Planning Commission Regular Meeting Agenda

January 20, 2026 at 6:00 PM

City Hall Donahue Council Chambers | 27215 Base Line, Highland CA 92346

Staff

Lawrence A. Mainez, Community Development Director
Kim Stater, Assistant Community Development Director
Angela Tafolla, Associate Planner
Travis Trejo, Assistant Planner
Tiffany Martinez, Assistant Planner
Camille Duarte, Administrative Assistant III
Octavio Duran, Public Works Director/City Engineer
Matt Wirz, Building Official
Scott Rice, City Landscape Architect

Mission Statement

Highland is dedicated to the betterment of the individual, the family, the neighborhood and the community. The City Council and the staff of Highland are dedicated to providing the quality of public facilities and services that its citizens are willing to fund and will do so as efficiently as possible.

In compliance with the Brown Act, any writings or documents provided to a majority of the legislative body regarding any item on this agenda, that are not exempt from disclosure under the California Public Records Act, will be made available for public inspection at City Hall, 27215 Base Line Highland, CA 92346, during normal business hours. Such documents will also be made available on the City's website at www.cityofhighland.org.

In compliance with the Americans with Disabilities Act (ADA), if you need special assistance, please contact the City Clerk's office at (909) 864-6861, ext. 226, at least 72 hours prior to the meeting for any requests for reasonable accommodations, including interpreters.

Levine Act: Pursuant to Government Code Section 84308, any party to a City proceeding must disclose on the record any campaign contributions made to a member of the City Council (or commission) in excess of $500 in the past 12 months. This disclosure requirement includes contributions by the party's agent and aggregated contributions from persons or entities related to the party. Please make the disclosure as soon as possible, but no later than the beginning of the proceeding.

Call to Order

Pledge of Allegiance

Public Comment

To address the Planning Commission, please complete a speaker form located at the entrance and give it to the Administrative Assistant prior to the beginning of the meeting. Your name will be called when it is your turn to speak. Individual speakers are limited to 3 minutes each. For those wishing to make public comments by email, please submit your comments by 5:00 p.m. on January 20, 2026, to publiccomment@highlandca.gov. If you are submitting a public comment pertaining to an item on the agenda, please identify the agenda item number. Members of the public may submit comments on public hearing items at any time before the meeting, as well as during the meeting up until the close of the public hearing for the respective item.

1. Minutes - November 18, 2025 Planning Commission Regular Meeting

   Approve Minutes as submitted.

2. Minutes - December 16, 2025 Planning Commission Regular Meeting

Planning Commission Public Hearing

3. An application by Patriot USICVI 5th Street, LLC to construct a 173,976 square foot tilt-up warehouse at the southeastern convener of 5th Street and Victoria Avenue requiring the annexation of a .56 acre parcel from the City of San Bernardino into the City of Highland; General Plan Amendment (GPA 23-001) to expand the City's Sphere of Influence, Zone Change (ZC 23-001) to Pre-Zone the .56 acre parcel Business Park (BP), Conditional Use Permit (CUP 22-014) to permit the development of a warehouse, Design Review Application (DRA 22-023) for review of the site development plans, and Tentative Parcel Map No. 20621 (TTM 23-001) to consolidate eleven (11) parcels into one (1) parcel.

   The Planning Commission adopt Resolution No. 2026 - _____, recommending the City Council:

   • Adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and instruct staff to file a Notice of Determination;

- Approve General Plan Amendment Application (GPA 23-001), to amend the City's Sphere of Influence and designate Assessor's Parcel Number 192-551-01 as Business Park (BP);

- Conduct First Reading and Introduce an Ordinance to Pre-zone (ZC 23-001) Assessor's Parcel Number 192-551-01 as Business Park (BP);

- Certify the Fiscal Analysis and Plan for Service Reports, and direct Staff to initiate an Application with the Local Agency Formation Commission (LAFCO) for a reorganization and to annex Assessor's Parcel Number 192-551-01 into the City of Highland;

- Approve Conditional Use Permit (CUP 22-014) to construct a 173,976 square foot tilt-up warehouse and associated improvements;

- Approve Design Review Application (DRA 22-023) for the Site Plan, Building Elevations, Landscaping and Grading Plans related to the warehouse development; and

- Approve Tentative Parcel Map No. 20621, (TTM 23-001) to consolidate eleven (11) lots into one (1) parcel.

(SB 1439 Campaign Contributions and Conflicts of Interest - Government Code Section 84308 is applicable)

4. General Amendment and Zone Change in accordance with the City's certified 6th Cycle Housing Element Program 33, requiring upzoning of moderate to high resource areas on the easterly portion of the City to a maximum residential density of thirty (30) dwelling units per acre (du/ac) (with a density range of 20 du/ac to 30 du/ac) (GPA 025-001/ZC 025-001)

   Adopt Resolution No. 2026 - _____, recommending the City Council:

   - Adopt a Negative Declaration, and instruct staff to file a Notice of Determination;

   - Approve General Plan Land Use Amendment (GPA 25-001), to amend designated Assessor's Parcel Numbers 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 as Planned Development (PD); and

   - Conduct First Reading and Introduce an Ordinance to Rezone (ZC 25-001) designated Assessor's Parcel Numbers 0297-201-07, 0297-061-50, 0297-061-07, 0297-061-42, 0297-061-26, 0297-061-13, 0297-061-25, and 0297-021-44 as Planned Development (PD).

PLANNING COMMISSION REGULAR MEETING MINUTES
November 18, 2025 – 6:00 P.M.

CALL TO ORDER

The regular meeting of the Planning Commission of the City of Highland was called to order at 6:00 p.m. by Chair Hamerly at the Donahue Council Chambers, 27215 Base Line, Highland, California.

Present:	Chair	Randall Hamerly
	Vice Chair	Chandra Thomas
	Commissioner	Nicole McCance
	Commissioner	Jarrod Miller
	Commissioner	Brent Merideth

Staff Present: Lawrence Mainez, Community Development Director
Kim Stater, Assistant Community Development Director
Travis Trejo, Assistant Planner
Gary Chambers, Code Enforcement Officer
Brian Wolfe, Assistant Public Works Director
Matt Wirz, Building Official
Camille Duarte, Administrative Assistant III

Chair Hamerly led the Pledge of Allegiance.

COMMUNITY INPUT (ITEMS NOT ON THE AGENDA)

None.

PUBLIC HEARINGS

1. A Public Hearing to declare the existence of a Public Nuisance in accordance with Title 8, Chapter 8.32, of the Highland Municipal Code, and authorize the abatement thereof, at the Property located at 7591 Cunningham St, Highland, CA 92346, Tax Assessor's Parcel Number 1192-381-21.

   Code Enforcement Officer Chambers presented the staff report.

   Commissioner McCance asked did the property owner respond to any of the violation notices or pay the fees?

   Code Enforcement Officer Chambers stated no, he did not, and he did not pay any of the citations that were issued.

   Chair Hamerly opened the public hearing.

   Property Owner Chiles stated If they would have gotten out of their vehicle and came up to

my door and talked to me like a person in English and talked about what the problem was instead of driving by and just taking pictures. Now, the last time that they said they had an anonymous call on my property and that there was somebody called anonymously. Well, last time they did that, my mom upped the rental code because I lived alone with two dogs since I was five months old at this place and never paid rent or mortgage in our lives. I've been told food stamp people didn't pay rent. My mom moved out when she got an inheritance and got her own place in Yucaipa and I've always lived here. So, you guys got an anonymous call about a structure with no permit and in 1950 there was no permit to have a structure because they didn't find nothing built that was there already since 1950. That's how they got my mom and swindled into being up the rental code and paying property tax at the same time. She gave me the house without telling me, which is the first thing I saw was notices for $750 and $1,000 fines for not pulling out a permit and getting your work done that she had to do. When I become owner, I didn't even get the deed till five months later. We had 14 things to do on my mom's house, tear down the front porch, back porch, both rooms of the garage that have the hot water heater, and my bedroom, which is the biggest room in the house. I screamed the whole time, we're not renters. and you guys would never listen to me. When I became an owner, they gave her back $460 refund check for inspections. I had my one friend's, the manager of the casino put new plugs in the kitchen that are safer and like turned off the electricity in my garage for two years, for nothing. When I became owner, we didn't have to do not one thing of the 14 things because they didn't find nothing he legally built and so when they say they somebody anonymously called this time, I've lived there for 55 and a half years.

Since you guys didn't turn in the resolution of giving me the street, and at the Hall of Records, they cannot find the government land transfer of the street, and my neighbor still gets his mail. It was 46 months after Caltrans signed off on the street, the neighbor who had his property gave to him in front of his house, His mail address still says Berry Street on it, and it's been gone for 46 months. Now, I've told the mailman, he said yes, confirmed.

The day you guys denied me $1,000,000 claim on elder abuse on my mom, January 12th, is the same day that they can't find the record of. I've got a copy right here of the falsified government document. Now that I've got three of them, that one and two parcel maps, I know how to draw everything, and parcel maps are the easiest. I sent 25 pages to the Federal Highway Administration, to the General Attorney Office in California, the head Caltrans of California, and I think I got the address right for the DA and state capital. If you guys watched the speed three-minute talk I did down at the supervisor meeting on the 4th this year, I talked my whole 3 minutes about what happens, forget about listening to me, about fixing, doing anything, and finding my property. They can't find the 10-page resolution down at the Hall of Records and the broker I talked to three years ago said, when I just talked to Madam for the first time, I was on the phone, he looked it up and said he couldn't see it. Well, when I go down there to the Hall of Records, I know everything about mapping and all the stages it goes through down there with property tax and they can't find it anywhere. They aren't helping me get it either on a federal Safeway to School fund that you guys got $9 million from. The same

day they denied me the $1,000,000 is the same day they stamped this and can't find it and commit these crimes. So, I've told you guys I sent 25 pages to all four of those agencies and today had sheriffs come out and do a police report. It's supposed to be turned into the District Attorney's Office, but I'm told to take my 25 copies because what it says when you are state workers, since you guys are so cool.

The San Bernardino County is not helping me with my property. It says when a state worker sees it, I taught this at the law library on the 4th of this month, two weeks ago, just before I went to the supervisor's meeting. Now I printed it out and I sent a copy of all this on my twenty-five pages to the DAA local one and make sure that'll be 5 different agencies it gets to.

[INAUDIBLE]

I've already done a claim with the county on this and they said they're not obligated to provide me with a recording just because I'm asking for one, and then two weeks later denied me. But that was talking smack to me. But just denying me because at first they ignored it and didn't give it to the supervisors. I went and delivered it to the head supervisors myself. But they just sent it back and said no. I talked about it November 5th, I went down there to the first time to the meeting, talked just for a second, and then bailed. This last time I talked for three minutes, you could watch it.

Thirteen months later, you guys did a meeting whether to keep the street or get rid of it, but Caltrans had already removed the street 13 months before. That was on the 10th of January and like it says, you're supposed to seize it, investigate it, and fix a falsified government document. It's a three-strike felony crime. Here's what you're supposed to do, report it to your local DA and I brought 12 pages. So, this is 4 pages of what the crime is and what the people did it, like what happens to him and stuff. I had the policeman and his police report took pictures of all this. I was going to give it to him, tell him to make copies and give it to his DA. He said his police report will go eventually to the DA, who told me on the phone last year, that if they get a report written that they can believe, then they'll press charges. I got 6 to 8 strikes; felony strikes on you guys.

I lived there at my house since I was five months old. My mom was the head of San Bernardino County School District's teacher's assistant. She was the head teacher's aide for her whole life because she had to be, not a full-time teacher because she had to get me and my sister. So, she only worked six instead of eight hours, right? But she was the head assistant. So that makes her legit, right? My dad, there would be hundreds of people who died from a second heart attack. Right at Base Line at the car wash, he pulled over in his van and the cops found him slumped over, dead from a second heart attack right at 57 years old. Now, I'm 56 and my mom's family landed on the 4th boat of the Pilgrims that actually landed in 1640. We started Connecticut and signed documents by Abraham Lincoln. We have family, taught at the first integrated school in Kentucky. So, they started Connecticut out of the 13 states and beat off

the British Empire, but they married into the Sandersons. My mom's maiden name, General Sanderson, War 1812. I'm a director, Senator of General Sanderson of that war. So, my mom, my grandma was put together the B-29s that dropped the bomb on, first nuclear bomb on Japan. My mom was pregnant when she was Rosie the Riveter, like putting together the B-29 that dropped the first bomb. When Grandpa was in the Aleutian Islands on the destroyer in the Navy, looking for submarines. My mom in Cleveland, Ohio and my dad's family moved from Texas to California in 1941 when he was one years old. They drove a Model A from Texas and stopped in Highland and put the 400 bucks in Bank of America on Palm Ave and Pacific Street. My grandma worked at Patton for 29 years and my grandpa, when he died, he had six houses and two mobile homes in 1970s. My dad was personal friends with the first mayor, Dennis Johnson. They were good friends, Johnson used to illegally street drag race up there in Claremont and my dad did the work on the engine. But they're both dead now.

So, these criminals that we got going on now, I've got proof, I'd say, of extortion from three different people. I've got the three documents. See, the county made them and there's stamped California documents, falsified ones, because you guys never went down there. They can't find it because they denied me the millions. So that's another strike because you knew what you were doing. I list 8 problems on your parcel map mistakes, and they said they never made a mistake. They take the document in front of them and copy it, never make a mistake. Now, I can show you some of them were the city's Civil Engineer and was just stupid and made them before the revised, but then the ones that are done to me and my friends, my neighbor's property, alters the fence lines that they had and their easement lines, move them and alter them on these and mark mine with the wrong dimensions. I go down there to Fountain Fixit and she marks it, does it wrong again. The City of Highland gave them to me and that's three strikes for each one of you. Well, the day after you guys kicked me, because I said, you guys had it sent to you guys instead of me, the property owner. Larry said, yeah, they never sent it and I went down there and got it myself. He was in the lobby and he ran out into the lobby and was telling me I had to leave and pointing at the door. They had called the cops and I said, no, I want to see my recording and he said no, you got to go now. So we went outside and the four cops were there, but we drove away, but they kept my driver's license. I really didn't do nothing, Next day I went to the Hall of Records and they said I could get my recording down there if I'm owner. So, I put the last of my gas money in the car, drove down there before 4.30, like she said, and I asked for my recording. They came with the security guard and was kicking me out. So, it's not my job to do it. I got real good at engineering drawing. I was taught by the San Gorgonio's drafting teacher. When AutoCAD first came out, I learned it. He said I had a future in drafting.

My grandpa from Ohio went to Ohio State, in received his Civil Engineering degree. Caltrans paid for the whole family to move to California and retired from Caltrans. He designed the overpass going to Riverside, but he didn't teach me anything.

I know you guys tried to play me with this restraining order. It was going to be nullified, but

what I'm asking for was the convictions of the strikes on, and I know who did it. There's 6 to 8 of them because they tried, they kicked me out of the Hall of Records the next day. That's trying to hide your crime. That's a felony on each one of them. I had sold the back lot because they said they were going to give me the parcel and two different parcels in my two different parcel numbers when they turned it in, but then said it was attached to our parcel number. It's not attached to my name, and they're not helping me get it. I did a claim for the $103 million with the county last year. They denied it and this year I sent in the federal government. I realized you guys got the $9 million to do this and if the federal government finds out that you guys lied to them, they're going to get madder than I am of the six to eight strikes. I've had to suffer and I have been trying to sell my place and go for four years. The broker says he can't see you think he's going to buy it, or when they want money, I got proof of extortion. This is one of the payments. I got an owner financed the back lot for $1,600 a month for 10 years. It came out, and this lady paid me for 11 months, $1,600 a month, and all of a sudden quit paying. I have proof from me and another person, a real estate company, Trinity Offers, is proof of extortion right here on this page right here. a note stating they denied me. They had me sign for $1,000 deposit, and the guy watched me sign all the 16 pages, and they were going to fill it out and waive the $7,000 fee because he said it should have been already done when they gave it to me, but it wasn't.

It stated on the second page that you adopted December 13th 2022. So, when I got this document stating January 12th, they denied me $1,000,000, but I had been at the oval desk telling the police chiefs and all them about the elderly abuse right to their faces, and they ignored me. That is the only reason I had the meetings was to find out who would decide to mess with my mom and our house. It was my dad's side of the family, but they all died now, so my mom ended up with it. But she's playing along, and I'm trying to figure out how to save our house. She gave it to me, but it messed up our relationship because we weren't no renters. It says in the explanation letter that it recently told them so. When it had been going on a couple months, almost three years, I was trying to figure out how to move our garage over a couple feet. and get signed off one of my friend contractors and then permits passed and then save our house. When the federal government funds, I sent my claim to them for just a week before they closed down, like 2 months ago. And then I was like, well, shoot, I didn't know, I don't have cable TV. I didn't know nothing about the news. I've confirmed by neighbors and stuff, they did shut down for a while and I talked to Carolyn James, the head of the project lead of the federal land transfer for the Federal Highway Administration. Carolyn James is her name but every time she transferred me, they wouldn't answer the phone, and I wanted to see who had gotten my claim because you have to do a claim for money before you can sue. Now, I've done my $1 million the same day you guys commit these crimes. I did the $103 million one with the county denied, and so I did the same one with the federal government, and I'm waiting for them to get it, and I just sent all those dirt to all four agencies, like four days ago. The administration got 25 pages, the DA of Sacramento, the general attorney, and Caltrans. I want my recording done. I would have just left the street there and left my house alone. I could have sold it and not worry about it messing things up and trying to sell it because

they want money when they and they're supposed to be trustworthy.

I didn't know the wordings of the resolution. marked exempt. This page right here has got descriptions all over it. You had it sent to you instead of me and no boxes marked X. It says if no boxes marked, you must pay 75 bucks, they paid nothing, but that means you got to mark a box and there's no box marked because they did not mark me exempt. Thought I'd be moved to get this money for extortion and just read and have them pay for the new surveyor and parcel maps come out and I'm gone and they get their money.

My dad was a legitimate person too, just like my mom, and we do not lie. Every time I tell the cops the truth, they won't believe me and listen to it. I'm supposedly one of the smarter kids I went to college and got an Associates of Science in Geography. I know one thing, which are what my rights are. I told them out at the county building, when they get this and the best, the federal government's going to be a lot madder than I am, because I'm pretty cool. Actually, because my parents, my dad was a boxer in the army. He's in the National Shuffleboard Hall of Fame and the best shuffleboard player that California ever had or will have in table shuffleboard was Billy Chiles, my dad, who died 28 years ago. But like people would, if he said something, people would put their lives on me when he's telling you the truth and wouldn't lie to you. Some people compare him to Jesus Christ when he's inducted into the Hall of Fame. They compare my dad to Jesus Christ, and I never got beat or put on restriction or in trouble my whole life. We were mural American values, and I want everybody to have either you're a legitimate American or you're an un-legitimate American. They can go across America and clean up America just like quicker than you ever would think, but if the Americans want to, they'll just do it like that and go door to door. And if you're a legitimate American, you're cool. And if not, they'll deal with you and clean up America and great American values across America. it's up to you guys what you want to do with this. I've been sitting and screaming that stuff for so long and pulling my hair out with no help from no attorneys or nothing on this. If you guys want to read it or do it at home, like what you're supposed to do when seeing a falsified government document and the procedures that must be done. It says you should be reported. So, I wrote all my stuff and submit a written complaint to the agencies. But FBI it says, like a falsified government document, you should report it to the appropriate government authority agencies. I went down to the supervisor's meeting and talked for three minutes about it. One Sheriff lady said I could talk to all the head sheriffs that were down there that day, two weeks ago. I waited, because my ride was coming, but I waited for him. I presented my stuff and showed him how this was supposed to go to the local DA, he refused to take my stuff and said that he wasn't a state worker. I tried to convince him he was a state worker but then he was telling me no, I had to go to a building that had just state workers. Now when he tells me that and doesn't look at my stuff like it says you're supposed to, I think he should give up his state pension and I should get his pension if he's going to not look at my stuff. He should be fired and I should get his pension, not him. If he's no state worker, why should the state pay him his pension? He talked to some people in the front lobby, and I waited, and I tried to convince him twice. He refused, and I bailed out of there and went and

got picked up at around the corner, you know, because the meeting was over at 11. I got picked up, but I did tell him all about it, and then when the federal government finds out. That's the part you guys need to work on, is fixing, they're supposed to fix my stuff and be a legitimate American. When you come to my house to talk about stuff in my yard, just come and knock on my door or something and talk about what exactly the problem is. Right across the street, they got car vehicles, like moving vans, stuff parked in the dirt right on the corner across the street. If they're going to pick and choose, they've got to give them a warning and all that when it was right there on the corner. I got pictures on my phone, but like after I lived there so long, plus if they can't find a record of me owning that stuff with the pictures, you can't give me any penalties on pictures of land that I don't officially own. If guys mess around like that, I'll be able to sue you guys for harassment and stuff like that because this is going on way too long with you guys. It was just somebody who said something I did, but it was false and not true. So, I got arrested, but no charges filed on it, it was false arrest every time. I tell them the truth every time.

I think when I went to college I was 17 and skipped the first drafting class and went to the second drafting class in college. The first drawing he put up on the wall at San Bernardino Valley College. I was like, man, am not nothing, because they can play me like I'm going to be dumb. Give me fines on land that they can't even find out at the Hall of Records and you guys and everybody's just ignoring me and brushing me to the curb and not even providing me my property like the 14th Amendment stated. I've got to be protected with the laws from these criminals, just like everybody else equally and that's why these guys are going to get in trouble, because, and I went in my court cases. You guys aren't giving me my property on a federal land exchange, and then that's falsified documents. My civil rights is retaliation. You can't go a certain group or kind of person or retaliate against them in the Civil Rights Act of 64. It says retaliation at the end and when I had the $1,000,000 claim for messing with my mom. I saved our house from getting tore down, and my mom having to pay you guys for tearing it down, or what would happen if we had to rebuild it, or what happens to my relationship with my mom. She didn't even tell me about giving me the house. It cost her 500 bucks and I bought it like I recently. I was cooperating with the public of the code people currently on the public nuisances in my yard it says on their which says is a different subject matter altogether than this one it says in her explanation letter. That was supposed to come at the same time as the refund check. She got the check, certified, I had to go get it. A week later, the letter came and she had to go get it. My grandma is property owner, she had been dead for 12 1/2 years, and they said that they had an anonymous call about something in my yard, and with my dead grandma as the property owner, started it off. I told them, don't do that anymore, because she isn't going to respond. I'm sick of you guys. I'm going to go home where my dog is. I'm going to wait for the General Attorney in the state. They'll end up using, they want you to store all your local resources before you get with them. I tried everything, but I am not going to lose my American values. I'm the only one on the corner over there. My family's gone, and I didn't pay taxes last year. I've got letters I filed saying I had a problem the last couple of years. 76 years, five people there paid property tax. My grandpa, grandma, dad, mom, and me, 76 years. So, like when these guys do this, I graduated high school, what

was it? June 1967, before you guys were born. I turned 18 November 11th, like 16 days before you guys were born as a city. Then they built all the apartments and all the houses in East Highland in two years. And there went to ******* San Bernardino. It is your guys' responsibility or the city leader, civil servants, to look after what the people need, not what they want. They have it if you read your mission statement, that you read it, that you're only willing to provide what the people are willing to pay for. So, it's like you're trying to extort money from the general public in your mission statement, it seems like. Have you read it? It's a mission statement on your city council thing, and then you said it's like there for the people and all that stuff, and it says what willing to do the best service for what's provided by willing, those people are willing to pay for, we're willing to do our best with, and stuff like that. When we're already paying you for it already, I don't like to hear that, like what are we supposed to do, have more kids or something? It's like exemptions or why don't we like give you more money when we're already paying property tax? Because not only are my parcel maps done wrong and I want it fixed, but my bill for your property tax dates together with Barry Street and south side adjacent. How could it say that when asking for money and they don't have it in all our records? That's why I say criminals.

[INAUDIBLE]

Chair Hamerly closed the public hearing.

A MOTION was made by Commissioner McCance and seconded by Commissioner Miller to adopt resolution 2025-024 declaring the existence of a public nuisance on the property generally located at 7591 Cunningham St, Highland CA 92346 and order the abatement thereof. Motion carried, 5-0.

RESOLUTION 2025-024

A RESOLUTION OF THE PLANNING COMMISSION/APPEALS BOARD OF THEW CITY OF HIGHLAND, CALIFORNIA, DECLARING THAT A PUBLIC NUISANCE EXISTS ON THE PROPERTY IDENTIFIED AS APN: 1192-381-21, LOCATED AT 7591 CUNNINGHAM ST, HIGHLAND CA 92346 AND ORDERING THE OWNER(S) OF THE PROPERTY TO ABATE THE NUISANCE CONTAINED THEREON.

2. Conditional Use Permit (CUP 22-015), for the expansion of an existing autobody repair shop to an adjacent 6,000 sf building and related Design Review Application (DRA 25-007) for the site plan, landscape plan and elevations.

Assistant Trejo presented the staff report.

Commissioner Merideth asked if the code enforcement violations have been mitigated?

Assistant Trejo stated yes. They have completed the business license application and they have the proper permissions to conduct business again on the eastern side.

Commissioner Merideth asked if the homeowner is involved in the process.

Assistant Planner Trejo stated they have been quiet. We did not receive comments or concerns regarding the CUP and DRA.

Chair Hamerly stated Gerber was purchased in 2021, and there was already an auto repair facility that had a license for years. Will the business license cover the western property as well?

Assistant Planner Trejo stated Gerber be operating on both sites under the same license.

Chair Hamerly stated since there are weren't elevations in the DRA we will strike building elevations from the DRA application in the recital.

Chair Hamerly opened the public hearing.

Chair Hamerly asked were any of the dead trees identified as being existing trees?

Assistant Planner Trejo stated I do not have an exact answer since our City's Landscape Architect is not available, however the new proposed new planting of trees does exceed that in abundance.

Chair Hamerly stated it stated the dead tree would be removed. I wanted to make sure they have shading on the parking spaces. I encourage staff to be specific about what street tree palette will be included on Base Line. It is on page 147 and then the condition that I was referring to required street tree should be minimum 24 inch box, overall tree sizes for the project should meet the following criteria. Whatever the street tree is, it should be named specifically in Condition No. 20.

Chair Hamerly stated Condition of Approval No. 16A on page 115 stated the design and installation of business signs shall be in accordance with chapter 16.56 sign regulations of the Highland Municipal Code. I would like to see 16A amended, because usually when pole-mounted sign that's in existence, it is a specified Condition of Approval that it be removed and replaced even though its implied.

Commissioner Miller stated on the grading plan, the far southwest corner regarding the grading contours, it looks like that area does drain off to the proposed landscaping rather than into the basin.

Chair Hamerly closed the public hearing.

A MOTION was made by Vice Chair Thomas and seconded by Commissioner McCance to:

1. Adopt Resolution No. 2025-025, approving Conditional Use Permit (CUP 22-015) for the expansion of an existing autobody repair shop to an adjacent 6,000 sf building on an approximately 1.2 acre parcel subject to the Conditions of Approval as modified and Findings Fact;

2. Adopt Resolution No. 2025 -026 Approving Design Review Application (DRA 25-007) for the site plan, building elevations, grading plan, and landscape plan, subject to the Conditions

of Approval and Findings of Fact as modified; and

3. Direct staff to file a Notice of Exemption with the County Clerk of the Board of Supervisors.

RESOLUTION NO. 2025 - 025

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF HIGHLAND, CALIFORNIA, APPROVING CONDITIONAL USE PERMIT (CUP 22-015) FOR THE EXPANSION OF AN EXISTING AUTOBODY REPAIR SHOP TO AN ADJACENT 6,000 SF BUILDING ON A 1.2 ACRE PARCEL LOCATED AT 26827, 26847, 26853 BASE LINE.

