence Mainez, Community Development Director
Reviewed By:	Lawrence Mainez, Community Development Director
Prepared By:	Angela Tafolla, Senior Planner
Subject:	General Amendment and Zone Change in accordance with the City's certified 6th Cycle Housing Element Program 33, requiring upzoning of moderate to high resource areas on the easterly portion of the City to a maximum residential density of thirty (30) dwelling units per acre (du/ac) (with a density range of 20 du/ac to 30 du/ac) (GPA 025-001/ZC 025-001)

Recommendation:
Adopt Resolution No. 2026 - _____, recommending the City Council:

- Adopt a Negative Declaration, and instruct staff to file a Notice of Determination;

- Approve General Plan Land Use Amendment (GPA 25-001), to amend designated Assessor's Parcel Numbers 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 as Planned Development (PD); and

- Conduct First Reading and Introduce an Ordinance to Rezone (ZC 25-001) designated Assessor's Parcel Numbers 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 as Planned Development (PD).

Fiscal Impact:
The cost associated with the subject General Plan Land Use and Zone Change include minimal staff time to prepare the related documents. The costs related to the CEQA documents were included in the City's 2025/2026 Budget and are estimated to cost $25,000.00. The property owners impacted by the General Plan Land Use and Zone Change have generously committed $12,500.00 to help cover the cost of the required CEQA review.

Public Notice:
The agenda for this item was posted at the three locations per Resolution No. 2011-047 and on the City's website.

Project Detail:
Location: The proposed Land Use Classification and Zoning Designation amendments consist of eight (8) parcels generally located along Greenspot Road between the Mediterra Planned Development/ Mediterra Parkway on the west and the Old Greenspot Road Historic Iron

Bridge on the east within the City of Highland.
The proposed changes would include the following Assessor Parcel Numbers (APN Nos.): 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 (See **Attachment 1** - Location Map).

Public Notice/Comments: On December 22, 2025, a Notice of Public Hearing was mailed to all property owners within three-hundred foot (300') radius of the project boundaries and agencies that may have jurisdiction over the properties. The Hearing Notice was also published in the San Bernardino Sun Newspaper on December 29, 2025. There were no comments received as of the publishing of the Planning Commission agenda.

Project Review: In accordance with the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), the City is proposing to upzone approximately five (5) acres of moderate to high resource areas on the easterly portion of the City of Highland to a maximum residential density of thirty (30) dwelling units per acre (du/ac) (with a density range of 20 du/ac to 30 du/ac).

As stated in the City's 6th Cycle Housing Element, "*while the City has identified an adequate supply of land to fully accommodate the City's 6th Cycle Regional Housing Needs Allocation (RHNA), the City will provide an additional buffer of sites to mitigate land use patterns of access to resources and opportunities, and patterns of segregation and integration*."

The Project site encompasses approximately 89 acres on the easterly portion of the City of Highland and is currently designated as Agricultural Equestrian AG/EQ on the City's adopted Zoning Map and within the City's current General Plan Land Use Element (Chapter 2, Figure 2-2) with a maximum density of 2 du/ac.

The proposed GPA 025-001/ZC 025-001 would redesignate the site to **Planned Development (PD)** with a range of densities including approximately 5 acres of the site upzoned with high density of 20-30 du/ac, approximately 61 acres of the site with 6-12 du/ac, and remaining 23 acres of the project site as open space (assumed to not be developable as it is the steep-sloped foothills of the San Bernardino Mountains). This would result in an overall 2.66% increase in density compared to what was analyzed in the General Plan Environmental Impacts Report (EIR) for the area.

On April 1, 2025, the City of Highland Planning Commission conducted a public workshop to receive public comments on a preferred location to upzone in accordance with the City's Housing Element Program 33, and the subject location was determined to be the preferred option.

The existing General Plan Land Use designation and Zoning Classification will be changed to PD with a footnote stipulating that at least five (5) acres of the area be incorporated into a future master plan for housing at a density range of 20 du/ac to 30 du/ac. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)).

The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

See **Attachment 2** - exisiting and proposed General Plan Land Use Amendment, and **Attachment 3** - existing and proposed Zoning Map Amendment.

Environmental Analysis: On December 19, 2025, per the California Environmental Quality Act (CEQA), and Initial Study was completed for the project and made available for public review and comments. There were no comments received as of the publishing of the Planning Commission agenda.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as AG/EQ. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. The proposed Project would implement the City's Housing Element Program 33. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)). Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level. The proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating environmental effects. The Initial Study determined that the proposed upzoning project would have not impact or less than significant impacts on the environment therefore a Negative Declaration is recommended for this project.

INITIAL STUDY

1. Case No: GPA 025-001 and ZC 025-001

   Project title: 6th Cycle Housing Element Program 33 Upzone

2. Lead agency: City of Highland, 27215 Base Line, Highland, CA 92346

3. Contact person: Lawrence A. Mainez, Community Development Director

   lmainez@cityofhighland.org

4. Project location: The proposed Land Use Classification and Zoning Designation amendment consists of eight (8) parcels generally located along Greenspot Road between the Mediterra Planned Development/ Mediterra Parkway on the west and the Old Greenspot Road Historic Iron Bridge on the east within the City of Highland.

   The proposed changes would include the following Assessor Parcel Numbers (APN Nos.): 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44

   The project is located in the USGS Redlands Quadrangle (7.5-minute series, topographic).

5. Project applicant /sponsor: City of Highland

6. Description of project:

In accordance with the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), the City is proposing to upzone approximately five (5) acres of moderate to high resource areas on the easterly portion of the City of Highland to a maximum residential density of thirty (30) dwelling units per acre (du/ac) (with a density range of 20 du/ac to 30 du/ac). As stated in the City's 6th Cycle Housing Element, "while the City has identified an adequate supply of land to fully accommodate the City's 6th Cycle Regional Housing Needs Allocation (RHNA), the City will provide an additional buffer of sites to mitigate land use patterns of access to resources and opportunities, and patterns of segregation and integration." The Project site encompasses approximately 89 acres on the easterly portion of the City of Highland and is currently designated as Agricultural Equestrian AG/EQ under the current General Plan Land Use. The proposed GPA 025-001/ZC 025-001 would redesignate the site to Planned Development (PD) with a range of densities including approximately 5 acres of the site upzoned with high density of 20-30 du/ac, approximately 61 acres of the site with 6-12 du/ac and remaining 23 acres of the project site as open space (assumed to not be developable as it is the steep-sloped foothills of the San Bernardino Mountains). This would result in an overall 2.66% increase in density compared to what was analyzed in the General Plan Environmental Impacts Report (EIR).

The current General Plan Land Use Designation and Zoning District for the subject location is AG/EQ (with a maximum density of 2 du/ac). On April 1, 2025, the City of Highland Planning Commission conducted a public workshop to receive public comments on a preferred location to upzone in accordance with the City's Housing Element Program 33, and the subject location was determined to be the preferred option. The existing General Plan Land Use designation and Zoning Classification will be changed to PD with a footnote stipulating that at least five (5) acres of the area be incorporated into a future master plan for housing at a density range of 20 du/ac to 30 du/ac. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)).

The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

7. Present Land Use: The project parcels consist of vacant land with natural vegetation communities, citrus orchards, and few utility structures (i.e., water tanks and pump shelters).

8. General Plan designation: Agricultural/Equestrian (AG/EQ)

9. Zoning: Agricultural/Equestrian (AG/EQ)

10. Is the proposed action a "project" as defined by CEQA? (See Section 2.6 of State CEQA Guidelines. If more than one project is present in the same area, cumulative impact should be considered) Yes ☑ No ☐

11. If "yes" on 10, does the project fall into any of the Emergency Projects listed in Section 15269 of the State CEQA Guidelines? Yes ☐ No ☑

12. If "no" on 10, does the project fall under any of the Ministerial Acts listed in Section 15268(b) of the State CEQA Guidelines? Yes ☐ No ☑

13. If "no" on 12, does the project fall under any of the Statutory Exemptions listed in Article 18 of the State CEQA Guidelines? Yes ☐ No ☑

14. If "no" on 13, does the project qualify for one of the Categorical Exemptions listed in Article 19 of the State CEQA Guidelines? (Where there is a reasonable probability that the activity will have a significant effect due to special circumstances, a categorical exemption does not apply). Yes ☐ No ☑

15. Surrounding land uses and setting (briefly describe the project's surroundings):

North: Undeveloped open space, San Bernadino Mountains

South: Undeveloped open space, Miniature Aircraft Radio Kontrol, citrus orchard

East: Undeveloped open space, Santa Anna River,

West: Single-family residences, East Valley Water District Office

16. Surrounding General Plan and Zoning:

North: Agriculture/Equestrian

South: Open Space

East: Open Space, Planned Development

West: Open Space, Agriculture/Equestrian, Low Density Residential

17. Is the proposed project consistent with (if answered "yes" or "n/a", no explanation is required):

City of Highland General Plan	Yes ☐ No ☑ N/A ☐
Applicable Specific Plan	Yes ☐ No ☐ N/A ☑
City of Highland Zoning Code	Yes ☐ No ☑ N/A ☐
South Coast Air Quality Management Plan	Yes ☐ No ☐ N/A ☑
San Bernardino International Airport Master Plan	Yes ☐ No ☐ N/A ☑
Other: East Highlands Ranch Planned Unit Development, Development Standards Report	Yes ☐ No ☐ N/A ☑

18. Are any of the following studies required?

Soils Report	Yes ☐ No ☑
Slope Study	Yes ☐ No ☑
Geological Report	Yes ☐ No ☑
Traffic Study	Yes ☐ No ☑
Air Quality Study	Yes ☐ No ☑
Hydrology	Yes ☐ No ☑
Sewer Study	Yes ☐ No ☑
Biological Study	Yes ☐ No ☑
Noise Study	Yes ☐ No ☑
Hazardous Materials Study	Yes ☐ No ☑
Housing Analysis	Yes ☐ No ☑
Archaeological Report	Yes ☐ No ☑
Groundwater Analysis	Yes ☐ No ☑

Water Quality Report	Yes ☐ No ☑
Other	Yes ☐ No ☑

19. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement). Only required at the time of development.

None, as no specific development is proposed.

I. AESTHETICS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade an existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) *Have a substantial adverse effect on a scenic vista?*

Less than Significant Impact. Scenic vistas are generally considered to be greater than one (1) mile from receptor and generally consist of background views. The San Bernardino Mountains are considered the backdrop for the City of Highland. The Project site encompasses approximately 89 acres on the easterly portion of the City of Highland and is currently designated A/EQ under the current General Plan Land Use. The proposed GPA 025-001/ZC 025-001 would redesignate the site to PD with a range of densities including approximately five (5) acres of the site upzoned with high density of 20-30 du/ac, approximately 61 acres of the site with 6-12 du/ac and remaining 23 acres assumed undevelopable as steep-sloped foothills of San Bernardino Mountains. The existing site is largely vacant land characterized with gently sloping terrain, scattered vegetation and citrus orchards with views of the San Bernardino Mountains to the north of the site. The proposed Project does not include specific development plans, and any future site plan would be subject to comply with the City of Highland General Plan policies, standards and regulation for new housing design and development. Moreover, parcels to the immediate north, south, east and west remain undeveloped, with a planned residential development present to far west. Therefore, the Project would not obstruct or substantially degrade views of scenic vistas visible from surrounding viewpoints and no substantial alteration of the existing topography or San Bernadino Mountain backdrop would be conducted under the project. Therefore, impacts from the Project would be less than significant.

b) *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

No Impact. The project site is not located along a designated state scenic highway and the nearest officially designated State Scenic Highway is Route 38, more than approximately two and a half (2.5) miles to the south- northeast of the Project site. Therefore, the Project does not have the potential to damage trees, rock outcroppings, or historic buildings within state scenic highways. No mitigation measures are required.

c) *Substantially degrade an existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Less than Significant Impact. The visual character of the Project site includes gently sloping terrain, scattered vegetation and citrus orchards with views towards the San Bernardino Mountains to the north of the site. The proposed GPA 025-001/ZC 025-001 would designate the Project site to PD allowing for a range of higher residential densities. The PD designation would not directly impact the visual character of the Project site. Indirect impacts from future development consistent with PD instead of AG/EQ would be less than significant because all future development (increase in density of dwellings units per acre) would be consistent with the Planned Development design guidelines and relevant requirements to reduce impacts to the existing visual character and is complimentary to the surrounding developments. Therefore, less than significant indirect impacts to the existing and visual character or quality of the Project site and its surroundings would occur as a result of the proposed GPA 025-001/ZC 025-001. No mitigation measures are required.

d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly create a new source of light and glare. All required lighting for future development consistent with PD will be in compliance with city standards so any light increase will be similar to that in the neighboring residential development. Therefore, less than significant indirect impacts from new sources of light from the Project site would occur as a result of the proposed GPA 025-001/ZC 025-001. No mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

II. AGRICULTURE AND FORESTRY RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☒	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☒	☐

a) *Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*

Less than Significant Impact. The California Department of Conservation, Farmland Mapping and Monitoring Program (FMMP), compiles Important Farmland maps pursuant to the provisions of Section 65570 of the California Government Code. The proposed Project includes a General Plan Amendment and Zone Change to redesignate the existing site from AG/EQ to PD with

approximately 5 acres of the site upzoned to high density residential (20-30 du/ac). According to the California Department of Conservation's *Farmland Mapping and Monitoring Program (FMMP)*, approximately 14.5 acres (16.5%) of the 89-acre project site are designated as Prime Farmland, Unique Farmland, and Significant Farmland. However, the Project does not include specific development that would convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance to non-agricultural use. Moreover, any future development under the proposed Project would be subject to project level CEQA review to evaluate and address project-specific impacts. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the proposed Project would not directly result in conversion of Important Farmlands to non-agriculture use and potential impacts from the Project would be less than significant.

b) *Conflict with existing zoning for agricultural use or a Williamson Act contract?*

Less than Significant Impact. According to Policy Plan map NR-5 *Agricultural Resources*, the Project Site is not identified as a part of a Williamson Act contract.[2] The proposed Project is not under a Williamson Act contract and the proposed GPA 025-001/ZC 025-001 would not conflict with an existing Williamson Act contract. The proposed Project site is currently zoned AG/EQ. The proposed GPA 025-001/ZC 025-001 would change land use and zoning of the Project site from AG/EQ to PD. Because the AG/EQ land use category is for rural and equestrian-oriented residential development it is for residential development and not for higher intensity agricultural uses such as commercial farming. The change of zone from AG/EQ to PD would not result in a significant loss of existing or potential agricultural uses. Therefore, the proposed GPA 025-001/ZC 025-001 would not conflict with existing zoning and impacts are less than significant. No mitigation measures are required.

c) *Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*

No Impact. There are no parcels within the City that are zoned as forest land or timberland. Therefore, the proposed Project would have no impact on forest or timberland and no mitigation is required.

d) *Result in the loss of forest land or conversion of forest land to non-forest use?*

No Impact. There is no forest land or any land that is designated for the purposes of conserving forest land within the Project site and the City of Highland. Implementation of the proposed Project would not result in loss of forest land or conversion of forest land to non-forest use. No impacts are identified or are anticipated, and no mitigation measures are required.

e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?*

Less than Significant Impact. The Project site is adjacent to existing residential and institutional (EMWD) developments within the City of Highland. The Project would introduce additional residential development consistent with surrounding land uses and would not extend

[2] NR-5 Agricultural Resources accessed October 10, 2025

infrastructure or growth into agricultural or forested areas beyond the site. The Project does not include specific development that would convert Farmland to non-agricultural use or forest land to non-forest use. Moreover, any future development under the proposed Project would be subject to project level CEQA review to evaluate and address project-specific impacts. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the Project's potential to induce conversion of Farmland or forest land to non-agricultural or non-forest use would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

III. AIR QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) *Conflict with or obstruct implementation of the applicable air quality plan?*