RESOLUTION NO. 2025 - 026

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF HIGHLAND, CALIFORNIA, APPROVING DESIGN REVIEW APPLICATION (DRA 25-007) FOR SITE PLAN, LANDSCAPE PLAN AND ELEVATIONS RELATED TO THE EXPANSION OF AN EXISTING AUTOBODY REPAIR SHOP TO AN ADJACENT 6,000 SF BUILDING ON A 1.2 ACRE PARCEL LOCATED AT 26827, 26847, 26853 BASE LINE.

PLANNING COMMISSION REGULAR MEETING MINUTES
December 16, 2025 – 6:00 P.M.

CALL TO ORDER

The regular meeting of the Planning Commission of the City of Highland was called to order at 6:00 p.m. by Chair Hamerly at the Donahue Council Chambers, 27215 Base Line, Highland, California.

Present:	Chair	Randall Hamerly
	Vice Chair	Chandra Thomas
	Commissioner	Nicole McCance
	Commissioner	Jarrod Miller
	Commissioner	Brent Merideth

Staff Present: Lawrence Mainez, Community Development Director
Kim Stater, Assistant Community Development Director
Angela Tafolla, Senior Planner
Camille Duarte, Administrative Assistant III

Chair Hamerly led the Pledge of Allegiance.

COMMUNITY INPUT (ITEMS NOT ON THE AGENDA)

Public Speaker Michael Johnson stated I've been trying to get to you guys for a while. I had an idea to create a theme park for the city. Originally, I talked to the City of Redlands, but they told me that I was at the wrong place. I have here a proposal and a business plan with everything lined out. I also emailed Yaamava Casino, and everybody else I would like involved. I've done a whole social media campaign to get everything started. The petition is sitting at 37 votes but has over 1000 views. So right now, I'm looking at the views still as votes because at least people saw it and the word is out. I've also been campaigning for Mark Zuckerberg, Beyoncé Knowles, Yaamava, for the city and their non-profit organizations also to get involved. I believe I've had some feedback from them, but in secretive ways. I'm not 100% sure if they are actually responding and going for it. I would like the Disney Imagineers to do it because who better than the House of Mouse? I know that Yaamava has connections with Disney, so they would be able to get involved and help with the city. I was hoping to pull from their connections. Also, while letting Yaamava pretty much take over the day-to-day operations and essentially get another property in the city. The piece of land that I was looking at is actually the wash over by the Costco on Greenspot Road. When you keep going further down by the East Valley Water District it will be right there. That whole plot of land and I believe I spoke to you about getting the parcel numbers and everything. This has been something that I've thought about for a while. It's been about like a year and a half, maybe two. So yes.

Commissioner Merideth asked what is it about that location that you like for this activity?

Public Speaker Michael Johnson stated so growing up out here, it's always just sat right there on the freeway and it's really boring to look at. Imagine looking over at a theme park right there. Now, when I was trying to design rides, and I tried to be like extra and wanted to was to shoot underneath the freeway like a U and then come back down. That is a really large stretch of property. I didn't know how much property the city would actually award because I also know that there's construction there.

Commissioner McCance asked are you talking about the wash that runs under the freeway?

Public Speaker Michael Johnson stated growing up in Redlands, we call that whole thing the wash.

Commissioner McCance stated it is a wash; you cannot build there.

Public Speaker Michael Johnson stated that's what I am asking. I didn't know how much of the property would actually be available to use. I did go and get the parcel numbers and everything. I actually haven't received any feedback. So, the actual property line itself would be right by East Valley Water District. California Adventure has that whole little property that's like based off of California and you can use the water district to like leverage education on the water system.

Commissioner Merideth asked who would pay for this?

Public Speaker Michael Johnson stated I've been trying to get grants through the Meta Prosper Foundation, through the Be Good Foundation, and I know that there's money stored away from COVID-19 to help revamp the city and Yaamava. I see myself as like the next Walt Disney. I was actually willing to like dip into my savings to do this as well, because that's exactly what he did. I'm 26, he was 56. With everybody's foundations involved and the tax breaks that can be used and the cuts. Would Six Flags being the base model? Six Flags doesn't have that much theming for their park. Ours would just have much more theming and it is based off of Central Park and Balboa Park in San Diego, just with rides. The whole idea is relaxation and heaven, so think of it that way. It's not as much to pay for as you think. So, Six Flags itself cost $370 million to build, and when the companies involved, it would be a lot less. Let's face it, Yaamava makes 5 billion a year, the monies there.

Chair Hamerly asked are you thinking of organizing this as a non-profit?

Michael Johnson stated so going after their non-profits was just the smartest way that I knew to get them involved. I am a Beyoncé fan, and I know her career is like on the way out, so she'll want something bigger to do. She hasn't done anything philanthropic in a very long time and with her heading into like the political space, I believe this would be one of the perfect opportunities to show philanthropy for a city. I see that San Bernardino is starting to change and before it gets all gentrified, I think we should give back to the city. This would be like one of the best ways we could do it. As for your question, I have no idea how to really answer that. I just know that going for their non-profit organizations is the best way to get them involved because they both haven't done anything major in a long time.

CONSENT CALENDAR

1. Minutes from September 16, 2025 Regular Meeting.

   A MOTION was made by Vice Chair Thomas and seconded by Commissioner Merideth to approve the minutes as amended. Motion 4-0-1, with Commissioner Miller abstaining.

PUBLIC HEARING

2. Request for a three-year Extension of Time (EXT 25-006) for Conditional Use Permit (CUP 22-009) to permit the development of a contractor's equipment rental business that includes a 3,900 square foot building and outdoor storage. Related entitlements include Design Review Application (DRA 22-012) for the Site Plan, Building Elevations, Grading Plan and Conceptual Landscape Plan.

   Senior Planner Tafolla presented the staff report.

   Commissioner Miller asked if three years would be adequate time for the project to be running?

   Applicants' Representative Deandra McCallister stated we are working with Crow Holdings on the project. This project has been approved because American Rentals wanted to relocate, but because of the economy they are holding off right now. They plan to move in, so hopefully in three years they will get their loans, start construction, and be finished.

   A MOTION was made by Vice Chair Thomas and seconded by Commissioner McCance to Adopt Resolution No. 2025 – 27, approving Extension of Time application (EXT 25-006) for a three (3) year extension of Conditional Use Permit (CUP 22-009) and Design Review Application (DRA 22-012) subject to the Conditions of Approval and Findings of Fact. Motion carried 5-0.

   RESOLUTION NO. 2025 - 027

   A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF HIGHLAND APPROVING A THREE (3) YEAR EXTENSION OF TIME (EXT 25-006) FOR CONDITIONAL USE PERMIT APPLICATION (CUP 22-009) AND DESIGN REVIEW APPLICATION (DRA 22-012) RELATED TO THE DEVELOPMENT OF CONTRACTORS EQUIPMENT RENTAL BUSINESS THAT INCLUDES A 3,900 SQUARE FOOT BUILDING AND OUTDOOR STORAGE LOCATED ON THE NORTH SIDE OF 3RD STREET, APPROXIMATELY 900 FEET WEST OF PALM AVENUE.

ANNOUNCEMENTS

None.

ADJOURN

There being no further business, Chair Hamerly declared the meeting adjourned at 6:25 p.m.

Randall Hamerly, Chair

Staff Report

To the Planning Commission

Date:	January 20, 2026
From:	Lawrence Mainez, Community Development Director
Reviewed By:	Kim Stater, Assistant Community Development Director
Prepared By:	Kim Stater, Assistant Community Development Director
Subject:	An application by Patriot USICVI 5th Street, LLC to construct a 173,976 square foot tilt-up warehouse at the southeastern convener of 5th Street and Victoria Avenue requiring the annexation of a .56 acre parcel from the City of San Bernardino into the City of Highland; General Plan Amendment (GPA 23-001) to expand the City's Sphere of Influence, Zone Change (ZC 23-001) to Pre-Zone the .56 acre parcel Business Park (BP), Conditional Use Permit (CUP 22-014) to permit the development of a warehouse, Design Review Application (DRA 22-023) for review of the site development plans, and Tentative Parcel Map No. 20621 (TTM 23-001) to consolidate eleven (11) parcels into one (1) parcel.

Recommendation:

The Planning Commission adopt Resolution No. 2026 - _____, recommending the City Council:

- Adopt a Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, and instruct staff to file a Notice of Determination;

- Approve General Plan Amendment Application (GPA 23-001), to amend the City's Sphere of Influence and designate Assessor's Parcel Number 192-551-01 as Business Park (BP);

- Conduct First Reading and Introduce an Ordinance to Pre-zone (ZC 23-001) Assessor's Parcel Number 192-551-01 as Business Park (BP);

- Certify the Fiscal Analysis and Plan for Service Reports, and direct Staff to initiate an Application with the Local Agency Formation Commission (LAFCO) for a reorganization and to annex Assessor's Parcel Number 192-551-01 into the City of Highland;

- Approve Conditional Use Permit (CUP 22-014) to construct a 173,976 square foot tilt-up warehouse and associated improvements;

- Approve Design Review Application (DRA 22-023) for the Site Plan, Building Elevations, Landscaping and Grading Plans related to the warehouse development; and

• Approve Tentative Parcel Map No. 20621, (TTM 23-001) to consolidate eleven (11) lots into one (1) parcel.

(SB 1439 Campaign Contributions and Conflicts of Interest - Government Code Section 84308 is applicable)

Fiscal Impact:
The Applicant made the required deposits for processing Planning entitlement applications with the City of Highland. With respect to the proposed warehouse project, the City has determined the need to collect Development Impact Fees (DIFs) to cover costs related to providing increased services and infrastructure resulting from the new development. The Project will be conditioned to pay the appropriate DIFs in accordance with City policy.

With respect to the fiscal impacts of the proposed annexation on the City of Highland, the City must demonstrate to the Local Agency Formation Commission (LAFCO) that the appropriate infrastructure improvements and services can be provided commensurate with demand from the project. Accordingly, LAFCO requires a jurisdiction to submit a Plan for Service and Fiscal Analysis with its Application for Annexation. According to the Fiscal Analysis, the projected project property tax revenues are estimated at $7,619. The Plan for Service demonstrates that the necessary public infrastructure will be provided in a timely manner commensurate with the development of the Project and will not create financial burdens on the City of Highland. The City Council must certify the Fiscal Analysis and Plan for Service prior to submission of the LAFCO application. These documents are attached to the Initial Study/Mitigated Negative Declaration discussed below.

Public Notice:
The agenda for this item was posted at the three locations per Resolution No. 2011-047 and on the City's website.

Project Detail:
LOCATION: The project site is located on 7.23 acres at the southeastern corner of 5th Street and Victoria Avenue and is composed of eleven (11) parcels within the City of Highland and City of San Bernardino including APN 1192-551-01 in the City of San Bernardino, and APNs 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15 in the City of Highland.

PUBLIC NOTICE/COMMENTS: On January 18, 2023, a Project Notice was mailed to all property owners within a three-hundred foot (300') radius of the property boundaries and agencies that may have jurisdiction over the property. There were no comments received during the initial Project Notice. Comments were received later with respect to the Project's environmental analysis. These comments are addressed in the Project's Initial Study / Mitigated Negative Declaration, discussed in more detail below.

On December 22, 2025, a Notice of Public Hearing was mailed to all property owners within a three-hundred foot (300') radius of the Project boundaries, those who requested notice and those who commented on the CEQA document. In addition, a Notice of Public Hearing was advertised in the San Bernardino Sun newspaper on December 27, 2025. The agenda for this item was posted at the three locations per Resolution No. 2011-047 and on the City's website.

SITE DESCRIPTION: The site is a 7.23-acre rectangular-shaped collection of parcels located on the east side of Victoria Avenue, spanning the block between 3rd Street and 5th Street,

west of the City Creek Bypass Flood Control Channel (Attachment "A" - Location Map). Until recently the site contained three single family homes and a commercial bar/tavern located at 26530, 26540, 26552, 26562 3rd Street. Several of these structures were abandoned and in various states of disrepair. They were being illegally occupied and suffered multiple structure fires. In response, the owner demolished all on-site structures in May 2023. The site is now vacant except for sparse plant materials. It is relatively flat and generally slopes down by approximately 0.7% from the northeast corner to the southwest corner.

The City's General Plan Land Use Map designates the Highland portion of the project site as Business Park (BP) with a corresponding Zoning designation of Business Park (BP). The one parcel within the City of San Bernardino (APN 1192-551-01) has a General Plan Land Use and Zoning of Commercial General 1. The site is in a developed area of the City and is surrounded by a mix of urbanized land uses.

Table 1. Surrounding Land Uses			
Direction	**Existing Use**	**General Plan**	**Zoning Designation**
North - City of Highland	Industrial uses and single-family homes	Business Park	Business Park
East - City of Highland	Vacant land, City Creek Bypass, and commercial/industrial uses	Business Park	Business Park
South - City of San Bernardino	*3rd Street and the San Bernardino International Airport*	*City of San Bernardino - Industrial*	*City of San Bernardino - Alliance California Specific Plan*
West - City of San Bernardino	*Victoria Avenue and vacant land*	*City of San Bernardino - Medium Density Residential and Commercial General*	*City of San Bernardino - Medium Density Residential and Commercial General*

The site is not within the General Plan's High Fire Severity Zone, area of Archeological Sensitivity, Mineral Extraction Zone, or Alquist-Priolo Seismic Hazard setback. It is adjacent to City Creek Overflow San Bernardino County Flood Control District facility. It is also within the Influence Area of the San Bernardino International Airport (SBIA) which can create noise and safety hazards which were considered in the project's environmental review described in detail below. Both of these agencies provided comments/conditions that were included in the environmental record for the project.

PROJECT REVIEW: The proposed warehouse is a one-story building composed of approximately 161,976 square feet of warehouse space and 12,000 square feet of mezzanine/office space (Attachment "B" - Project Development Plans). The building and site could support a variety of activities associated with the industrial/warehouse building, including

the ingress and egress of passenger vehicles and trucks, the loading and unloading of trucks with designated truck courts/loading areas, and the internal and external movement of materials around the project site via forklifts, pallet jacks, yard hostlers, and similar equipment. In addition, the office space would support general internal office activities related to industrial warehouse uses.

The project would install improvements along the project's street frontage including landscaping, walls, fencing, street, and sidewalk facilities. A variety of trees, shrubs, and groundcovers would be planted within the front and side and rear setbacks and at project driveways.

Conditional Use Permit

The Municipal Code requires approval of a Conditional Use Permit to allow the establishment of distribution and warehousing in the Business Park (BP) Zone (HMC Table 16.24.030.A. Uses Permitted within Employment Districts).

Site Plan – Access and Circulation (Page A1 of Project Plans):
The warehouse is generally rectangular in shape measuring approximately 398'x478', a total of 173,976 square feet including two (2) 6,000 square foot offices/mezzanines. The front of the building is oriented towards Victoria Avenue to the west with mezzanines at the north and south corners. The main entry is at the northwest corner. The building is setback 20' from the north and south and 81 feet from Victoria Avenue. Passenger car parking is located along Victoria and at the project entries along 3rd and 5th Streets. There is a landscape perimeter varying in width between eight (8) and forty (40) feet. The floor area ratio is 55.3%, within the permitted envelope of 60%.

Access to the project site would be provided by four (4) driveways: two (2) driveways on Victoria Avenue, one (1) on 5th Street, and one (1) on 3rd Street. All four (4) driveways would provide both ingress and egress lanes. The two western driveways along Victoria Avenue would serve passenger vehicles only and would be full access (i.e., no restrictions on turning movements left/right). The other two driveways along 3rd Street and 5th Street would be mainly for truck access. Turning movements would be restricted to right-in/right-out only unless otherwise approved by the Public Works/Engineering Division. The main truck circulation pattern is expected to be westbound into the site from 3rd Street. The truck would make a right-hand turn in (traveling north). To exit, trucks would continue north through the site and make a right turn, eastbound onto 5th Street. Trucks are anticipated to be traveling to and from State Route 210, utilizing the on and off-ramps at Greenspot Road/5th Street. A lesser amount of truck traffic will travel north to the 210 via Victoria Avenue. The project is conditioned by the Engineering Division to construct road, drainage and traffic improvements as referenced in the Conditions of Approval for the Conditional Use Permit in Attachment 2. These include the frontage of 3rd Street, 5th Street and Victoria Avenue street curb adjacent sidewalks, driveway approaches and access ramps, parkway landscaping, curb, gutter, and streetlights.

The project proposes including a total of 79 passenger parking stalls measuring 9x19' with 2' overhang into the landscape planter. The City's warehouse standards call for 1 parking space/1,000 square feet of warehousing and 1/250 for office. The total number of parking spaces required is 221. The applicant is seeking a reduction of 130 spaces. In addition, the warehouse will have 18 dock high doors and 20 truck parking spaces along the easterly boundary within the truck bay. A bicycle rack is located at the southwest building entrance and motorcycle parking along Victoria at the northern entrance. The designated EV parking spaces

are at the southern entrance.

HMC Section 16.52.020(F)(2) provides that a decrease in the number of off-street spaces required may be granted under the circumstances identified in HMC Section 16.52.050, or by the approval of a variance. HMC Section 16.52.050(D) states that if there is a low percentage of usable space, the applicant may provide a breakdown of square footage and seek a reduction in parking requirements. To address the proposed parking reduction, the Applicant submitted a parking study for consideration by the Commission. The parking study analyzed the specific site characteristics, parking ratios at similarly sized warehouse sites, and a comparison of surrounding communities. It showed that most surrounding communities use a graduated parking ratio such as 1/1,000 sq. ft. of gross floor area for the first 20,000 sq. ft.; 1/ea. 2,000 sq. ft. of gross floor area for the portion over 20,000 sq. ft. The report cited:

"▪ Based on the highest observed parking rate of 1 space per 2,660 SF determined from the parking surveys of two existing warehouses near the project site, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces).

▪ The project's proposed supply of 79 parking spaces can adequately accommodate its forecast parking demand of 66 spaces (based on the highest peak observed parking rate)."

Two (2) trash enclosures are located inside the truck bay, one at the north entry and one at the south entry. The enclosures will be built to the City's latest standards. They will have four tilt-up concrete walls, steel roof and gates painted to match the building.

Eight (8) foot tall CMU walls are proposed to be installed to secure the truck bay. Individual wall panels are 26' wide and painted in alternating grey and white blocks. Vehicle entry points will be controlled by automated steel rolling gates. Assembly Bill 98 (AB 98) and Senate Bill (415) require an increased wall height of 10' total. A Planning Condition of Approval was included to address this mandate.

Lighting/Photometrics: Parking lot lights include building-mounted and pole-mounted LED "Razar" brand products constructed of heavy cast copper aluminum. The Photometric Study is included in the plan set, labeled FC-1. Fixtures include 7 pole-mounted lights between 27 and 29 feet tall, and 37 wall packs mounted at 9 feet and 25 feet above grade. The site is well lit at its entries, along the building, parking lot and dock doors. The plan meets the requirements of Municipal Code, Section 16.40.160 Lighting, by providing an average of one-half foot-candle of illumination for visibility and security. The illumination does not exceed 0.5 foot-candles at the property line and does not spill over into residentially zoned properties.

Design Review Application

The Design Review Application includes the project's Site Plan, Building Elevations, Grading Plan, and Conceptual Landscape Plan.

Building Elevations: The building type is a concrete tilt-up warehouse measuring 478' north to south along Victoria Avenue and 398' east to west. The building is generally considered 45' tall. At the rear of the building where the truck bay is located, the grade lowers five feet to accommodate the loading and unloading of semi trucks. While this ramp is lower than the remainder of the site, it does not affect the overall aspect of the building from the public right-of-way and does not exceed the City's maximum building height limit of 55'.

The building's architecture is modern in design with alternating 4-tone, white and grey painted panels with a clear anodized canopy and brow and blue reflected storefront glazing at each corner. The long expanse of the building is broken up by several diagonal breaks in the colors and materials that dive down towards the center of the building then rise at the corners. The roof parapet will screen roof-mounted equipment.

The building was designed consistent with the General Plan's Land Use and Community Design Elements. The BP designation promotes light industrial, research and development and office uses that provide attractive working environments and cites "warehousing within an enclosed building" as a preferred use. The General Plan notes that Highland, given its size, will likely never be a major employment hub, should provide these types of uses within the prescribed areas so that residents can avoid long commutes by working locally and bring money into the City, "buoying the local economy." The 5th Street Corridor Policy Area serves as a major gateway to the Airport and is expected to be one of the City's major employment centers.

Conceptual Landscape Plan: Page A 3_1 of the project plans show how the building elevations will be softened by the future mature landscape materials. The Site Plan identifies 51,194 square feet of landscape coverage, a total of 16% of the site. This exceeds the 10% required by the Municipal Code. A three-foot high wall or berm shall be constructed in back of the landscaped area along street setbacks. Where off-street parking is located within building setback areas, a minimum landscaped area of 10 feet deep will be planted between the property line and parking area, with an additional minimum landscaped area of 10 feet in depth required between the parking area and the building.

Grading: The Conceptual Grading Plan is located in the project plan set. It notes that the earthwork for the project requires 28,305 cubic yards of cut and 41,985 cubic yards of fill to balance the site. The northeast corner of the site will join the existing curb and gutter with a finished surface of approximately 1,152 feet and gently slope down to the west with a finished surface of approximately 1,146 feet.

The project proposes minimal grading to the existing slope of the Site. The Site would only be graded to the extent necessary to create the building pads and the driveway leading to each pad. The balance of the site would maintain the existing slope. The limits of proposed grading are described on the Plan.

Drainage: As noted in the Initial study, "the site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall. Existing runoff sheet flows southwesterly onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel then the Santa Ana River.

Development of the project will include the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions. On-site stormwater would be collected from roof drains, curbs, gutters, and catch basins. It would be conveyed to an on-site underground infiltration/detention basin at the western portion of the site. The infiltration basin would be sized to capture and infiltrate flows for a 100-year design storm, consistent with the San Bernardino County Hydraulics Manual. The overflow would be directed through a 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system."

Parcel Map

As noted above, the purpose of the Parcel Map is to merge all eleven (11) lots into a single, cohesive parcel. The resulting parcel will be rectangular in shape measuring approximately 563'x516', 8.140 gross acres, 7.226 net acres. As designed, the Map meets the Development Standards for Business Park. It exceeds the required minimum lot size of one (1) acre, minimum width of 150 feet, and minimum depth of 150 feet. The Map includes typical street sections for 3rd Street, 5th Street and Victoria Avenue. The Public Works/Engineering Division has applied the appropriate conditions of approval to the map related to right-of-way design and dedications. Vehicular access is detailed on the map as described above with four (4) separate driveways. Map Dedications/Annexations will include a 10' dedication for a landscape easement along the frontage and annexation into the City's Consolidated Landscape District for potential City maintenance of the parkway and frontage landscaping should the property owner cease doing so.

Local Agency Formation Commission (LAFCO) Action / Annexation:

As noted above, an annexation is necessary to bring the northwest corner of the site into the City of Highland. City staff and the City of San Bernardino are in support of this action because it results in a logical development pattern and improves the provision of services by both Highland and San Bernardino. The project requires two LAFCO actions:

1) Amendment to the Sphere of Influence of the City of Highland (expansion), City of San Bernardino (reduction) and San Bernardino County Fire Protection District (reduction); and

2) Annexation to the City of Highland and detachment from the City of San Bernardino, the San Bernardino County Fire Protection District (SBCFPD), SBCFPD Valley Service Zone, and SBCFPD Service Zone FP-5.

Annexation is initiated with the submission of an application by the City of Highland to LAFCO. LAFCO will require the application include the Fiscal Analysis, Plan for Service, General Plan Amendment (GPA 23-001) to expand the City of Highland's Sphere of Influence, and Zone Change (ZC 23-001) to Pre-Zone the parcel. These actions will affect the parcel in question and its adjacent right-of-way.

A detailed Fiscal Analysis and Plan for Services were completed by staff and included in the Mitigated Negative Declaration. The Plan describes how public facilities and infrastructure improvements will be implemented and presents the related capital costs where available. It identifies the proposed public facility improvements and services related to roads, fire and emergency medical services, police, libraries, water, wastewater, storm drainage, parks and open space, public utilities, schools, and solid waste management. It demonstrates that the necessary public infrastructure will be provided in a timely manner commensurate with the development of the Project and will not create financial burdens on the City of Highland.

In order for Highland to annex the parcel in question, the City of San Bernardino and SBCFPD must be in agreement to the detachment including reducing their Sphere of Influence. On February 5, 2025, the San Bernardino City Council authorized their staff to initiate reorganization proceedings. Both the Inland Valley Development Agency (IVDA) and San Bernardino County Fire Protection District staff gave written support for the action.

The approval of the Project will be subject to LAFCO approving the annexation of APN 1192-551-01 into the City of Highland.

General Plan Amendment & Zone Change

Staff proposes the San Bernardino parcel be given a land use designation of Business Park (BP) consistent with the Land Use Designation and Zoning on the remainder of the site in the City of Highland. The primary purpose of BP is to "provide appropriate regulations and suitable locations for light industrial, research and development, and office-based firms seeking pleasant and attractive working environments, and for business support services and commercial uses requiring large parcels (Highland Municipal Code, Section 16.24.020). The GPA, ZC and LAFCO Annexation Applications are being processed concurrently. They will be effective following final action by the LAFCO Board to reorganize, detach and annex the parcel in question.

ENVIRONMENTAL ANALYSIS: On October 18, 2024, per the California Environmental Quality Act (CEQA), an Initial Study was completed for the Project.

The Initial Study determined that any impacts anticipated as a result of the Project could be mitigated to a level of insignificance. As noted, "…when coupled with biological, cultural, tribal cultural, and geological impacts related to the implementation of other related projects throughout the broader project area, the project would potentially result in cumulative-level impacts if these significant impacts are left unmitigated. However, with the incorporation of mitigation identified herein, the project's impacts … would be reduced to less-than-significant levels and would not considerably contribute to cumulative impacts in the greater project region. In addition, these other related projects would presumably be bound by their applicable lead agency to (1) comply with all applicable federal, state, and local regulatory requirements and (2) incorporate all feasible mitigation measures, consistent with CEQA, to further ensure that their potentially cumulative impacts would be reduced to less-than-significant levels."

The Initial Study was subject to a thirty (30) day public review period which included distribution to State Agencies through the State Clearinghouse (SCH#2024100850). The review period concluded on November 18, 2024.

Comments were received from government agencies including California Department of Fish and Wildlife (CDFW), Local Agency Formation Commission (LAFCO), South Coast Air Quality Management District (SCAQMD), San Bernardino County Department of Public Works, and So Cal Gas SE Regional Redlands Utility Request. Individual responses to these comments are included in the Final EIR. Additionally, there were three organizations who submitted comments which were later withdrawn; Californians Allied for a Responsible Economy (CARE CA), Advocates for the Environment, and Golden State Environmental Justice Alliance (GSEJA). Responses were not prepared for these comments.

ANALYSIS: The proposal would be a positive asset to the City's Business Park (BP). The warehouse site design complies with the Municipal Code's Development Standards. It significantly exceeds the minimum front, side and rear yard setbacks of 20'. The building height is less than the maximum 55' and the lot coverage is approximately 5% less than 60% permitted. It also meets the Special Site Development Standards (HMC 16.24.040.B.) including 40' separation from structures in a residential zone, landscaping placement and screening. The plans are also consistent with Chapter 16.48 Performance Standards including, but not limited to standards established to ensure that new developments do not generate excessive noise, vibration, light and glare, hazardous materials, etc.

The project proposal will further the City's General Plan goals and policies included in the

Land Use, Circulation and Community Design Elements. It's location within the Business Park Zone, 5th Street Corridor, Victoria Avenue Corridor and proximity to the SBIA is the appropriate placement for warehousing and distribution in the City. It will promote and maintain an organized pattern of land use that minimizes conflicts between adjacent land uses. It will result in a well-designed distribution facility in proximity to an airport with air cargo service and State Route 210 and Interstate 10 furthering distribution needs throughout southern California. It's contemporary design and street improvements will promote the 5th Street Corridor as a major industrial entryway to the SBIA. This facility in conjunction with Patriot's other six (6) developments will provide a comprehensive design program, promoting the corridor as a unified, business-friendly employment center. It will improve landscaping along the edges and medians, provide adequate transitions and buffers with existing uses (General Plan Goal 2.13, Policy 1-9). It will aid in the General Plan's effort to create a major business park node at the southern terminus of Victoria Avenue to maximize employment opportunities (Goal 2.14). The project also furthers General Plan Goal 3.6 to maintain designated truck routes, provide appropriately designed roadways that safety accommodate truck travel.

The project is also compliant with relevant provisions of California Assembly Bill 98 and Senate Bill 415 applicable to warehousing and distribution facilities statewide. Because the project began the local entitlement process prior to September 30, 2024, the only provisions of AB 98 and SB 415 that are applicable to the project is compliance with Government Code Section 65098.1(d). As such, the project will orient the loading bays to the east and not to the north toward existing residential uses. It will locate the truck entry, exit and internal circulation away from sensitive receptors to the extent feasible. The nearest sensitive receptor is northeast of the project on the opposite side of 5th Street. Internal circulation is buffered on the north, south and east and cannot be completely prohibited from the use of 5th Street as it is the designated truck route servicing the Business Park (BP) zone. The entry to the loading docks was pulled back into the site approximately 100 feet. Buffering includes a solid decorative wall around the perimeter of the loading docks and landscaping at the northeast corner of the property including groundcover, shrubs and sizable shade and evergreen trees. The project has also been conditioned to comply with AB 98/SB 415, as may be amended from time to time. This will ensure that the project complies with AB 98 and SB 415, as those statutes may be amended.

SITE PLAN GENERAL NOTES

1. THE SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS.
2. GENERAL CONTRACTOR TO REVIEW THE SOILS REPORT AND ALL AMENDMENTS LISTED ON THE TITLE SHEET AND FOLLOW ALL RECOMMENDATIONS.
3. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS AND CURBS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL OR CURB. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER LINE OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR THE FACE OF THE WALL FINISH.
4. REFER TO CIVIL, AND MEP PLANS TO CONFIRM UTILITY INFORMATION SHOWN ON THE ARCHITECT'S SITE PLAN AND FOR ADDITIONAL UTILITY INFORMATION. GENERAL CONTRACTOR TO COORDINATE ALL POINTS OF CONNECTION.
5. REFER TO CIVIL DRAWINGS FOR ALL FINISHED GRADES AND SLOPES. ALL FINISHED GRADES TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING. GENERAL CONTRACTOR TO FIELD VERIFY.
6. ALL ACCESSIBLE ROUTES IDENTIFIED ON THE SITE PLAN DRAWINGS SHALL CONFORM TO THE FOLLOWING:
   a) SLOPES IN THE DIRECTION OF TRAVEL DO NOT EXCEED 5%. CROSS SLOPES DO NOT EXCEED 2%.
   b) THE CLEAR WIDTH OF ALL WALKWAYS IS 4'-0" MIN.
   c) CHANGES IN LEVEL UP TO 1/2" COMPLY w/ 11/A0.2.1. CHANGES IN LEVEL GREATER THAN 1/2" IF THEY OCCUR ARE RAMPED. SEE PLANS.
   d) THE VERTICAL CLEARANCE ALONG THE ACCESSIBLE ROUTE IS 80" MIN.
7. ALL PAVED AND LANDSCAPED AREAS TO BE BOUND BY A MIN. 6" HIGH, 6" WIDE CONCRETE CURB U.O.N.
8. A CONCRETE MOW STRIP EXTENDING 12" BEYOND EA END OF THE OPENING SHALL BE PROVIDED @ ALL EXTERIOR GLAZING WHERE THE SILL IS WITHIN 3" VERTICAL OF THE FINISHED GRADE. SEE 2/AD1.1
10. PROVIDE PIPE BOLLARD PROTECTION POSTS AS REQUIRED BY UTILITY COMPANIES AND OR FIRE AUTHORITIES AT ALL EXTERIOR ELECTRICAL EQUIPMENT AND FIRE PREVENTION DEVICES. IF PIPE BOLLARD PROTECTION POST DETAILS ARE NOT PROVIDED BY UTILITY COMPANIES AND OR FIRE AUTHORITY SEE DETAIL 3/AD1.1
11. ALL EXPOSED BIORETENSION DEVICE COVERINGS SHALL BE PAINTED FOREST GREEN.
12. WHERE OCCURS, GENERAL CONTRACTOR TO PROVIDE FLUID APPLIED DAMP PROOFING AT ALL RETAINING AND PLANTER WALLS WHERE THE SIDE OF THE WALL OPPOSITE THE SOIL SIDE IS EXPOSED TO VIEW AND ALL EXTERIOR WALLS WHERE THE ADJACENT FLOOR SLAB IS BELOW GRADE. SEE 6/AD1.2
13. PROVIDE A HOSE BIB NEAR THE MAIN ENTRANCE AND IN THE TRASH ENCLOSURE. SEE PLAN FOR LOCATION.

FLOOR SLAB GENERAL NOTES

1. THE FLOOR SLAB THICKNESS TO BE X". SEE STRUCTURAL DRAWINGS FOR ADDITIONAL REQUIREMENTS.
2. THE FLOOR SLAB TO BE CLASS V PER ACI 302-1R-04 TABLE 21.
3. THE GENERAL CONTRACTOR SHALL COORDINATE WITH THE OWNER WHETHER OR NOT TO PROVIDE JOINT FILLER AT FLOOR SLAB CONTROL AND CONSTRUCTION JOINTS.
4. SLOPE POUR STRIPS @ EXTERIOR PEDESTRIAN AND OVERHEAD DOORS. SEE 5, 7, & 10/AD4.1.
5. CRANES, CONCRETE TRUCKS, AND SIMILAR HEAVY EQUIPMENT ARE PROHIBITED ON THE FLOOR SLAB DURING CONSTRUCTION.
6. BELOW FLOOR SLAB SOIL COMPACTION TO BE 95% MIN.
7. TRENCH SOIL COMPACTION TO BE 90% MIN.
8. SLAB FINISH TO BE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
9. THE GENERAL CONTRACTOR TO MAINTAIN A CLEAN FLOOR SLAB. ALL TRUCKS AND EQUIPMENT TO BE DIAPERED.
10. ALL CONSTRUCTION MARKINGS SHALL BE REMOVED FROM THE FLOOR SLAB PRIOR TO SEALING.
11. SEE 6/AD2.1 FOR SLAB PATCHING DETAIL.
12. PROVIDE 10'-0" WIDE PERIMETER FLOOR POUR-STRIPS AT ALL TRUCK DOCK WALLS AND 5'-0" WIDE AT ALL OTHER WALLS UNLESS NOTED OTHERWISE ON STRUCTURAL DRAWINGS. NO UNDERGROUND PIPING, CONDUITS, ETC ALLOWED IN POUR-STRIPS AT DOCK DOORS TO ALLOW FOR CURRENT OR FUTURE RECESSED DOCK LEVELERS.
13. ALL FLOOR SLAB NAIL OR BRACE FRAME HOLES TO BE FILLED WITH APPROVED 2-PART EPOXY COMPOUND TO MATCH CONCRETE COLOR. PEGA BOND LV 2000, BURKE EPOXY INJECTION RESIN OR =.
14. ALL FLOOR SLAB PANEL FORM NAIL HOLES TO BE PREDRILLED AND WOOD DOWELED PRIOR TO NAILING. BRACE HOLES TO BE PREDRILLED.
15. CHAMFER AND REVEAL STRIPS ATTACHED TO THE FLOOR SLAB MUST BE PROPERLY PATCHED PRIOR TO SEALING THE FLOOR SLAB.

FLOOR PLAN GENERAL NOTES

1. WHERE A MEZZANINE OCCURS AND A 1" TOPPING IS CALLED OUT FOR IN THE STRUCTURAL DRAWINGS, PROVIDE A 1" THICK TOPPING OF GYP-CRETE 2000 WITH A MINIMUM STRENGTH OF 2,500 PSI.
2. PROVIDE FIRE EXTINGUISHERS AS REQUIRED BY THE FIRE DEPARTMENT AND THE CBC/CFC. REQUIREMENTS AND LOCATIONS TO BE DETERMINED IN THE FIELD BY THE FIRE DEPARTMENT INSPECTOR.
3. ALL PENETRATIONS THROUGH FIRE RATED PARTITIONS SHALL BE SEALED WITH APPROVED FIRE CAULKING. SEE SHTS AD2.3, & AD2.4.
4. U.O.N., ALL DIMENSIONS TO CONCRETE WALLS ARE EITHER TO THE CENTER (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL. ALL DIMENSIONS TO FRAMED WALLS ARE EITHER TO THE CENTER OF THE WALL FRAMING (SHOWN WITH A CENTERLINE) OR FACE OF THE WALL FINISH.
5. PROVIDE ILLUMINATED AND TACTILE EXIT SIGNAGE. SEE EXITING & SIGNAGE PLANS.
6. SEE CIVIL DRAWINGS FOR ALL UTILITY POINTS OF CONNECTION. GENERAL CONTRACTOR TO VERIFY LOCATIONS.
7. PROVIDE PIPE BOLLARD PROTECTION POSTS @ FIRE RISERS & ELECTRICAL GEAR AS REQUIRED BY THE ELECTRICAL AND FIRE PROTECTION PLANS. SEE 7/AD5.0 FOR ADDITIONAL INFORMATION.
8. FOR REQUIRED LANDINGS @ ACCESSIBLE DOORS, SEE 11/A0.2.1.
9. NO SMOKING IS ALLOWED WITHIN 25' OF ALL BUILDING ENTRANCES, PER GREEN BUILDING STANDARD CODE DIVISION 5.504.7. POST REQUIRED SIGNAGE.
10. U.O.N. @ INTERIOR PARTITIONS, FINISHED HINGE SIDE OF JAMB TO BE 6" FROM FINISHED SURFACE OF INTERSECTING WALL.

(AFFECT SUBJECT PROPERTY BUT DOES NOT AFFECT PARCEL 7)

LEGAL DESCRIPTION

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 PAGE 22, OF MAP, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

LISTED AS FOLLOWS:
PARCEL 1: APN: 1192-151-06

PARCEL 2: APN: 1192-151-07

PARCEL 3: APN: 1192-151-04

PARCEL 4: APN: 1192-151-05

PARCEL 5: APN: 1192-151-02

PARCEL 7: APN: 1192-151-01

PARCEL 8: APN: 1192-151-03

PARCEL 6 IS DESCRIBED AS:

PARCELS 1, 2, 3 AND 4 OF PARCEL MAP NO. 4244, IN THE CITY OF HIGHLAND, SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 41, PAGE 12 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

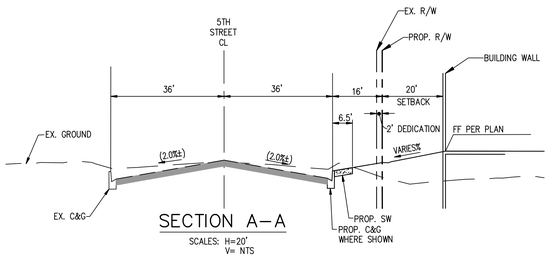
PARCEL 6: APN: 1192-151-12, APN: 1192-151-13, APN 1192-151-14 AND 1192-151-15

SURVEY NOTES AND SUMMARY

BASIS OF BEARINGS: BEARINGS SHOWN HEREON ARE BASED ON THE CENTERLINE OF EAST 3RD STREET BEING NORTH 88°47'21" WEST ON RECORD OF SURVEY 97-0077, R.S.B. 113/15-22.

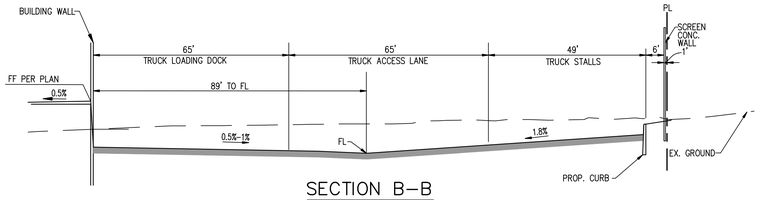
2. ASSESSOR'S PARCEL NO. = 1192-551-06, 1192-551-07, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-02, 1192-551-12, 1192-551-13, 1192-551-14, 1192-551-15 AND 1192-551-01 (ASSESSOR'S PARCEL NUMBERS SHOWN HEREON ARE PER THE CURRENT TAX ASSESSOR'S ROLLS AS PROVIDED BY COMMONWEALTH LAND TITLE COMPANY.

3. DATE OF FIELD SURVEY: JUNE 20, 2022



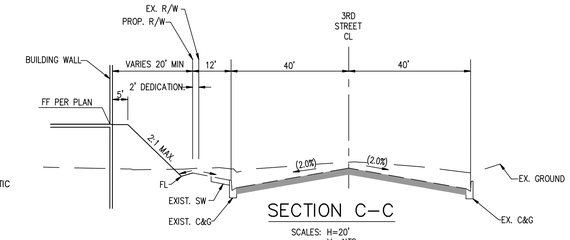
4. LANDSCAPED AREAS MAY CONTAIN IRRIGATION SPRINKLER SYSTEMS.

5. SITE ADDRESS: SOUTHEAST CORNER OF 5TH STREET AT VICTORIA AVENUE, NEC 3RD ST AND VICTORIA AVE, 26530, 26540, 26552 AND 26562 3RD ST., HIGHLAND, CA



6. THE PROPERTY SHOWN HEREON IS LOCATED WITHIN FLOOD ZONE X. FLOOD ZONE X IS DEFINED AS "AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN" AND WITHIN FLOOD ZONE A, DEFINED AS AREAS WITHOUT BASE FLOOD ELEVATIONS ON FEDERAL EMERGENCY MANAGEMENT AGENCY FIRM (FLOOD INSURANCE RATE MAP) MAP NO. 06071C8701J, EFFECTIVE DATE SEPTEMBER 2, 2016.

7. THE PROPERTY DESCRIBED AND SHOWN HEREON CONTAINS 8.14 ACRES GROSS, MORE OR LESS, AND 7.45 ACRES EX. NET AND 7.23 NET AFTER DEDICATION, MORE OR LESS.



8. AERIAL PHOTOGRAPHY WAS COMPILED BY ROBERT J. LUNG & ASSOCIATES, DATED JUNE 23, 2022 AND COMPLIES WITH NATIONAL MAPPING ACCURACY STANDARDS.

TENTATIVE PARCEL MAP NO. 20621

IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA

SEPTEMBER 2022

LEGAL DESCRIPTION

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL 1: APN: 1192-551-06

THE EAST 40 FEET OF THE FOLLOWING DESCRIBED PROPERTY: PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 PAGE 22, OF MAP, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE (NOW VICTORIA AVENUE) WITH THE CENTER LINE OF FOURTH STREET, (NOW EAST THIRD STREET); THENCE NORTH ALONG THE CENTER LINE OF SAID PEPPER AVENUE, A DISTANCE OF 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 330 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 130 FEET TO THE CENTER LINE OF SAID FOURTH STREET; THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

ALSO THAT PORTION OF SAID LOT 33 DESCRIBED AS COMMENCING AT A POINT ON THE SOUTH LINE OF SAID LOT, 330 FEET EAST OF THE CENTER LINE OF PEPPER STREET, ALSO KNOWN AS VICTORIA AVENUE; THENCE NORTH 280 FEET, MORE OR LESS TO A POINT 330 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33; THENCE EAST 50 FEET PARALLEL WITH THE NORTH LINE OF SAID LOT; THENCE SOUTH 280 FEET TO THE SOUTH LINE OF SAID LOT 33; THENCE WEST 50 FEET, MORE OR LESS, TO THE POINT OF BEGINNING.

PARCEL 2: APN: 1192-551-07

THAT PORTION OF LOT 33, CUNNINGHAM SUBDIVISION, OF A PORTION OF BLOCK 62 AND 63, RANCHO SAN BERNARDINO, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT ON THE SOUTH LINE OF SAID LOT, 330 FEET EAST OF THE CENTER LINE OF PEPPER STREET, ALSO KNOWN AS VICTORIA AVENUE, THENCE NORTH 280 FEET, MORE OR LESS, TO A POINT 330 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33; THENCE EAST 330 FEET PARALLEL WITH THE NORTH LINE OF SAID LOT, TO THE EAST LINE OF SAID LOT 33, THENCE SOUTH ALONG THE EAST LINE OF SAID LOT 33 TO THE SOUTHEAST CORNER THEREOF, THENCE WEST 330 FEET, MORE OR LESS, TO THE POINT OF THE BEGINNING.

SAVING AND EXCEPTING THE WEST 50 FEET THEREOF.

ALSO EXCEPTING THEREFROM THAT PORTION OF SAID LOT 33, LYING WITHIN AN 80 FOOT WIDE STRIP OF LAND BEING 40 FEET ON EACH SIDE OF MEASURED AT RIGHT ANGLES TO THE FOLLOWING DESCRIBED CENTER LINE:

BEGINNING AT A POINT IN THE CENTER LINE OF THIRD STREET (82.5 FEET WIDE) AS SAID STREET IS SHOWN ON PLAT OF RANCHO SAN BERNARDINO, RECORDED IN BOOK 7 OF MAPS, PAGE 2, RECORDS OF SAID COUNTY, SAID POINT BEING DISTANT SOUTH 88° 14' 59" EAST, 631.30 FEET FROM THE INTERSECTION OF THE CENTER LINE OF SAID THIRD STREET WITH THE CENTER LINE OF VICTORIA AVENUE (82.5 FEET WIDE), THENCE NORTH 54° 44' 39" EAST, 151.37 FEET; THENCE NORTHEASTERLY, 440.32 FEET ALONG A TANGENT CURVE CONCAVE TO THE SOUTHEAST HAVING A RADIUS OF 1529.63 FEET AND A CENTRAL ANGLE OF 16° 29' 35"; THENCE NORTH 71° 14' 14" EAST, A DISTANCE OF 1069.50 FEET TO THE POINT OF TERMINATION IN THE CENTER LINE OF FIFTH STREET (82.5 FEET WIDE), SAID POINT OF TERMINATION BEING DISTANT NORTH 89° 48' 14" WEST, 469.24 FEET FROM THE INTERSECTION OF THE CENTER LINE OF SAID FIFTH STREET WITH THE CENTER LINE OF CENTRAL AVENUE AS SHOWN ON PLAT OF TRACT NO. 2060, BLUE RIBBON FARMS, RECORDED IN MAP BOOK 29, PAGE 65, RECORDS OF SAID COUNTY.

THE OUTSIDE BOUNDARIES SHALL BE PROLONGED OR SHORTENED AS NECESSARY TO BEGIN AND END IN THE SAME LINES AS SAID CENTER LINE BEGINS AND ENDS.

EXCEPTING THEREFROM THE INTEREST IN THE SOUTH 8.75 FEET, AS CONVEYED TO THE COUNTY OF SAN BERNARDINO, FOR PUBLIC HIGHWAYS, AS CONTAINED IN THE INSTRUMENT RECORDED NOVEMBER 7, 1929, IN BOOK 559 OF OFFICIAL RECORDS, PAGE 126.

PARCEL 3: APN: 1192-551-04

THE WEST 70 FEET OF THE EAST 180 FEET OF THE FOLLOWING DESCRIBED PROPERTY:

A PORTION OF LOT 33 OF SUBDIVISION OF A PORTION BLOCKS 62 AND 63, RANCH SAN BERNARDINO, COMMONLY KNOWN AS CUMMINGHAM'S SUBDIVISION, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH (NOW EAST THIRD STREET);
THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET;
THENCE EAST AT RIGHT ANGLES, A DISTANCE OF 330 FEET;
THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE 130 FEET TO THE CENTERLINE LINE OF SAID FOURTH STREET;
THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

EXCEPTING THEREFROM THAT PORTION CONVEYED TO THE COUNTY OF SAN BERNARDINO, BY DEED RECORDED SEPTEMBER 22, 1980 AS INSTRUMENT NO. 80-212971, OFFICIAL RECORDS.

PARCEL 4: APN: 1192-551-05

THE EAST 70 FEET OF THE WEST 140 FEET OF THE EAST 180 FEET OF THE FOLLOWING DESCRIBED PROPERTY:

PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER PLAT RECORDED IN BOOK 2, PAGE 22 OF MAPS, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT A POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH STREET (NOW EAST THIRD STREET);
THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET;
THENCE EAST AT RIGHT ANGLES, A DISTANCE OF 330 FEET;
THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 130 FEET TO THE CENTER LINE OF SAID FOURTH STREET;
THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET, A DISTANCE OF 330 FEET TO THE POINT OF BEGINNING.

PARCEL 5: APN: 1192-551-02

THAT PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 2 OF MAPS, PAGE 22, RECORDS OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE WITH THE CENTER LINE OF FOURTH STREET (NOW EAST THIRD STREET); THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE, A DISTANCE OF 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 142 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE A DISTANCE OF 12 1/2 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 8 FEET; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 117 1/2 FEET TO THE CENTER LINE OF SAID FOURTH STREET; AND THENCE WEST ALONG THE CENTER LINE OF FOURTH STREET/A DISTANCE OF 150 FEET TO THE POINT OF BEGINNING.

EXCEPT THEREFROM THAT PORTION CONVEYED TO COUNTY OF SAN BERNARDINO, A BODY CORPORATE AND POLITIC BY DOCUMENT RECORDED SEPTEMBER 22, 1980 AS INSTRUMENT NO. 80- 212971 OF OFFICIAL RECORDS.

PARCEL 6: APN: 1192-551-12, APN: 1192-551-13, APN 1192-551-14 AND 1192-551-15

PARCELS 1, 2, 3 AND 4 OF PARCEL MAP NO. 4244, IN THE CITY OF HIGHLAND, SAN BERNARDINO, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 41, PAGE 12 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 7: APN: 1192-551-01

A PARCEL OF LAND SITUATED IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, BEING THAT PORTION OF LOT 33 OF CUNNINGHAM SUBDIVISION, AS SHOWN ON MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE EAST LINE OF VICTORIA AVENUE (PEPPER STREET) 82.5 FEET WIDE, WITH THE SOUTH LINE OF EAST FIFTH AVENUE, 82.5 FEET WIDE;
THENCE EAST PARALLEL WITH THE NORTH LINE OF SAID LOT 33, A DISTANCE OF 62 FEET;
THENCE SOUTH PARALLEL WITH THE WEST LINE OF SAID LOT, A DISTANCE OF 145.48 FEET;
THENCE WEST PARALLEL WITH SAID NORTH LINE 62 FEET;
THENCE NORTH ALONG SAID WEST LINE 145.48 FEET TO THE POINT OF BEGINNING.

TOGETHER WITH THAT PORTION OF THE EAST 1/2 OF SAID VICTORIA AVENUE ADJOINING SAID PARCEL OF LAND ON THE WEST AND ALL THAT PORTION OF THE SOUTH 1/2 OF SAID EAST FIFTH STREET ADJOINING SAID PARCEL OF LAND ON THE NORTH CONTAINING 0.44 ACRES, MORE OR LESS, INCLUDING 0.23 ACRES, MORE OR LESS IN STREETS.

CONTINUOUS WITH THAT PORTION OF LOT 33 OF CUNNINGHAM SUBDIVISION, IN THE COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS SHOWN BY MAP ON FILE IN BOOK, STATE OF CALIFORNIA, AS SHOWN ON MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE EAST LINE OF VICTORIA AVENUE (PEPPER STREET) 82.5 FEET SOUTH OF THE NORTH LINE OF SAID LOT 33;
THENCE EAST PARALLEL WITH SAID NORTH LINE 62 FEET TO THE TRUE POINT OF BEGINNING;
THENCE CONTINUING EAST, PARALLEL WITH SAID NORTH LINE, 107 FEET;
THENCE SOUTH PARALLEL WITH THE WEST LINE OF SAID LOT, A DISTANCE OF 145.48 FEET;
THENCE WEST PARALLEL WITH SAID NORTH LINE, 107 FEET;
THENCE NORTH PARALLEL WITH SAID WEST LINE, 145.48 FEET TO THE TRUE POINT OF BEGINNING.

TOGETHER WITH THAT PORTION OF THE SOUTH 1/2 OF EAST FIFTH STREET, 82.5 FEET WIDE, ADJOINING THE ABOVE DESCRIBED LAND ON THE NORTH.

PARCEL 8: 1192-551-03

THAT PORTION OF LOT 33 OF SUBDIVISION OF A PORTION OF BLOCKS 62 AND 63, RANCHO SAN BERNARDINO, COMMONLY KNOWN AS CUNNINGHAM'S SUBDIVISION, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, AS SHOWN ON A MAP RECORDED IN BOOK 2, PAGE 22 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

COMMENCING AT THE POINT OF INTERSECTION OF THE CENTER LINE OF PEPPER AVENUE (NOW VICTORIA AVENUE) WITH THE CENTER LINE OF 4TH STREET (NOW EAST 3RD STREET); THENCE NORTH ALONG THE CENTER LINE OF PEPPER AVENUE 130 FEET; THENCE EAST AT RIGHT ANGLES A DISTANCE OF 142 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 12.5 FEET; THENCE EAST PARALLEL WITH THE CENTER LINE OF 4TH STREET, 8 FEET; THENCE NORTH PARALLEL WITH THE CENTER LINE OF PEPPER AVENUE, 12.5 FEET; THENCE WEST PARALLEL WITH THE CENTER LINE OF 4TH STREET, 8 FEET TO THE POINT OF BEGINNING.