Less than Significant Impact. The project site is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The applicable air quality plan for the region is the 2022 Air Quality Management Plan (AQMP). The proposed Project involves a General Plan Amendment and Zone Change for an approximately 89-acre site from AG/EQ to PD, to accommodate future residential development consistent with the City's certified 6th Cycle Housing Element (Program 33). The Project would upzone approximately 5 acres of the site to high density residential (PD; 20–30 du/ac), approximately 61 acres with Low–Medium Density Residential (6–12 du/ac) and retain approximately 23 acres as assumed undevelopable. Overall, the proposed changes represent an estimated 2.66 percent increase in citywide residential density. This is considered a modest increase, above what was already accounted for in the City's General Plan, General Plan EIR, and the AQMP. The Project would therefore not introduce significant growth beyond regional projections or otherwise interfere with implementation of the AQMP's control measures or emission reduction goals. Accordingly, the Project would not conflict with or obstruct implementation of the applicable air quality plan, and impacts would be less than significant.

b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly result in development that could violate air quality standards or contribute substantially to an existing air quality violation. The proposed GPA 025-001/ZC 025-001 would change land use categories in the Project site from AG/EQ to PD. However, air pollutant emissions associated with future development could occur over the short-term from site preparation and construction activities and over the long term from daily vehicle trips associated with the new residential units. Moreover, the proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth

projections used in SCAQMD 2022 AQMP and accounted for in the General Plan EIR. Therefore, the proposed Project would not indirectly allow significant residential development beyond what was already considered in the General Plan for the area and analyzed in the General Plan EIR. As such, the Project's potential to violate air quality standards is less than significant. No mitigation measures are required.

c) *Expose sensitive receptors to substantial pollutant concentrations?*

Less than Significant Impact. The only and closest sensitive receptors to the Project site are the single-family residences of the Mediterra development to the northwest and north. The proposed GPA 025-001/ZC 025-001 would change the land use designation of the approximately 89-acre AG designated Project site to PD with varying densities of 20-30 du/ac on 5 acres of the site and a density of 6-12 du/ac on approximately 61 acres of the remaining site with approximately 23 acres assumed undevelopable as steep-sloped foothills of the San Bernardino Mountains. The proposed GPA/ZC would not directly result in construction or physical development that could expose sensitive receptors such as residences, schools, daycare centers, hospitals and other facilities to pollutants. Moreover, any future development within the GPA/ZC area would be subject to project-level review under CEQA and would be designed in compliance with the SCAQMD guidelines utilizing construction BMPS. Therefore, impacts under the proposed Project would be less than significant and no mitigation measures are required.

d) *Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly result in development but would allow future residential development of increased density on approximately 89 acres site. The Project would upzone approximately 5 acres of the site with high density residential (20–30 du/ac), approximately 61 acres with Low–Medium Density Residential (6–12 du/ac) and retain approximately 23 acres is assumed undevelopable as it is steep-sloped foothills of the San Bernardino Mountains. Short-term construction activities such as use of diesel-powered equipment, asphalt paving, application of paints and coating would generate temporary odors. However, these odors would be short term, localized and typical of construction projects. Moreover, future construction activities would be required to comply with SCAQMD Rule 402 and 403, and construction best management practices would be utilized to minimize emissions and impacts. Long-term operational odors would be typical of residential use and are not considered significant sources of objectional odors. Moreover, the GPA 025-001/ZC 025-001 does not propose any land use known to generate substantial odors such as landfills, wastewater treatment plants or manufacturing facilities. Therefore, the Project would not result in significant other emissions that cause odors, and the impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Less than Significant Impact. As outlined in the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, there are a large number of animal and plant communities within and adjacent to the City, several of which are significant biological habitats. Many are associated with the watercourses that traverse the City and drainages in the canyons of the foothills and mountains. According to previous biological surveys, the following sensitive native habitats (natural communities) have been identified within or adjacent to the City:

- Valley Needlegrass Grassland
- Wildflower Field (California Annual Grassland)
- Riversidian Alluvial Fan Sage Scrub

- Southern Willow Scrub
- Southern Coast Live Oak Riparian Forest
- Southern Sycamore Alder Riparian Woodland
- California Walnut Woodland
- Freshwater Seep

The City contains habitat for species that are designated as "endangered" or "threatened" under the under the federal Endangered Species Act (ESA), the California Endangered Species Act (CESA), as well as species designated as sensitive by the California Department of Fish and Wildlife (CDFW) or the California Native Plant Society (CNPS) and include:

- San Bernardino Kangaroo Rat (animal)
- Santa Ana River Woolly Star (plant)
- Slender-Horned Spineflower (plant)
- Coastal California Gnatcatcher (bird)

The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, one parcel with utility structures (i.e. water tank and pump shelters), and citrus orchards. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources. Moreover, any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Less than Significant Impact. Per the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-1 Biological Sensitivity Map, Plunge Creek and Santa Ana River are located outside of the Project site, to the northwest and east, respectively. Also, per Figure 5-1 Biological Sensitivity Map, the vacant areas of the Project site, not developed or citrus groves, are mapped as natural communities. Based on review of aerial maps/ imagery the canyons of the San Bernardino Mountain foothills in the northern part of the Project site may support drainages that convey stormwater runoff from the mountains to the Santa Ana River which may meet the definition of water of the state or US that are regulated by state code or the federal Clean Water Act.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, riparian habitat or other sensitive natural community. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations as applicable. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density

of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

Less than Significant Impact. As outlined in the City of Highland General Plan, Chapter 5. Conservation and Open Space Element and based on previous biological surveys, there are a large number of plant communities within and adjacent to the City, several of which are significant biological habitats. Many are associated with the watercourses that traverse the City and drainages in the canyons of the foothills and mountains and include Riversidian alluvial fan sage scrub, southern willow scrub, southern coast live oak riparian forest, southern cottonwood-willow riparian forest, southern riparian forest, white alder riparian forest, southern sycamore alder riparian woodland, California walnut woodland, and freshwater seep. Vermal pools were not identified, and coastal wetlands, including mashes would not occur as not located near the coast. These drainage features and associated riparian habitats could contain areas within them that have the various parameters to constitute a wetland.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, including wetlands. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations, as applicable. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

Less than Significant Impact. Habitat linkages provide connections between larger habitat areas that are separated by development. Wildlife corridors provide opportunities for animals to disperse or migrate between areas. A corridor can be defined as a linear landscape feature of sufficient width to allow animal movement between two comparatively undisturbed habitat fragments. Adequate cover is essential for a corridor to function as a wildlife movement area. Wildlife corridors allow for the dispersal, seasonal migration, breeding, and foraging of a variety of wildlife species. The Project site is located adjacent to and north of an important wildlife corridor in the region, the Santa Ana River wash. The Project site contains some vacant areas with some remaining natural habitat and citrus groves in which wildlife could move from the Santa Ana River Wash to the San Bernardino Mountains to the north. Development of these areas could reduce the area's potential to function as a wildlife corridor. Per the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-1 Biological Sensitivity Map, Plunge Creek and Santa Ana River are located outside of the Project site, to the northwest and east, respectively. They serve as wildlife corridors between the Santa Ana River wash and the San Bernardino Mountains. These areas are also designated as Open Space the General Plan and

no change is proposed to the land use designation and zoning of these areas; they would remain unchanged/ as is.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, including wildlife corridors. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations as applicable. If sensitive biological resources are present, including wildlife corridors, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

Less than Significant Impact. The City of Highland has a Heritage Tree Preservation Ordinance (HMC 16.64.040). The Project site does contain mature trees and woodland areas which could be impacted/removed by future development projects. However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact protected trees. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including compliance with the Heritage Tree Preservation Ordinance. If protected trees are present, appropriate mitigation - such as avoidance or replacement of trees in accordance with the ordinance - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

Less than Significant Impact. The Upper Santa Ana River Wash Habitat Conservation Plan (HCP) is located approximately 1 mile downstream of the Seven Oaks Dam and encompasses approximately 4,892 acres, extending approximately 6 miles westward from Greenspot Road in the City of Highland to Alabama Street in the City of Redlands. The primary goal of the Upper Santa Ana River Wash HCP (Wash Plan HCP) is to balance the ground-disturbing activities of water conservation, aggregate mining, recreational activities, and other public services in the Wash Plan HCP Area with the conservation of natural communities and populations of special-status plants and wildlife. The five species covered by the Wash Plan HCP include: slender-horned spineflower, Santa Ana River woolly-star, cactus wren, coastal California gnatcatcher, and San Bernardino kangaroo rat. The Project site is not located with any other adopted HCP, Natural Community Conservation Plan, or other approved habitat conservation plan.

Most of the Project site is located outside of the Wash Plan HCP area. Only a small portion of the Project site which is located south of Greenspot Road, is located within the Wash Plan, which is designated as Neutral Lands in the plan and not included in the HCP Preserve lands. Therefore, any future development in this area within the Wash Plan HCP area would not conflict with the conservation goals and objectives of the Wash Plan HCP. Furthermore, the proposed GPA/ZC

would not directly result in construction or physical development that would conflict with an HCP. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including compliance with an adopted HCP. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change I the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

a) *Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

Less than Significant Impact. The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, one parcel with utility structures (i.e. water tank and pump shelters), and citrus orchards. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact a historic resource. Moreover, any future development within the GPA/ZC area would be subject to project-level CEQA review, including historic resources assessments in accordance with CEQA Guidelines §15064.5. If archaeological resources are present, appropriate mitigation - such as avoidance, evaluation, or data recovery - would be implemented to reduce potential impacts to a less-than-significant level. The proposed Project would result in less than significant impacts and no mitigation measures are required.

b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

Less than Significant Impact. Figure 5-2, *Archeological Resources* in the City of Highland General Plan identifies the Project site as largely being located within the mapped Areas of Sensitivity for Archeological Resources. The proposed GPA 025-001/ZC 025-001 would change the land use and zoning from AG/EQ to PD. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact an archaeological resource. Moreover, any future development on the site would be subject to project-level CEQA review, including cultural resources assessments in accordance with CEQA Guidelines §15064.5. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. If archaeological resources are present, appropriate mitigation such as avoidance, evaluation, or data recovery would be implemented to reduce potential impacts to a less-than-significant level.

c) *Disturb any human remains, including those interred outside of formal cemeteries?*

Less than Significant Impact. There are no cemeteries in or near the Project site. No human remains are known to exist in the Project area. The proposed GPA/ZC would not directly result in

land disturbance and construction activities that could potentially disturb human remains interred outside of a formal cemetery. However, the potential exists that human remains may be unearthed during earthmoving activities associated with future Project construction associated with GPA/ZC Project area. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR.

If human remains are discovered during construction activities, the Project proponent would be required to comply with the applicable provisions of California Health and Safety Code § 7050.5 as well as Public Resources Code § 5097, et. seq., which requires that if the coroner determines the remains to be of Native American origin, he or she will notify the Native American Heritage Commission, who will then identify the most likely descendants to be consulted regarding treatment and/or reburial of the remains. Mandatory compliance with these provisions of California state law would ensure that impacts to human remains, if unearthed during construction activities, would be appropriately treated. California state law (California Health & Safety Code 7050.5) and federal law and regulations ([Archaeological Resources Protection Act (ARPA) 16 USC 470 & 43 CFR 7], [Native American Graves Protection & Repatriation Act (NAGPRA) 25 USC 3001 & 43 CFR 10] and [Public Lands, Interior 43 CFR 8365.1-7]) require a defined protocol if human remains are discovered in the State of California regardless of if the remains are modern or archaeological. The proposed Project would result in less than significant impacts and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) *Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?*

Less Than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 would redesignate approximately 89 acres of the Project Site from AG/EQ to PD with an upzone on 5 acres of the site with high density residential, low- medium density residential on 61 acres of the site. However, there is no proposed development under the Project, therefore no unnecessary consumption of energy resources would occur due to construction and operation. Moreover, any future development within the GPA/ZC Project area would be subject to project level CEQA review and would be required to comply with the state and local regulations and the latest California Building Energy Efficiency Standards (Title 24, Part 6) and the California Green Building Standards Code (CALGreen), which establish requirements to reduce energy demand and promote efficient building design. As such, the Project would not directly or indirectly result in the wasteful, inefficient, or unnecessary consumption of energy resources during construction or operation. Therefore, the impact would be less than significant.

b) *Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

No Impact. The proposed Project does not currently include specific development. Any future development within the GPA/ZC Project area would be designed to comply with the latest California Building Energy Efficiency Standards (Title 24, Part 6) and the California Green Building Standards Code (CALGreen) The Proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury death involving?				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

I. Rupture of a known earthquake fault, as delineated on the most recent Alquist Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

II. Strong seismic ground shaking?

III. Seismic related ground failure, including liquefaction?

IV. Landslides?

I-IV) **Less than Significant Impact.** The proposed Project GPA 025-001 and ZC 025-001 would redesignate approximately 89 acres of the Project site from AG/EQ to PD with an upzone on 5 acres of the site with high density residential, low- medium density residential on 61 acres of the site and remaining 23 acres would be assumed as undevelopable. The majority of the Project site except a parcel to the southwest of the Greenspot Road is located within an Alquist-Priolo Earthquake Fault Zone or County Fault Hazard Zones.[3] According to the San Bernardino County Policy Plan, Hazard Element Map *HZ-1 Earthquake Fault Zone*, the San Andreas Fault is located approximately four miles north of the Project site and the south branch of the fault traverses northwest through southeast of the Project site. The Project site is located in a seismically active area and in a high liquefaction susceptibility area, but not in a high landslide susceptibility area based on Hazard Element Map *HZ-2 Liquefaction and Landslides.*[4] Per the City of Highland General Plan, Chapter 6. Public Health Safety, and Environmental Justice Element, Figure 12, Landslides, the Project site is located in Landslide Susceptibility areas 2 and 3. The proposed Project includes a policy level change and does not include any specific development or construction activities. Moreover, any future project would be subject to project level CEQA review and would be required to comply with the California Building Code requirements and the Uniform Fire Code requirements and all applicable statutes, codes, ordinances, and standards of the Highland Fire Department. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The design of any structures on-site would incorporate measures to accommodate projected seismic ground shaking in accordance with the California Building Code (CBC) and local building regulations. The CBC is designed to preclude significant adverse effects associated with strong seismic ground shaking. Compliance with these codes and standards would address potential impacts resulting from an earthquake event. Therefore, impacts under the proposed Project would be less than significant.

b) *Result in substantial soil erosion or the loss of topsoil?*

Less than Significant Impact. As explained in the prior sections, the proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities. Any future development would be subject to a project level CEQA review and would be required to develop and implement a Storm Water Pollution and Prevention Plan (SWPPP) for construction activities and a Water Quality Management Plan (WQMP) for long-term use/operations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. SWPPPs and WQMPs for future projects would outline the Best Management Practices (BMPs) to be implemented for each Project to avoid and minimize soil erosion. Compliance and implementation of BMPs would ensure that the proposed Project does not result in substantial soil erosion or the loss of topsoil. Therefore, less significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

c) *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?*

Less than Significant Impact. As explained in the prior sections, the proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or

[3] San Bernardino Countywide Plan. HZ-1 Earthquake Fault Zones.
[4] San Bernardino Countywide Plan. HZ-2 Liquefaction and Landslides.

construction activities. Moreover, any future project would be subject to project level CEQA review and would be required to comply with the California Building Code requirements as well as recommendations identified in standard geotechnical investigations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Compliance with regulations and code and project specific geotechnical investigation recommendations would address potential risks associated with future residential development and unstable soils and mitigate risks to life and property. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

d) *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?*

Less than Significant Impact. The proposed Project would change the land use and zoning of the site from AG/EQ to PD with varying densities. The Project does not currently include specific development and construction activities and would not directly expose people or structures to expansive soil hazards. Any future development on the site would be subject to Project level CEQA review and would be required to comply with the California Building Code, including provisions for design and construction on expansive soils, as well as recommendations identified in standard geotechnical investigations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Compliance with these regulations and geotechnical investigation recommendations would address potential risks associated with expansive soils and mitigate risks to life and property. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

e) *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

No Impact. The GPA/ZC from AG/EQ to PD is a policy level change and does not include development or construction activities and thus would not impact the soils on site. Any future development on site will connect to the local water and sewer delivery system, therefore no impacts are anticipated.

f) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

Less than Significant Impact. The proposed Project to redesignate the site from AG/EQ to PD is a policy level change and does not include any specific development or ground-disturbing construction activities. Any future development would be subject to project level CEQA review, including preparation of a project specific paleontological resources assessment by the City or Project proponent's consulting paleontologist. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the potential impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

a) *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

b) *Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Less than Significant Impact. The proposed Project GPA 025-001/ZC 025-001 will redesignate approximately 89 acres on the easterly portion of the City of Highland from AG/EQ to PD allowing for various residential densities with an upzone on approximately 5 acres of the site with higher density residential (20-30 du/ac). The Project would develop approximately 61 acres with medium-density residential (6–12 du/ac), and approximately 23 acres would remain as assumed undevelopable. The proposed Project is a policy level change and does not include any site-specific development or construction.

The proposed GPA/ZC would result in an overall 2.66 percent increase in residential citywide density compared to what was already accounted for and evaluated in the City's General Plan, General Plan EIR, and the AQMP. This is considered a modest increase. In addition, any future residential projects in the proposed GPA/ZC area would be required to comply with the Green Building Code, which reduces GHG emissions. Because this increase represents a relatively small adjustment within the City's planned growth framework, it would not introduce significant growth beyond regional projections and what was already evaluated in the General Plan EIR. Moreover, the Project is a policy level amendment which would not result in direct residential development and generation of GHG emissions. The Project would not conflict with any adopted local or statewide plans, policies, or regulations aimed at reducing greenhouse gas (GHG) emissions. Therefore, the Project would not generate greenhouse gas emissions, either directly or indirectly, or conflict with an applicable plan, policy or regulation adopted for the purpose of reducing emission of greenhouse gases. Thus, the impacts under the Project would be less than significant.

No significant adverse impacts have been identified or anticipated, and no mitigation is required.

IX. HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk loss, injury or death involving wildland fires?	☐	☐	☒	☐

a) *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 are a policy level change and does not include any specific development or construction activities. Construction of future residential projects within the Project area would require the routine transport, use, storage, and disposal of limited quantities of common hazardous materials such as gasoline, diesel fuel, oils, solvents, paint, fertilizers, pesticides, and other similar materials. All materials required during construction would be required to be kept in compliance with State and local regulations and BMPs. Although these materials could be stored on-site during construction activities, future residential projects would be required to comply with the guidelines established by the SWPPP. The management of hazardous materials during future construction activities would not result in significant impacts. Operations would include standard maintenance (i.e., landscape upkeep, exterior painting and similar activities) involving the use of commercially available products (e.g., pesticides, herbicides, gas, oil, paint, etc.) the use of which would not

create a significant hazard to the public. Impacts from operations would be less than significant. Hazardous materials are highly regulated in California, including the methods in which they are transported, used and stored. Moreover, any future project would be subject to project level CEQA review and would be required to comply with all federal, state and local regulations related to hazardous materials. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

Less than Significant Impact. The existing site is largely vacant land characterized with gently sloping terrain, scattered vegetation and citrus orchards with views of the San Bernardino Mountains to the north of the site. Per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 8 Hazardous Waste Cleanup Sites, the Project area does not contain any hazardous waste cleanup sites. Moreover, there are no known hazardous materials sites within or adjacent to the Project Site, nor is there historical evidence of prior industrial uses that involved hazardous substances. The proposed Project does not include specific development plans or construction activities that would directly result in the routine use, storage, transport or disposal of hazardous materials. Future residential development would be subject to project-level CEQA review and compliance with applicable federal, state, and local regulations governing hazardous materials. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the Proposed Projects would be less than significant.

c) *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

No Impact. No existing or known proposed school is located within one-quarter mile of the Project area. The nearest school is Cram Elementary School located at 29700 Water St. approximately 2.9 miles northwest of the Project area. No schools exist within a quarter mile of the Project area. Residential development is not a type of land use that typically generates hazardous emissions or handles acutely hazardous materials or substances. Therefore, the proposed Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or known proposed school. No impacts are identified or anticipated, and no mitigation measures are required.

d) *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

No Impact. According to the California Department of Toxic Substances Control EnviroStor (accessed 10/22/2025), the Project Site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. And per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 8 Hazardous Waste Cleanup Sites, the Project area does not contain any hazardous waste cleanup sites. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

e) *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?*

No Impact. The Project area is not within an airport safety review area or Airport Runway Protection Zone. The Project area is not located within the vicinity of any other private or public airstrip. The nearest airport to the Project area is Redlands Municipal Airport, approximately two and a half (2.5) miles southwest. The San Bernadino International Airport a public airport is located approximately seven (7) miles southwest of the Project area in the City of San Bernadino. Per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 9 Airport Influence Areas, the Project area is not located within the San Bernardino Airport Influence Area. The Project area is not located within 2 miles of any neighboring public use airport. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

f) *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities that would alter roadway alignments or circulation patterns that would interfere with emergency response plan or evacuation plan. The proposed Project area is located along Greenspot Road, a designated arterial that provides access to major regional routes including State Route 210 and Highland Avenue. The proposed amendment would not alter Greenspot Road, and all future development projects would be required to comply with the City's Emergency Operations Plans and Fire Code standards and undergo a project level CEQA review for compliance. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the project would be less than significant.

g) *Expose people or structure, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

Less than Significant Impact. According to the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map, the portion of the Project area located north of Greenspot Road is within an area designated as Very High Fire Hazard Severity Zone and the portion of the Project area located south of Greenspot Road is within an area designated as High Fire Severity Zone. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. Future residential development would be subject to project-level CEQA review and would be required to comply with the current building and fire codes and regulations designed for safe development in these Very High and High Fire Severity Zones. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the proposed Project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires resulting in a less than significant impact and no mitigation is required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?				
I. Result in substantial erosion or siltation on – or off-site;	☐	☐	☒	☐
II. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on – or off-site;	☐	☐	☒	☐
III. Create or contribute runoff water which would exceed the capacity of the existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff; or	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐

a) *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?*

Less than Significant Impact. The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, citrus orchards, and one parcel with utility structures (i.e. water tank and pump shelters). The proposed GPA/ZC would not directly result in construction or physical development that could violate water quality standards or discharge requirements. Moreover, the proposed project does not currently include development and any future residential development **in** the Project area would be subject to Project level CEQA review and would be required to comply with federal, state, and local water quality regulations for new developments which include preparation and implementation of Storm Water Pollution Prevention Plans (SWPPPs) for construction activities and project specific Water Quality Management Plans (WQMPs) for long-term operations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the proposed project would be less than significant.

b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities, therefore, the Project would not result in extraction of groundwater or substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

The Project area is not currently used for groundwater recharge. The Upper Santa Ana River Wash Habitat Conservation Plan (HCP) is located south of the Project area, directly south of Greenspot Road and includes extensive groundwater recharge basins owned and operated by the San Bernardino Valley Water Conservation District. The proposed Project would not interfere with current groundwater recharge activities in the area.

Efficient use, protection and conservation of water resources are high priorities in the City of Highland General Plan Chapter 5. Conservation and Open Space Element, which includes various goals and policies related to water conservation and protection of water quality. Any future residential development would be subject to project level CEQA review and would be required to comply with the City of Highland's General Plan policies related to groundwater sustainability and conservation. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential, was evaluated in the General Plan EIR. Therefore, impacts under the policy level change of the proposed Project would less than significant.

c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?*

I. *Result in substantial erosion or siltation on – or off-site;*

II. *Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site;*

III. *Create or contribute runoff water which would exceed the capacity of the existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff; or*

I-III. Less than Significant Impact. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities that would alter existing drainage patterns.

Moreover, any future development under the GPA 025-001/ZC 025-001 would be subject to project level CEQA review and compliance with the City of Highland Municipal Code, including Chapter 8.28 (Stormwater and Urban Runoff Management), and the National Pollutant Discharge Elimination System (NPDES) permit requirements. Any future projects would include site-specific design and construction activities deploying BMPs to minimize soil erosion, manage stormwater and ensure runoff does not exceed the capacity of existing or planned drainage infrastructure. Therefore, implementation of standard stormwater management and erosion control measures during future development would ensure that potential impacts to drainage patterns, erosion, flooding, or stormwater quality remain less than significant. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build

out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

d) *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

Less than Significant Impact. Tsunamis are giant waves caused by earthquakes or volcanic eruptions under the sea. As the proposed Project area is located more than 50 miles inland from the Pacific Ocean and is not subject to tsunami hazards, potential impacts from tsunamis are less than significant. A seiche is a standing wave oscillating in a body of water. There are no large standing bodies of water near the Project area, therefore, potential impacts from seiche are less than significant. As shown in the City of Highland General Plan Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 11 Flood Risk, the Project area is not located within the 100-year Flood Zone.

The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities, therefore, the Project would not provide residential development that would be subject to a flood hazard, tsunami, or seiche. Any future development within the Project area would be subject to project level CEQA review and would be required to comply with the City's General Plan Safety Element, floodplain management regulations and applicable NPDES requirements to ensure flood and water quality protection. Therefore, the proposed Project would not expose people or structures to risk of pollutants, and potential impacts would be less than significant. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XI. LAND USE AND PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

a) *Physically divide an established community?*

No Impact. The majority of the Project site is vacant with natural vegetation, but also contains citrus orchards and few water infrastructure structures. The Project area does not contain an established community. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. Any future residential development in the proposed GPA 025-001/ZC 025-001 Project area would not physically divide an established community. Residential uses of similar land use intensity as the proposed Project are present to west of the Project area. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. No mitigation measures are required.

b) *Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

Less than Significant Impact. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as AG/EQ. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. The proposed Project would implement the City's Housing Element Program 33. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level. The proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or

mitigating environmental effects. Impacts would be less than significant and no mitigation is required.

No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) *Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

Less than Significant Impact. In 1975, the California Legislature enacted the Surface Mining and Reclamation Act (SMARA), which, among other things, provided guidelines for the classification and designation of mineral lands. Areas are classified on the basis of geologic factors without regard to existing land use and land ownership. The areas are categorized into four Mineral Resource Zones (MRZs):

- MRZ-1: An area where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence;
- MRZ-2: An area where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood exists for their presence;
- MRZ-3: An area containing mineral deposits, the significance of which cannot be evaluated; and
- MRZ-4: An area where available information is inadequate for assignment to any other MRZ zone.

According to the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-3, Mineral Resources Zones the Project area is located within zones MRZ-2 and MRZ-3. The Project area is largely vacant except for natural vegetation communities, citrus orchards and a small water utility structure and has not previously been used for mineral extraction. As such, the proposed Project would not result in the loss of availability of a known mineral resource as the mineral resource was not previously available for extraction. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, less significant impacts are anticipated, and no mitigation measures are required.

b) *Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

Less than Significant Impact. As discussed previously, the Project area is within areas mapped as MRZ-2 and MRZ-3. However, no mineral extraction activities occur on the site currently, or historically. The site is largely vacant with natural and disturbed vegetation communities and citrus orchards . As such, the proposed Project would not result in the loss of availability of a known

mineral resource as the mineral resource was not previously available for extraction. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, less significant impacts are identified or anticipated, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration of groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

b) *Generation of excessive groundborne vibration of groundborne noise levels?*

Less than Significant Impact. The proposed Project GPA 025-001/ZC 025-001 is a General Plan Amendment and Zone change that will redesignate approximately 89 acres on the easterly portion of the City of Highland from AG/EQ to PD allowing various residential densities with an upzone on approximately five (5) acres of the site with higher density residential (20-30 du/ac). The Project would develop approximately 61 acres with medium-density residential (6–12 du/ac), and approximately 23 acres would remain as open space. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. The proposed Project is a policy level change and does not include any site-specific development or construction activities that would generate noise or vibration. Any future development within the Project area would be subject to project level CEQA review to ensure future development incorporates site-specific noise mitigation measures such as setbacks, sound attenuation features for sensitive receptors including schools, hospitals and residences. Future development would also be required to comply with the City of Highland General Plan Noise Element, Municipal Code Chapter 8.50 (Noise Control Ordinance), and standard design practices to minimize construction and operational noise impacts. All future construction activities would implement BMPs such as mufflers, restricted hours, and vibration-reducing equipment. Operational noise from typical residential uses including traffic, landscaping, and neighborhood activities would be consistent with existing ambient levels and would not exceed local noise standards. Potential impacts due to groundborne vibration or noise would be short-term and temporary during construction. Thus, the potential impacts of the proposed Project would be less than significant.

c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

No Impact. The proposed Project is not located within the vicinity of a private airstrip or an airport land use plan. The nearest airport to the Project area is Redlands Municipal Airport, approximately two and a half (2.5) miles southwest. The San Bernadino International Airport, a public airport, is located approximately seven (7) miles southwest of the Project area in the City of San Bernadino. The Project is not located within 2 miles of any neighboring public use airport. Therefore, the proposed Project would not expose people residing or working in the Project area to excessive noise levels and there would be no potential impact.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) *Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

Less than Significant Impact. The proposed Project would allow an overall 2.66 percent increase in residential growth compared to the levels analyzed in the City's General Plan EIR. This is considered a modest increase and is intended to accommodate the City's growing population and meet regional housing needs identified in the 6th Cycle Housing Element (Program 33). The Project would not induce significant population growth beyond the growth projections already considered in the General Plan EIR and would not exceed the City's planned capacity for infrastructure, public services, or roads. Any future development under the PD designation would be subject to project-level CEQA review. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, potential impacts under the Project would be less than significant.

b) *Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

No Impact. The proposed Project area contains citrus groves and some water infrastructure with the remaining area vacant. There are no exiting people or housing that would necessitate the construction or replacement of housing. Therefore, no impact would occur, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XV. PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?	☐	☐	☒	☐
ii. Police protection?	☐	☐	☒	☐
iii. Schools?	☐	☐	☒	☐
iv. Recreation/Parks?	☐	☐	☒	☐
v. Other public facilities?	☐	☐	☒	☐

a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire protection, Police protection, Schools, Recreation/Parks, Other public facilities?*

Less than Significant Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's planned capacity for public services. Any future development under the PD designation would be subject to project-level CEQA review. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR.

Fire Protection: The City of Highland Fire Department and San Bernardino County Fire Department have planned for growth consistent with the General Plan. The modest increase in density allowed and associated population from this Project is not expected to require new fire stations or substantial expansion of existing facilities. Moreover, this is a policy level change, and any future project would be subject to project level CEQA review and would be compliant with standard fire safety requirements, including compliance with building and fire codes, hydrants, and fire access.

Police Protection: The City's Police Department has planned for population growth consistent with the General Plan. The small increase in residential density would not require construction of

new police facilities beyond those anticipated in the General Plan buildout. Any proposed future development would pay standard development impact fees to support police services.

Schools: Any additional student population generated by any future residential development would be accommodated within existing or planned school facilities. School districts routinely plan for residential growth using enrollment projections that include General Plan buildout. Any project-level impacts would be addressed through standard development impact fees to the school district.

Recreation/Parks: The Project includes 23 acres of open space, which would contribute to recreational opportunities. Any future residential development would be required to comply with City standards for parkland dedication or in-lieu fees, ensuring that park and recreational service ratios remain acceptable.