ITEM NUMBERS INDICATED WITH A HEXAGON ( ) REFLECT ITEMS WHICH ARE PLOTTED HEREON:

(3) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY
RECORDING DATE: NOVEMBER 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS
(AFFECTS PARCELS 1, 2 AND 4)

(4) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 409 OF OFFICIAL RECORDS

(5) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: PACIFIC BELL TELEPHONE COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: JUNE 27, 2005
RECORDING NO: AS INSTRUMENT NO. 2005-0456148 OF OFFICIAL RECORDS

(6) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: PUBLIC UTILITIES, INGRESS AND EGRESS
RECORDING DATE: JUNE 29, 2005
RECORDING NO: AS INSTRUMENT NO. 2005-0463987 OF OFFICIAL RECORDS

(8) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: CITY OF HIGHLAND, A MUNICIPAL CORPORATION
PURPOSE: FOR ROADS, DRAINAGE, AND PUBLIC UTILITY PURPOSES
RECORDING DATE: JANUARY 10, 2019
RECORDING NO: AS INSTRUMENT NO. 2019-0009522 OF OFFICIAL RECORDS

(10) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY RECORDING DATE:NOV. 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS

(17) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: O. G. BREWSTER
PURPOSE: PIPE LINES RECORDING DATE: DECEMBER 18, 1950
RECORDING NO: IN BOOK 2689, PAGE 369 OF OFFICIAL RECORDS

(18) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: AN ELECTRIC LINE
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 406 OF OFFICIAL RECORDS

(19) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: HIGHWAY AND ROAD PURPOSES
RECORDING DATE: JULY 24, 1968
RECORDING NO: IN BOOK 7065, PAGE 129 OF OFFICIAL RECORDS

(22) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: O. G. BREWSTER
PURPOSE: PIPE LINES RECORDING DATE: DECEMBER 18, 1950
RECORDING NO: IN BOOK 2689, PAGE 369 OF OFFICIAL RECORDS

(23) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY
PURPOSE: AN ELECTRIC LINE
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 406 OF OFFICIAL RECORDS

(24) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO
PURPOSE: HIGHWAY AND ROAD PURPOSES
RECORDING DATE: JULY 24, 1968
RECORDING NO: IN BOOK 7065, PAGE 129 OF OFFICIAL RECORDS AFFECTS: THE SOUTH 50 FEET OF SAID LAND

(26) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: COUNTY OF SAN BERNARDINO, A BODY CORPORATE AND POLITIC
PURPOSE: PUBLIC HIGHWAY RECORDING DATE: NOVEMBER 7, 1929
RECORDING NO: IN BOOK 559, PAGE 126 OF OFFICIAL RECORDS
(AFFECTS SUBJECT PROPERTY BUT DOES NOT AFFECT PARCEL 5)

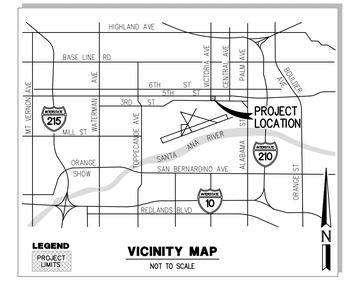
(28) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
PURPOSE: STREET, HIGHWAY AND PUBLIC UTILITIES
RECORDING DATE: JUNE 1, 2015
RECORDING NO: AS INSTRUMENT NO. 2015-0224285 OF OFFICIAL RECORDS

(31) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: POLELINES
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 407 OF OFFICIAL RECORDS.

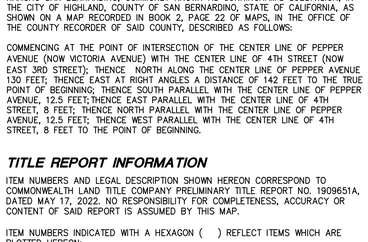
(32) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: POLELINES
RECORDING DATE: AUGUST 29, 1949
RECORDING NO: IN BOOK 2453, PAGE 361 OF OFFICIAL RECORDS.

(38) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: THE COUNTY OF SAN BERNARDINO
PURPOSE: PUBLIC HIGHWAY RECORDING DATE: OCTOBER 4, 1947
RECORDING NO: 53, IN BOOK 2126, PAGE 463 OF OFFICIAL RECORDS AFFECTS: THE NORTH 82 1/2 FEET OF LOT 33

(39) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
PURPOSE: PUBLIC UTILITIES
RECORDING DATE: MARCH 25, 1949
RECORDING NO: IN BOOK 2378, PAGE 407 OF OFFICIAL RECORDS



(40) EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT:
GRANTED TO: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION
PURPOSE: PUBLIC UTILITIES RECORDING DATE: AUGUST 29, 1949
RECORDING NO: IN BOOK 2453, PAGE 361 OF OFFICIAL RECORDS
(AFFECT SUBJECT PROPERTY BUT DOES NOT AFFECT PARCEL 7)



SURVEY NOTES AND SUMMARY

1. BASIS OF BEARINGS: BEARINGS SHOWN HEREON ARE BASED ON THE CENTERLINE OF EAST 3RD STREET BEING NORTH 88°47'21" WEST ON RECORD OF SURVEY 97-0077, R.S.B. 113/15-22.
2. ASSESSOR'S PARCEL NO. = 1192-551-06, 1192-551-07, 1192-551-04, 1192-551-03 1192-551-05, 1192-551-02, 1192-551-12, 1192-551-13, 1192-551-14, 1192-551-15 AND 1192-551-01 (ASSESSOR'S PARCEL NUMBERS SHOWN HEREON ARE PER THE CURRENT TAX ASSESSOR'S ROLLS AS PROVIDED BY COMMONWEALTH LAND TITLE COMPANY.
3. DATE OF FIELD SURVEY: JUNE 20, 2022
4. LANDSCAPED AREAS MAY CONTAIN IRRIGATION SPRINKLER SYSTEMS.
5. SITE ADDRESS: SOUTHEAST CORNER OF 5TH STREET AT VICTORIA AVENUE, NEC 3RD ST AND VICTORIA AVE, 26530, 26540, 26552 AND 26562 3RD ST., HIGHLAND, CA
6. THE PROPERTY SHOWN HEREON IS LOCATED WITHIN FLOOD ZONE X, FLOOD ZONE X IS DEFINED AS "AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN" AND WITHIN FLOOD ZONE A, DEFINED AS AREAS WITHOUT BASE FLOOD ELEVATIONS ON FEDERAL EMERGENCY MANAGEMENT AGENCY FIRM (FLOOD INSURANCE RATE MAP) MAP NO. 06071C8701J, EFFECTIVE DATE SEPTEMBER 2, 2016.
7. THE PROPERTY DESCRIBED AND SHOWN HEREON CONTAINS 8.140 ACRES GROSS, MORE OR LESS, AND 7.450 ACRES NET, MORE OR LESS.
8. AERIAL PHOTOGRAPHY WAS COMPILED BY ROBERT J. LUNG & ASSOCIATES, DATED JUNE 23, 2022 AND COMPLIES WITH NATIONAL MAPPING ACCURACY STANDARDS.
9. ZONING INFORMATION: BP – BUSINESS PARK

SOLID STATE AREA LIGHTING

RAZAR WALLMOUNT-LED

SPECIFICATIONS

PROJECT NAME:

PROJECT TYPE:

OPTICAL HOUSING
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly with integral cooling fins. The Optical Panel mounting surface is milled flat (surface variance <± .003" over 12") to facilitate thermal transfer of heat to housing and cooling fins. The Optical Housing bolts to the Electrical Housing forming a unified assembly.The minimum wall thickness is .188".

ELECTRICAL HOUSING
Heavy cast low copper aluminum (A356 alloy; <0.2% copper) assembly. Minimum wall thickness is .188". Fixture Mounting Plate affixes to mounting surface over a recessed J-box. Electrical Housing anchors on the top edge of the Mounting Plate and stainless steel recessed socket head screws tighten the Electrical Housing to the Mounting Plate from the bottom.

PLED® OPTICAL MODULES
Emitters (LED's) are arrayed on a metal core PCB panel with each emitter located on a copper thermal transfer pad and enclosed by an LED refractor. LED optics completely seal each individual emitter to meet an IP66 rating. In asymmetric distributions, a micro-reflector inside the refractor re-directs the house side emitter output towards the street side and functions as a house side shielding element. Refractors are injection molded H12 acrylic. Each LED refractor is sealed to the PCB over an emitter and all refractors are retained by an aluminum frame. Any one Panel, or group of Panels in a luminaire, have the same optical pattern. LED refractors produce Type II, III, and Type IV site/area distributions as well as other specialty asymmetric distributions. Panels are field replaceable and field rotatable in 90° increments.

LED DRIVER(S)
Constant current electronic with a power factor of > .90 and a minimum operating temperature of -40°F/-40°C. Driver(s) is/are UL and cUL recognized and mounted directly against the Electrical Housing to facilitate thermal transfer, held down by universal clamps to facilitate easy removal. In-line terminal blocks facilitate wiring between the driver and optical arrays. Drivers accept an input of 120-277V, 50/60Hz or 347V-480V, 50,60Hz. (0 - 10V dimmable driver is standard. Driver has a minimum of 3KV internal surge protection. Luminaire supplied with 20KV surge protector for field accessible installation.)

LED EMITTERS
High output LED's are utilized with drive currents ranging from 350mA to 1050mA. 70CRI Minimum. LED's are available in standard Neutral White (4000K), or optional Cool White (5000K) or Warm White (3000K). Consult Factory for other LED options.

AMBER LED's
PCA (Phosphor Converted Amber) LED's utilize phosphors to create color output similar to LPS lamps and have a slight output in the blue spectral bandwidth. **TRA** (True Amber) LED's utilize material that emits light in the amber spectral bandwidth only without the use of phosphors.

FINISH
Electrostatically applied TGIC Polyester Powder Coat on substrate prepared with 20 PSI power wash at 140°F. Four step media blast and iron phosphate pretreatment for protection and paint adhesion. 400°F bake for maximum hardness and durability.

Resolution

RESOLUTION NO. 2026 – ___

A RESOLUTION OF THE HIGHLAND PLANNING COMMISSION RECOMMENDING THE CITY COUNCIL ADOPT A MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM, APPROVE GENERAL PLAN AMENDMENT (GPA 23-001) TO AMEND THE CITY'S SPHERE OF INFLUENCE AND DESIGNATE ASSESSOR'S PARCEL NUMBER 1192-551-01 AS BUSINESS PARK (BP), CONDUCT A FIRST READING AND INTRODUCE AND ORDINANCE TO PRE-ZONE ASSESSOR'S PARCEL NUMBER 1192-551-01 AS BUSINESS PARK (BP) (ZC 23-001), CERTIFY THE FISCAL ANALYSIS AND PLAN FOR SERVICE REPORTS AND DIRECT STAFF TO INITIATE AN APPLICATION WITH THE LOCAL AGENCY FORMATION COMMISSION OF SAN BERNARDINO COUNTY (LAFCO) FOR A REORGANIZATION AND TO ANNEX ASSESSOR'S PARCEL NUMBER 1192-551-01 INTO THE CITY OF HIGHLAND, APPROVE CONDITIONAL USE PERMIT (CUP 22-014) TO CONSTRUCT A 173,976 SQUARE FOOT TILT-UP WAREHOUSE AND ASSOCIATED IMPROVEMENTS, APPROVE DESIGN REVIEW APPLICATION (DRA 22-023) FOR THE RELATED SITE PLAN, BUILDING ELEVATIONS, LANDSCAPING AND GRADING PLANS, AND APPROVE TENTATIVE PARCEL MAP NO. 20621 (TTM 23-001) TO CONSOLIDATE ELEVEN (11) LOTS INTO ONE (1) PARCEL AT THE SOUTHEAST CORNER OF 5TH STREET AND VICTORIA AVENUE. ASSESSOR PARCEL NUMBERS: 1192-551-01 THROUGH -07 AND 1192-551-12 THROUGH -15.

APPLICANT: PATRIOT USICVI 5TH STREET, LLC

A. RECITALS

1. On December 7, 2022, the Applicant filed multiple applications to develop a 173,976 square foot industrial warehouse and associated improvements on 7.23 acres at the southeast corner of 5th Street and Victoria Avenue within the jurisdictions of the City of Highland and City of San Bernardino. These Applications include Conditional Use Permit (CUP-23-003) to approve the warehouse use, loading docks, passenger vehicle parking, a stormwater detention/infiltration basin, and landscape area, Design Review (DRA-23-004) to approve the Project's site plan, building elevations, grading and landscape design, and Tentative Parcel Map No. 20621 (TPM 23-001) to merge eleven (11) parcels into one (1) parcel. Concurrently, applications were filed requesting a 0.56 acre parcel within the project's development footprint be detached from the City of San Bernardino and annexed into the City of Highland. These applications include General Plan Amendment (GPA 23-001) to include the 0.56 acre property (APN 1192-551-01) in Highland's Sphere of Influence and designate it as a Business Park (BP) land use, and Zone Change (ZC 23-001) to Pre-Zone the 0.56 acre parcel as Business Park (BP).

2. The 0.56 acre parcel within San Bernardino is located at the southeast corner of Victoria Avenue and 5th Street and is zoned Commercial General 1 (APN 1192-551-01). The remaining 10 parcels within Highland, cover 6.67 acres and are zoned Business Park (BP) (APNs 1192-551-02 through -07 and 1192-551-12 through -15).

3. The City of Highland and the City of San Bernardino desire to initiate proceedings pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Section 65000 et seq. of the California Government Code for:

   a. Sphere of Influence amendments for the City of Highland (expansion), City of San Bernardino (reduction), and San Bernardino County Fire Protection District (reduction); and

   b. An annexation to the City of Highland and detachment from the City of San Bernardino, San Bernardino County Fire Protection District (SBCFPD), SBCFPD Valley Service Zone and SBCFPD Service Zone FP-5.

4. The proposed boundary adjustment, including both public and private property, to be included in this application to the Local Agency Formation Commission of the County of San Bernardino (the "LAFCO") is included in the map of the boundaries of the territory and legally described in the exhibit attached hereto and incorporated herein; and

5. The proposed organization will not conflict with any sphere of influence, and the proposed change includes amendments to the sphere of influence for the City of Highland and San Bernardino; and

6. It is desired that the proposed reorganization be subject to the following terms and conditions;

   a. Both the City Councils of the City of Highland, City of San Bernardino, and SBCFPD must approve the proposed Sphere of Influence and Annexation/Detachment proceedings.

   b. The City of Highland shall process an amendment to its General Plan and pre-zone the territory to "Business Park (BP)".

   c. The City of Highland shall accept (annex) from the City of San Bernardino (detachment) an approximately 0.56 acre parcel (APN 1192-551-01) east of Victoria Avenue and south of 5th Street and its adjacent southerly road right-of-way along 5th Street and its adjacent easterly road right-of-way along Victoria Avenue (0.39 acre). The City of Highland shall assume all land use authority and maintenance, access permits, and other governmental responsibilities associated with the public rights-of-way fronting APN 1192-551-01.

   d. The City of Highland shall certify the *Fiscal Analysis* dated May 2024, which identifies the project's valuation and taxable income in addition to costs related to the General Fund, police services, fire services and special districts.

   e. The City of Highland shall certify the *Plan for Service* dated May 2024, which demonstrates the range and level of services currently available within the property will, at least, be maintained by the City of Highland.

   d. The City of Highland shall cause the application to be filed with LAFCO to include all filing fees and exhibits that may be necessary to complete the application.

e. The City Councils of the City of Highland and City of San Bernardino shall both accept all standard conditions as required by LAFCO.

7. The reasons for this proposed boundary adjustment between the City of Highland and the City of San Bernardino are as follows:

   a. Coordinate property development standards and essential services such as streets, police and fire protection, and land use implementation in a more defined corporate boundary between the two cities.

   b. Assist property owners and public in understanding the jurisdictional boundaries between the City of Highland and City of San Bernardino.

   c. Improve essential services such as street maintenance and repair, public safety, fire protection, knowing the centerline of Victoria Avenue will be the boundary between the Cities at this location and that this portion of 5th Street will be fully within the corporate boundary of the City of Highland.

8. Pursuant to the provision of the California Environmental Quality Act ("CEQA") (Cal. Pub. Res. Code § 21000 et seq.) and State CEQA Guidelines (the "Guidelines") (14 Cal. Code Regs. § 15000 et seq.), the City of Highland is the Lead Agency, and is charged with the responsibility of deciding whether or not to approve the proposed Project.

9. The City contracted with Dudek for the independent preparation of an Initial Study to analyze the potential environmental effects of the Project. Based on the information contained in the Initial Study, Dudek and City staff concluded that the Project could have a significant effect on the environment, but that mitigation measures could be implemented to reduce such impacts to a less than significant level. Based upon this determination, Dudek prepared, and City staff concurred in, a Draft Mitigated Negative Declaration ("Draft MND") in accordance with CEQA Section 21080(c) and Section 15070 of the State CEQA Guidelines. Mitigation Measures are recommended in the areas of Biological Resources, Cultural Resources, Tribal Cultural Resources, and Geology and Soils.

10. The City circulated a Notice of Intent to Adopt the Draft MND, along with the Draft MND and its Appendices, to the public and other interested parties, for a 30-day comment period between October 18, 2024, through November 18, 2024, State Clearinghouse (SCH #: 2024100850). The City published the Notice of Intent for the Draft MND in the San Bernardino Sun, a newspaper of general circulation within the City. Copies of the documents have been available for public review and inspection at the Highland Planning Department located in City Hall, 27215 Base Line Street, Highland, California 92346, and the Highland Sam J. Racadio Library, 7863 Central Ave, Highland, CA 92346, and on the City's website.

11. During the comment period, the City received eight (8) written comments on the Draft MND from various agencies, individuals, and organizations and entities. A response to all of the comments made therein was prepared, submitted to the Planning Commission, and incorporated into the administrative record of the proceedings.

12. The "Final Mitigated Negative Declaration" ("Final MND") consists of the Draft MND, all of its appendices and the Mitigation Monitoring and Reporting Program, the comments received on the Draft MND, and responses to those comments. The Final MND was made available to the public and to all commenting agencies on December 22, 2025, which is at least 10 days prior to adoption of the Final MND, in compliance with Public Resources Code Section 21092.5(a). A copy of the Final MND is attached and is incorporated herein by this reference.

13. Public Resources Code Section 21081.6 requires the City to prepare and adopt a Mitigation Monitoring and Reporting Program for any project for which mitigation measures have been imposed to assure compliance with the adopted mitigation measures. The Mitigation Monitoring and Reporting Program is attached hereto and is incorporated herein by reference.

14. On January 20, 2026, the Planning Commission held a duly noticed public hearing to consider the Final MND and the Project, at which time the Planning Commission heard and considered information presented by City staff on the Project and its environmental review. In addition, all interested persons had an opportunity to and did testify regarding this matter.

15. All legal prerequisites to the adoption of this Resolution have occurred.

B. RESOLUTION

NOW THEREFORE, it is hereby found, determined and resolved by the Planning Commission of the City of Highland as follows:

Section 1. The Planning Commission finds that all of the facts set forth in the Recitals, Part "A" of this Resolution, are true and correct.

Section 2. Based upon substantial evidence presented to the Planning Commission during the January 20, 2026 public hearing, including public testimony and written and oral staff reports, the Planning Commission finds as follows:

a. All necessary Public Meetings and opportunities for public testimony and comment have been conducted in compliance with State Law and the Municipal Code of the City of Highland.

Section 3. The Planning Commission has independently considered the administrative record before it, which is hereby incorporated by reference and which includes the Final MND, the written and oral comments on the Draft MND, the Draft MND and its Appendices, staff reports and presentations, and all oral and written testimony.

Section 4. The Planning Commission has reviewed the Final MND and all comments received regarding the Final MND prior to and at the January 20, 2026 public hearing, and based on the whole record before it finds that: (1) the Final MND was prepared in compliance with CEQA; (2) there is no substantial evidence that the Project will have a significant effect on the environment; and (3) the

Final MND reflects the independent judgment and analysis of the Planning Commission.

Section 5. Findings of Fact for **General Plan Amendment (GPA 24-001)** (Highland Municipal Code Section 16.08.030.G *General plan amendments. Findings*):

Based on the Findings below, the Highland Planning Commission does hereby find:

a. The proposed use is permitted within the subject district pursuant to the provisions of this section and complies with all of the applicable provisions of this title; and is consistent with the goals, policies, and objectives of the Highland general plan, and with the applicable development policies and standards of the city.

Response: The proposed General Plan Amendment affects Figure 2.2 *General Plan Land Use*, amending the Sphere of Influence to include Assessor's Parcel Number 1192-551-01, currently within the jurisdictional boundaries of the City of San Bernardino. Concurrently, the parcel will be Pre-Zoned Business Park (BP), in keeping with the adjoining parcels to the north, south and east and the goals, policies and objectives of the 5th Street Corridor Policy Area and Victoria Avenue Corridor Policy Area.

The GPA will facilitate the development of a 173,976 square foot warehouse within the City's Business Park (BP) Zone District. The General Plan Land Use Element conveys that the appropriate uses in the BP land use designation include light manufacturing, wholesaling and warehousing. The proposed project meets this objective.

It will meet the generalized "Plan Objectives" to plan for future growth, provide clarity in land use guidance, help create place for people to work, expand the employment base and ensure land use compatibility.

Specific to the proposed warehouse project, the GPA will help ensure the adjacent parcels, currently in Highland's boundary, can form a larger, cohesive usable space for BP development. It will eliminate a remainder parcel, cut from the project at the corner of 5th Street and Victoria Avenue. The project can be built in a logical way, encompassing the full block of Victoria Avenue from 3rd Street to 5th Street.

Each of the nine (9) Policies of the General Plan's Goal 2.13 to Transform the 5th Street Corridor into a major employment center and gateway to the San Bernardino International Airport would be furthered by the development of the proposed project including coordination with the San Bernardino International Airport Authority, promoting 5th Street as a major industrial entryway to the Airport, furthering a comprehensive design and branding program, improving circulation, enhancing the integrity of industrial sites, improving landscaping along the edges and medians, promoting Development Code standards, and transitioning uses and utilizing buffers between existing residential neighborhoods and industrial uses.

Goal 2.14 to Establish the Victoria Avenue Corridor as the major entryway into the San Bernardino International Airport, Policies 4, 5 and 6 are also furthered by the project's ability to consolidate parcels to promote quality planned development, consolidate access points along Victoria Avenue to improve traffic flow, and create a major business node at the southern terminus of Victoria Avenue to maximize employment opportunities adjacent to the airport.

b. The proposed use would not impair the integrity and character of the district in which it is to be established or located.

Response: The proposed project will not impair the integrity or character of the Business Park district as it will facilitate the construction of a warehouse and warehouse uses are allowed in the Business Park district.

The GPA to modify the City's Sphere of Influence and incorporate the 0.56 acre parcel will improve public health and safety by clarifying the service boundaries between San Bernardino and Highland. Currently the parcel is an island at the southeast corner of 5th Street and Victoria Avenue, surrounded by Highland properties to the north, south and east. Adjusting the boundaries will unify the property under the same land use development standards, utilities and public safety response providers.

The GPA will facilitate the orderly development of a warehouse which will be constructed in compliance with Municipal, Fire & Building codes. Each public safety division of the City has reviewed the warehouse project and provided relevant Conditions of Approval that will be adopted by resolution. The necessary ingress and egress are provided and all public utilities and services will be in place.

The proposed warehouse will increase economic stability and vitality of the City's industrial uses and ensure orderly development by developing the land and surrounding right-of-way, improving the 5th Street and Victoria Avenue Corridors and generating new jobs.

c. The site is suitable for the type and intensity of use or development which is proposed;

Response: The site is suitable for the type and intensity of use or development because the 0.56 acre site that is the subject of the GPA, is part of a larger project that totals 7.23 acres in size. This site can accommodate a warehouse that is 173,976 square feet in size as it meets all of the o the City's Development Standards for Employment Districts (Chapter 16.24) and where necessary, has been conditioned to meet said standards.

The GPA will promote the development of the full site, eleven (11) parcels within Highland and San Bernardino by bringing them together as one parcel in one jurisdiction. It will be more effective to review and condition the project and provide services to a project within one city.

d. There are adequate provisions for water, sanitation, and public utilities and services to ensure public health and safety;

Response: East Valley Water District has facilities in proximity to the project and has acknowledged that they will provide water and sanitation services. The Southern California Gas Co., Southern California Edison, AT&T, Frontier and Spectrum also have facilities adjacent to the site and have been informed of the project and its operational characteristics. The City's Engineering/Public Works Division will ensure that all utilities will be provided for and accommodated as needed within the public right-of-way including electricity, gas, telephone, internet, and cable before any occupancy of the site is granted.

e. The proposed use will not be detrimental to the public health, safety, or welfare, or materially injurious to properties and improvements in the vicinity; and

Response: The warehouse development will be in compliance with Municipal, Fire & Building codes. Each public safety division of the City has reviewed the project and provided relevant Conditions of Approval that will be adopted by resolution. The necessary ingress and egress are provided and all public utilities and services will be in place. An Initial Study was prepared for the project in accordance with the California Environmental Quality Act and a Mitigated Negative Declaration is proposed for adoption concurrently with a Mitigation Monitoring and Reporting Program. All impacts will be mitigated to a level of insignificance. There is no indication that the project would be detrimental to the public health, safety or welfare, or materially injurious to properties and improvement in the vicinity.

f. The proposed use would not result in a significant effect on the environment.

Response: An Initial Study was prepared for the Project and potential impacts to Biological Resources, Cultural Resources, Tribal Cultural Resources and Soils and Geology were identified. The Project design features and Project-specific mitigation measures have been included to reduce said impacts to below a level of significance and the list of measures has been included in the Mitigation Monitoring and Reporting Program (MMRP). Based upon the Findings of the Initial Study and adoption of the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program, the Project will not have a significant impact upon the environment.

Section 6. Findings of Fact for **Zone Change (ZC 24-001)** (Highland Municipal Code Section 16.08.040 *Amendments to zoning districts and other provisions)*.

Based on the Findings below, the Highland Planning Commission does herby find:

a. The proposed change of zone or revision is consistent with the goals, objectives, policies, and programs of the general plan, and is necessary and desirable to implement the provisions of the general plan;

Response: The zone change would result in the site being Pre-Zoned to be within the City's Business Park (BP) Zone District. Concurrently, it would be added to the City's Sphere of Influence within the General Plan's Business Park (BP) land use designation. The concurrent action ensures that the change will result in a uniform land use designation as both the General Plan and Municipal Code policies, goals and objectives are alike. The both strive to provide and promote light industrial land uses in an attractive setting and bolster the City's employment opportunities.

The zone change is consistent with the Highland General Plan goals, policies and objectives noted in the Community Design Element, Circulation Element, and Land Use Element especially those established for the 5th Street Corridor Policy Area and Victoria Avenue Corridor Policy Area.

Each of the nine (9) Policies of the General Plan's Goal 2.13 to transform the 5th Street Corridor into a major employment center and gateway to the San Bernardino International Airport would be furthered by the zone change which will allow the development of the proposed project including coordination with the San Bernardino International Airport Authority, promoting 5th Street as a major industrial entryway to the Airport, furthering a comprehensive design and branding program, improving circulation, enhancing the integrity of industrial sites, improving landscaping along the edges and medians, promoting Development Code standards, and transitioning uses and utilizing buffers between existing residential neighborhoods and industrial uses.

Goal 2.14 to Establish the Victoria Avenue Corridor as the major entryway into the San Bernardino International Airport, Policies 4, 5 and 6 are also furthered by the project's ability to consolidate parcels to promote quality planned development, consolidate access points along Victoria Avenue to improve traffic flow, and create a major business node at the southern terminus of Victoria Avenue to maximize employment opportunities adjacent to the airport.

b. The proposed change of zone or revision will not adversely affect the public health, safety, and welfare or result in an illogical land use pattern;

Response: The zone change will Pre-Zone the parcel so that it would be properly annexed into the City and will promote the development of the full 7.23 acre site in both Highland and San Bernardino. The zone change will merge the parcels together under one jurisdiction improving the public health, safety and welfare especially to the San Bernardino parcel. The Highland Fire Department (California Department of Forestry and Fire Protection, Cal Fire) Station Nos. 1 and 3 are within one and a half miles of the site and currently provide fire protection and medical aid to the Highland parcels that comprise the project as well as those properties immediately to the north, south and east of the site. Both of Highland Fire stations are closer to the site than the San Bernardino City Fire (San Bernardino County Fire Department) that service the San Bernardino parcel. The Highland Police Department (San Bernardino County Sheriff Highland Station) is also in closer proximity to the site than the current services by San Bernardino City

Police. The annexation of this property into Highland will result in quicker response times and improved public safety and welfare.

The zone change will result in a more effective review and conditioning of the proposed warehouse. The Highland Municipal Code Title 16 will be utilized to implement goals, objectives and policies of the city and manage growth accordingly for the entire 7.23 acre site. The project has been planned according to the City's Development Standards for Employment Districts (Chapter 16.24) and where necessary, has been conditioned to meet said standards.

The proposed warehouse will increase economic stability and vitality of the City's industrial uses and ensure orderly development by developing the land and surrounding right-of-way, improving the 5th Street and Victoria Avenue Corridors and generating new jobs.

c. The proposed change of zone or revision is consistent with the purpose and intent of the remainder of this title not under consideration; and

Response: The purpose and intent of Title 16 *Land Use* is to implement the General Plan, protect the physical, social and economic vitality of the City's industrial land use, assure orderly development, ensure proper design of buildings and improvements, and to attain physical, social and economic advantages resulting from comprehensive and orderly land use resource planning (HMC 16.04.010. *Purpose and intent*). As indicated above, the project includes a pre-zone / change of zone from Commercial General within the City of San Bernardino to Business Park within the City of Highland. The pre-zone will establish a land use designation consistent with the Highland properties on all sides and result in a uniform and logical land use pattern.

The remainder of Title 16, not under consideration specifically with the Zone Change, includes aspects that are being reviewed concurrently with the project's Conditional Use Permit, Design Review Application, and Tentative Parcel Map. These include Chapters 16.24 *Employment Districts*, 16.40 *General Development Standards*, 16.48 *Performance Standards*, 16.52 *Parking Regulations*, 16.56 *Sign Regulations*, and 16.68 *Land Divisions*. The project is designed and conditioned to comply with the Municipal Code Standards for Business Park (BP) Districts including land use as a warehouse, development standards such as setbacks and lot coverage (HMC Table 16.24.040.A), and Special Site Development Standards including additional buffering, circulation and parking (HMC 16.24.040.B). The orihect meets the required provisions for development density, fences and walls, grading, lighting, storage and signs. The project will result in a well-designed and well-functioning warehouse / distribution facility.

d. The potential environmental impacts of the proposed change of zone or revision are insignificant or there are overriding considerations which outweigh the potential impacts.

Response: An Initial Study was prepared for the Project and potential impacts to Biological Resources, Cultural Resources, Tribal Cultural Resources, Soils and Geology were identified. Project specific mitigation measures have been included to reduce said impacts to below a level of significance and the list of measures have been included in the MMRP.

Based upon the Findings of the Initial Study and adoption of a Final MND and MMRP, the Project will not have a significant impact upon the environment. Concurrently with an Ordinance, the Planning Commission recommends the City Council adopt a Resolution adopting the Final MND and MMRP for this Project.

Section 7. **LAFCO Action**. The Planning Commission recommends the City Council certify the Fiscal Analysis and Plan for Service, and authorize the filing of the appropriate application and exhibits to the LAFCO of the County of San Bernardino to adjust the boundary between the City of Highland and City of San Bernardino pursuant to Government Code Section 56000 et.seq., the Cortese-Knox-Hertzberg Local Reorganization Act of 2000 and the procedures of the LAFCO.

Section 8. The Planning Commission recommends the City of Highland City Council acknowledge and agree to the Local Agency Formation Commission for San Bernardino County's requirement for imposing legal indemnification as outlined in Policy 3 of Chapter 2 of the Internal Operations, Accounting, and Financial Section of its Policy and Procedure Manual.

Section 9. **Conditional Use Permit (CUP 22-014)** Findings of Fact (Highland Municipal Code Section 16.08.050.E):

a. The proposed use is permitted within the subject district pursuant to the provisions of this section and complies with all of the applicable provisions of this title (Title 16); and is consistent with the goals, policies, and objectives of the Highland General Plan, and the applicable development policies and standards of the city.

Response: The proposed use of warehousing and distribution is permitted in the Business Park Zone District subject to approval of a Conditional Use Permit as noted in Table 16.24.030.A. *Uses Permitted within Employment Districts, Subsection B.2. Wholesale Uses and Warehousing*. Applicable provisions in Title 16 *Land Use*, include but are not limited to, Chapter 16.24 *Employment Zones*, 16.40 *General Development Standards*, and 16.54 *Parking*. The project meets the standards established in these chapters. It complies with Table 16.24.040.A *Industrial Site Development Minimum Standards* including setbacks, maximum building height and lot coverage as well as Section 16.24.040.B. *Special Site Development Standards* requiring increased setbacks to residential districts and landscape buffering. The proposal meets the City's criteria for maximum fence heights, minimum and maximum site lighting, and screening of industrial uses. The applicant is seeking a reduction in the required number of parking spaces and has provided a parking study for consideration by the Planning Commission. Other than the minimum number of spaces, the

project meets all other parking criteria such as size of spaces, circulation, lot coverage and surfacing requirements.

Each of the nine (9) Policies of the General Plan's Goal 2.13 to Transform the 5th Street Corridor into a major employment center and gateway to the San Bernardino International Airport would be furthered by the development of the proposed project including coordination with the San Bernardino International Airport Authority, promoting 5th Street as a major industrial entryway to the Airport, furthering a comprehensive design and branding program, improving circulation, enhancing the integrity of industrial sites, improving landscaping along the edges and medians, promoting Development Code standards, and transitioning uses and utilizing buffers between existing residential neighborhoods and industrial uses.

Goal 2.14 to Establish the Victoria Avenue Corridor as the major entryway into the San Bernardino International Airport, Policies 4, 5 and 6 are also furthered by the project's ability to consolidate parcels to promote quality planned development, consolidate access points along Victoria Avenue to improve traffic flow, and create a major business node at the southern terminus of Victoria Avenue to maximize employment opportunities adjacent to the airport.

b. The proposed use would not impair the integrity and character of the district in which it is to be established or located.

Response: The proposed warehouse use is in keeping with the expected character of Business Park District and its future development. It would be constructed in compliance with the Highland General Plan and Municipal Code standards related to warehousing in the Business Park District, the Victoria Avenue Corridor and 5th Street Corridor Policy Areas. It meets development code standards such as land use, setbacks, density, lighting, parking, circulation, etc. It has a high quality, modern design in keeping with the Policy Area standards. It has quality finishes, landscaping, and hardscape and will construct surrounding infrastructure. It would improve two major nodes of the Corridor at the 5th Street and Victoria Avenue intersection and the 3rd Street and Victoria Avenue intersection. Vehicular and pedestrian circulation improvements and landscaping would be installed and the overall appearance of the Corridors dramatically improved with a quality industrial facility.

c. The site is suitable for the type and intensity of use or development which is proposed.

Response: The 7.23 acre site is adequate for proposed industrial development with a 55% lot coverage area. The Code permits up to 60% lot coverage. The topography of the site is predominantly flat. Utilities are readily accessible within the adjacent right-of-way, and the site offers favorable drainage conditions for both on-site water retention and water quality treatment. Accessibility to the site is facilitated through four (4) separate driveways, reducing the mingling of commercial truck and passenger vehicle traffic. Moreover, the site has excellent connectivity to

regional transportation networks situated adjacent to the San Bernardino International Airport, 1.5 miles from State Route 210 and 2.5 miles from Interstate 10.

Per Municipal Code Section 16.24.040 Employment District Development Standards. It meets the minimum lot size, lot width and depth as well as required building setbacks, lot coverage, and landscape coverage.

d. There are adequate provisions for water, sanitation, and public utilities and services to ensure public health and safety.

Response: Existing water, public utilities and services for the project are available adjacent to the site within the public right-of-way. East Valley Water District provided a "Will Serve" letter to the applicant, confirming the provision of water and sanitary sewer services. All utility providers were given notice of the project and none expressed concern. Public health and safety were addressed with the design and conditioning of the project. The proposed annexation of 0.56 acres of property into the City of Highland will improve the provision of utilities and public safety services as it will better align jurisdictional boundaries and create a more logical boundary.

e. The proposed use will not be detrimental to public health, safety, or welfare, or materially injurious to properties and improvements in the vicinity.

Response: The proposed warehouse development will be compliant with Municipal, Fire & Building codes. Each public safety division of the City has reviewed the project and provided relevant Conditions of Approval that will be adopted by resolution. The necessary ingress and egress are provided, and all public utilities and services will be in place. There is no indication that the project would be detrimental to public health, safety or welfare, or materially injurious to properties and improvement in the vicinity.

f. The proposed use would not result in a significant effect on the environment.

Response: Pursuant to the California Environmental Quality Act (CEQA) and State and Local CEQA Guidelines, the City of Highland is the Lead Agency. As such, the City oversaw preparation of an Initial Study which was made available for public review. Mitigation Measures were necessary to reduce impacts below a level of significance in the areas of Biological Resources, Cultural Resources, Tribal Cultural Resources, and Geology and Soils. All other CEQA topics were found to be less than significant or no impact. With the incorporation of the mitigation measures set forth in the MND and MMRP, the project will not result in a significant effect on the environment.

Section 10. **Airport overlay zone and safety compatibility** Findings of Fact (Highland Municipal Code Section **16.40.410(F)**):

a. The proposed use is consistent with the applicable adopted airport land use compatibility plan.

Response: The project site is located within Airport Compatibility Zone E 'Negligible Risk'. Warehousing and distribution are designated in Zone E as "SR". "Where the symbol "SR" appears in the column beneath an airport safety zone, the use is compatible. Use is acceptable without safety-related conditions (noise, airspace protection, and/or overflight limitations may apply) (HMC 16.410.D and Table 16.40.410.A *Airport Overlay Zone and Safety Compatibility Criteria*). Zone E has no maximum limit for nonresidential intensity and permits up to 100% lot coverage.

b. The proposed use does not involve the storage or dispensing of volatile or otherwise hazardous substances that would endanger aircraft operations and public safety.

Response: The Building & Safety Division and Fire Marshal have conditioned the project so that in the event volatile or hazardous substances are stored or dispensed, the operator shall follow the appropriate local and state requirements for safe storage, use and movement.

c. The proposed use does not attract a large concentration of birds, produce smoke, generate electrical interference, reflect a glare of light or emit radio transmissions that may endanger aircraft operations.

Response: The San Bernardino International Airport Authority (SBIAA) has reviewed the project and submitted no concerns related to the proposed land use, its Site Plan, Building Elevations, Landscaping or Lighting. The project does not have standing water that would attract birds. It does not generate smoke, emit radio transmissions or otherwise endanger aircraft operations.

d. The proposed use promotes the public interest to provide for the development of the public-use airport and the area around the airport in such a manner, among other things, to promote the overall noise standards adopted pursuant to the Public Utilities Code and prevent the creation of new noise and safety hazards.

Response: The proposed warehouse / distribution facility supports the SBIAA as it increases the opportunities to move goods in proximity to the air cargo and passenger air service. It will not generate excessive noise, and it will not result in new sensitive receptors near the SBIAA.

e. The proposed use enhances the protection of public health, safety and welfare, by ensuring the orderly expansion of the airport and the adoption of land use measures or development standards that minimize the public's exposure to excessive noise and safety hazards within the area around the airport to the extent that such areas are not already devoted to incompatible uses.

Response: The proposed warehouse use is in keeping with the goals and objectives of the SBIAA. Warehousing is permitted use within Airport Influence Zone E which has a "negligible" safety risk. The land use measures identified in HMC Section 16.40.410.G. *Airport overlay and*

safety compatibility, Development Standards, limit the overall height of the structure permitted by the FAA, address light and glare, land use and heliports. The building will not exceed the 55' maximum within the Business Park Zone, which is less than the 60' height permitted by the FAA. It will not exceed the maximum land use intensity or lot coverage (HMC Table16.40.410.A).

f. The proposed use will not adversely affect safe air navigation, airport operations or interfere with airport communications.

Response: The SBIAA has reviewed the proposal, its site design, right-of-way improvements, and its operational characteristics. They cited no adverse effects on air safety or communications.

g. The proposed use complies with the development standards specified by this section.

Response: Development standards include height limits, light and glare, land use and heliport requirements (HMC 16.40.410.G *Development Standards*). The building is less than 55' as mandated by the Municipal Code for all uses in the Business Park District (BP) including those within Compatibility Zone E. The proposed use of a warehouse / distribution facility is acceptable without safety-related conditions. The project will not emit excessive glare and will not construct a helipad. The SBIAA did not cite additional safety measures regarding these Standards.

Section 11. **Design Review (DRA 22-023)** Findings of Fact (Highland Municipal Code Section 16.08.090.E *Design review, Findings*):

a. That the proposed project is consistent with the general plan or specific plan.

Response: With the General Plan amendment (GPA 23-001) designating APN 1192-531-001 to be in the City's sphere of influence and providing that the parcel has a land use designation of Business Park, the proposed project will have a General Plan Land Use Designation of Business Park (BP). It is consistent with the Highland General Plan goals, policies and objectives noted in the Community Design Element, Circulation Element, and Land Use Element especially those established for the 5th Street Corridor Policy Area and Victoria Avenue Corridor Policy Area.

Each of the nine (9) Policies of the General Plan's Goal 2.13 to *Transform the 5th Street Corridor into a major employment center and gateway to the San Bernardino International Airport* would be furthered by the development of the proposed project including coordination with the San Bernardino International Airport Authority, promoting 5th Street as a major industrial entryway to the Airport, furthering a comprehensive design and branding program, improving circulation, enhancing the integrity of industrial sites, improving landscaping along the edges and medians, promoting Development Code standards, and transitioning uses and utilizing buffers between existing residential neighborhoods and industrial uses.

Goal 2.14 to *Establish the Victoria Avenue Corridor as the major entryway into the San Bernardino International Airport, Policies 4, 5 and 6* are also furthered by the project's ability to consolidate parcels to promote quality planned development, consolidate access points along Victoria Avenue to improve traffic flow, and create a major business node at the southern terminus of Victoria Avenue to maximize employment opportunities adjacent to the airport.

b. That the proposed use is in accordance with the objectives of Title 16, Land Use and Development of the City of Highland Municipal Code, and the purposes of the land use district in which the site is located.

Response: The proposed use of warehousing and distribution is permitted in the Business Park (BP) Zone District subject to approval of a Conditional Use Permit as noted in Table 16.24.030.A. *Uses Permitted within Employment Districts, Subsection B.2. Wholesale Uses and Warehousing*. Applicable provisions in Title 16 *Land Use*, include but are not limited to, Chapter 16.24 *Employment Zones*, 16.40 *General Development Standards*, and 16.52 *Parking*. The project meets the standards established in these chapters. It complies with Table 16.24.040.A *Industrial Site Development Minimum Standards* including setbacks, maximum building height and lot coverage as well as Section 16.24.040.B. *Special Site Development Standards* requiring increased setbacks to residential districts and landscape buffering. The proposal meets the City's criteria for maximum fence heights, minimum and maximum site lighting, and screening of industrial uses. The applicant is seeking a reduction in the required number of parking spaces and has provided a parking study for consideration by the Planning Commission and City Council. Other than the minimum number of spaces, the project meets all other parking criteria such as size of spaces, circulation, lot coverage and surfacing requirements.

c. That the proposed use is in compliance with city design and landscape standards and criteria.

Response: In accordance with the Highland General Plan, specific criteria are outlined for this location under the Land Use and Community Design Elements. Goal 10.8 is designed to ensure that developments are both professionally executed and aesthetically pleasing through a coordinated approach to site planning, signage, and architectural design. To comply with these guidelines, the project will feature specialized landscaping at its entrances, which serves to enhance the contemporary architectural elements of the building. This approach is congruent with the established thematic development in the Highland area.

The design meets the intent of Policy 10.8.1 which encourages "contemporary, clean and distinctive buildings with clearly visible entrances" and Policy 10.8.3 to "avoid long, blank building walls by incorporating diagonal façade articulation and modulation and varying use of color, materials and landscaping." Parking and service areas are screened from public view with walls and landscaping and berms and utilities will be

underground. The building is set back as far as possible from adjacent educational facilities.

The Land Use Element of the General Plan Goal 2.13, Policy 3 notes that 5th Street Corridor developments should "Develop a comprehensive design and branding program for the 5th Street Corridor, promoting it as a unified, business-friendly employment center." The project proponent has entitled six (6) other warehouse projects within the vicinity of the current proposal. All projects including this project have a continuing theme of distinctive, contemporary stylings, tall white facades with blue glazed windows, offsetting white, grey and black rhythmic geometric shapes that extend along all four sides of the buildings with matching perimeter walls. The landscaping consists of varying shrubs and trees mixed to perform well in the region and provides the full array of groundcover, shrubs, accent trees and shade trees. The design meets the objective of Policies 6 and 7 to "Improve landscaping along the edges and median of 5th Street and the boundaries of the corridor" and "Ensure quality development through Development Code standards and the Community Design Element policies and guidelines."

d. That the proposed use, together with the conditions applicable thereto, will not be detrimental to the public health, safety, or welfare or will not be materially injurious to properties or improvements in the vicinity of the site.

Response: The warehouse development will comply with Municipal, Fire & Building codes. Each public safety division of the City has reviewed the project and provided relevant Conditions of Approval that will be adopted by resolution. The necessary ingress and egress are provided, and all public utilities and services will be in place. There is no indication that the project would be detrimental to the public health, safety or welfare, or materially injurious to properties and improvement in the vicinity.

Section 12. **Airport overlay zone and safety compatibility**, Development Standards (Highland Municipal Code Section **16.40.410(G)**). The proposed use is consistent with the applicable adopted development standards within the airport land use compatibility plan:

a. Proposed structures and the normal mature height of any vegetation shall not exceed the height limitations provided by the requirements of Federal Aviation Regulations (FAR), Part 77. Existing topographic elevations, as compared to the elevation of the centerline of the runway (primary surface), shall be considered in determining the permitted height of an affected structure.

Response: The site lies within the San Bernardino International Airport Influence Zone E which has a "negligible" safety risk due to its distance from airport operations and flight patterns. The subject proposal for warehousing is a permitted use within Zone E. The land use development standards identified in HMC Section 16.40.410.G. Airport overlay and safety compatibility, Development Standards, limit the overall height of the structure permitted by the FAA, address light and glare, land use and heliports. The building will not exceed the 55' maximum within the Business

Park Zone, less than the height permitted by the FAA. It will not exceed the maximum land use intensity or lot coverage (HMC Table16.40.410.A).

The San Bernardino International Airport Authority (SBIAA) staff have reviewed the proposal, its site design, conceptual landscape plan, right-of-way improvements, and its operational characteristics. They cited no adverse effects on air safety.

b. Proposed uses shall be consistent with the adopted airport land use compatibility plan, if any.

Response: The project site is located within Airport Compatibility Zone E 'Negligible Risk'. Warehousing and distribution are designated in Zone E as "SR". "*Where the symbol "SR" appears in the column beneath an airport safety zone, the use is compatible. Use is acceptable without safety-related conditions (noise, airspace protection, and/or overflight limitations may apply) (HMC 16.410.D and Table 16.40.410.A Airport Overlay Zone and Safety Compatibility Criteria).* Zone E has no maximum limit for nonresidential intensity and permits up to 100% lot coverage.

c. The proposed use or the structure shall not reflect glare, emit electronic interference or produce smoke that would endanger aircraft operations.

Response: The San Bernardino International Airport Authority (SBIAA) staff have reviewed the project and submitted no concerns related to the proposed land use, its Site Plan, Building Elevations, Landscaping or Lighting. The project's photometrics plan has been reviewed and conditioned not to exceed City's lighting standards which are in more stringent than airport compatibility maximums. The project does not have standing water that could attract birds. It does not generate smoke, emit radio transmissions or otherwise endanger aircraft operations.

d. All heliports shall be constructed pursuant to FAA Advisory Circular 150/5390-1B.

Response: The project does not propose a heliport.

Section 13. Tentative Parcel Map No. 20621 (TPM 23-001) proposes to merge eleven (11) parcels into one (1) parcel on approximately 7.23 acres. Tentative Parcel Map No. 20621 (TPM 23-001) complies with the provisions of Chapter 16.68 *Land Divisions* of the Highland Municipal Code and with the Subdivision Map Act, Sections 66410-66499.58 of the Government Code of the State of California.

Section 14. Findings of Fact for **Tentative Parcel Map No. 20621 (TPM 23-001)**. Consistent with Government Code section 66477, the Planning Commission does hereby find:

a. That the proposed map is consistent with applicable General and Specific Plans as specified in California Government Code Section 65451.

Response: The Tentative Parcel Map 20621 as designed and conditioned is consistent with the Highland General Plan. The map promotes the use of the property as a warehouse, merging several small parcels that would not be otherwise usable as Business Park developments. The resulting project will expand the employment base and ensure land use compatibility. It is in keeping with the *Non-residential Buildout Analysis* (Table 2.2) of the Land Use Element.

Each of the nine (9) Policies of the General Plan's Goal 2.13 to Transform the 5th Street Corridor into a major employment center and gateway to the San Bernardino International Airport would be furthered by the development of the proposed project including coordination with the San Bernardino International Airport Authority, promoting 5th Street as a major industrial entryway to the Airport, furthering a comprehensive design and branding program, improving circulation, enhancing the integrity of industrial sites, improving landscaping along the edges and medians, promoting Development Code standards, and transitioning uses and utilizing buffers between existing residential neighborhoods and industrial uses.

Goal 2.14 to Establish the Victoria Avenue Corridor as the major entryway into the San Bernardino International Airport, Policies 4, 5 and 6 are also furthered by the project's ability to consolidate parcels to promote quality planned development, consolidate access points along Victoria Avenue to improve traffic flow, and create a major business node at the southern terminus of Victoria Avenue to maximize employment opportunities adjacent to the airport.

It addresses the policy to require BP development provide for light industrial firms seeking a pleasant and attractive working environment. The proposal is a modern warehouse project with attractive architecture and landscaping, adds a modern distribution facility to the City's inventory, and increases employment opportunities.

b. That the design or improvement of the proposed subdivision is consistent with the Development Code.

Response: The design of the subdivision is compliant with Chapter 16.24 *Employment Districts* in that it merges several small lots into one large, usable lot, necessary for BP development. The lot width, depth and area are compliant with the BP zone district development standards. The design of the subdivision is also compliant with Chapter 16.68 *Land Divisions* of the Highland Municipal Code including the street design for 3rd and 5th Streets and Victoria Avenue. It has the appropriate vehicular and pedestrian access with the proper locations and design. The Map itself has the necessary documentation and clarifying information in compliance with Section 16.68.040 *Required Information*.

c. That the site is physically suitable for the type of development.

Response: The Project site is an urbanized area. It has been subject to numerous studies that address relevant issues including geotechnical,

hydrology, potential flooding, fire protection, storm water, soils and hazards. These reports address the suitability of the Project site for the type of development contemplated by Tentative Parcel Map No. 20621. Based on the location of the Project, the site is physically suitable for the development of this Project.

d. The site is physically suitable for the proposed density of development.

Response: This Project site will be of a suitable size, 7.23 acres, to accommodate the respective warehouse development. The map and accompanying CUP and DRA would authorize the development of a maximum 173,976 square foot warehouse, water quality management facilities and right-of-way improvements. The project design is compliant with the Business Park (BP) zoning requirements, developmental standards, and other regulations to ensure it is physically suitable for the Project site.

e. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Response: The Site lies in an urbanized area and is adjacent to the San Bernardino International Airport designated for light industrial development. The Project impacts with respect to all CEQA categories have been considered. The potential environmental impacts were analyzed in the Initial Study / Mitigated Negative Declaration and circulated for public review as required by state and local law. Mitigation measures for Biological Resources, Cultural Resources, Tribal Cultural Resources and Geology and Soils have been established, and the project will be built and operated in compliance with environmental findings and compliance with the Mitigation Monitoring and Reporting Program (MMRP).

f. That the design of the subdivision or the type of improvements is not likely to cause serious public health problems.

Response: The proposed Project has been reviewed and conditioned by the City's Engineering, Building and Safety, Planning Divisions and Fire Department so that the design of the subdivision or the types of improvements will not cause serious public health problems.

g. That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision. In this connection, the governing body may approve a map if it finds that alternate easements, for access or for use, will be provided, and that these will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction and no authority is hereby granted to a legislative body to determine that the public at large has acquired easements for access through or use of property within the proposed subdivision.

Response: The design of the parcel map will not conflict with easements for access through, or use of, property within the proposed subdivision. All points of access to this property can be taken from perimeter streets; 3rd Street, 5th Street and Victoria Avenue. The proposed design of the lot is conditioned so as not to conflict with any easements of record or judgement of court.

Section 17. This Project is not within a high fire severity zone. Findings required by Government Code section 66474.02 are not applicable.

Section 18. The project is not subject to the Williamson Act. Findings required by Government Code section 66474.4 are not applicable

Section 19. Based on the Findings and Conclusions set forth above, the Planning Commission recommends the City Council:

a) Adopt the Final MND and Mitigation Monitoring and Reporting Program (MMRP), both of which are attached hereto and incorporated herein by reference.

Exhibit 1 - Final Initial Study/Mitigated Negative Declaration including Mitigation Monitoring and Reporting Program (MMRP)

b) Certify the Fiscal Analysis and Plan for Service, and authorize the filing of the appropriate application and exhibits attached hereto to the LAFCO of the County of San Bernardino to adjust the boundary between the City of Highland and City of San Bernardino pursuant to Government Code Section 56000 et.seq., the Cortese-Knox-Hertzberg Local Reorganization Act of 2000 and the procedures of the LAFCO. The City of Highland acknowledges and agrees to the Local Agency Formation Commission for San Bernardino County's requirement for imposing legal indemnification as outlined in Policy 3 of Chapter 2 of the Internal Operations, Accounting, and Financial Section of its Policy and Procedure Manual.

Exhibit 2 – Map of Boundary to be adjusted
Exhibit 3 – Legal Description of Boundary to be adjusted
Exhibit 4 – Fiscal Analysis Report
Exhibit 5 – Plan for Service Report
Exhibit 6 – LAFCO Application

c) Approve General Plan Amendment (GPA 24-001), expanding the City's Sphere of Influence to include APN 1192-551-01 and its adjacent southerly road right-of-way along 5th Street and its adjacent easterly road right-of-way along Victoria Avenue, and assigning the parcel a land use designation of Business Park (BP) as shown on Exhibit 7.

Exhibit 7 – Existing and Proposed General Plan Land Use Designation

d) Approve Zone Change (ZC 23-001) to Pre-Zone the subject 0.56 acre parcel as Business Park (BP) within the City of Highland Sphere of Influence generally located at the southeast corner of 5th Street and Victoria Avenue,

commonly known as APN 1192-551-01. The City's Official Zoning Map shall be updated to reflect the changes made in Exhibit 8.