Other Public Facilities: Other municipal services, including libraries, community centers, and utilities, have been planned for General Plan buildout. The incremental increase in allowed residential density from this Project is not expected to trigger the need for new facilities beyond those that currently exist or would be needed with General Plan buildout.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

Less than Significant Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's planned capacity for neighborhood or regional parks. Moreover, no specific developments are proposed at this stage. All future projects under the GPA 025-001/ZC 025-001 would be subject to project level CEQA review and compliance with the local park ordinance and in-lie fee requirements under the Quimby Act (government Code 66477). This would ensure maintenance of recreational facilities and services and would not cause accelerated substantial physical deterioration of the facilities. Therefore, the impacts under the proposed Project would be less than significant and mitigation is not required.

b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

Less than Significant Impact. The proposed Project does not include the construction or expansion of recreational facilities. Any future development under the PD designation may include open spaces and recreational facilities to serve any future residents within the Project area. Construction of such facilities would occur in compliance with applicable regulations and ordinances and would undergo project level review to address site-specific impacts. As such, the proposed GPA 025-001/ZC 025-001 does not include construction of recreational facilities which might have an adverse physical impact on the environment. Therefore, the impacts under the proposed Project would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

a) *Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

No Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's circulation system. The majority of the Project site is located north of Greenspot Road, with one parcel located to the southwest of Greenspot Road, which is identified as a Major Highway in Figure 3-2 *Roadway Network*, in the City of Highland General Plan Circulation Element. The Project does not include any specific development or construction activities. Any future developments in the Project area would be subject to project level CEQA review and would be required to comply with existing programs, policies and ordinances addressing the circulation system. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. The Project is a policy level change and does not conflict with a program plan, or ordinance, or policy addressing the circulation system, including bicycle and pedestrian facilities. Thus, less than significant impacts are anticipated.

b) *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

Less Than Significant Impact. The Project is a policy level change and does not include any specific development or construction activities. CEQA Guidelines Section 15064.3(b) identifies Vehicle Miles Traveled (VMT) as the primary measure of transportation impacts for CEQA purposes. The proposed GPA/ZC promotes higher-density residential development in areas of opportunity, consistent with the City's 6th Cycle Housing Element (Program 33) and the General Plan's land use policies. By encouraging infill-type development near existing infrastructure, services, and transit options, the Project supports reduced VMT compared to lower-density,

dispersed development patterns. Any future residential development facilitated by the Project would be required to undergo project-level CEQA review, including evaluation of VMT and implementation of applicable mitigation measures consistent with City, regional (SCAG), and state (CARB) guidelines. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the Project would not conflict with CEQA Guidelines Section 15064.3(b) and impacts would be less than significant.

c) *Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?*

Less Than Significant Impact. As the Project is a policy level change and does not include any specific development or construction activities **it would not affect existing roadways**. Any future residential development within the Project area would be subject to Project level CEQA review and required to comply with City roadway design standards, engineering requirements, and the Municipal Code, which ensure safe geometric design for streets, intersections, and driveways. Additionally, future projects would be reviewed for potential traffic hazards, including compatibility with adjacent uses, farm equipment, or other potential conflicts. Any necessary improvements, such as realigned intersections, traffic calming, or signage, would be implemented at the project level to maintain safety standards. Because the Project does not include site-specific improvements and future development would be required to comply with all applicable safety and roadway design standards, the Project would not substantially increase hazards due to geometric design or incompatible uses, and potential impacts would be less than significant.

d) *Result in inadequate emergency access?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction activities. Any future residential development in the Project area would be subject to Project level CEQA review and required to comply with City roadway design standards, engineering requirements, and the Municipal Code, which include provisions for adequate emergency access, street widths, turnaround areas, and connectivity for fire and police vehicles. Thus, the Project would not create conditions that would impair emergency access, and potential impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, lace, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

Summary of AB 52 Consultation

On August 11, 2025, the City of Highland initiated consultation with the following Native American tribes, pursuant to AB 52 and SB 18:

- Gabrieleno Band of Mission Indians
- Soboba Band of Luiseno Indians
- Yuhaaviatam of San Manuel Nation

The Gabrieleno Band of Mission Indians and Yuhaaviatam of San Manuel Nation responded via emails, stating that they have no comments since there are no proposed developments or construction at this time. However, they would like to be notified if there is a future proposed project that would result in ground disturbance. The Soboba Band of Luiseno Indians did not respond to the Project notification for request to consult.

a) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

Less than Significant. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact a historic resource. Moreover, any future development within the Project area would be subject to project-level CEQA review, including historic resources assessments in accordance with CEQA Guidelines §15064.5. If archaeological resources are present, appropriate mitigation - such as avoidance, evaluation, or data recovery - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the proposed Project would be less than significant.

b) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?*

Less than Significant. The Project is a policy-level action and does not include site-specific development or construction that could directly affect **tribal** cultural resources. The Tibal consultation conducted by the City of Highland did not indicate concerns from Tribes during the consultation period. Any future development within the Project area would be subject to project-level CEQA review and consultation with the Tribes, which would include evaluation for potential impacts to **tribal** cultural resources and implementation of standard mitigation measures if such resources are encountered. Therefore, impacts under the proposed Project would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) *Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

Less than Significant Impact. The proposed Project would Overall, the proposed Project would allow for an estimated 2.66 percent increase in citywide residential density. This is considered a modest increase above what was already accounted for in the City's General Plan and EIR and is not anticipated to exceed the existing and planned citywide utility and infrastructure capacities required at buildout. Moreover, the proposed Project is a policy level change and does not include specific development or utility construction at this stage. Any future development under the GPA/ZC would be subject to project level CEQA review. Any necessary utility extensions or upgrades would occur within existing or previously disturbed right of way and would be constructed in compliance with applicable City, regional and state regulations. These improvements would not cause significant new environmental effects beyond those previously evaluated in the General Plan EIR. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. Therefore, potential impacts under the Project would be less than significant.

b) *Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

Less than Significant Impact. The proposed Project is a policy level change and does not include specific development or construction. Any future development under the proposed Project could result in a modest 2.66% increase in residential density beyond what was considered under the General Plan EIR. The proposed Project would not allow for significant unplanned population growth beyond the General Plan projections. The East Valley Water District (EVWD) provides water service within the City of Highland. Any future development consistent with the proposed GPA and ZC would be subject to a project level CEQA review to demonstrate adequate water availability and connection capacity through the EVWD's development review and permitting process. All future projects would be subject to City's water conservation requirements (Municipal Code Chapter 13.30) and EVWD's Water Shortage Contingency Plan, which ensures reliability during drought conditions. Therefore, the Project would not result in deficiency in water supplies and potential impacts would be less than significant.

c) *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Less than Significant Impact. Per the City of Highland General Plan, Chapter 4. Public Services & Facilities Element, East Valley Water District (EVWD) maintains Highland's sewer system and has a joint powers agreement with the City of San Bernardino to accept all sewage generated within EVWD's boundaries which is conveyed to the City of San Bernardino Water Reclamation Plant (WRP) operated by the San Bernardino Municipal Water Department (SBMWD). The San Bernardino WRP has a treatment capacity of approximately 33 million gallons per day (mgd) and currently treats an average daily flow of about 26 mgd. The anticipated 2.66% increase in residential density and associated growth allowed with the GPA 025-001/ZC 025-001 would be accommodated within the existing reserve capacity of the treatment plant. Any future development under the GPA/ZC would be subject to project level CEQA review and would be required to coordinate with the City, EVWD and SBMWD to ensure adequate conveyance and treatment capacity prior to service connection, consistent with Municipal Code Chapter 13.12. Thus, the Project would not exceed the existing capacity of wastewater treatment facilities or require construction of new facilities that could result in significant environmental effects. Therefore, impacts would be less than significant.

d) *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

Less than Significant Impact. The Project represents a policy-level amendment and does not include specific development or construction that would generate solid waste. Solid waste collection and disposal services in the City of Highland are provided by Burrtec Waste Industries, with disposal at the Mid-Valley Sanitary Landfill (MVSL) operated by the County of San Bernardino Department of Public Works, Solid Waste Management Division. The MVSL has a maximum permitted daily throughput of 7,500 tons per day and a remaining capacity of approximately 61.2 million tons, with an estimated closure date of 2045. The anticipated 2.66 percent increase in residential density and associated growth that would be allowed under the proposed Project would result in a minor incremental increase in solid waste generation that would be well within the existing and planned landfill capacity. Because the Project is a policy-level land use action that would not directly generate solid waste, and future development would be subject to compliance with all applicable waste reduction and recycling regulations, the Project would not

result in solid waste generation exceeding local capacity or impede waste reduction goals. Therefore, impacts would be less than significant.

e) *Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

Less than Significant Impact. The Project is a policy-level amendment and does not include site-specific development or construction at this stage. Any future development proposed under the GPA 025-001/ZC 025-001 would be required to comply with all applicable federal, state, and local regulations regarding solid waste management, including the following:

- California Integrated Waste Management Act (AB 939) – mandates waste diversion and landfill reduction goals.
- California Green Building Standards Code (CALGreen, Title 24, Part 11) – requires construction and demolition waste recycling and reduction.
- City of Highland Municipal Code Chapter 8.20 (Solid Waste Management) – governs solid waste collection, recycling, and disposal within the city.

Because the Project does not include development at this stage and any future project would be required to comply with the above statutes and regulations to ensure appropriate solid waste management, promote recycling, and prevent adverse impacts related to the handling or disposal of solid waste, impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XX. WILDFIRE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project?				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

a) *Substantially impair an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction that would impair or block emergency evacuation or response plans. The City of Highland has adopted emergency response and evacuation plans that guide emergency operations and ensure safe evacuation during wildfires, floods, or other hazards. Any future development within the Project area would be required to comply with City standards for street design, emergency access, and fire safety, including consultation with the Highland Fire Department and other emergency service providers. Because the Project does not propose changes that would block, restrict, or otherwise interfere with emergency routes or operations, and future development would be required to maintain compliance with all emergency planning requirements, the impacts would be less than significant.

b) *Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

Less than Significant Impact. The Project is a policy-level change and does not include specific development, construction or grading that would immediately alter slope or vegetation conditions. However, the Project area is located within Very High and High Fire Hazard Severity Zone according to the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map. Any future development would be subject to project level CEQA review and comply with the Highland Municipal Code, Fire Code regulations, and California Department of Forestry and Fire Protection (CAL FIRE) standards for wildland-urban interface areas. Thus, the proposed Project would not cause a significant impact due to slope, prevailing

winds, and other factors, exacerbate wildfire risks, thereby exposing Project occupants to pollutant concentrations from wildfire or the uncontrolled spread of a wildfire. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. Therefore, impacts would be less than significant impacts.

c) *Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

Less than Significant Impact. The Project area is located adjacent to existing residential development to the west and Greenspot Road which have existing infrastructure such as power lines and other utilities. Only minor extensions from these areas would be required to serve any future developments within the Project area. The proposed Project is a policy level change and does not include the installation or maintenance of associated infrastructure that would exacerbate fire risk. Any future development and associated infrastructure improvements would be subject to project level CEQA review and would be made in accordance with development standards per the San Bernardino County Development Code, and County Fire Department development standards as well as California Fire Codes. Therefore, impacts under the project would be less than significant.

d) *Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

Less than Significant Impact. The Project site is relatively vacant with gentle sloping terrain, vegetation and citrus orchards, and the foothills of the San Bernadino Mountains. The Project **area** is located within High and Very High Fire Risk areas as shown on the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map. It is not within a 100-year Flood Zone per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – Figure 11 Flood Risk Map. The Project is a policy level amendment and does not include site specific development. Any future development would be subject to project level CEQA review and would be required to comply with local, regional and state regulations and building codes. The Project area is not anticipated to expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Therefore, impacts under Project are less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

Less than Significant Impacts. The proposed Project is a policy level change and does not include any specific development or construction. The results of the Initial Study show that the impacts under the proposed GPA 025-001/ZC 025-001 would be less than significant. Therefore, the Proposed Project will not substantially degrade the quality of the environment and impact on habitat, wildlife populations, plant and animal communities, rare and endangered species or important examples of the major periods of California history or prehistory; no mitigation is warranted.

b) *Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

Less than Significant Impact. Cumulative impacts are defined as two or more individual effects that, when considered together, are considerable or that compound or increase other environmental impacts. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor but collectively significant

developments taking place over a period. The CEQA Guidelines, Section 15130 (a) and (b), states:

(a) Cumulative impacts shall be discussed when the project's incremental effect is cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the project. The discussion should be guided by the standards of practicality and reasonableness.

The results of the Initial Study show that the impacts under the proposed GPA 025-001/ZC 025-001 would be less than significant. Impacts associated with the proposed Project would not be significant individually and would not contribute towards cumulative impacts. The proposed Project would have less than significant cumulative impacts, and no mitigation measures are required.

c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction. There would be no substantial adverse effects on human beings, either directly or indirectly. Any future development would be subject to project level CEQA review and would be required to comply with local, regional and state regulations and building codes. Therefore, impacts under Project are less than significant.

Planning Commission Resolution

RESOLUTION NO. 2026 – ___

A RESOLUTION OF THE HIGHLAND PLANNING COMMISSION RECOMMENDING THE CITY COUNCIL ADOPT A NEGATIVE DECLARATION, APPROVE GENERAL PLAN AMENDMENT (GPA 25-001) AND ZONE CHANGE (ZC 25-001) TO CHANGE THE GENERAL PLAN AND ZONING DESIGNATION OF APPROXIMATELY 89 ACRES OF EXISTING AGRICULTURAL/EQUESTRIAN (AG/EQ) TO PLANNED DEVELOPMENT (PD) LAND USE AND ZONING GENERALLY LOCATED ALONG GREENSPOT ROAD BETWEEN THE MEDITERRA PLANNED DEVELOPMENT MEDITERRA PARKWAY ON THE WEST AND THE OLD GRENSPOT ROAD HISTORIC IRON BRIDGE ON THE EAST WITHIN THE CITY OF HIGHLAND. ASSESSOR'S PARCEL NUMBERS: 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, AND 0297-021-44.

APPLICANT: CITY OF HIGHLAND

A. RECITALS

1. On August 18, 2023, the California Department of Housing and Community Development determined the City's adopted 6th Cycle Housing Element was in substantial compliance with State Housing Element Law (Government Code § 65580 et. Seq.) and stipulated that the City must continue timely and effective implementation of all programs including Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas by December 2025.

2. On April 1, 2025, the City of Highland Planning Commission conducted a public workshop to receive public comments on a preferred location to upzone in accordance with the City's 6th Cycle Housing Element Program 33, and the subject location was determined the preferred option.

3. The City contracted with Ruth Villalobos & Associates, Inc (RVA) for the independent preparation of an Initial Study to analyze the potential environmental effects of the Project. Based on the information contained in the Initial Study, RVA and City staff concluded that the Project had no impacts or less than significant impacts. Based upon this determination, RVA prepared, and City staff concurred in, a draft Negative Declaration ("Draft ND") in accordance with CEQA Section 21080(c) and Section 15070 of the State CEQA Guidelines.

4. The City circulated a Notice of Intent to Adopt the Draft ND, to the public and other interested parties, for a 20-day comment period between December 19, 2025, through January 7, 2026. The City published the Notice of Intent for the Draft ND in the San Bernardino Sun, a newspaper of general circulation within the City. Copies of the documents have been available for public review and inspection at the Highland Planning Division located in City Hall, 27215 Base Line Street, Highland, California 92346, and the Highland Sam J. Racadio Library, 7863 Central Ave, Highland, CA 92346, and on the City's website.

5. During the Notice of Intent to Adopt the Draft ND comment period, the City received no comments on the Draft ND from various agencies, individuals, and organizations and entities.

6. On December 22, 2025, a Notice of Public Hearing was mailed to all property owners within three-hundred foot (300') radius of the project boundaries and agencies that may have jurisdiction over the properties, and a Notice of Public Hearing was also published in the San Bernardino Sun Newspaper on December 29, 2025.

7. On January 20, 2026, the Planning Commission held a duly noticed public hearing and made a recommendation to the City Council to adopt a Negative Declaration and approve General Plan Amendment (GP 25-001) and Zone Change (ZC 25-001). In addition, all interested persons had an opportunity to and did testify regarding this matter.

8. All legal prerequisites to the adoption of this Resolution have occurred.

B. RESOLUTION

NOW THEREFORE, it is hereby found, determined and resolved by the Planning Commission of the City of Highland as follows:

Section 1. The Planning Commission finds that all of the facts set forth in the Recitals, Part "A" of this Resolution, are true and correct.

Section 2. Based upon substantial evidence presented to the Planning Commission during the January 20, 2026, public hearing, including public testimony and written and oral staff reports, the Planning Commission finds as follows:

a. All necessary Public Meetings and opportunities for public testimony and comment have been conducted in compliance with State Law and the Municipal Code of the City of Highland.

Section 3. The Planning Commission has independently considered the administrative record before it, which is hereby incorporated by reference and which includes the Negative Declaration, any written and oral comments on the Negative Declaration, staff reports and presentations, and all oral and written testimony.

Section 4. The Planning Commission has reviewed the Negative Declaration and all comments received regarding the Negative Declaration prior to and at the January 20, 2026 public hearing, and based on the whole record before it finds that: (1) the Negative Declaration was prepared in compliance with CEQA; (2) there is no substantial evidence that the Project will have a significant effect on the environment; and (3) the Negative Declaration reflects the independent judgment and analysis of the Planning Commission.