Exhibit 8 – Pre-Zone (Zone Change) Exhibit

Approve an amendment to the City of Highland Municipal Code Section 16.04.090.(c) Zoning Districts of Chapter 16.04, Administration, of Title 16, Land Use and Development Standards, of the Highland Municipal Code is hereby amended in its entirety to read as follows : "*C. An official map for the incorporated area of the City of Highland, county of San Bernardino, state of California, is hereby adopted and established as is hereafter set forth in this code, to promote, protect and secure the public health, safety and general welfare; to provide the social and economic advantages resulting from an orderly, planned use of land resources; and to encourage, guide and provide a definite plan for the future growth and development of said city. The official zoning map shall be in the office of the city clerk and may be periodically reviewed, refined, updated, and maintained, and the city council in conformity with State Planning and Zoning Law, as amended and the provision of this Code, hereby delegated to the community development director of the city of Highland, the responsibility for conducting necessary studies, surveys and the preparation of maps in order to develop detailed land use plans, and the responsibility for processing changes of land use districts for adoption by the city council for the various portions of the incorporated territory of Highland as it becomes desirable, and practical and practicable so that the results shall be a comprehensive land use plan for the city.*"

e) Approve Conditional Use Permit (CUP 22-014) facilitating the construction of a 173,976 square foot warehouse and related improvements. All improvements will be completed subject to the Conditions of Approval attached hereto and the development plans incorporated by reference.

Exhibit 9 – Project Development Plans
Exhibit 10 – Conditions of Approval for CUP/DRA/TTM

f) Approve Design Review Application (DRA 22-023) facilitating the construction of a 173,976 square foot warehouse and related improvements. All improvements will be completed subject to the Conditions of Approval attached hereto and the development plans incorporated herein by reference (Exhibits 9 and 10).

g) Approve Tentative Parcel Map No. 20621 (TPM 23-001) to merge eleven (11) parcels into one (1) parcel to accommodate a 173,976 square foot warehouse, subject to the Conditions of Approval attached hereto and incorporated by reference (Exhibits 9 and 10):

C. ADOPTION OF RESOLUTION.

The City Clerk shall certify to the adoption of this Resolution and shall cause the same to be published or posted in the manner prescribed by law.

PASSED, **APPROVED** and **ADOPTED** this 20th day of January, 2026.

ATTEST:

Randall Hamerly, Chairman
Planning Commission

Lawrence A. Mainez,
Community Development Director

1 Introduction

1.1 Project Overview

The City of Highland (City) received an application from Patriot Development Partners (project applicant) requesting the following approvals for development of the proposed 5th Street and Victoria Avenue Warehouse Project (project) located at the southeast corner of 5th Street and Victoria Avenue in Highland, California:

- General Plan Amendment (GPA 23-001)
- Zone Change (ZC 23-001)
- Conditional Use Permit (CUP 22-014)
- Design Review (DRA 22-023)
- Variance (No. VAR 22-006)
- Parking Reduction (supported by parking study; Appendix J2)
- Annexation of APN 1192-551-01 (LAFCO No. To Be Determined)
- Tentative Parcel Map (TPM 23-001/TPM 20621)

The project includes land use entitlement and design review for the construction of an approximately 173,976-square-foot, one-story industrial/warehouse facility on an approximately 7.23-acre (gross) property located in the southern part of the City of Highland. The project site is composed of 11 parcels, one in the City of San Bernardino and 10 in the City of Highland (Assessor's Parcel Numbers [APNs] 1192-551-01 [City of San Bernardino], 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15). In addition to the industrial/warehouse building, the project would include a landscaping area, passenger vehicle parking spaces, trailer parking spaces, and tractor-trailer loading docks. A portion of the project – APN 1192-551-01 and its adjacent southerly road right-of-way along 5th Street and its adjacent easterly road right-of-way along Victoria Avenue – is currently within the City of San Bernardino. In order to place this said portion into the City of Highland's jurisdiction, it will require amendments of the spheres of influence for the city of Highland (expansion), the City of San Bernardino (reduction) and the San Bernardino County Fire Protection District (reduction) and a reorganization to include annexation to the City of Highland and detachments from the City of San Bernardino, and the San Bernardino County Fire Protection District and its Service Zones, requiring approval by the Local Agency Formation commission (LAFCO). APN 1192-551-01 and its adjacent road rights-of-way total approximately 0.95 acres.

1.2 California Environmental Quality Act Compliance

The City is the lead California Environmental Quality Act (CEQA) agency responsible for the review and approval of the proposed project. Based on the findings of the initial study (IS), the City has made the determination that a mitigated negative declaration (MND) is the appropriate environmental document to be prepared in compliance with CEQA (California Public Resources Code, Section 21000 et seq.). As stated in CEQA Section 21064, an MND may be prepared for a project subject to CEQA when an IS has identified no potentially significant effects on the environment.

This draft IS/MND has been prepared by the City as lead agency and is in conformance with Section 15070(a) of the CEQA Guidelines (14 CCR 15000 et seq.). The purpose of the MND and the IS Checklist is to determine any potentially significant impacts associated with the proposed project and to incorporate mitigation measures into the project design, as necessary, to reduce or eliminate the significant or potentially significant effects of the project.

1.3 Public Review Process

In accordance with CEQA, a good faith effort has been made during the preparation of this IS/MND to contact affected agencies, organizations, and persons who may have an interest in this project.

In reviewing the IS/MND, affected public agencies and the interested public should focus on the sufficiency of the document in identifying and analyzing the project's possible impacts on the environment. The draft IS/MND and related documents are available for review on City's website (https://www.cityofhighland.org/209/Public-Notices).

Comments on the IS/MND may be made in writing before the end of the public review period. Following the close of the public comment period, the City will consider this IS/MND and comments thereto in determining whether to approve the proposed project.

Written comments on the IS/MND should be sent to the following address by November 18, 2024.

City of Highland
Planning Department
27215 Base Line
Highland, California 92346
Contact: Kim Stater
Email: kstater@cityofhighland.org

1.4 Initial Study Checklist

Dudek, under the City's guidance, prepared the project's Environmental Checklist (i.e., IS) per CEQA Guidelines Sections 15063–15065. The CEQA Guidelines include a suggested checklist to indicate whether a project would have an adverse impact on the environment. The checklist is found in Chapter 3 of this document. Following the Environmental Checklist, Sections 3.1 through 3.21 include an explanation and discussion of each significance determination make in the checklist for the project.

For this IS/MND, the following four possible responses to each individual environmental issue area are included in the checklist:

- Potentially Significant Impact
- Less-than-Significant Impact with Mitigation Incorporated
- Less-than-Significant Impact
- No Impact

The checklist and accompanying explanation of checklist responses provide the information and analysis necessary to assess relative environmental impacts of the project. Upon review, the City will determine the extent of additional environmental review, if any, for the project.

2 Project Description

2.1 Project Location

The project site is located in the southwestern area of the City of Highland and partially within the City of San Bernardino in western San Bernardino County. The City is bounded by the San Bernardino National Forest to the north and to the east, the City of Redlands to the south, and the City of San Bernardino to the west. The project site is located at the southeastern corner of 5th Street and Victoria Avenue, north of 3rd Street, east of Victoria Street, south of 5th Street, and west of City Creek Bypass Flood Control Channel (Figure 1, Project Location, and Figure 2, Aerial Overview).

Regional access to the project area is provided by Interstate (I) 10 to the south, I-215 to the west, and State Route (SR) 210 to the east. The site is bounded to the north by scattered low-density residential land uses, to the east by City Creek Bypass Channel and auto services uses, and to the south and west by the City boundary, with the City of San Bernardino and the San Bernardino Airport located beyond the City limits.

2.2 Environmental Setting

City of Highland

The City of Highland is a mid-sized California city with approximately 55,000 residents and 18 square miles of territory. Within the City, the pattern of land use transitions from predominantly single and multi-family residential and industrial near the San Bernardino International Airport and Trade Center (SBIA) to predominately single-family residential, commercial, service and civic center uses to the north. The eastern areas of the City are mostly made up of planned development areas with various residential types, parks, and open space.

Project Site

The approximately 7.23-acre rectangular-shaped project site is located on the southeastern corner of 5th Street and Victoria Avenue. The project site was previously developed with abandoned structures; however, due to unsafe, substandard conditions, the City issued a demolition permit. The project site is currently vacant, consisting of areas dominated by disturbed habitat and undeveloped land.

The project site is relatively flat and generally slopes down by approximately 0.7% from the northeast corner to the southwest corner. Soils on site consist of Tujunga gravelly loamy sand (TvC), 0% to 9% slopes, and Psamments, fluvents, and frequently flooded soils (Ps).

The City's General Plan Land Use Map designates the project site as Business Park, and the project site is zoned as Business Park. The one parcel within the City of San Bernardino (APN 1192-551-01) has a General Plan Land Use and zoning of Commercial General 1 (Figure 3, General Plan Land Use, and Figure 4, Zoning).

Surrounding Land Uses

The project site is located within a developed part of the City and is surrounded by a mix of urbanized land uses. Specific land uses in the immediate project area are depicted in Table 1.

Table 1. Surrounding Land Uses

Direction	Existing Use	General Plan	Zoning Designation
North	Industrial uses and single-family homes	Business Park	Business Park
East	Vacant land, City Creek Bypass, and commercial/industrial uses	Business Park	Business Park
South	3rd Street and the San Bernardino International Airport	Industrial	Alliance California Specific Plan
West	Victoria Avenue and vacant land	City of San Bernardino (Medium Density Residential and Commercial General)[1]	City of San Bernardino (Medium Density Residential and Commercial General)[1]

Note: See Figure 3 and Figure 4.

[1] This area would be within the Airport Gateway Specific Plan, which is in the planning stages and would primarily include distribution uses.

2.3 Project Characteristics

The project involves construction of an approximately 173,976-square-foot (gross area, inclusive of mezzanine/office spaces), one-story warehouse building on an approximately 7.23-acre site (gross area). The warehouse building would be composed of approximately 164,066 square feet of warehouse space and 12,000 square feet of mezzanine/office space (Figure 5, Site Plan). The warehouse building would have a maximum height of 45 feet when measured from grade. Given that the City's Municipal Code allows for a maximum height of 35 feet in the Business Park zone, a minor variance (Variance No. VAR 22-006) is being requested to accommodate the project's height. Internally, the project would have a clear height of 36 feet and would not contain any cold storage space.

Operational Characteristics

The project would support a variety of activities associated with the industrial/warehouse building, including the ingress and egress of passenger vehicles and trucks, the loading and unloading of trucks with designated truck courts/loading areas, and the internal and external movement of materials around the project site via forklifts, pallet jacks, yard hostlers, and similar equipment. In addition, the office space would support general internal office activities related to the industrial/warehouse uses.

On- and Off-Site Improvements

The project would also include improvements along the project's street frontage, including landscaping, fencing, and street and sidewalk improvements. A variety of trees, shrubs, and groundcovers would be planted within the project frontage's landscape setback area and at project driveways (Figure 6, Landscape Plan).

Site Access and Parking

Access to the project site would be provided by four driveways: two driveways on the western portion of the site along Victoria Avenue, one driveway on the northern portion of the site along 5th Street, and one driveway on the southern portion of the site along 3rd Street. All four driveways would provide both ingress and egress lanes. The two western driveways along Victoria Avenue would serve passenger vehicles and would be full access (i.e., no restrictions on turning movements). The other two driveways along 3rd Street and 5th Street would be mainly for truck access and turning movements would be restricted to right-in/right-out only or as otherwise approved by the Public Works/Engineering Division.

Based on the average observed parking rate of 1 space per 5,377 SF determined from the parking analysis (Appendix J2) of the four surveyed warehouses, the proposed 173,976 SF warehouse would have a peak parking demand of 33 spaces (173,976 SF ÷ 5,377 SF = 33 spaces). Additionally, the highest parking demand was also calculated to provide a conservative analysis. Using the highest observed parking rate of 1 space per 2,660 SF, the proposed 173,976 SF warehouse would have a peak parking demand of 66 spaces (173,976 SF ÷ 2,660 SF = 66 spaces). These estimates are provided in Table 2 below.

Table 2. Parking Requirements per Observed Rates

Land Use	Size	Observed Parking Rates	Parking Requirement
Warehouse	173,976 SF	1 space per 5,377 SF of floor area[1]	33 spaces
		1 space per 2,660 SF of floor area[2]	66 spaces

Notes: SF = square foot

[1] Based on the average observed parking rate noted in Table 3 of Appendix J2.

[2] Based on the highest observed parking rate noted in Table 3 of Appendix J2.

The proposed project would provide a parking supply of 79 spaces; therefore, assuming the conservative peak parking demand rate of 1 space per 2,660 SF, the project's projected parking demand of 66 spaces would be adequately accommodated within the proposed supply, with a residual of 13 spaces (79 spaces – 66 spaces).

Utility Improvements

The project site is currently served by domestic water, sanitary sewer, electrical, natural gas, and telecommunication service. The project would connect to the existing facilities located on and in the immediate vicinity of the project site, as detailed in following sections and depicted in Figure 7, Conceptual Grading Plan.

Domestic Water

Domestic water would be provided to the project site by the East Valley Water District (EVWD). The EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. Water service is provided for residential, commercial, industrial, governmental, and landscaping purposes (City of Highland 2006). A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public right-of-way (ROW) along Victoria Avenue to provide domestic and irrigation water service to the site. Fire suppression water service would be provided via connections to existing lines in both Victoria Avenue and 3rd Street.

Sanitary Sewer

The City's sewer system is maintained by the EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within the EVWD's boundaries. The sewage from the City is treated at the San Bernardino Water Reclamation Plant (WRP), operated by the San Bernardino City Municipal Water District (City of Highland 2006). One new 6-inch sewer line would connect to the existing 21-inch sewer line within 5th Street. Future treatment will take place at the EVWD Sterling Natural Resources Plant, currently under construction at the intersection of Del Rosa Drive, between 5th and 6th Streets.

Natural Gas, Electrical Service, and Telecommunications

The Southern California Gas Company would provide natural gas service to the project site. Southern California Edison would provide electric service. The project would connect to existing electrical lines within Victoria Avenue. Telecommunication services are provided by various telecommunication service providers. The project would connect to these existing facilities.

Storm Drainage

The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin near the SR-71 and SR-91 interchange (Figure 8, Existing Drainage).

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. The existing drainage pattern would be preserved in post-developed conditions (Figure 9, Proposed Drainage). On-site stormwater would be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soils. The infiltration basin would be sized to capture and infiltrate flows for a 100-year design storm, consistent with the San Bernardino County Hydraulics Manual. The overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

2.4 Project Construction and Phasing

The project applicant intends to commence construction on or around June 1,2024. It is anticipated that construction would take approximately 9 months, ending in February 2025. Table 3 provides a tentative project construction schedule, as used in air quality and greenhouse gas (GHG) emissions impact analyses (refer to Section 3.3, Air Quality, and Section 3.8, Greenhouse Gas Emissions, of this IS/MND; also see Appendix A, Air Quality, Greenhouse Gas Emission, and Energy Modeling Inputs and Outputs).

Table 3. Anticipated Project Construction Schedule

Construction Phase	Duration	Phase Start Date	Phase End Date
Site Preparation	1 month	July 2, 2024	July 16, 2024
Grading	1 month	July 17, 2024	August 27, 2024
Building Construction	4 months	August 28, 2024	December 23, 2024
Paving	1 month	December 24, 2024	January 20, 2024
Architectural Coating	1 month	January 21, 2025	February 18, 2025

2.5 Project Approvals

The actions and/or approvals that the City needs to consider for the proposed project include, but are not limited to, the following. This list is preliminary and may not be comprehensive:

Lead Agency Approvals

- General Plan Amendment (GPA 23-001)
- Zone Change (ZC 23-001)
- Conditional Use Permit (CUP 22-014)
- Design Review (DRA 22-023)
- Variance (No. VAR 22-006)
- Parking Reduction (supported by parking study; Appendix J2)
- Tentative Parcel Map (TPM 23-001/TPM 20621)

LAFCO Approval

- Annexation of APN 1192-551-01 (LAFCO No. To Be Determined)
- Sphere of influence (SOI) amendments, including:
  - Expansion of the City of Highland SOI
  - Adjustments to the City of San Bernardino SOI
  - Adjustments to the San Bernardino County Fire Protection District SOI
- Reorganization to include:
  - Annexation to the City of Highland
  - Detachment from the City of Bernardino
  - Detachment from the San Bernardino County Fire Protection District, its Valley Service Zone, and Service Zone FP-5
- Inclusion of adjacent roadway right-of-way along 5th Street and Victoria Avenue within the SOI amendments and proposed reorganization area

Subsequent non-discretionary approvals (which would require separate processing through the City) would include, but may not be limited to, a tree removal permit, demolition permit, grading permit, building permits, and occupancy permits.

INTENTIONALLY LEFT BLANK

3 Initial Study Checklist

1. Project title:

SEC 5th Street and Victoria Avenue Warehouse Project

2. Lead agency name and address:

City of Highland, Planning Department
27215 Base Line
Highland, California 92346

3. Contact person and phone number:

Kim Stater, Assistant Community Development Director
27215 Base Line
Highland, California 92346
909.864.6861 Ext. 204
909.862.3180 (Fax)
kstater@cityofhighland.org

4. Project location:

The project site is located at a 7.23-acre property at the southeastern corner of 5th Street and Victoria Avenue in the City of Highland and San Bernardino, California (Figure 1). The project site is composed of 11 parcels (APNs 1192-551-01 (City of San Bernardino), 1192-551-02, 1192-551-03, 1192-551-04, 1192-551-05, 1192-551-06, 1192-551-07, 1192-551-12, 1192-551-13, 1192-551-14, and 1192-551-15). The project site is north of 3rd Street, east of Victoria Avenue, south of 5th Street, and west of vacant land, City Creek Bypass Flood Control Channel, and commercial/industrial uses.

5. Project sponsor's name and address:

Patriot Development Partners
12126 West Sunset Boulevard
Los Angeles, California 90094

6. General plan designation:

The City of Highland portion of the project has a General Plan Designation of Business Park. The City of San Bernardino portion of the project, Parcel 1192-551-01, has a General Plan Land Use of Commercial General 1.

7. Zoning:

The City of Highland portion of the project has a Zoning designation of Business Park. The City of San Bernardino portion of the project, Parcel 1192-551-01, is zoned Commercial General 1.

8. Description of project:

The project would include construction of an approximately 173,976-square-foot (gross area, inclusive of mezzanine/office spaces), one-story warehouse building on an approximately 7.23-acre site (gross area). The warehouse building would be composed of approximately 164,066 square feet of warehouse space and 12,000 square feet of mezzanine/office space (Figure 5).

9. Surrounding land uses and setting:

The project site is located within a developed part of the City and is surrounded by a mix of urbanized land uses. Specific land uses in the immediate project area include the following:

- **North**: Multifamily and single-family homes and industrial uses
- **East**: Vacant land, City Creek, and commercial/industrial uses
- **South**: 3rd Street and the SBIA
- **West**: Victoria Avenue and the City boundary

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Annexation of APN 1192-551-01 into the City of Highland would need to occur in coordination with the City of San Bernardino and LAFCO. LAFCO Plan for Service (Appendix K1) and LAFCO Fiscal Analysis (Appendix K2) are referenced herein and included as appendices to this IS/MND.

11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Please refer to Section 3.5, Cultural Resources, and 3.18, Tribal Cultural Resources, of this IS/MND.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☒ Biological Resources	☒ Cultural Resources	☐ Energy
☒ Geology and Soils	☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Determination

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature Date

Evaluation of Environmental Impacts

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.
4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross-referenced).
5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
6) Earlier Analysis Used. Identify and state where they are available for review.
7) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
8) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
9) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
10) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
11) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
12) The explanation of each issue should identify:
13) The significance criteria or threshold, if any, used to evaluate each question; and
14) The mitigation measure identified, if any, to reduce the impact to less than significance

3.1 Aesthetics

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS –** Except as provided in Public Resources Code Section 21099, would the project**:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b)	Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) Would the project have a substantial adverse effect on a scenic vista?

No Impact. Scenic vistas and other important visual resources are typically associated with natural landforms such as mountains, foothills, ridgelines, and coastlines. The project site is located within in an area with generally flat terrain near the SBIA. Major scenic vistas that are visible from the project site are the San Bernardino and San Gabriel Mountain ranges. They are located approximately 4 miles northeast and 25 miles northwest of the project site, respectively. The City of Highland's General Plan aims to preserve the views of the San Bernardino Mountains and stretches of open space along City Creek and the Santa Ana River (City of Highland 2006). The project site is located 1.5 miles away from the nearest stretches of open space along City Creek Bypass and the Santa Ana River. Based on these distances, as well as the presence of existing intervening natural topographical variations and human-made urban features, the project site is not located within the direct viewshed of these scenic vistas. Overall, the project site is located well outside the viewshed of any scenic vistas or other important visual resources. Therefore, no impacts associated with scenic vistas would occur.

b) Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. Scenic highways and routes are a unique component of the circulation system, as they traverse areas of unusual scenic or aesthetic value. The closest officially designated State Scenic Highway is

California SR-38, located 23 miles east of the project site (Caltrans 2018). Based on this distance and intervening natural topography and human-made development, the project site is not located within the viewshed of this officially designated state scenic highway. Therefore, no impacts associated with state scenic highways would occur.

c) ***In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?***

Less-than-Significant Impact. Visual character describes the aesthetic setting of a project area. The project is located within an urbanized area of the City and is surrounded by similar light industrial/business park land uses. Section 20171 of the California Public Resources Code defines an "urbanized area" as "an incorporated city that meets either of the following criteria: (1) Has a population of at least 100,000 persons, or (2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons." As of January 1, 2022, the California Department of Finance estimated the population of Highland to be 55,546 persons (DOF 2022). However, because the City of Highland is bordered by the City of San Bernardino, which has a population that exceeds 100,000 persons, regarding the determination of significance under this threshold, the project would be considered to result in a significant adverse impact if the project design would conflict with applicable zoning and other regulations governing scenic quality. The proposed project would be consistent with the designated business park zoning per the City's Zoning Map.

To ensure that both current and future development within the City is designed and constructed to conform to existing visual character and quality of the surrounding built environment, the City's Municipal Code includes design standards related to building size, height, and setbacks, as well as landscaping, signage, and other visual considerations. The project is consistent with all applicable regulations outlined in the City's Municipal Code related to scenic quality with the exception of Section 16.24.040, which states that building heights are not to exceed 35 feet within the Business Park zone. The proposed warehouse building would have a maximum height of 45 feet. Given that the City's Municipal Code allows for a maximum height of 35 feet in the Business Park Zone, a minor variance (Variance No. VAR 22-006) is being requested to accommodate the project's height. This request for additional height is consistent with other industrial uses in the vicinity. With approval of the minor variance, the project would not conflict with the City's Municipal Code.

The project would be required to apply for a design review by the City's planning commission. This design review is intended to ensure that the proposed project would not interfere with existing or future development within the City, and to ensure the project is consistent with the applicable elements of the general plan. Views of utilitarian project components, such as loading areas and mechanical equipment, would be screened from public view to the maximum extent practicable through the project's site plan design. Parkway and setback landscape areas along the public ROW would soften views of the project site and enhance the visual quality of the project.

These project components, as well as the City's review of the project's design, would ensure that the project would not degrade the existing visual character and quality of the area. Therefore, impacts would be less than significant.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Short-Term Construction Impacts

No Impact. In accordance with the City's Policy, Controlled Hours of Operation, construction hours are limited to between the hours of 7:00 a.m. and 7:00 p.m. However, the project's proximity to sensitive receptors would limit construction from 7:00 a.m. to 6:00 p.m. (see Section 3.13, Noise, for more details). As such, project construction would be limited to daytime hours and nighttime lighting would not be required until the project is operational. Therefore, no short-term construction impacts associated with light and glare would occur.

Long-Term Operational Impacts

Less-than-Significant Impact. Consistent with Section 16.40.160 of the City's Development Code, all lighting used on the project site is required to be directed and/or shielded to prevent the light from adversely affecting adjacent parcels, and no structures or features that create adverse glare effects are permitted. Thus, all exterior lighting would be shielded/hooded to prevent light trespass onto nearby properties. A Photometrics Plan, prepared by a certified engineer, must be approved by the Planning Commission in conjunction with the Conditional Use Permit. Additionally, the project would use a variety of non-reflective materials, and although some new reflective improvements (i.e., windows and building front treatments) would be introduced onto the project site, the project as a whole would not be considered a source of glare in the project area. Therefore, long-term impacts associated with light and glare would be less than significant.

3.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) ***Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?***

No Impact. The project site currently consists of developed and vacant land and is not used for agricultural purposes. The General Plan designates the land use at the site as Business Park and the City's Zoning Map identifies the site as Business Park (City of Highland 2006, 2012). According to the California Department of Conservation Important Farmland Finder (CDOC 2016), the project site does not contain Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (collectively, "Important Farmland"). The project would not occur within any farmland locations and would not result in the conversion of Prime or Unique Farmland or Farmland of Statewide Importance. Therefore, no impacts associated with the conversion of Important Farmland would occur.

b) ***Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?***

No Impact. Refer to Section 3.2(a).

c) ***Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?***

No Impact. Refer to Section 3.2(a). The project site is zoned as Business Park and is located within a developed area. There are no areas zoned for forest land within the vicinity of the project site. Therefore, no impacts associated with forest land would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. Refer to Section 3.2(c). The proposed project would not involve the conversion of forest land to non-forest use. Therefore, no impact with forest land would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. Refer to Section 3.2(a). The project site is zoned as Business Park and is located within a developed area. Further, no off-site improvement associated with the project would result in changes to other properties designated as Farmland or forest land. There are no areas zoned for agricultural use or identified as forest land within the vicinity of the project site. Therefore, no impacts associated with forest land would occur.

3.3 Air Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less-than-Significant Impact. The project site is located within the South Coast Air Basin (SCAB), which includes the non-desert portions of Los Angeles, Riverside, San Bernardino Counties, and all of Orange County, and is within the jurisdictional boundaries of the South Coast Air Quality Management District (SCAQMD).

SCAQMD administers SCAB's Air Quality Management Plan (AQMP), which is a comprehensive document outlining an air pollution control program for attaining the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). The AQMP is the regional path towards improving air quality and meeting federal standards for air pollutants, and each AQMP incorporates significant new

scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. The most recent SCAQMD approved AQMP is the 2022 AQMP (SCAQMD 2022), which was adopted by the SCAQMD Governing Board in December 2022. The SCAQMD 2022 AQMP was developed to address the attainment of the 2015 national 8-hour ozone (O_3) ambient air quality standard (70 parts per billion) for the SCAB and Coachella Valley. The 2022 AQMP provides actions, strategies, and steps needed to reduce air pollutant emissions and meet the O_3 standard by 2037.

The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the 2022 AQMP and if it would interfere with the region's ability to comply with federal and state air quality standards. SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3, of the SCAQMD CEQA Air Quality Handbook. These criteria are as follows (SCAQMD 1993):

Consistency Criterion No. 1: Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.

Consistency Criterion No. 2: Whether the project would exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

To address the first criterion, project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed under Section 3.3(b). Detailed results of this analysis are included in Appendix A. As presented in Section 3.3(b), the project would not generate construction or operational criteria air pollutant emissions that exceed the SCAQMD's thresholds, and the project would therefore be consistent with Criterion No. 1.

The second criterion regarding the potential of the project to exceed the assumptions in the AQMP or increments based on the year of project buildout and phase is primarily assessed by determining consistency between the project's land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (SCAQMD 1993).

The SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, and employment by industry) developed by the Southern California Association of Governments (SCAG) for its 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (SCAG 2020). SCAQMD uses this document, which is based on general plans for cities and counties in the SCAB, to develop the AQMP emissions inventory (SCAQMD 2022).[1] The SCAG RTP/SCS and associated Regional Growth Forecast are generally consistent with the local plans; therefore, the 2022 AQMP is generally consistent with local government plans.

[1] Information necessary to produce the emissions inventory for SCAB is obtained from the SCAQMD and other governmental agencies, including the California Air Resources Board, California Department of Transportation, and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socioeconomic and transportation activities projections in their 2020 RTP/SCS are integrated in the 2022 AQMP (SCAQMD 2022).

The City's Zoning Map designates the project site as Business Park (BP). According to Section 16.24.020(A) of the City's Municipal Code, the primary purpose of the BP district is to provide appropriate regulations and suitable locations for light industrial, research and development, and office-based firms seeking pleasant and attractive working environments, and for business support services and commercial uses requiring large parcels (City of Highland 2021). The Municipal Code identifies Warehousing and Wholesaling as permitted, subject to a conditional use permit application (City of Highland 2021). Therefore, the project would be consistent with the existing zoning of the project site and does not propose a change in land use designation. The parcel within the City of San Bernardino will be rezoned from Commercial General (non-residential) to Business Park, compliant with the remainder of the site. As such, since the proposed project is not anticipated to result in residential population growth or generate an increase in employment that would conflict with existing employment-population projections, it would not conflict with or exceed the assumptions in the 2022 AQMP. Accordingly, the project is consistent with the SCAG RTP/SCS forecasts used in development of the SCAQMD AQMP.

In summary, based on the considerations presented for the two criteria, impacts relating to the project's potential to conflict with or obstruct implementation of the applicable AQMP would be less than significant.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less-than-Significant Impact. Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and the SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are used to determine whether a project's individual emissions would have a cumulatively considerable contribution to air quality. If a project's emissions would exceed the SCAQMD significance thresholds, it would be considered to have a cumulatively considerable contribution. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant (SCAQMD 2003a).

A quantitative analysis was conducted to determine whether the project might result in emissions of criteria air pollutants that may cause exceedances of the NAAQS or CAAQS or cumulatively contribute to existing nonattainment of ambient air quality standards. Criteria air pollutants include O_3, nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide, particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM_{10}), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns ($PM_{2.5}$), and lead. Pollutants that are evaluated herein include volatile organic compounds (VOCs) and oxides of nitrogen (NO_x), which are important because they are precursors to O_3, as well as CO, sulfur oxides (SO_x), PM_{10}, and $PM_{2.5}$.

Regarding NAAQS and CAAQS attainment status,[2] the SCAB is designated as a nonattainment area for federal and state O_3 and $PM_{2.5}$ standards (CARB 2019; EPA 2020). The SCAB is also designated as a nonattainment area for state PM_{10} standards; however, it is designated as an attainment area for federal PM_{10} standards. The SCAB is designated as an attainment area for federal and state CO and NO_2 standards,

[2] An area is designated as in attainment when it is in compliance with the NAAQS and/or the CAAQS. These standards for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or the public welfare are set by the EPA and CARB, respectively. Attainment = meets the standards; attainment/maintenance = achieves the standards after a nonattainment designation; nonattainment = does not meet the standards.

as well as for state sulfur dioxide standards. Although the SCAB has been designated as nonattainment for the federal rolling 3-month average lead standard, it is designated attainment for the state lead standard.[3]

The project would result in emissions of criteria air pollutants for which the California Air Resources Board (CARB) and U.S. Environmental Protection Agency (EPA) have adopted ambient air quality standards (i.e., the NAAQS and CAAQS). Projects that emit these pollutants have the potential to cause, or contribute to, violations of these standards. The SCAQMD CEQA Air Quality Significance Thresholds, as revised in April 2019, set forth quantitative emission significance thresholds for criteria air pollutants, which, if exceeded, would indicate the potential for a project to contribute to violations of the NAAQS or CAAQS. Table 4 lists the revised SCAQMD Air Quality Significance Thresholds (SCAQMD 2019).

Table 4. South Coast Air Quality Management District Air Quality Significance Thresholds

Criteria Pollutants Mass Daily Thresholds		
Pollutant	**Construction (Pounds per Day)**	**Operation (Pounds per Day)**
VOCs	75	55
NO_x	100	55
CO	550	550
SO_x	150	150
PM_{10}	150	150
$PM_{2.5}$	55	55
Lead[a]	3	3
TACs and Odor Thresholds		
TACs[b]	Maximum incremental cancer risk ≥10 in 1 million Cancer Burden >0.5 excess cancer cases (in areas ≥1 in 1 million) Chronic and acute hazard index ≥1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	

Source: SCAQMD 2019.
Notes: VOC = volatile organic compounds; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; TAC = toxic air contaminant; SCAQMD = South Coast Air Quality Management District.
GHG emissions thresholds for industrial projects, as added in the March 2015 revision to the SCAQMD Air Quality Significance Thresholds, were not include included in this table as they are addressed within the GHG emissions analysis and not the air quality analysis.

[a] The phase-out of leaded gasoline started in 1976. Since gasoline no longer contains lead, the project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

[b] TACs include carcinogens and noncarcinogens.

The project would result in a cumulatively considerable net increase for O_3, which is a nonattainment pollutant, if the project's construction or operational emissions would exceed the SCAQMD VOC or NO_x thresholds shown in Table 4. These emission-based thresholds for O_3 precursors are intended to serve as a surrogate for an O_3 significance threshold (i.e., the potential for adverse O_3 impacts to occur) because O_3 itself is not emitted directly, and the effects of an individual project's emissions of O_3 precursors (i.e., VOCs and NO_x) on O_3 levels in ambient air cannot be determined through air quality models or other quantitative methods.

[3] Re-designation of the lead NAAQS designation to attainment for the Los Angeles County portion of the SCAB is expected based on current monitoring data. The phase-out of leaded gasoline started in 1976. Since gasoline no longer contains lead, the project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

The California Emissions Estimator Model (CalEEMod) Version 2022.1 was used to estimate emissions from construction and operation of the project.[4] The following discussion quantitatively evaluates project-generated construction and operational emissions and impacts that would result from implementation of the project.

Construction Emissions

Construction of the project would result in the temporary addition of pollutants to the local airshed caused by on-site sources (e.g., off-road construction equipment, soil disturbance, and VOC off-gassing from architectural coatings and asphalt pavement application) and off-site sources (e.g., vendor trucks, haul trucks, and worker vehicle trips). Specifically, entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM_{10} and $PM_{2.5}$ emissions. Internal combustion engines used by construction equipment, haul trucks, vendor trucks (i.e., delivery trucks), and worker vehicles would result in emissions of VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$. Construction emissions can vary substantially from day to day depending on the level of activity, the specific type of operation, and, for dust, the prevailing weather conditions.

Emissions from the construction phase of the project were estimated using CalEEMod default values. To conservatively estimate project emissions, construction was modeled beginning in February 2023 and concluding in October 2023,[5] lasting approximately 9 months. As a result of demolition, 761 tons of debris were estimated to be exported from the site. In addition, approximately 13,680 cubic yards (cy) of soil will be imported to balance the cut and fill of soil on the project site during the grading phase. The analysis contained herein is based on the following schedule assumptions (duration of phases is approximate):

- Demolition: 1 month (February 2023)
- Site preparation: 2 weeks (March 2023)
- Grading: 1 month (March 2023–April 2023)
- Building construction: 4 months (April 2023–August 2023)
- Paving: 1 month (August 2023–September 2023)
- Application of architectural coatings: 4 weeks (September 2023–October 2023)

Construction modeling assumptions for equipment and vehicles are provided in Table 5. Equipment mix and horsepower were based on CalEEMod default values, including equipment load factor. For the analysis, it was generally assumed that heavy-duty construction equipment would be operating at the site 5 days per week. In addition, one on-site heavy duty diesel water truck was assumed to be present during the demolition, site preparation, and site grading phase to control fugitive dust emissions.

4 CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant emissions associated with construction and operational activities from a variety of land use projects, including warehouses.

5 The analysis assumes a construction start date of February 2023, which represents the earliest date construction would initiate. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant and GHG emissions, because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

Table 5. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Average Daily Haul Truck Trips	Equipment Type	Quantity	Usage Hours

Emissions generated during construction (and operation) of the project are subject to the rules and regulations of the SCAQMD. Rule 403, Fugitive Dust, requires the implementation of measures to control the emission of visible fugitive/nuisance dust, such as wetting soils that would be disturbed. It was assumed that the active sites would be watered at least two times daily, resulting in an approximately 61% reduction of fugitive dust (CalEEMod default value), which meets the compliance requirements of SCAQMD standard dust control measures in Rule 403. The application of architectural coatings, such as exterior/interior paint and other finishes, and the application of asphalt pavement would also produce VOC emissions; however, the contractor is required to procure architectural coatings that comply with the requirements of SCAQMD's Rule 1113, Architectural Coatings.[6]

[6] SCAQMD Rule 1113, Architectural Coatings, requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

Table 6 shows the estimated maximum daily construction emissions associated with the construction phase of the project.

Table 6. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions

Year	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds Per Day					
2023	42.3	39.9	36.8	0.05	10.4	5.73
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Appendix A.
Notes: VOC = volatile organic compound; NOx = oxides of nitrogen; CO = carbon monoxide; SOx = sulfur oxides; PM10 = coarse particulate matter; PM2.5 = fine particulate matter; SCAQMD = South Coast Air Quality Management District.
The values shown are the maximum summer or winter daily emissions results from CalEEMod.
CalEEMod shows compliance with regulations as "mitigation", therefore, the results shown are the "mitigated" results.

As shown in Table 6, daily construction emissions would not exceed the SCAQMD significance thresholds for VOC, NO_x, CO, SO_x, PM_{10}, or $PM_{2.5}$ during project construction, and short-term construction impacts would be less than significant.

Operational Emissions

Emissions from the operational phase of the project were estimated using CalEEMod. Operational year 2024 was assumed.

Area Sources

CalEEMod was used to estimate operational emissions from area sources, including emissions from consumer product use, architectural coatings, and landscape maintenance equipment. Emissions associated with natural gas usage in space heating and water heating are calculated in the building energy use module of CalEEMod, as described in the following text.

Consumer products are chemically formulated products used by household and institutional consumers, including:

- Detergents
- Cleaning compound
- Polishes
- Floor finishes
- Cosmetics
- Personal care products
- Home, lawn, and garden products
- Disinfectants
- Sanitizers
- Aerosol paints
- Automotive specialty products

Other paint products, furniture coatings, or architectural coatings are not considered consumer products (CAPCOA 2017). Consumer product VOC emissions were estimated in CalEEMod based on the floor area of buildings and default factor of pounds of VOC per building square foot per day. The CalEEMod default values for consumer products were assumed.

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings, such as in paints and primers used during building maintenance. CalEEMod calculates the VOC evaporative emissions from the application of surface coatings based on the VOC emission factor, the building square footage, the assumed fraction of surface area, and the reapplication rate. The VOC emissions factor is based on the VOC content of the surface coatings, and SCAQMD's Rule 1113, Architectural Coatings, governs the VOC content for interior and exterior coatings. This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories (SCAQMD 2016). CalEEMod default values were assumed, including the surface area to be painted, the VOC content of architectural coatings, and the reapplication rate of 10% of area per year.

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chainsaws, and hedge trimmers. The emissions associated with landscape equipment use were estimated based on CalEEMod default values for emission factors (grams per square foot of building space per day) and number of summer days (when landscape maintenance would generally be performed) and winter days.

Mobile Sources

The project would generate criteria pollutant emissions from mobile sources (vehicular traffic) as a result of the employee passenger vehicles (workers) and truck traffic associated with the operation of the warehouse.

Emissions from the mobile sources during operation of the project were estimated using CalEEMod. The maximum daily trip rates, taken from the Traffic Scoping Form prepared for the project (Appendix I), were 301 primary trips per day, which were assumed 7 days per week. The passenger vehicle trip lengths were assumed to be CalEEMod default trip lengths of 16.8 miles for home-work trips (i.e., trips made by someone who is employed by the warehouse land use) and assumed to be 100% of primary trips. The light-duty, medium-heavy-duty, and heavy-duty truck trip lengths were based on the SCAQMD recommendation of 40 miles and assumed to be 100% of primary trips.[7] Vehicle emissions occur during start-up, operation (running), and idling, as well as from evaporative losses when the engines are resting.

The vehicle mix was provided by the Traffic Scoping Form (Appendix I), assuming 72.5% are passenger vehicles, 17.2% are 4+-axle trucks, 5.7% are 3-axle trucks, and 4.6% are 2-axle trucks. Weighted fleet mixes were developed for use in CalEEMod to represent the passenger vehicle trips and the truck trips. For passenger vehicles, the default fleet mix was adjusted to reflect passenger only type vehicles composed of light-duty auto, light-duty trucks, and medium-duty vehicles. The 4+-axle trucks were assumed to be heavy-duty trucks, 3-axle trucks were assumed to be medium-heavy-duty trucks, and 2-axle trucks were assumed to be light-heavy-duty trucks. Default CalEEMod emission factors for the vehicles were used, which are based on EMFAC2021.

On May 7, 2021, the SCAQMD adopted the Warehouse Indirect Source Rule, Rule 2305. Rule 2305 was adopted to facilitate local and regional emission reductions associated with existing and new warehouses with an indoor warehouse floor space equal to or greater than 100,000 square feet within a single building

[7] The average trip length for heavy-duty trucks were based on implementation of the Facility-Based Mobile Source Measures adopted in the SCAQMD's 2016 AQMP. SCAQMD's Preliminary Warehouse Emission Calculations assumed a heavy-heavy-duty truck trip length of 39.9 miles (SCAQMD 2018) and the default commercial-nonwork trip length for trucks in CalEEMod is 6.9 miles. Therefore, the conservatively assumed trip length of 40 miles is utilized for this analysis.

and the mobile sources associated with these warehouses. Under Rule 2305, operators of applicable existing and new warehouses are subject to an annual Warehouse Actions and Investments to Reduce Emissions Points Compliance Obligation intended to reduce regional and local emissions from warehouse indirect sources. Based on the approximately 173,976-square-foot warehouse building proposed for the project, Rule 2305 would be applicable to the project. However, Rule 2305 provides options for the operator to earn a certain number of points each year from emission-reducing activities or payment of a mitigation fee. Because there is possible payment of a mitigation fee, conservatively, no emission reductions from Rule 2305 are proposed for the air quality or GHG analysis.

Off-Road Equipment (Forklifts)

The exact operational off-road equipment is unknown at this time; however, in a good faith effort to include anticipated forklifts, forklifts were estimated based on the warehouse square footage and the SCAQMD study, as described below.

The SCAQMD published a summary of operational survey results from 34 operating high-cube warehouses (SCAQMD 2014). The SCAQMD survey reported an average of 0.12 forklifts/pallet jacks per 1,000 square feet of building area, which was applied to the project. This estimate is for total forklifts and pallet jacks. Pallet jacks are small as they are primarily used to lift small loads in tight quarters (and are electric or manual); therefore, assuming all pieces of equipment are forklifts is conservative. For the project, a total of 22 forklifts were assumed. Of the total 22 forklifts, 11 of the forklifts were modeled as diesel powered with Tier 4 Interim compliant engines. The remaining 11 forklifts are assumed to be electric-operated. All 22 forklifts are assumed to operate 8 hours per day and 7 days per week at the project site. CalEEMod was used to estimate emissions from diesel powered forklifts, while a spreadsheet model was used to estimate the energy consumption and GHG emissions from the electric forklifts; see Appendix A.

Table 7 presents the maximum daily emissions associated with operation of the project in 2024 at buildout. The values shown are the maximum summer and winter daily emissions results from CalEEMod for mobile, area, energy, and off-road emissions sources. Complete details of the emissions calculations are provided in Appendix A.

Table 7. Estimated Maximum Daily Operation Criteria Air Pollutant Emissions

Emissions Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Area	5.48	0.06	7.66	<0.01	0.01	0.01
Energy	0.05	0.90	0.76	0.01	0.07	0.07
Mobile	0.86	11.5	16.6	0.11	2.65	0.67
Off-Road (Forklifts)	0.25	6.84	11.8	0.02	0.03	0.03
Total	**6.65**	**19.3**	**36.82**	**0.14**	**2.76**	**0.79**
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Threshold Exceeded?	No	No	No	No	No	No

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD = South Coast Air Quality Management District; <0.01 = reported value less than 0.01.
See Appendix A for complete results.

As shown in Table 7, maximum daily operational emissions of VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$ generated by the project would not exceed the SCAQMD's significance thresholds, and long-term operational impacts would be less than significant.

As previously discussed, the SCAB has been designated as a federal nonattainment area for O_3 and $PM_{2.5}$ and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. However, as indicated in Tables 6 and 7, project-generated construction and operational emissions would not exceed the SCAQMD emission-based significance thresholds for VOCs, NO_x, PM_{10}, or $PM_{2.5}$.

Cumulative localized impacts would potentially occur if a project were to occur concurrently with another off-site project. Schedules for potential future projects near the project site are currently unknown; therefore, potential impacts associated with two or more simultaneous projects would be considered speculative.[8] However, future projects would be subject to CEQA and would require air quality analysis and, where necessary, mitigation. Criteria air pollutant emissions associated with construction activity of future projects would be reduced through implementation of control measures required by the SCAQMD. Cumulative PM_{10} and $PM_{2.5}$ emissions would be reduced because all future projects would be subject to SCAQMD Rule 403 (Fugitive Dust), which sets forth general and specific requirements for all sites in the SCAQMD. Additionally, cumulative VOC emissions would be reduced because all future projects would be subject VOC content of the surface coatings, SCAQMD's Rule 1113, Architectural Coatings, governs the VOC content for interior and exterior coatings.

Therefore, the project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants, and impacts would be less than significant during construction and operation.

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less-than-Significant Impact. The project would not expose sensitive receptors to substantial pollutant concentrations, as evaluated in the following text.

Sensitive Receptors

Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to the SCAQMD, sensitive receptors include sites such as residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993). The nearest sensitive receptors are residential uses located approximately 90 feet north of the project site.

Localized Significance Thresholds

The SCAQMD recommends a localized significance threshold (LST) analysis to evaluate localized air quality impacts to sensitive receptors in the immediate vicinity of the project as a result of project activities. The impacts were analyzed using methods consistent with those in the SCAQMD's Final Localized Significance Threshold Methodology (SCAQMD 2008a). The project is located within Source-Receptor Area 34 (Central San Bernardino Valley). This analysis applies the SCAQMD LST values for a 2.5-acre site within Source-

[8] The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145).

Receptor Area 34 with a receptor distance of 70 meters (230 feet), which is the distance to the nearest sensitive receptor.

Project construction activities would result in temporary sources of on-site criteria air pollutant emissions associated with off-road equipment exhaust and fugitive dust generation. According to the Final Localized Significance Threshold Methodology, "off-site mobile emissions from the project should not be included in the emissions compared to the LSTs" (SCAQMD 2008a). Trucks and worker trips associated with the project are not expected to cause substantial air quality impacts to sensitive receptors along off-site roadways since emissions would be relatively brief in nature and would cease once the vehicles pass through the main streets. Off-site emissions from truck trips were limited to 1,320 feet of estimated on-site activity within the LST analysis. The maximum daily on-site emissions generated by construction of the project are presented in Table 8 and compared to the SCAQMD localized significance criteria for Source-Receptor Area 34 to determine whether project-generated on-site emissions would result in potential LST impacts.

Table 8. Construction Localized Significance Thresholds Analysis

Year	NO_2	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day (On Site)			
2023	39.8	35.7	10.2	5.67
SCAQMD LST Criteria[a]	*243*	*2,160*	*34*	*9*
Threshold Exceeded?	**No**	**No**	**No**	**No**

Source: SCAQMD 2008a; Appendix A.
Notes: NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = particulate matter with a diameter less than or equal to 10 microns (coarse particulate matter); $PM_{2.5}$ = particulate matter with a diameter less than or equal to 2.5 microns (fine particulate matter); SCAQMD = South Coast Air Quality Management District; LST = localized significance threshold.
Maximum on-site emissions occurred during the overlap of the following phases: grading and site preparation.
[a] LST are shown for a 2.5-acre disturbed area corresponding to a distance to a sensitive receptor of 70 meters in Source-Receptor Area 34 (Central San Bernardino Valley).

As shown in Table 8, proposed construction activities would not generate emissions in excess of site-specific LSTs. Impacts would be less than significant.

Carbon Monoxide Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed "CO hotspots." The transport of CO is extremely limited, as it disperses rapidly with distance from the source. However, under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthy levels, affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (LOS) (LOS E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots. As discussed in Section 3.17, Transportation, the proposed project is forecast to generate 43 AM peak hour trips and 47 PM peak hour trips (passenger car equivalent-adjusted), the proposed project would not exceed the 250 two-way peak hour trip threshold for the preparation of a traffic impact analysis (TIA) per the Congestion Management Program (CMP) or the 100 two-way peak hour trip threshold for preparation of a TIA per the City's Traffic

Study Guidelines. Therefore, a TIA and further LOS analysis would not be required, unless requested by the City for a focused analysis of specific facilities.

In addition, at the time that the SCAQMD Handbook (SCAQMD 1993) was published, the SCAB was designated nonattainment under the CAAQS and NAAQS for CO. In 2007, the SCAQMD was designated in attainment for CO under both the CAAQS and NAAQS as a result of the steady decline in CO concentrations in the SCAB due to turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities. The SCAQMD conducted CO modeling for the 2003 AQMP[9] (SCAQMD 2003b) for the four worst-case intersections in the SCAB:

(1) Wilshire Boulevard and Veteran Avenue
(2) Sunset Boulevard and Highland Avenue
(3) La Cienega Boulevard and Century Boulevard
(4) Long Beach Boulevard and Imperial Highway

At the time the 2003 AQMP was prepared, the intersection of Wilshire Boulevard and Veteran Avenue was the most congested intersection in Los Angeles County, with an average daily traffic volume of about 100,000 vehicles per day. The 2003 AQMP projected 8-hour CO concentrations at these four intersections for 1997 and from 2002 through 2005. From years 2002 through 2005, the maximum 8-hour CO concentration was 3.8 parts per million at the Sunset Boulevard and Highland Avenue intersection in 2002 and the maximum 8-hour CO concentration was 3.4 parts per million at the Wilshire Boulevard and Veteran Avenue in 2002.

Accordingly, CO concentrations at congested intersections would not exceed the 1-hour or 8-hour CO CAAQS unless projected daily traffic would be at least over 100,000 vehicles per day. Because the project is not anticipated to increase daily traffic volumes at any study intersection to more than 100,000 vehicles per day, a CO hotspot is not anticipated to occur.

Based on these considerations, the project would not generate traffic that would contribute to potential adverse traffic impacts that may result in the formation of CO hotspots. This conclusion is supported by the analysis in Section 3.17, which demonstrates that traffic impacts would be less than significant. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing. Based on these considerations, the project would result in a less-than-significant impact to air quality with regard to potential CO hotspots.

In addition to impacts from criteria pollutants, certain projects may include emissions of pollutants identified by the state and federal government as toxic air contaminants (TACs) or hazardous air pollutants. State law has established the framework for California's TAC identification and control project, which is generally more stringent than the federal project, and is aimed at TACs that are a problem in California. The state has formally identified more than 200 substances as TACs, including the federal hazardous air pollutants, and is adopting appropriate control measures for sources of these TACs.

In an abundance of caution, a voluntary health risk assessment (HRA) was performed for construction and operation of the project, as discussed below.

The most recent guidance from the Office of Environmental Health Hazard Assessment (OEHHA) is the 2015 Risk Assessment Guidelines Manual (OEHHA 2015), which was adopted in 2015 to replace the 2003

9 SCAQMD's CO hotspot modeling guidance has not changed since 2003.

HRA Guidance Manual. The Children's Environmental Health Protection Act of 1999 (Senate Bill [SB] 25), which requires explicit consideration of infants and children in assessing risks from air toxics, required revisions of the methods for both non-cancer and cancer risk assessment and of the exposure assumptions in the 2003 HRA Guidance Manual. Cancer risk parameters, such as age-sensitivity factors, daily breathing rates, exposure period, fraction of time at home, and cancer potency factors were based on the values and data recommended by OEHHA as implemented in the Hotspots Analysis and Reporting Program Version 2 (HARP2). SCAQMD's Modeling Guidance for American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD) (SCAQMD 2018) and Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (SCAQMD 2003c) provide guidance to perform dispersion modeling for use in HRAs within the SCAB.

Health effects from carcinogenic air toxics are usually described in terms of cancer risk. The SCAQMD recommends a carcinogenic (cancer) risk threshold of 10 in one million. Some TACs increase noncancer health risk due to long-term (chronic) exposures. The Chronic Hazard Index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. The Chronic Hazard Index estimates for all receptor types used the OEHHA-derived calculation method, which uses high-end exposure parameters for the inhalation and next top two exposure pathways and mean exposure parameters for the remaining pathways for non-cancer risk estimates. The Chronic Hazard Index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system.[10] A hazard index less than 1.0 means that adverse health effects are not expected. Within this analysis, noncarcinogenic exposures of less than 1.0 are considered less than significant. The SCAQMD recommends a Chronic Hazard Index significance threshold of 1.0 (project increment) and an acute hazard index of 1.0.

The greatest potential for TAC exposure from project construction and operation is from diesel particulate matter (DPM), as the exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure values are established and regulated and therefore these are not addressed in this assessment.

The dispersion modeling was performed using AERMOD, which is the model SCAQMD requires for atmospheric dispersion of emissions. AERMOD (Version 19191) is a steady-state Gaussian plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of surface and elevated sources, building downwash, and simple and complex terrain (EPA 2018a).

Construction Health Risk

Construction Health Risk Assessment

An HRA was performed to evaluate potential health risk associated with construction of the project. The following discussion summarizes the dispersion modeling and HRA methodology.

For risk assessment purposes, PM_{10} in diesel exhaust is considered DPM, originating mainly from off-road equipment operating at a defined location for a given length of time at a given distance from sensitive receptors. Less-intensive, more-dispersed emissions result from on road vehicle exhaust (e.g., heavy-duty

[10] The HIC estimates for all receptor types used the OEHHA-derived calculation method (OEHHA 2015).

diesel trucks). For the construction HRA, the CalEEMod scenario for the project was adjusted to reduce diesel truck one-way trip distances to 1,000 feet (0.19 miles) to estimate emissions from truck pass-by at proximate receptors.

The air dispersion modeling methodology was based on generally accepted modeling practices of SCAQMD (SCAQMD 2021a). Air dispersion modeling was performed using the EPA's AERMOD Version 19191 modeling system (computer software) with the Lakes Environmental Software implementation/user interface, AERMOD View Version 9.9.0. The HRA followed OEHHA 2015 guidelines (OEHHA 2015) and SCAQMD guidance to calculate the health risk impacts at all proximate receptors as further discussed below. The dispersion modeling included the use of standard regulatory default options. AERMOD parameters were selected consistent with the SCAQMD and EPA guidance and identified as representative of the project site and project activities. Principal parameters of this modeling are presented in Table 9.