Section 5. Findings of Fact for **General Plan Amendment (GPA 24-001)** (Highland Municipal Code Section 16.08.030.G *General plan amendments. Findings*):

Based on the Findings below, the Highland Planning Commission does hereby find:

a. The proposed use is permitted within the subject district pursuant to the provisions of this section and complies with all of the applicable provisions of this title; and is consistent with the goals, policies, and objectives of the Highland general plan, and with the applicable development policies and standards of the city.

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (Ag/Eq). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level.

b. The proposed use would not impair the integrity and character of the district in which it is to be established or located.

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the

City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (Ag/Eq). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level; therefore, the proposed project will not impair the integrity or character of the project area/district.

c. The site is suitable for the type and intensity of use or development which is proposed;

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within

an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level.

d. There are adequate provisions for water, sanitation, and public utilities and services to ensure public health and safety;

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (Ag/Eq). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular

features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies and services at the project level.

e. The proposed use will not be detrimental to the public health, safety, or welfare, or materially injurious to properties and improvements in the vicinity; and

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (Ag/EQ). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies and services at the project level to ensure it will not be detrimental to the public health, safety, or welfare, or materially injurious to properties and improvements in the vicinity.

f. The proposed use would not result in a significant effect on the environment.

Response: An Initial Study was prepared to analyze the potential environmental effects of the Project. Based on the information contained in the Initial Study, the City concluded that the Project had no impacts or less than significant impacts. Based upon this determination, a draft Negative Declaration ("Draft ND") in accordance with CEQA Section 21080(c) and Section 15070 of the State CEQA Guidelines is recommended. The Planning Commission recommends the City Council approve the Negative Declaration for this Project.

Section 6. Findings of Fact for **Zone Change (ZC 25-001)** (Highland Municipal Code Section 16.08.040 *Amendments to zoning districts and other provisions).*

Based on the Findings below, the Highland Planning Commission does herby find:

a. The proposed change of zone or revision is consistent with the goals, objectives, policies, and programs of the general plan, and is necessary and desirable to implement the provisions of the general plan;

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (AG/EQ). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging

of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level.

b. The proposed change of zone or revision will not adversely affect the public health, safety, and welfare or result in an illogical land use pattern;

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (AG/EQ). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level.

c. The proposed change of zone or revision is consistent with the purpose and intent of the remainder of this title not under consideration; and

Response: The proposed General Plan Amendment is a requirement stipulated in the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), which commits the City to rezone sites to increase multifamily residential options in moderate and high opportunity/ high resource areas. This action affects Chapter 2 of the General Plan, Figure 2.2 *General Plan Land Use,* and the City's official Zoning Map on file with the City Clerk.

The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as Agricultural/Equestrian (AG/EQ). Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. As noted above, the proposed Project would implement the City's Housing Element Program 33. The proposed designation of Planned Development (PD) will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level.

d. The potential environmental impacts of the proposed change of zone or revision are insignificant or there are overriding considerations which outweigh the potential impacts.

Response: An Initial Study was prepared to analyze the potential environmental effects of the Project. Based on the information contained in the Initial Study, the City concluded that the Project had no impacts or less than significant impacts. Based upon this determination, a draft Negative Declaration ("Draft ND") in accordance with CEQA Section 21080(c) and Section 15070 of the State CEQA Guidelines is recommended. The Planning Commission recommends the City Council approve the Negative Declaration for this Project.

Section 7. Based on the Findings and Conclusions set forth above, the Planning Commission recommends the City Council:

a) Adopt a Negative Declaration, which is attached hereto and incorporated herein by reference.

Exhibit 1 - Initial Study/Negative Declaration (ND)

b) Approve General Plan Amendment (GPA 25-001), to include APNs 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 assigned a land use designation of Agricultural/Equestrian (AG/EQ) to be changed to Planned Development (PD) with a footnote stipulating that "*at least five (5) acres of the area be incorporated into a future master plan for housing at a density range of 20 du/ac to 30 du/ac*" as shown on Exhibit 2.

Exhibit 2 – Existing and Proposed General Plan Land Use Designation

d) Approve Zone Change (ZC 25-001) to include APNs 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 assigned a zoning designation of Agricultural/Equestrian (AG/EQ) to be changed to Planned Development (PD) with a footnote stipulating that "*at least five (5) acres of the area be incorporated into a future master plan for housing at a density range of 20 du/ac to 30 du/ac*" as shown on Exhibit 3. The City's Official Zoning Map on file with the City Clerk shall be updated to reflect the changes.

Exhibit 3 – Existing and Proposed Zoning (Zone Change)

C. ADOPTION OF RESOLUTION.

The City Clerk shall certify to the adoption of this Resolution and shall cause the same to be published or posted in the manner prescribed by law.

PASSED, **APPROVED** and **ADOPTED** this 20th day of January, 2026.

ATTEST:

Randall Hamerly, Chairman
Planning Commission

Lawrence A. Mainez,
Community Development Director

Exhibit 1 - Initial Study/Negative Declaration (ND)

INITIAL STUDY FOR:

CITY OF HIGHLAND

HOUSING ELEMENT 6th CYCLE UPZONE GPA 025-001/ZC 025-001

NOTICE OF INTENT TO ADOPT A

NEGATIVE DECLARATION

Public Review Period:

Begins: December 19, 2025

Ends: January 7, 2026

INITIAL STUDY

1. Case No: GPA 025-001 and ZC 025-001

   Project title: 6th Cycle Housing Element Program 33 Upzone

2. Lead agency: City of Highland, 27215 Base Line, Highland, CA 92346

3. Contact person: Lawrence A. Mainez, Community Development Director

   lmainez@cityofhighland.org

4. Project location: The proposed Land Use Classification and Zoning Designation amendment consists of eight (8) parcels generally located along Greenspot Road between the Mediterra Planned Development/ Mediterra Parkway on the west and the Old Greenspot Road Historic Iron Bridge on the east within the City of Highland.

   The proposed changes would include the following Assessor Parcel Numbers (APN Nos.): 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44

   The project is located in the USGS Redlands Quadrangle (7.5-minute series, topographic).

5. Project applicant /sponsor: City of Highland

6. Description of project:

In accordance with the City's certified 6th Cycle Housing Element Program 33 (Strategically Enhance Access to Areas of Opportunity), the City is proposing to upzone approximately five (5) acres of moderate to high resource areas on the easterly portion of the City of Highland to a maximum residential density of thirty (30) dwelling units per acre (du/ac) (with a density range of 20 du/ac to 30 du/ac). As stated in the City's 6th Cycle Housing Element, "while the City has identified an adequate supply of land to fully accommodate the City's 6th Cycle Regional Housing Needs Allocation (RHNA), the City will provide an additional buffer of sites to mitigate land use patterns of access to resources and opportunities, and patterns of segregation and integration." The Project site encompasses approximately 89 acres on the easterly portion of the City of Highland and is currently designated as Agricultural Equestrian AG/EQ under the current General Plan Land Use. The proposed GPA 025-001/ZC 025-001 would redesignate the site to Planned Development (PD) with a range of densities including approximately 5 acres of the site upzoned with high density of 20-30 du/ac, approximately 61 acres of the site with 6-12 du/ac and remaining 23 acres of the project site as open space (assumed to not be developable as it is the steep-sloped foothills of the San Bernardino Mountains). This would result in an overall 2.66% increase in density compared to what was analyzed in the General Plan Environmental Impacts Report (EIR).

The current General Plan Land Use Designation and Zoning District for the subject location is AG/EQ (with a maximum density of 2 du/ac). On April 1, 2025, the City of Highland Planning Commission conducted a public workshop to receive public comments on a preferred location to upzone in accordance with the City's Housing Element Program 33, and the subject location was determined to be the preferred option. The existing General Plan Land Use designation and Zoning Classification will be changed to PD with a footnote stipulating that at least five (5) acres of the area be incorporated into a future master plan for housing at a density range of 20 du/ac to 30 du/ac. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)).

The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

7. Present Land Use: The project parcels consist of vacant land with natural vegetation communities, citrus orchards, and few utility structures (i.e., water tanks and pump shelters).

8. General Plan designation: Agricultural/Equestrian (AG/EQ)

9. Zoning: Agricultural/Equestrian (AG/EQ)

10. Is the proposed action a "project" as defined by CEQA? (See Section 2.6 of State CEQA Guidelines. If more than one project is present in the same area, cumulative impact should be considered) Yes ☑ No ☐

11. If "yes" on 10, does the project fall into any of the Emergency Projects listed in Section 15269 of the State CEQA Guidelines? Yes ☐ No ☑

12. If "no" on 10, does the project fall under any of the Ministerial Acts listed in Section 15268(b) of the State CEQA Guidelines? Yes ☐ No ☑

13. If "no" on 12, does the project fall under any of the Statutory Exemptions listed in Article 18 of the State CEQA Guidelines? Yes ☐ No ☑

14. If "no" on 13, does the project qualify for one of the Categorical Exemptions listed in Article 19 of the State CEQA Guidelines? (Where there is a reasonable probability that the activity will have a significant effect due to special circumstances, a categorical exemption does not apply). Yes ☐ No ☑

15. Surrounding land uses and setting (briefly describe the project's surroundings):

North: Undeveloped open space, San Bernadino Mountains

South: Undeveloped open space, Miniature Aircraft Radio Kontrol, citrus orchard

East: Undeveloped open space, Santa Anna River,

West: Single-family residences, East Valley Water District Office

16. Surrounding General Plan and Zoning:

North: Agriculture/Equestrian

South: Open Space

East: Open Space, Planned Development

West: Open Space, Agriculture/Equestrian, Low Density Residential

17. Is the proposed project consistent with (if answered "yes" or "n/a", no explanation is required):

City of Highland General Plan	Yes ☐ No ☑ N/A ☐
Applicable Specific Plan	Yes ☐ No ☐ N/A ☑
City of Highland Zoning Code	Yes ☐ No ☑ N/A ☐
South Coast Air Quality Management Plan	Yes ☐ No ☐ N/A ☑
San Bernardino International Airport Master Plan	Yes ☐ No ☐ N/A ☑
Other: East Highlands Ranch Planned Unit Development, Development Standards Report	Yes ☐ No ☐ N/A ☑

18. Are any of the following studies required?

Soils Report	Yes ☐ No ☑
Slope Study	Yes ☐ No ☑
Geological Report	Yes ☐ No ☑
Traffic Study	Yes ☐ No ☑
Air Quality Study	Yes ☐ No ☑
Hydrology	Yes ☐ No ☑
Sewer Study	Yes ☐ No ☑
Biological Study	Yes ☐ No ☑
Noise Study	Yes ☐ No ☑
Hazardous Materials Study	Yes ☐ No ☑
Housing Analysis	Yes ☐ No ☑
Archaeological Report	Yes ☐ No ☑
Groundwater Analysis	Yes ☐ No ☑

Water Quality Report	Yes ☐ No ☑
Other	Yes ☐ No ☑

19. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement). Only required at the time of development.

None, as no specific development is proposed.

I. AESTHETICS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade an existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) *Have a substantial adverse effect on a scenic vista?*

Less than Significant Impact. Scenic vistas are generally considered to be greater than one (1) mile from receptor and generally consist of background views. The San Bernardino Mountains are considered the backdrop for the City of Highland. The Project site encompasses approximately 89 acres on the easterly portion of the City of Highland and is currently designated A/EQ under the current General Plan Land Use. The proposed GPA 025-001/ZC 025-001 would redesignate the site to PD with a range of densities including approximately five (5) acres of the site upzoned with high density of 20-30 du/ac, approximately 61 acres of the site with 6-12 du/ac and remaining 23 acres assumed undevelopable as steep-sloped foothills of San Bernardino Mountains. The existing site is largely vacant land characterized with gently sloping terrain, scattered vegetation and citrus orchards with views of the San Bernardino Mountains to the north of the site. The proposed Project does not include specific development plans, and any future site plan would be subject to comply with the City of Highland General Plan policies, standards and regulation for new housing design and development. Moreover, parcels to the immediate north, south, east and west remain undeveloped, with a planned residential development present to far west. Therefore, the Project would not obstruct or substantially degrade views of scenic vistas visible from surrounding viewpoints and no substantial alteration of the existing topography or San Bernadino Mountain backdrop would be conducted under the project. Therefore, impacts from the Project would be less than significant.

b) *Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

No Impact. The project site is not located along a designated state scenic highway and the nearest officially designated State Scenic Highway is Route 38, more than approximately two and a half (2.5) miles to the south- northeast of the Project site. Therefore, the Project does not have the potential to damage trees, rock outcroppings, or historic buildings within state scenic highways. No mitigation measures are required.

c) *Substantially degrade an existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage points.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Less than Significant Impact. The visual character of the Project site includes gently sloping terrain, scattered vegetation and citrus orchards with views towards the San Bernardino Mountains to the north of the site. The proposed GPA 025-001/ZC 025-001 would designate the Project site to PD allowing for a range of higher residential densities. The PD designation would not directly impact the visual character of the Project site. Indirect impacts from future development consistent with PD instead of AG/EQ would be less than significant because all future development (increase in density of dwellings units per acre) would be consistent with the Planned Development design guidelines and relevant requirements to reduce impacts to the existing visual character and is complimentary to the surrounding developments. Therefore, less than significant indirect impacts to the existing and visual character or quality of the Project site and its surroundings would occur as a result of the proposed GPA 025-001/ZC 025-001. No mitigation measures are required.

d) *Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly create a new source of light and glare. All required lighting for future development consistent with PD will be in compliance with city standards so any light increase will be similar to that in the neighboring residential development. Therefore, less than significant indirect impacts from new sources of light from the Project site would occur as a result of the proposed GPA 025-001/ZC 025-001. No mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

II. AGRICULTURE AND FORESTRY RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☒	☐
b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☒	☐
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☒	☐

a) *Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*

Less than Significant Impact. The California Department of Conservation, Farmland Mapping and Monitoring Program (FMMP), compiles Important Farmland maps pursuant to the provisions of Section 65570 of the California Government Code. The proposed Project includes a General Plan Amendment and Zone Change to redesignate the existing site from AG/EQ to PD with

approximately 5 acres of the site upzoned to high density residential (20-30 du/ac). According to the California Department of Conservation's *Farmland Mapping and Monitoring Program (FMMP)*, approximately 14.5 acres (16.5%) of the 89-acre project site are designated as Prime Farmland, Unique Farmland, and Significant Farmland. However, the Project does not include specific development that would convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance to non-agricultural use. Moreover, any future development under the proposed Project would be subject to project level CEQA review to evaluate and address project-specific impacts. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the proposed Project would not directly result in conversion of Important Farmlands to non-agriculture use and potential impacts from the Project would be less than significant.

b) *Conflict with existing zoning for agricultural use or a Williamson Act contract?*

Less than Significant Impact. According to Policy Plan map NR-5 *Agricultural Resources,* the Project Site is not identified as a part of a Williamson Act contract.[2] The proposed Project is not under a Williamson Act contract and the proposed GPA 025-001/ZC 025-001 would not conflict with an existing Williamson Act contract. The proposed Project site is currently zoned AG/EQ. The proposed GPA 025-001/ZC 025-001 would change land use and zoning of the Project site from AG/EQ to PD. Because the AG/EQ land use category is for rural and equestrian-oriented residential development it is for residential development and not for higher intensity agricultural uses such as commercial farming. The change of zone from AG/EQ to PD would not result in a significant loss of existing or potential agricultural uses. Therefore, the proposed GPA 025-001/ZC 025-001 would not conflict with existing zoning and impacts are less than significant. No mitigation measures are required.

c) *Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*

No Impact. There are no parcels within the City that are zoned as forest land or timberland. Therefore, the proposed Project would have no impact on forest or timberland and no mitigation is required.

d) *Result in the loss of forest land or conversion of forest land to non-forest use?*

No Impact. There is no forest land or any land that is designated for the purposes of conserving forest land within the Project site and the City of Highland. Implementation of the proposed Project would not result in loss of forest land or conversion of forest land to non-forest use. No impacts are identified or are anticipated, and no mitigation measures are required.

e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?*

Less than Significant Impact. The Project site is adjacent to existing residential and institutional (EMWD) developments within the City of Highland. The Project would introduce additional residential development consistent with surrounding land uses and would not extend

[2] NR-5 Agricultural Resources accessed October 10, 2025

infrastructure or growth into agricultural or forested areas beyond the site. The Project does not include specific development that would convert Farmland to non-agricultural use or forest land to non-forest use. Moreover, any future development under the proposed Project would be subject to project level CEQA review to evaluate and address project-specific impacts. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the Project's potential to induce conversion of Farmland or forest land to non-agricultural or non-forest use would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

III. AIR QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) *Conflict with or obstruct implementation of the applicable air quality plan?*

Less than Significant Impact. The project site is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The applicable air quality plan for the region is the 2022 Air Quality Management Plan (AQMP). The proposed Project involves a General Plan Amendment and Zone Change for an approximately 89-acre site from AG/EQ to PD, to accommodate future residential development consistent with the City's certified 6th Cycle Housing Element (Program 33). The Project would upzone approximately 5 acres of the site to high density residential (PD; 20–30 du/ac), approximately 61 acres with Low–Medium Density Residential (6–12 du/ac) and retain approximately 23 acres as assumed undevelopable. Overall, the proposed changes represent an estimated 2.66 percent increase in citywide residential density. This is considered a modest increase, above what was already accounted for in the City's General Plan, General Plan EIR, and the AQMP. The Project would therefore not introduce significant growth beyond regional projections or otherwise interfere with implementation of the AQMP's control measures or emission reduction goals. Accordingly, the Project would not conflict with or obstruct implementation of the applicable air quality plan, and impacts would be less than significant.

b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly result in development that could violate air quality standards or contribute substantially to an existing air quality violation. The proposed GPA 025-001/ZC 025-001 would change land use categories in the Project site from AG/EQ to PD. However, air pollutant emissions associated with future development could occur over the short-term from site preparation and construction activities and over the long term from daily vehicle trips associated with the new residential units. Moreover, the proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth

projections used in SCAQMD 2022 AQMP and accounted for in the General Plan EIR. Therefore, the proposed Project would not indirectly allow significant residential development beyond what was already considered in the General Plan for the area and analyzed in the General Plan EIR. As such, the Project's potential to violate air quality standards is less than significant. No mitigation measures are required.

c) *Expose sensitive receptors to substantial pollutant concentrations?*

Less than Significant Impact. The only and closest sensitive receptors to the Project site are the single-family residences of the Mediterra development to the northwest and north. The proposed GPA 025-001/ZC 025-001 would change the land use designation of the approximately 89-acre AG designated Project site to PD with varying densities of 20-30 du/ac on 5 acres of the site and a density of 6-12 du/ac on approximately 61 acres of the remaining site with approximately 23 acres assumed undevelopable as steep-sloped foothills of the San Bernardino Mountains. The proposed GPA/ZC would not directly result in construction or physical development that could expose sensitive receptors such as residences, schools, daycare centers, hospitals and other facilities to pollutants. Moreover, any future development within the GPA/ZC area would be subject to project-level review under CEQA and would be designed in compliance with the SCAQMD guidelines utilizing construction BMPS. Therefore, impacts under the proposed Project would be less than significant and no mitigation measures are required.

d) *Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Less than Significant Impact. The proposed GPA 025-001/ZC 025-001 would not directly result in development but would allow future residential development of increased density on approximately 89 acres site. The Project would upzone approximately 5 acres of the site with high density residential (20–30 du/ac), approximately 61 acres with Low–Medium Density Residential (6–12 du/ac) and retain approximately 23 acres is assumed undevelopable as it is steep-sloped foothills of the San Bernardino Mountains. Short-term construction activities such as use of diesel-powered equipment, asphalt paving, application of paints and coating would generate temporary odors. However, these odors would be short term, localized and typical of construction projects. Moreover, future construction activities would be required to comply with SCAQMD Rule 402 and 403, and construction best management practices would be utilized to minimize emissions and impacts. Long-term operational odors would be typical of residential use and are not considered significant sources of objectional odors. Moreover, the GPA 025-001/ZC 025-001 does not propose any land use known to generate substantial odors such as landfills, wastewater treatment plants or manufacturing facilities. Therefore, the Project would not result in significant other emissions that cause odors, and the impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

IV. BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Less than Significant Impact. As outlined in the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, there are a large number of animal and plant communities within and adjacent to the City, several of which are significant biological habitats. Many are associated with the watercourses that traverse the City and drainages in the canyons of the foothills and mountains. According to previous biological surveys, the following sensitive native habitats (natural communities) have been identified within or adjacent to the City:

- Valley Needlegrass Grassland
- Wildflower Field (California Annual Grassland)
- Riversidian Alluvial Fan Sage Scrub

- Southern Willow Scrub
- Southern Coast Live Oak Riparian Forest
- Southern Sycamore Alder Riparian Woodland
- California Walnut Woodland
- Freshwater Seep

The City contains habitat for species that are designated as "endangered" or "threatened" under the under the federal Endangered Species Act (ESA), the California Endangered Species Act (CESA), as well as species designated as sensitive by the California Department of Fish and Wildlife (CDFW) or the California Native Plant Society (CNPS) and include:

- San Bernardino Kangaroo Rat (animal)
- Santa Ana River Woolly Star (plant)
- Slender-Horned Spineflower (plant)
- Coastal California Gnatcatcher (bird)

The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, one parcel with utility structures (i.e. water tank and pump shelters), and citrus orchards. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources. Moreover, any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

Less than Significant Impact. Per the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-1 Biological Sensitivity Map, Plunge Creek and Santa Ana River are located outside of the Project site, to the northwest and east, respectively. Also, per Figure 5-1 Biological Sensitivity Map, the vacant areas of the Project site, not developed or citrus groves, are mapped as natural communities. Based on review of aerial maps/ imagery the canyons of the San Bernardino Mountain foothills in the northern part of the Project site may support drainages that convey stormwater runoff from the mountains to the Santa Ana River which may meet the definition of water of the state or US that are regulated by state code or the federal Clean Water Act.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, riparian habitat or other sensitive natural community. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations as applicable. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density

of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

Less than Significant Impact. As outlined in the City of Highland General Plan, Chapter 5. Conservation and Open Space Element and based on previous biological surveys, there are a large number of plant communities within and adjacent to the City, several of which are significant biological habitats. Many are associated with the watercourses that traverse the City and drainages in the canyons of the foothills and mountains and include Riversidian alluvial fan sage scrub, southern willow scrub, southern coast live oak riparian forest, southern cottonwood-willow riparian forest, southern riparian forest, white alder riparian forest, southern sycamore alder riparian woodland, California walnut woodland, and freshwater seep. Vermal pools were not identified, and coastal wetlands, including mashes would not occur as not located near the coast. These drainage features and associated riparian habitats could contain areas within them that have the various parameters to constitute a wetland.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, including wetlands. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations, as applicable. If sensitive biological resources are present, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

Less than Significant Impact. Habitat linkages provide connections between larger habitat areas that are separated by development. Wildlife corridors provide opportunities for animals to disperse or migrate between areas. A corridor can be defined as a linear landscape feature of sufficient width to allow animal movement between two comparatively undisturbed habitat fragments. Adequate cover is essential for a corridor to function as a wildlife movement area. Wildlife corridors allow for the dispersal, seasonal migration, breeding, and foraging of a variety of wildlife species. The Project site is located adjacent to and north of an important wildlife corridor in the region, the Santa Ana River wash. The Project site contains some vacant areas with some remaining natural habitat and citrus groves in which wildlife could move from the Santa Ana River Wash to the San Bernardino Mountains to the north. Development of these areas could reduce the area's potential to function as a wildlife corridor. Per the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-1 Biological Sensitivity Map, Plunge Creek and Santa Ana River are located outside of the Project site, to the northwest and east, respectively. They serve as wildlife corridors between the Santa Ana River wash and the San Bernardino Mountains. These areas are also designated as Open Space the General Plan and

no change is proposed to the land use designation and zoning of these areas; they would remain unchanged/ as is.

However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact sensitive biological resources, including wildlife corridors. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including biological resources assessments and jurisdictional delineations as applicable. If sensitive biological resources are present, including wildlife corridors, appropriate mitigation - such as avoidance, minimization of impacts, and/or mitigation - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

Less than Significant Impact. The City of Highland has a Heritage Tree Preservation Ordinance (HMC 16.64.040). The Project site does contain mature trees and woodland areas which could be impacted/removed by future development projects. However, the proposed GPA/ZC would not directly result in construction or physical development that could adversely impact protected trees. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including compliance with the Heritage Tree Preservation Ordinance. If protected trees are present, appropriate mitigation - such as avoidance or replacement of trees in accordance with the ordinance - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

Less than Significant Impact. The Upper Santa Ana River Wash Habitat Conservation Plan (HCP) is located approximately 1 mile downstream of the Seven Oaks Dam and encompasses approximately 4,892 acres, extending approximately 6 miles westward from Greenspot Road in the City of Highland to Alabama Street in the City of Redlands. The primary goal of the Upper Santa Ana River Wash HCP (Wash Plan HCP) is to balance the ground-disturbing activities of water conservation, aggregate mining, recreational activities, and other public services in the Wash Plan HCP Area with the conservation of natural communities and populations of special-status plants and wildlife. The five species covered by the Wash Plan HCP include: slender-horned spineflower, Santa Ana River woolly-star, cactus wren, coastal California gnatcatcher, and San Bernardino kangaroo rat. The Project site is not located with any other adopted HCP, Natural Community Conservation Plan, or other approved habitat conservation plan.

Most of the Project site is located outside of the Wash Plan HCP area. Only a small portion of the Project site which is located south of Greenspot Road, is located within the Wash Plan, which is designated as Neutral Lands in the plan and not included in the HCP Preserve lands. Therefore, any future development in this area within the Wash Plan HCP area would not conflict with the conservation goals and objectives of the Wash Plan HCP. Furthermore, the proposed GPA/ZC

would not directly result in construction or physical development that would conflict with an HCP. Any future development within the GPA/ZC area would be subject to project-level CEQA review, including compliance with an adopted HCP. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would result in less than significant impacts, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

V. CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change I the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

a) *Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

Less than Significant Impact. The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, one parcel with utility structures (i.e. water tank and pump shelters), and citrus orchards. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact a historic resource. Moreover, any future development within the GPA/ZC area would be subject to project-level CEQA review, including historic resources assessments in accordance with CEQA Guidelines §15064.5. If archaeological resources are present, appropriate mitigation - such as avoidance, evaluation, or data recovery - would be implemented to reduce potential impacts to a less-than-significant level. The proposed Project would result in less than significant impacts and no mitigation measures are required.

b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

Less than Significant Impact. Figure 5-2, *Archeological Resources* in the City of Highland General Plan identifies the Project site as largely being located within the mapped Areas of Sensitivity for Archeological Resources. The proposed GPA 025-001/ZC 025-001 would change the land use and zoning from AG/EQ to PD. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact an archaeological resource. Moreover, any future development on the site would be subject to project-level CEQA review, including cultural resources assessments in accordance with CEQA Guidelines §15064.5. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR. If archaeological resources are present, appropriate mitigation such as avoidance, evaluation, or data recovery would be implemented to reduce potential impacts to a less-than-significant level.

c) *Disturb any human remains, including those interred outside of formal cemeteries?*

Less than Significant Impact. There are no cemeteries in or near the Project site. No human remains are known to exist in the Project area. The proposed GPA/ZC would not directly result in

land disturbance and construction activities that could potentially disturb human remains interred outside of a formal cemetery. However, the potential exists that human remains may be unearthed during earthmoving activities associated with future Project construction associated with GPA/ZC Project area. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan of which the build out of this same Project area as residential was evaluated in the General Plan EIR.

If human remains are discovered during construction activities, the Project proponent would be required to comply with the applicable provisions of California Health and Safety Code § 7050.5 as well as Public Resources Code § 5097, et. seq., which requires that if the coroner determines the remains to be of Native American origin, he or she will notify the Native American Heritage Commission, who will then identify the most likely descendants to be consulted regarding treatment and/or reburial of the remains. Mandatory compliance with these provisions of California state law would ensure that impacts to human remains, if unearthed during construction activities, would be appropriately treated. California state law (California Health & Safety Code 7050.5) and federal law and regulations ([Archaeological Resources Protection Act (ARPA) 16 USC 470 & 43 CFR 7], [Native American Graves Protection & Repatriation Act (NAGPRA) 25 USC 3001 & 43 CFR 10] and [Public Lands, Interior 43 CFR 8365.1-7]) require a defined protocol if human remains are discovered in the State of California regardless of if the remains are modern or archaeological. The proposed Project would result in less than significant impacts and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VI. ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) *Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?*

Less Than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 would redesignate approximately 89 acres of the Project Site from AG/EQ to PD with an upzone on 5 acres of the site with high density residential, low- medium density residential on 61 acres of the site. However, there is no proposed development under the Project, therefore no unnecessary consumption of energy resources would occur due to construction and operation. Moreover, any future development within the GPA/ZC Project area would be subject to project level CEQA review and would be required to comply with the state and local regulations and the latest California Building Energy Efficiency Standards (Title 24, Part 6) and the California Green Building Standards Code (CALGreen), which establish requirements to reduce energy demand and promote efficient building design. As such, the Project would not directly or indirectly result in the wasteful, inefficient, or unnecessary consumption of energy resources during construction or operation. Therefore, the impact would be less than significant.

b) *Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

No Impact. The proposed Project does not currently include specific development. Any future development within the GPA/ZC Project area would be designed to comply with the latest California Building Energy Efficiency Standards (Title 24, Part 6) and the California Green Building Standards Code (CALGreen) The Proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VII. GEOLOGY AND SOILS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury death involving?				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

I. Rupture of a known earthquake fault, as delineated on the most recent Alquist Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

II. Strong seismic ground shaking?

III. Seismic related ground failure, including liquefaction?

IV. Landslides?

I-IV) **Less than Significant Impact.** The proposed Project GPA 025-001 and ZC 025-001 would redesignate approximately 89 acres of the Project site from AG/EQ to PD with an upzone on 5 acres of the site with high density residential, low- medium density residential on 61 acres of the site and remaining 23 acres would be assumed as undevelopable. The majority of the Project site except a parcel to the southwest of the Greenspot Road is located within an Alquist-Priolo Earthquake Fault Zone or County Fault Hazard Zones.[3] According to the San Bernardino County Policy Plan, Hazard Element Map *HZ-1 Earthquake Fault Zone*, the San Andreas Fault is located approximately four miles north of the Project site and the south branch of the fault traverses northwest through southeast of the Project site. The Project site is located in a seismically active area and in a high liquefaction susceptibility area, but not in a high landslide susceptibility area based on Hazard Element Map *HZ-2 Liquefaction and Landslides.*[4] Per the City of Highland General Plan, Chapter 6. Public Health Safety, and Environmental Justice Element, Figure 12, Landslides, the Project site is located in Landslide Susceptibility areas 2 and 3. The proposed Project includes a policy level change and does not include any specific development or construction activities. Moreover, any future project would be subject to project level CEQA review and would be required to comply with the California Building Code requirements and the Uniform Fire Code requirements and all applicable statutes, codes, ordinances, and standards of the Highland Fire Department. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The design of any structures on-site would incorporate measures to accommodate projected seismic ground shaking in accordance with the California Building Code (CBC) and local building regulations. The CBC is designed to preclude significant adverse effects associated with strong seismic ground shaking. Compliance with these codes and standards would address potential impacts resulting from an earthquake event. Therefore, impacts under the proposed Project would be less than significant.

b) *Result in substantial soil erosion or the loss of topsoil?*

Less than Significant Impact. As explained in the prior sections, the proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities. Any future development would be subject to a project level CEQA review and would be required to develop and implement a Storm Water Pollution and Prevention Plan (SWPPP) for construction activities and a Water Quality Management Plan (WQMP) for long-term use/operations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. SWPPPs and WQMPs for future projects would outline the Best Management Practices (BMPs) to be implemented for each Project to avoid and minimize soil erosion. Compliance and implementation of BMPs would ensure that the proposed Project does not result in substantial soil erosion or the loss of topsoil. Therefore, less significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

c) *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?*

Less than Significant Impact. As explained in the prior sections, the proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or

[3] San Bernardino Countywide Plan. HZ-1 Earthquake Fault Zones.
[4] San Bernardino Countywide Plan. HZ-2 Liquefaction and Landslides.

construction activities. Moreover, any future project would be subject to project level CEQA review and would be required to comply with the California Building Code requirements as well as recommendations identified in standard geotechnical investigations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Compliance with regulations and code and project specific geotechnical investigation recommendations would address potential risks associated with future residential development and unstable soils and mitigate risks to life and property. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

d) *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?*

Less than Significant Impact. The proposed Project would change the land use and zoning of the site from AG/EQ to PD with varying densities. The Project does not currently include specific development and construction activities and would not directly expose people or structures to expansive soil hazards. Any future development on the site would be subject to Project level CEQA review and would be required to comply with the California Building Code, including provisions for design and construction on expansive soils, as well as recommendations identified in standard geotechnical investigations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Compliance with these regulations and geotechnical investigation recommendations would address potential risks associated with expansive soils and mitigate risks to life and property. Therefore, no significant impacts are identified or anticipated, and no mitigation measures are recommended.

e) *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

No Impact. The GPA/ZC from AG/EQ to PD is a policy level change and does not include development or construction activities and thus would not impact the soils on site. Any future development on site will connect to the local water and sewer delivery system, therefore no impacts are anticipated.

f) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

Less than Significant Impact. The proposed Project to redesignate the site from AG/EQ to PD is a policy level change and does not include any specific development or ground-disturbing construction activities. Any future development would be subject to project level CEQA review, including preparation of a project specific paleontological resources assessment by the City or Project proponent's consulting paleontologist. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the potential impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

VIII. GREENHOUSE GAS EMISSIONS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less than Significant Impact. The proposed Project GPA 025-001/ZC 025-001 will redesignate approximately 89 acres on the easterly portion of the City of Highland from AG/EQ to PD allowing for various residential densities with an upzone on approximately 5 acres of the site with higher density residential (20-30 du/ac). The Project would develop approximately 61 acres with medium-density residential (6–12 du/ac), and approximately 23 acres would remain as assumed undevelopable. The proposed Project is a policy level change and does not include any site-specific development or construction.

The proposed GPA/ZC would result in an overall 2.66 percent increase in residential citywide density compared to what was already accounted for and evaluated in the City's General Plan, General Plan EIR, and the AQMP. This is considered a modest increase. In addition, any future residential projects in the proposed GPA/ZC area would be required to comply with the Green Building Code, which reduces GHG emissions. Because this increase represents a relatively small adjustment within the City's planned growth framework, it would not introduce significant growth beyond regional projections and what was already evaluated in the General Plan EIR. Moreover, the Project is a policy level amendment which would not result in direct residential development and generation of GHG emissions. The Project would not conflict with any adopted local or statewide plans, policies, or regulations aimed at reducing greenhouse gas (GHG) emissions. Therefore, the Project would not generate greenhouse gas emissions, either directly or indirectly, or conflict with an applicable plan, policy or regulation adopted for the purpose of reducing emission of greenhouse gases. Thus, the impacts under the Project would be less than significant.

No significant adverse impacts have been identified or anticipated, and no mitigation is required.

IX. HAZARDS AND HAZARDOUS MATERIALS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk loss, injury or death involving wildland fires?	☐	☐	☒	☐

a) *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 are a policy level change and does not include any specific development or construction activities. Construction of future residential projects within the Project area would require the routine transport, use, storage, and disposal of limited quantities of common hazardous materials such as gasoline, diesel fuel, oils, solvents, paint, fertilizers, pesticides, and other similar materials. All materials required during construction would be required to be kept in compliance with State and local regulations and BMPs. Although these materials could be stored on-site during construction activities, future residential projects would be required to comply with the guidelines established by the SWPPP. The management of hazardous materials during future construction activities would not result in significant impacts. Operations would include standard maintenance (i.e., landscape upkeep, exterior painting and similar activities) involving the use of commercially available products (e.g., pesticides, herbicides, gas, oil, paint, etc.) the use of which would not

create a significant hazard to the public. Impacts from operations would be less than significant. Hazardous materials are highly regulated in California, including the methods in which they are transported, used and stored. Moreover, any future project would be subject to project level CEQA review and would be required to comply with all federal, state and local regulations related to hazardous materials. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

Less than Significant Impact. The existing site is largely vacant land characterized with gently sloping terrain, scattered vegetation and citrus orchards with views of the San Bernardino Mountains to the north of the site. Per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 8 Hazardous Waste Cleanup Sites, the Project area does not contain any hazardous waste cleanup sites. Moreover, there are no known hazardous materials sites within or adjacent to the Project Site, nor is there historical evidence of prior industrial uses that involved hazardous substances. The proposed Project does not include specific development plans or construction activities that would directly result in the routine use, storage, transport or disposal of hazardous materials. Future residential development would be subject to project-level CEQA review and compliance with applicable federal, state, and local regulations governing hazardous materials. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the Proposed Projects would be less than significant.

c) *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

No Impact. No existing or known proposed school is located within one-quarter mile of the Project area. The nearest school is Cram Elementary School located at 29700 Water St. approximately 2.9 miles northwest of the Project area. No schools exist within a quarter mile of the Project area. Residential development is not a type of land use that typically generates hazardous emissions or handles acutely hazardous materials or substances. Therefore, the proposed Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or known proposed school. No impacts are identified or anticipated, and no mitigation measures are required.

d) *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

No Impact. According to the California Department of Toxic Substances Control EnviroStor (accessed 10/22/2025), the Project Site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. And per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 8 Hazardous Waste Cleanup Sites, the Project area does not contain any hazardous waste cleanup sites. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

e) *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?*

No Impact. The Project area is not within an airport safety review area or Airport Runway Protection Zone. The Project area is not located within the vicinity of any other private or public airstrip. The nearest airport to the Project area is Redlands Municipal Airport, approximately two and a half (2.5) miles southwest. The San Bernadino International Airport a public airport is located approximately seven (7) miles southwest of the Project area in the City of San Bernadino. Per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 9 Airport Influence Areas, the Project area is not located within the San Bernardino Airport Influence Area. The Project area is not located within 2 miles of any neighboring public use airport. Therefore, no impacts are identified or anticipated, and no mitigation measures are required.

f) *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities that would alter roadway alignments or circulation patterns that would interfere with emergency response plan or evacuation plan. The proposed Project area is located along Greenspot Road, a designated arterial that provides access to major regional routes including State Route 210 and Highland Avenue. The proposed amendment would not alter Greenspot Road, and all future development projects would be required to comply with the City's Emergency Operations Plans and Fire Code standards and undergo a project level CEQA review for compliance. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the project would be less than significant.

g) *Expose people or structure, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

Less than Significant Impact. According to the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map, the portion of the Project area located north of Greenspot Road is within an area designated as Very High Fire Hazard Severity Zone and the portion of the Project area located south of Greenspot Road is within an area designated as High Fire Severity Zone. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. Future residential development would be subject to project-level CEQA review and would be required to comply with the current building and fire codes and regulations designed for safe development in these Very High and High Fire Severity Zones. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the proposed Project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires resulting in a less than significant impact and no mitigation is required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

X. HYDROLOGY AND WATER QUALITY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?				
I. Result in substantial erosion or siltation on – or off-site;	☐	☐	☒	☐
II. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on – or off-site;	☐	☐	☒	☐
III. Create or contribute runoff water which would exceed the capacity of the existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff; or	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐

a) *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?*

Less than Significant Impact. The Project site consists of approximately 89 acres of vacant land with natural vegetation communities, citrus orchards, and one parcel with utility structures (i.e. water tank and pump shelters). The proposed GPA/ZC would not directly result in construction or physical development that could violate water quality standards or discharge requirements. Moreover, the proposed project does not currently include development and any future residential development **in** the Project area would be subject to Project level CEQA review and would be required to comply with federal, state, and local water quality regulations for new developments which include preparation and implementation of Storm Water Pollution Prevention Plans (SWPPPs) for construction activities and project specific Water Quality Management Plans (WQMPs) for long-term operations. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the proposed project would be less than significant.

b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*

Less than Significant Impact. The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities, therefore, the Project would not result in extraction of groundwater or substantially decrease groundwater supplies or interfere substantially with groundwater recharge.

The Project area is not currently used for groundwater recharge. The Upper Santa Ana River Wash Habitat Conservation Plan (HCP) is located south of the Project area, directly south of Greenspot Road and includes extensive groundwater recharge basins owned and operated by the San Bernardino Valley Water Conservation District. The proposed Project would not interfere with current groundwater recharge activities in the area.

Efficient use, protection and conservation of water resources are high priorities in the City of Highland General Plan Chapter 5. Conservation and Open Space Element, which includes various goals and policies related to water conservation and protection of water quality. Any future residential development would be subject to project level CEQA review and would be required to comply with the City of Highland's General Plan policies related to groundwater sustainability and conservation. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential, was evaluated in the General Plan EIR. Therefore, impacts under the policy level change of the proposed Project would less than significant.

c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?*

I. *Result in substantial erosion or siltation on – or off-site;*

II. *Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site;*

III. *Create or contribute runoff water which would exceed the capacity of the existing or planned stormwater drainage systems or provide substantial additional resources of polluted runoff; or*

I-III. Less than Significant Impact. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities that would alter existing drainage patterns.

Moreover, any future development under the GPA 025-001/ZC 025-001 would be subject to project level CEQA review and compliance with the City of Highland Municipal Code, including Chapter 8.28 (Stormwater and Urban Runoff Management), and the National Pollutant Discharge Elimination System (NPDES) permit requirements. Any future projects would include site-specific design and construction activities deploying BMPs to minimize soil erosion, manage stormwater and ensure runoff does not exceed the capacity of existing or planned drainage infrastructure. Therefore, implementation of standard stormwater management and erosion control measures during future development would ensure that potential impacts to drainage patterns, erosion, flooding, or stormwater quality remain less than significant. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build

out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

d) *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

Less than Significant Impact. Tsunamis are giant waves caused by earthquakes or volcanic eruptions under the sea. As the proposed Project area is located more than 50 miles inland from the Pacific Ocean and is not subject to tsunami hazards, potential impacts from tsunamis are less than significant. A seiche is a standing wave oscillating in a body of water. There are no large standing bodies of water near the Project area, therefore, potential impacts from seiche are less than significant. As shown in the City of Highland General Plan Chapter 6. Public Health, Safety, and Environmental Justice Element, Figure 11 Flood Risk, the Project area is not located within the 100-year Flood Zone.

The proposed Project GPA 025-001 and ZC 025-001 is a policy level change and does not include any specific development or construction activities, therefore, the Project would not provide residential development that would be subject to a flood hazard, tsunami, or seiche. Any future development within the Project area would be subject to project level CEQA review and would be required to comply with the City's General Plan Safety Element, floodplain management regulations and applicable NPDES requirements to ensure flood and water quality protection. Therefore, the proposed Project would not expose people or structures to risk of pollutants, and potential impacts would be less than significant. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. A less than significant impact is anticipated, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XI. LAND USE AND PLANNING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

a) *Physically divide an established community?*

No Impact. The majority of the Project site is vacant with natural vegetation, but also contains citrus orchards and few water infrastructure structures. The Project area does not contain an established community. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. Any future residential development in the proposed GPA 025-001/ZC 025-001 Project area would not physically divide an established community. Residential uses of similar land use intensity as the proposed Project are present to west of the Project area. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. No mitigation measures are required.

b) *Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

Less than Significant Impact. The proposed Project GPA 025-001/ ZC 025-001 is a policy level change and does not include any specific development or construction activities. The General Plan identifies the Project area as residential land use, as AG/EQ. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. The proposed Project would implement the City's Housing Element Program 33. The proposed designation of PD will provide for superior development by allowing a greater degree of design and land use flexibility within the framework of a site-specific development plan (Highland Municipal Code (HMC) Section 16.12.010 (A)(1)). The PD designation will allow for the clustering of units and building types, and the formula of specific development standards and design criteria which respond to the particular features or conditions effecting a site (HMC Section 16.12.010(A)(2)). The proposed PD designation also encourages the merging of areas or parcels in a single overall land use plan and site design which might otherwise be developed separately (HMC Section 16.12.010(A)(3)(c)).

Any future residential development in the Project area would be reviewed for consistency with the City's General Plan, Zoning Code, and other applicable environmental protection policies at the project level. The proposed Project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or

mitigating environmental effects. Impacts would be less than significant and no mitigation is required.

No significant adverse impacts are identified or are anticipated, and no mitigation measures are required.

XII. MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) *Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

Less than Significant Impact. In 1975, the California Legislature enacted the Surface Mining and Reclamation Act (SMARA), which, among other things, provided guidelines for the classification and designation of mineral lands. Areas are classified on the basis of geologic factors without regard to existing land use and land ownership. The areas are categorized into four Mineral Resource Zones (MRZs):

- MRZ-1: An area where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence;
- MRZ-2: An area where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood exists for their presence;
- MRZ-3: An area containing mineral deposits, the significance of which cannot be evaluated; and
- MRZ-4: An area where available information is inadequate for assignment to any other MRZ zone.

According to the City of Highland General Plan, Chapter 5. Conservation and Open Space Element, Figure 5-3, Mineral Resources Zones the Project area is located within zones MRZ-2 and MRZ-3. The Project area is largely vacant except for natural vegetation communities, citrus orchards and a small water utility structure and has not previously been used for mineral extraction. As such, the proposed Project would not result in the loss of availability of a known mineral resource as the mineral resource was not previously available for extraction. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, less significant impacts are anticipated, and no mitigation measures are required.

b) *Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

Less than Significant Impact. As discussed previously, the Project area is within areas mapped as MRZ-2 and MRZ-3. However, no mineral extraction activities occur on the site currently, or historically. The site is largely vacant with natural and disturbed vegetation communities and citrus orchards . As such, the proposed Project would not result in the loss of availability of a known

mineral resource as the mineral resource was not previously available for extraction. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, less significant impacts are identified or anticipated, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIII. NOISE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration of groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

b) *Generation of excessive groundborne vibration of groundborne noise levels?*

Less than Significant Impact. The proposed Project GPA 025-001/ZC 025-001 is a General Plan Amendment and Zone change that will redesignate approximately 89 acres on the easterly portion of the City of Highland from AG/EQ to PD allowing various residential densities with an upzone on approximately five (5) acres of the site with higher density residential (20-30 du/ac). The Project would develop approximately 61 acres with medium-density residential (6–12 du/ac), and approximately 23 acres would remain as open space. The proposed Project would represent an approximately 2.66% increase in citywide residential density, a modest change relative to existing regional population and growth projections in the General Plan EIR. The proposed Project is a policy level change and does not include any site-specific development or construction activities that would generate noise or vibration. Any future development within the Project area would be subject to project level CEQA review to ensure future development incorporates site-specific noise mitigation measures such as setbacks, sound attenuation features for sensitive receptors including schools, hospitals and residences. Future development would also be required to comply with the City of Highland General Plan Noise Element, Municipal Code Chapter 8.50 (Noise Control Ordinance), and standard design practices to minimize construction and operational noise impacts. All future construction activities would implement BMPs such as mufflers, restricted hours, and vibration-reducing equipment. Operational noise from typical residential uses including traffic, landscaping, and neighborhood activities would be consistent with existing ambient levels and would not exceed local noise standards. Potential impacts due to groundborne vibration or noise would be short-term and temporary during construction. Thus, the potential impacts of the proposed Project would be less than significant.

c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

No Impact. The proposed Project is not located within the vicinity of a private airstrip or an airport land use plan. The nearest airport to the Project area is Redlands Municipal Airport, approximately two and a half (2.5) miles southwest. The San Bernadino International Airport, a public airport, is located approximately seven (7) miles southwest of the Project area in the City of San Bernadino. The Project is not located within 2 miles of any neighboring public use airport. Therefore, the proposed Project would not expose people residing or working in the Project area to excessive noise levels and there would be no potential impact.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIV. POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) *Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

Less than Significant Impact. The proposed Project would allow an overall 2.66 percent increase in residential growth compared to the levels analyzed in the City's General Plan EIR. This is considered a modest increase and is intended to accommodate the City's growing population and meet regional housing needs identified in the 6th Cycle Housing Element (Program 33). The Project would not induce significant population growth beyond the growth projections already considered in the General Plan EIR and would not exceed the City's planned capacity for infrastructure, public services, or roads. Any future development under the PD designation would be subject to project-level CEQA review. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, potential impacts under the Project would be less than significant.

b) *Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

No Impact. The proposed Project area contains citrus groves and some water infrastructure with the remaining area vacant. There are no exiting people or housing that would necessitate the construction or replacement of housing. Therefore, no impact would occur, and no mitigation measures are required.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XV. PUBLIC SERVICES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?	☐	☐	☒	☐
ii. Police protection?	☐	☐	☒	☐
iii. Schools?	☐	☐	☒	☐
iv. Recreation/Parks?	☐	☐	☒	☐
v. Other public facilities?	☐	☐	☒	☐

a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: Fire protection, Police protection, Schools, Recreation/Parks, Other public facilities?*

Less than Significant Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's planned capacity for public services. Any future development under the PD designation would be subject to project-level CEQA review. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR.

Fire Protection: The City of Highland Fire Department and San Bernardino County Fire Department have planned for growth consistent with the General Plan. The modest increase in density allowed and associated population from this Project is not expected to require new fire stations or substantial expansion of existing facilities. Moreover, this is a policy level change, and any future project would be subject to project level CEQA review and would be compliant with standard fire safety requirements, including compliance with building and fire codes, hydrants, and fire access.

Police Protection: The City's Police Department has planned for population growth consistent with the General Plan. The small increase in residential density would not require construction of

new police facilities beyond those anticipated in the General Plan buildout. Any proposed future development would pay standard development impact fees to support police services.

Schools: Any additional student population generated by any future residential development would be accommodated within existing or planned school facilities. School districts routinely plan for residential growth using enrollment projections that include General Plan buildout. Any project-level impacts would be addressed through standard development impact fees to the school district.

Recreation/Parks: The Project includes 23 acres of open space, which would contribute to recreational opportunities. Any future residential development would be required to comply with City standards for parkland dedication or in-lieu fees, ensuring that park and recreational service ratios remain acceptable.

Other Public Facilities: Other municipal services, including libraries, community centers, and utilities, have been planned for General Plan buildout. The incremental increase in allowed residential density from this Project is not expected to trigger the need for new facilities beyond those that currently exist or would be needed with General Plan buildout.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVI. RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

Less than Significant Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's planned capacity for neighborhood or regional parks. Moreover, no specific developments are proposed at this stage. All future projects under the GPA 025-001/ZC 025-001 would be subject to project level CEQA review and compliance with the local park ordinance and in-lie fee requirements under the Quimby Act (government Code 66477). This would ensure maintenance of recreational facilities and services and would not cause accelerated substantial physical deterioration of the facilities. Therefore, the impacts under the proposed Project would be less than significant and mitigation is not required.

b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

Less than Significant Impact. The proposed Project does not include the construction or expansion of recreational facilities. Any future development under the PD designation may include open spaces and recreational facilities to serve any future residents within the Project area. Construction of such facilities would occur in compliance with applicable regulations and ordinances and would undergo project level review to address site-specific impacts. As such, the proposed GPA 025-001/ZC 025-001 does not include construction of recreational facilities which might have an adverse physical impact on the environment. Therefore, the impacts under the proposed Project would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVII. TRANSPORTATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

a) *Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

No Impact. The Project would allow for a 2.66 percent increase in residential growth compared to the growth levels analyzed in the City's General Plan EIR. This growth is considered a modest increase and would not induce significant population that would exceed the City's circulation system. The majority of the Project site is located north of Greenspot Road, with one parcel located to the southwest of Greenspot Road, which is identified as a Major Highway in Figure 3-2 *Roadway Network*, in the City of Highland General Plan Circulation Element. The Project does not include any specific development or construction activities. Any future developments in the Project area would be subject to project level CEQA review and would be required to comply with existing programs, policies and ordinances addressing the circulation system. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. The Project is a policy level change and does not conflict with a program plan, or ordinance, or policy addressing the circulation system, including bicycle and pedestrian facilities. Thus, less than significant impacts are anticipated.

b) *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

Less Than Significant Impact. The Project is a policy level change and does not include any specific development or construction activities. CEQA Guidelines Section 15064.3(b) identifies Vehicle Miles Traveled (VMT) as the primary measure of transportation impacts for CEQA purposes. The proposed GPA/ZC promotes higher-density residential development in areas of opportunity, consistent with the City's 6th Cycle Housing Element (Program 33) and the General Plan's land use policies. By encouraging infill-type development near existing infrastructure, services, and transit options, the Project supports reduced VMT compared to lower-density,

dispersed development patterns. Any future residential development facilitated by the Project would be required to undergo project-level CEQA review, including evaluation of VMT and implementation of applicable mitigation measures consistent with City, regional (SCAG), and state (CARB) guidelines. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the Project would not conflict with CEQA Guidelines Section 15064.3(b) and impacts would be less than significant.

c) *Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?*

Less Than Significant Impact. As the Project is a policy level change and does not include any specific development or construction activities **it would not affect existing roadways**. Any future residential development within the Project area would be subject to Project level CEQA review and required to comply with City roadway design standards, engineering requirements, and the Municipal Code, which ensure safe geometric design for streets, intersections, and driveways. Additionally, future projects would be reviewed for potential traffic hazards, including compatibility with adjacent uses, farm equipment, or other potential conflicts. Any necessary improvements, such as realigned intersections, traffic calming, or signage, would be implemented at the project level to maintain safety standards. Because the Project does not include site-specific improvements and future development would be required to comply with all applicable safety and roadway design standards, the Project would not substantially increase hazards due to geometric design or incompatible uses, and potential impacts would be less than significant.

d) *Result in inadequate emergency access?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction activities. Any future residential development in the Project area would be subject to Project level CEQA review and required to comply with City roadway design standards, engineering requirements, and the Municipal Code, which include provisions for adequate emergency access, street widths, turnaround areas, and connectivity for fire and police vehicles. Thus, the Project would not create conditions that would impair emergency access, and potential impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XVIII. TRIBAL CULTURAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, lace, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

Summary of AB 52 Consultation

On August 11, 2025, the City of Highland initiated consultation with the following Native American tribes, pursuant to AB 52 and SB 18:

- Gabrieleno Band of Mission Indians
- Soboba Band of Luiseno Indians
- Yuhaaviatam of San Manuel Nation

The Gabrieleno Band of Mission Indians and Yuhaaviatam of San Manuel Nation responded via emails, stating that they have no comments since there are no proposed developments or construction at this time. However, they would like to be notified if there is a future proposed project that would result in ground disturbance. The Soboba Band of Luiseno Indians did not respond to the Project notification for request to consult.

a) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

Less than Significant. The proposed GPA/ZC would not directly result in construction or physical development that could adversely impact a historic resource. Moreover, any future development within the Project area would be subject to project-level CEQA review, including historic resources assessments in accordance with CEQA Guidelines §15064.5. If archaeological resources are present, appropriate mitigation - such as avoidance, evaluation, or data recovery - would be implemented to reduce potential impacts to a less-than-significant level. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the build out of this same Project area as residential was evaluated in the General Plan EIR. Therefore, the impacts under the proposed Project would be less than significant.

b) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?*

Less than Significant. The Project is a policy-level action and does not include site-specific development or construction that could directly affect **tribal** cultural resources. The Tibal consultation conducted by the City of Highland did not indicate concerns from Tribes during the consultation period. Any future development within the Project area would be subject to project-level CEQA review and consultation with the Tribes, which would include evaluation for potential impacts to **tribal** cultural resources and implementation of standard mitigation measures if such resources are encountered. Therefore, impacts under the proposed Project would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XIX. UTILITIES AND SERVICE SYSTEMS

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) *Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

Less than Significant Impact. The proposed Project would Overall, the proposed Project would allow for an estimated 2.66 percent increase in citywide residential density. This is considered a modest increase above what was already accounted for in the City's General Plan and EIR and is not anticipated to exceed the existing and planned citywide utility and infrastructure capacities required at buildout. Moreover, the proposed Project is a policy level change and does not include specific development or utility construction at this stage. Any future development under the GPA/ZC would be subject to project level CEQA review. Any necessary utility extensions or upgrades would occur within existing or previously disturbed right of way and would be constructed in compliance with applicable City, regional and state regulations. These improvements would not cause significant new environmental effects beyond those previously evaluated in the General Plan EIR. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. Therefore, potential impacts under the Project would be less than significant.

b) *Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

Less than Significant Impact. The proposed Project is a policy level change and does not include specific development or construction. Any future development under the proposed Project could result in a modest 2.66% increase in residential density beyond what was considered under the General Plan EIR. The proposed Project would not allow for significant unplanned population growth beyond the General Plan projections. The East Valley Water District (EVWD) provides water service within the City of Highland. Any future development consistent with the proposed GPA and ZC would be subject to a project level CEQA review to demonstrate adequate water availability and connection capacity through the EVWD's development review and permitting process. All future projects would be subject to City's water conservation requirements (Municipal Code Chapter 13.30) and EVWD's Water Shortage Contingency Plan, which ensures reliability during drought conditions. Therefore, the Project would not result in deficiency in water supplies and potential impacts would be less than significant.

c) *Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Less than Significant Impact. Per the City of Highland General Plan, Chapter 4. Public Services & Facilities Element, East Valley Water District (EVWD) maintains Highland's sewer system and has a joint powers agreement with the City of San Bernardino to accept all sewage generated within EVWD's boundaries which is conveyed to the City of San Bernardino Water Reclamation Plant (WRP) operated by the San Bernardino Municipal Water Department (SBMWD). The San Bernardino WRP has a treatment capacity of approximately 33 million gallons per day (mgd) and currently treats an average daily flow of about 26 mgd. The anticipated 2.66% increase in residential density and associated growth allowed with the GPA 025-001/ZC 025-001 would be accommodated within the existing reserve capacity of the treatment plant. Any future development under the GPA/ZC would be subject to project level CEQA review and would be required to coordinate with the City, EVWD and SBMWD to ensure adequate conveyance and treatment capacity prior to service connection, consistent with Municipal Code Chapter 13.12. Thus, the Project would not exceed the existing capacity of wastewater treatment facilities or require construction of new facilities that could result in significant environmental effects. Therefore, impacts would be less than significant.

d) *Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

Less than Significant Impact. The Project represents a policy-level amendment and does not include specific development or construction that would generate solid waste. Solid waste collection and disposal services in the City of Highland are provided by Burrtec Waste Industries, with disposal at the Mid-Valley Sanitary Landfill (MVSL) operated by the County of San Bernardino Department of Public Works, Solid Waste Management Division. The MVSL has a maximum permitted daily throughput of 7,500 tons per day and a remaining capacity of approximately 61.2 million tons, with an estimated closure date of 2045. The anticipated 2.66 percent increase in residential density and associated growth that would be allowed under the proposed Project would result in a minor incremental increase in solid waste generation that would be well within the existing and planned landfill capacity. Because the Project is a policy-level land use action that would not directly generate solid waste, and future development would be subject to compliance with all applicable waste reduction and recycling regulations, the Project would not

result in solid waste generation exceeding local capacity or impede waste reduction goals. Therefore, impacts would be less than significant.

e) *Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

Less than Significant Impact. The Project is a policy-level amendment and does not include site-specific development or construction at this stage. Any future development proposed under the GPA 025-001/ZC 025-001 would be required to comply with all applicable federal, state, and local regulations regarding solid waste management, including the following:

- California Integrated Waste Management Act (AB 939) – mandates waste diversion and landfill reduction goals.
- California Green Building Standards Code (CALGreen, Title 24, Part 11) – requires construction and demolition waste recycling and reduction.
- City of Highland Municipal Code Chapter 8.20 (Solid Waste Management) – governs solid waste collection, recycling, and disposal within the city.

Because the Project does not include development at this stage and any future project would be required to comply with the above statutes and regulations to ensure appropriate solid waste management, promote recycling, and prevent adverse impacts related to the handling or disposal of solid waste, impacts would be less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XX. WILDFIRE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project?				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

a) *Substantially impair an adopted emergency response plan or emergency evacuation plan?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction that would impair or block emergency evacuation or response plans. The City of Highland has adopted emergency response and evacuation plans that guide emergency operations and ensure safe evacuation during wildfires, floods, or other hazards. Any future development within the Project area would be required to comply with City standards for street design, emergency access, and fire safety, including consultation with the Highland Fire Department and other emergency service providers. Because the Project does not propose changes that would block, restrict, or otherwise interfere with emergency routes or operations, and future development would be required to maintain compliance with all emergency planning requirements, the impacts would be less than significant.

b) *Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

Less than Significant Impact. The Project is a policy-level change and does not include specific development, construction or grading that would immediately alter slope or vegetation conditions. However, the Project area is located within Very High and High Fire Hazard Severity Zone according to the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map. Any future development would be subject to project level CEQA review and comply with the Highland Municipal Code, Fire Code regulations, and California Department of Forestry and Fire Protection (CAL FIRE) standards for wildland-urban interface areas. Thus, the proposed Project would not cause a significant impact due to slope, prevailing

winds, and other factors, exacerbate wildfire risks, thereby exposing Project occupants to pollutant concentrations from wildfire or the uncontrolled spread of a wildfire. Although the proposed Project would increase the density of allowed residential development within the Project area, it is within an area that was already designated for residential development in the General Plan, of which the buildout of this same Project area as residential was evaluated in the General Plan EIR. Therefore, impacts would be less than significant impacts.

c) *Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

Less than Significant Impact. The Project area is located adjacent to existing residential development to the west and Greenspot Road which have existing infrastructure such as power lines and other utilities. Only minor extensions from these areas would be required to serve any future developments within the Project area. The proposed Project is a policy level change and does not include the installation or maintenance of associated infrastructure that would exacerbate fire risk. Any future development and associated infrastructure improvements would be subject to project level CEQA review and would be made in accordance with development standards per the San Bernardino County Development Code, and County Fire Department development standards as well as California Fire Codes. Therefore, impacts under the project would be less than significant.

d) *Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

Less than Significant Impact. The Project site is relatively vacant with gentle sloping terrain, vegetation and citrus orchards, and the foothills of the San Bernadino Mountains. The Project **area** is located within High and Very High Fire Risk areas as shown on the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – San Bernardino County Local Responsibility Area Fire Hazard Severity Zones Map. It is not within a 100-year Flood Zone per the City of Highland General Plan, Chapter 6. Public Health, Safety, and Environmental Justice Element, City of Highland – Figure 11 Flood Risk Map. The Project is a policy level amendment and does not include site specific development. Any future development would be subject to project level CEQA review and would be required to comply with local, regional and state regulations and building codes. The Project area is not anticipated to expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Therefore, impacts under Project are less than significant.

No significant adverse impacts are identified or anticipated, and no mitigation measures are required.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

a) *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

Less than Significant Impacts. The proposed Project is a policy level change and does not include any specific development or construction. The results of the Initial Study show that the impacts under the proposed GPA 025-001/ZC 025-001 would be less than significant. Therefore, the Proposed Project will not substantially degrade the quality of the environment and impact on habitat, wildlife populations, plant and animal communities, rare and endangered species or important examples of the major periods of California history or prehistory; no mitigation is warranted.

b) *Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

Less than Significant Impact. Cumulative impacts are defined as two or more individual effects that, when considered together, are considerable or that compound or increase other environmental impacts. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the development when added to the impacts of other closely related past, present, and reasonably foreseeable or probable future developments. Cumulative impacts can result from individually minor but collectively significant

developments taking place over a period. The CEQA Guidelines, Section 15130 (a) and (b), states:

(a) Cumulative impacts shall be discussed when the project's incremental effect is cumulatively considerable.

(b) The discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the project. The discussion should be guided by the standards of practicality and reasonableness.

The results of the Initial Study show that the impacts under the proposed GPA 025-001/ZC 025-001 would be less than significant. Impacts associated with the proposed Project would not be significant individually and would not contribute towards cumulative impacts. The proposed Project would have less than significant cumulative impacts, and no mitigation measures are required.

c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Less than Significant Impact. The proposed Project is a policy level change and does not include any specific development or construction. There would be no substantial adverse effects on human beings, either directly or indirectly. Any future development would be subject to project level CEQA review and would be required to comply with local, regional and state regulations and building codes. Therefore, impacts under Project are less than significant.