Table 9. American Meteorological Society/Environmental Protection Agency Regulatory Model Principal Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Riverside Airport air monitoring station (KRAL) was used for the dispersion modeling (SCAQMD 2021b). A 5-year meteorological data set from 2012 through 2016 was obtained from the SCAQMD in a preprocessed format suitable for use in AERMOD.
Urban versus Rural Option	Urban dispersion option was selected due to the developed nature of the project area and per SCAQMD guidelines.
Terrain Characteristics	The elevation of the site is 803.8 feet (247 meters) above sea level.
Elevation Data	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the United States Geological Survey's National Elevation Dataset format with a resolution of 1/3 degree (approximately 10 meters), consistent with the SCAQMD guidance (SCAQMD 2021a).
Source Release Characterizations	Air dispersion modeling of DPM emissions was conducted assuming the off-road equipment would operate in accordance with the modeling scenario estimated in CalEEMod (Appendix A). The construction equipment and on-site truck travel DPM emissions were modeled as a line of adjacent volume sources across the project site to represent project construction with a release height of 5 meters, plume height of 10 meters, and plume width of 9 meters (SCAQMD 2008a; EPA 2021).

Note: AERMOD = American Meteorological Society/Environmental Protection Agency Regulatory Model; SCAQMD = South Coast Air Quality Management District; DPM = diesel particular matter; CalEEMod = California Emissions Estimator Model.
See Appendix A.

Regarding receptors, the construction scenario used a 1-kilometer by 1-kilometer Cartesian receptor grid with 50-meter spacing to establish the impact area and evaluate locations of maximum health risk impact (SCAQMD 2021a).

The health risk calculations were performed using HARP2 Air Dispersion and Risk Tool (dated 21081). AERMOD was run with all sources emitting unit emissions (1 gram per second) to obtain the necessary input values for HARP2. The line of volume sources was partitioned evenly based on the 1 gram per second emission rate. The ground-level concentration plot files were then used to estimate the long-term cancer

health risk to an individual, and the non-cancer chronic health indices. There is no reference exposure level (REL) for acute health impacts from DPM; thus, acute risk was not evaluated.

Cancer risk is defined as the increase in probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased chances in one million. Maximum Individual Cancer Risk is the estimated probability of a maximally exposed individual potentially contracting cancer as a result of exposure to TACs over a period of 30 years for residential receptor locations. For the purposes of this construction HRA, given the less-than-lifetime exposure period and the higher breathing rates and sensitivity of children to TACs, the cancer risk calculation assumes that the exposure would affect children early in their lives. The 9-month exposure duration was assumed to start during the third trimester of pregnancy through 9 months of age based on the duration of construction. The exposure pathway for DPM is inhalation only.

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs since some TACs increase non-cancer health risk due to long-term (chronic) exposures and some TACs increase non-cancer health risk due to short-term (acute) exposures. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in the HRA. Chronic exposure is evaluated in the construction HRA. Non-carcinogenic risks are quantified by calculating a hazard index, expressed as the ratio between the ambient pollutant concentration and its toxicity or REL, which is a concentration at or below which health effects are not likely to occur. The chronic hazard index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. A hazard index less of than one (1.0) means that adverse health effects are not expected.

The Maximum Individual Cancer Risk and the Chronic Hazard Index for residential receptors as a result of project construction are presented in Table 10.

Table 10. Construction Health Risk Assessment Results – Unmitigated

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk–Residential	Per Million	6.73	10	Less than Significant
Maximum Individual Cancer Risk–Student (Head Start Preschool @ 5th and Central Avenue)	Per Million	1.00	10	Less than Significant
Chronic Hazard Index–Residential	Index Value	0.0089	1.0	Less than Significant

Source: SCAQMD 2019.
Notes: CEQA = California Environmental Quality Act.

As shown in Table 10, project construction activities would result in a Residential Maximum Individual Cancer Risk of 6.73 in 1 million and a Maximum Individual Cancer Risk to Students of 1 in 1 million, which do not exceed the significance threshold of 10 in 1 million. Project construction would result in a Chronic Hazard Index of 0.0089, which is below the 1.0 significance threshold. Impacts would be **less than significant**.

Operational Health Risk

An HRA was performed to evaluate potential health risk associated with operation of the project. The following discussion summarizes the dispersion modeling and HRA methodology.

CARB's Air Quality and Land Use Handbook: A Community Health Perspective encourages consideration of the health impacts of distribution centers that accommodate more than 100 trucks per day on sensitive receptors sited within 1,000 feet from the source in the land use decision-making process (CARB 2005). The proposed project would result in 83 daily truck trips per day; however, out of an abundance of caution an operational HRA was prepared. For the operational HRA, operational year 2024 was assumed, consistent with completion of project construction. Emissions from the operation of the project include truck trips and truck idling emissions. For risk assessment purposes, PM_{10} in diesel exhaust is considered DPM, originating mainly from trucks traveling on site and off site and trucks idling at the loading docks. Truck idling emission rates were obtained from CARB's EMFAC2021. Emission factors representing the vehicle mix and emissions for 2024 were used to estimate emissions associated with operation of the project. Truck idling would be limited to 5 minutes in accordance with CARB's adopted Airborne Toxic Control Measure; however, truck idling was conservatively assumed to idle for 15 minutes. Therefore, the analysis conservatively overestimates DPM emissions from idling. Deliveries would occur every day of the week. A total of 22 forklifts were assumed to operate with the project loading dock areas. A total of 11 of the forklifts were modeled as diesel powered with Tier 4 Interim compliant engines.

Conservatively, a 2024 EMFAC2021 run was conducted and a constant 2024 emission factor data set was used for the entire duration of the analysis (i.e., 30 years). Use of the 2024 emission factors would overstate potential impacts since this approach does not include reductions in emissions due to fleet turnover or cleaner technology with lower emissions. The truck travel DPM emissions were calculated by applying the exhaust PM_{10} emission factor from CalEEMod and the total truck trip number over the length of the distance traveled. In addition, the on-site truck idling exhaust emissions were calculated by applying the idle exhaust PM_{10} emission factor from EMFAC2021 and total truck trip over the total idling time (i.e., 15 minutes). The truck traffic was modeled as a line of adjacent volume sources with 20% of the truck traffic entering and exiting the project site south via 3rd Street and an estimated 80% of the truck traffic would enter and exit the site from 5th Street. Trucks travel east on 3rd and 5th Streets, merging onto 5th and then onto SR-210. Truck idling was modeled as a line of adjacent volume source at the truck loading bays. Additionally, the forklifts were modeled as a line of adjacent volume sources operating within the truck loading bay area.

As previously described, health effects from carcinogenic air toxics are usually described in terms of cancer risk. The SCAQMD recommends a carcinogenic (cancer) risk threshold of 10 in one million. Some TACs increase noncancer health risk due to long-term (chronic) exposures. A hazard index less than one (1.0) means that adverse health effects are not expected. Within this analysis, noncarcinogenic exposures of less than 1.0 are considered less than significant. The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens. DPM has established cancer risk factors and relative exposure values for long-term chronic health hazard impacts. No short-term, acute relative exposure values are established and regulated and are therefore not addressed in this assessment.

The air dispersion modeling methodology was based on generally accepted modeling practices of SCAQMD (SCAQMD 2021a). Air dispersion modeling was performed using the EPA's AERMOD (Version 19191) modeling system with the Lakes Environmental Software implementation/user interface, AERMOD View Version 9.9.0. The HRA followed the OEHHA 2015 guidelines (OEHHA 2015) and SCAQMD guidance to

calculate the health risk impacts at all proximate receptors as further discussed below. The dispersion modeling included the use of standard regulatory default options. AERMOD parameters were selected consistent with the SCAQMD and EPA guidance and identified as representative of the project site and project activities. Principal parameters of this modeling are presented in Table 11.

Table 11. Operational Health Risk Assessment American Meteorological Society/U.S. Environmental Protection Agency Regulatory Model Operational Principal Parameters

Parameter	Details
Meteorological Data	AERMOD-specific meteorological data for the Riverside Airport air monitoring station (KRAL) was used for the dispersion modeling (SCAQMD 2021b). A 5-year meteorological data set from 2012 through 2016 was obtained from the SCAQMD in a preprocessed format suitable for use in AERMOD.
Urban versus Rural Option	Urban dispersion option was selected due to the developed nature of the project area and per SCAQMD guidelines.
Terrain Characteristics	The elevation of the site is 803.8 feet (247 meters) above sea level.
Emission Sources and Source Release Parameters	Air dispersion modeling of operational activities was conducted using emissions generated using CalEEMod. Off-site and on-site truck travel were modeled as a line of adjacent volume sources, and based on EPA methodology, the modeled sources would result in a release height of 3.4 meters, a plume height of 6.8 meters, and a plume width of 13.4 meters (SBCAPCD 2020). The truck idling emissions at loading docks were modeled as a line of adjacent volume sources with a release height of 4 meters a plume height of 8 meters, and a plume width of 8.6 meters (SBCAPCD 2020). Forklifts were modeled as a line of adjacent volume sources with a release height of 3.4 meters, a plume height of 6.8 meters, and a plume width of 8.6 meters (SBCAPCD 2020).

Notes: AERMOD = American Meteorological Society/Environmental Protection Agency Regulatory Model; SCAQMD = South Coast Air Quality Management District; EPA = U.S. Environmental Protection Agency.

Regarding receptors, the operational HRA scenario built from the construction HRA's 1-kilometer by 1-kilometer Cartesian receptor grid with 50-meter spacing to establish the impact area and evaluate locations of maximum health risk impact (SCAQMD 2021a). The operational scenario added receptors at 50-meter spacing at sensitive receptor areas adjacent to the truck routes discussed above.

The health risk calculations were performed using the HARP2 Air Dispersion and Risk Tool (dated 19121). AERMOD was run with all sources or source groups emitting unit emissions (1 gram per second) to obtain the necessary input values for HARP2. The line of volume sources was partitioned evenly based on the 1 gram per second emission rate. The ground-level concentration plot files were then used to estimate the long-term cancer health risk to an individual, and the non-cancer chronic health indices. There is no REL for acute health impacts from DPM; thus, acute risk was not evaluated.

Cancer risk is defined as the increase in probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased chances in one million. Maximum Individual Cancer Risk is the estimated probability of a maximally exposed individual potentially contracting cancer as a result of exposure to TACs over a period of 30 years for residential receptor locations. The HRA assumes exposure would start in the third trimester of pregnancy through 30 years for all residential sensitive receptor locations. The exposure pathway for DPM is inhalation only.

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs since some TACs increase non-cancer health risk due to long-term (chronic) exposures and some TACs increase non-cancer health risk due to short-term (acute) exposures. No short-term, acute relative exposure level has been established for DPM; therefore, acute impacts of DPM are not addressed in the HRA. Chronic exposure is evaluated in the operational HRA. Non-carcinogenic risks are quantified by calculating a hazard index, expressed as the ratio between the ambient pollutant concentration and its toxicity or REL, which is a concentration at or below which health effects are not likely to occur. The chronic hazard index is the sum of the individual substance chronic hazard indices for all TACs affecting the same target organ system. A hazard index less of than one (1.0) means that adverse health effects are not expected.

The results of the health risk assessment during operation are provided in Table 12.

Table 12. Operational Health Risk Assessment Results

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Maximum Individual Cancer Risk–Residential	Per Million	9.48	10	Less than Significant
Maximum Individual Cancer Risk–Student (Head Start Preschool @ 5th and Central Avenue)	Per Million	0.21	10	Less than Significant
Chronic Hazard Index–Residential	Index Value	0.0026	1.0	Less than Significant

Source: SCAQMD 2019.
Notes: CEQA = California Environmental Quality Act.

As shown in Table 12, the results of the operational analysis demonstrate that the Maximum Individual Cancer Risk for the student and residential receptors are below the 10 in a million threshold and the Chronic Hazard Index is below the threshold of 1. The project operational TACs impact from DPM emissions would be **less than significant**.

Health Effects of Criteria Air Pollutants

Construction and operation of the project would generate criteria air pollutant emissions; however, estimated construction and operational emissions would not exceed the SCAQMD mass-emission daily thresholds as shown in Tables 6 and 7, respectively. As previously discussed, the SCAB has been designated as a federal nonattainment area for O_3 and $PM_{2.5}$ and a state nonattainment area for O_3, PM_{10}, and $PM_{2.5}$.

Health effects associated with O_3 include respiratory symptoms, worsening of lung disease leading to premature death, and damage to lung tissue (CARB 2021). VOCs and NO_x are precursors to O_3, for which the SCAB is designated as nonattainment with respect to the NAAQS and CAAQS. The contribution of VOCs and NO_x to regional ambient O_3 concentrations is the result of complex photochemistry. The increases in O_3 concentrations in the SCAB due to O_3 precursor emissions tend to be found downwind from the source location to allow time for the photochemical reactions to occur. However, the potential for exacerbating excessive O_3 concentrations would also depend on the time of year that the VOC emissions would occur because exceedances of the O_3 ambient air quality standards tend to occur between April and October when solar radiation is highest. The holistic effect of a single project's emissions of O_3 precursors is speculative because of the lack of quantitative methods to assess this impact. Because construction and

operation of the project would not result in O_3 precursor emissions (i.e., VOCs or NO_X) that would exceed the SCAQMD thresholds (as shown in Tables 6 and 7), the project is not anticipated to substantially contribute to regional O_3 concentrations and their associated health impacts.

Health effects associated with NO_x include lung irritation and enhanced allergic responses (CARB 2021). Construction and operation of the project would not generate NO_x emissions that would exceed the SCAQMD mass daily thresholds; therefore, construction and operation of the project is not anticipated to contribute to exceedances of the NAAQS and CAAQS for NO_2 or contribute to associated health effects. In addition, the SCAB is designated as in attainment of the NAAQS and CAAQS for NO_2, and the existing NO_2 concentrations in the area are well below the NAAQS and CAAQS standards.

Health effects associated with CO include chest pain in patients with heart disease, headache, light-headedness, and reduced mental alertness (CARB 2021). CO tends to be a localized impact associated with congested intersections. CO hotspots were discussed previously as a less-than-significant impact. Thus, the project's CO emissions would not contribute to the health effects associated with this pollutant.

Health effects associated with PM_{10} and $PM_{2.5}$ include premature death and hospitalization, primarily for worsening of respiratory disease (CARB 2021). As with O_3 and NO_X, and as shown in Tables 6 and 7, the project would not generate emissions of PM_{10} or $PM_{2.5}$ that would exceed the SCAQMD's thresholds. Accordingly, the project's PM_{10} and $PM_{2.5}$ emissions are not expected to cause an increase in related health effects for this pollutant.

The California Supreme Court's decision in *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 (referred to herein as the Friant Ranch decision; issued on December 24, 2018) addressed the need to correlate mass emission values for criteria air pollutants to specific health consequences and contains the following direction from the California Supreme Court:

> The Environmental Impact Report (EIR) must provide an adequate analysis to inform the public how its bare numbers translate to create potential adverse impacts or it must explain what the agency *does* know and why, given existing scientific constraints, it cannot translate potential health impacts further [Italics in original].

Currently, SCAQMD, CARB, and EPA have not approved a quantitative method to reliably, meaningfully, and consistently translate the mass emission estimates for the criteria air pollutants resulting from the project to specific health effects. In addition, there are numerous scientific and technological complexities associated with correlating criteria air pollutant emissions from an individual project to specific health effects or potential additional nonattainment days.

In connection with the judicial proceedings culminating in issuance of the Friant Ranch decision, the SCAQMD and the San Joaquin Valley Air Pollution Control District (SJVAPCD) filed amicus briefs attesting to the extreme difficulty of correlating an individual project's criteria air pollutant emissions to specific health impacts. Both SJVAPCD and SCAQMD have among the most sophisticated air quality modeling and health impact evaluation capabilities of the air districts in California. The key relevant points from the SCAQMD and SJVAPCD briefs are summarized herein.

In requiring a health impact type of analysis for criteria air pollutants, it is important to understand how O_3 and particulate matter (PM) are formed, dispersed, and regulated. The formation of O_3 and PM in the

atmosphere, as secondary pollutants,[11] involves complex chemical and physical interactions of multiple pollutants from natural and anthropogenic sources. The O_3 reaction is self-perpetuating (or catalytic) in the presence of sunlight because NO_2 is photochemically reformed from nitric oxide. In this way, O_3 is controlled by both NO_x and VOC emissions (NRC 2005). The complexity of these interacting cycles of pollutants means that incremental decreases in one emission may not result in proportional decreases in O_3 (NRC 2005). Although these reactions and interactions are well understood, variability in emission source operations and meteorology creates uncertainty in the modeled O_3 concentrations to which downwind populations may be exposed (NRC 2005). Once formed, O_3 can be transported long distances by wind and due to atmospheric transport, contributions of precursors from the surrounding region can also be important (EPA 2008). Because of the complexity of O_3 formation, a specific tonnage of VOCs or NO_X emitted in a particular area does not equate to a particular concentration of O_3 in that area (SJVAPCD 2015).

PM can be divided into two categories: directly emitted PM and secondary PM. Secondary PM, like O_3, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as SO_x and NO_x (SJVAPCD 2015). Because of the complexity of secondary PM formation, including the potential to be transported long distances by wind, the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area (SJVAPCD 2015). This is especially true for individual projects, like the proposed project, where project-generated criteria air pollutant emissions are not derived from a single "point source," but from construction equipment and mobile sources (passenger cars and trucks) driving to, from, and around the project site.

Additionally, health effects from air pollutants are related to the concentration of the air pollutant that an individual is exposed to, not necessarily the individual mass quantity of emissions associated with an individual project. For example, health effects from O_3 are correlated with increases in the ambient level of O_3 in the air a person breathes (SCAQMD 2015). However, it takes a large amount of additional precursor emissions to cause a modeled increase in ambient O_3 levels over an entire region (SCAQMD 2015). The lack of link between the tonnage of precursor pollutants and the concentration of O_3 and $PM_{2.5}$ formed is important because it is not necessarily the tonnage of precursor pollutants that causes human health effects; rather, it is the concentration of resulting O_3 that causes these effects (SJVAPCD 2015). Indeed, the ambient air quality standards, which are statutorily required to be set by EPA at levels that are requisite to protect the public health, are established as concentrations of O_3 and $PM_{2.5}$ and not as tonnages of their precursor pollutants (EPA 2018a). Because the ambient air quality standards are focused on achieving a particular concentration region-wide, the tools and plans for attaining the ambient air quality standards are regional in nature. For CEQA analyses, project-generated emissions are typically estimated in pounds per day or tons per year and compared to mass daily or annual emission thresholds. While CEQA thresholds are established at levels that the air basin can accommodate without affecting the attainment date for the ambient air quality standards, even if a project exceeds established CEQA significance thresholds, this does not mean that one can easily determine the concentration of O_3 or PM that will be created at or near the project site on a particular day or month of the year, or what specific health impacts will occur (SJVAPCD 2015).

In regard to regional concentrations and air basin attainment, the SJVAPCD emphasized that attempting to identify a change in background pollutant concentrations that can be attributed to a single project, even one as large as the entire Friant Ranch Specific Plan, is a theoretical exercise. The SJVAPCD brief noted that it "would be extremely difficult to model the impact on NAAQS attainment that the emissions from the Friant Ranch project may have" (SJVAPCD 2015). The situation is further complicated by the fact that

[11] Air pollutants formed through chemical reactions in the atmosphere are referred to as secondary pollutants.

background concentrations of regional pollutants are not uniform either temporally or geographically throughout an air basin, but are constantly fluctuating based upon meteorology and other environmental factors. SJVAPCD noted that the currently available modeling tools are equipped to model the impact of all emission sources in the San Joaquin Valley Air Basin on attainment (SJVAPCD 2015). The SJVAPCD brief then indicated that, "running the photochemical grid model used for predicting O_3 attainment with the emissions solely from the Friant Ranch project (which equate to less than 0.1% of the total NO_x and VOC in the Valley) is not likely to yield valid information given the relative scale involved" (SJVAPCD 2015).

SCAQMD and SJVAPCD have indicated that it is not feasible to quantify project-level health impacts based on existing modeling (SCAQMD 2015; SJVAPCD 2015). Even if a metric could be calculated, it would not be reliable because the models are equipped to model the impact of all emission sources in an air basin on attainment and would likely not yield valid information or a measurable increase in O_3 concentrations sufficient to accurately quantify O_3-related health impacts for an individual project.

Nonetheless, following the Supreme Court's Friant Ranch decision, some EIRs where estimated criteria air pollutant emissions exceeded applicable air district thresholds have included a quantitative analysis of potential project-generated health effects using a combination of a regional photochemical grid model[12] and the EPA Benefits Mapping and Analysis Program (BenMAP or BenMAP–Community Edition).[13] The publicly available health impact assessments (HIAs) typically present results in terms of an increase in health incidences and/or the increase in background health incidence for various health outcomes resulting from the project's estimated increase in concentrations of O_3 and $PM_{2.5}$.[14] To date, the five publicly available HIAs reviewed herein have concluded that the evaluated project's health effects associated with the estimated project-generated increase in concentrations of O_3 and $PM_{2.5}$ represent a small increase in incidences and a very small percent of the number of background incidences, indicating that these health impacts are negligible and potentially within the models' margin of error. It is also important to note that while the results of the five available HIAs conclude that the project emissions do not result in a substantial increase in health incidences, the estimated emissions and assumed toxicity are also conservatively inputted into the HIA and thus overestimate health incidences, particularly for $PM_{2.5}$.

As explained in the SJVAPCD brief and noted previously, running the photochemical grid model used for predicting O_3 attainment with the emissions solely from an individual project like the Friant Ranch project or the proposed project is not likely to yield valid information given the relative scale involved. The five examples reviewed support the SJVAPCD's brief contention that consistent, reliable, and meaningful results may not be provided by methods applied at this time. Accordingly, additional work in the industry and more

12 The first step in the publicly available HIAs includes running a regional photochemical grid model, such as the Community Multiscale Air Quality model or the Comprehensive Air Quality Model with extensions to estimate the increase in concentrations of O_3 and $PM_{2.5}$ as a result of project-generated emissions of criteria and precursor pollutants. Air districts, such as the SCAQMD, use photochemical air quality models for regional air quality planning. These photochemical models are large-scale air quality models that simulate the changes of pollutant concentrations in the atmosphere using a set of mathematical equations characterizing the chemical and physical processes in the atmosphere (EPA 2017).

13 After estimating the increase in concentrations of O_3 and $PM_{2.5}$, the second step in the five examples includes use of BenMAP or BenMAP-Community Edition to estimate the resulting associated health effects. BenMAP estimates the number of health incidences resulting from changes in air pollution concentrations (EPA 2018b). The health impact function in BenMAP-Community Edition incorporates four key sources of data: (i) modeled or monitored air quality changes, (ii) population, (iii) baseline incidence rates, and (iv) an effect estimate. All of the five example HIAs focused on O_3 and $PM_{2.5}$.

14 The following CEQA documents included a quantitative HIA to address Friant Ranch: (1) California State University Dominguez Hills 2018 Campus Master Plan EIR (CSU Dominguez Hills 2019), (2) March Joint Powers Association K4 Warehouse and Cactus Channel Improvements EIR (March JPA 2019), (3) Amendment to Norman Y. Mineta San Jose Airport Amendment to the Airport Master Plan EIR (City of San Jose 2020), (4) City of Inglewood Basketball and Entertainment Center Project EIR (City of Inglewood 2019), and (5) San Diego State University Mission Valley Campus Master Plan EIR (SDSU 2019).

importantly, air district participation, is needed to develop a more meaningful analysis to correlate project-level mass criteria air pollutant emissions and health effects for decision makers and the public. Furthermore, at the time of writing, no HIA has concluded that health effects estimated using the photochemical grid model and BenMAP approach are substantial provided that the estimated project-generated incidences represent a very small percent of the number of background incidences, potentially within the models' margin of error.

In summary, construction and operation of the project would not result in exceedances of the SCAQMD significance thresholds for certain criteria pollutants, and potential health effects associated with criteria air pollutants would be less than significant based on the mass regional thresholds.

In addition, an analysis of the project's potential to exceed the SCAQMD LSTs is presented above. The SCAQMD developed the LST analysis in response to CARB Governing Board's Environmental Justice Enhancement Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS (which are health protective standards) at the nearest sensitive receptor, taking into consideration ambient concentrations in each source receptor area, project size, and distance to the nearest sensitive receptor. LSTs have been developed for NO_2, CO, PM_{10}, and $PM_{2.5}$. As presented above, the project's localized construction emissions would not exceed site-specific LSTs and impacts would be less than significant.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less-than-Significant Impact. The project would result in emissions, including criteria air pollutant and TACs; however, those are addressed under Sections 3.3(b) and 3.3(c). Accordingly, the evaluation of other emissions is focused on the potential for the project to generate odors. The occurrence and severity of potential odor impacts depend on numerous factors. The nature, frequency, and intensity of the source; the wind speed and direction; and the sensitivity of receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be potentially generated from vehicles and equipment exhaust emissions during construction of the project. Potential odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment, architectural coatings, and asphalt pavement application. Such odors would disperse rapidly from the project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding (SCAQMD 1993). The project entails operation of a warehouse and would not create any new sources of odors during operation. Therefore, project operations would result in an odor impact that is less than significant.

3.4 Biological Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

The following analysis relies on a biological resources assessment conducted by Dudek (Appendix B, Biological Constraints Analysis). This assessment included a review of the latest available relevant literature, published research, maps, soil data, data on biological baselines, special-status habitats, and species distributions to determine those resources that have the potential to occur within the project site and surrounding 300-foot buffer (the biological study area). A field assessment was conducted to characterize the environmental conditions, vegetation communities/land covers, and any plants or wildlife (including their habitats) that could be impacted during project implementation. During the field survey, vegetation communities and land covers were catalogued and confirmed based on existing site conditions. Dudek compiled a general inventory of plant and wildlife species

and made a determination concerning the potential for special-status species to occur within the study area. Additionally, Dudek conducted an investigation of jurisdictional waters of the United States regulated by the U.S. Army Corps of Engineers, jurisdictional waters of the state regulated by the Regional Water Quality Control Board, and California Department of Fish and Wildlife jurisdictional streambed and associated riparian habitat. Field data and supporting documentation are included within this draft IS/MND as Appendix B.

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less-than-Significant Impact with Mitigation Incorporated.

Special-Status Plant Species

The project site consists of areas dominated by disturbed habitat and developed/landscaped land. No special-status species were observed during the site visit (Appendix B). Due to the disturbed and developed conditions of the site and lack of suitable vegetation, microhabitat conditions, and topographic setting, no special-status species are expected to occur within the project site. Species that occur in similar soil types as the project site are not expected to occur due to the impacted and compacted conditions of the soil.

Special-Status Wildlife Species

Three species of wildlife were observed during the survey. Bird species observed were common raven (*Corvus corax*), house finch (*Haemorhous mexicanus*), and house sparrow (*Passer domesticus*). However, no special-status wildlife species were observed during the site visit. One special-status wildlife species has a moderate potential to occur: burrowing owl (*Athene cunicularia*), a California Department of Fish and Wildlife Species of Special Concern. Burrowing owl is a candidate for listing under the California Endangered Species Act, a USFWS Bird of Conservation Concern and a CDFW Species of Special Concern. The burrowing owl is an opportunistic species that can move onto a site once a suitable burrow is established and unoccupied. Grassland habitat within the disturbed area of the project site and small mammal burrows found during the site visit may provide suitable habitat for this species. While the grassland habitat is highly disturbed and regularly maintained, there is one known occurrence of this species less than 1 mile from the project site. All other mentioned special-status species are not expected to occur at the project site due to the disturbed habitat conditions and the lack of suitable habitat, soils, and vegetation.

Therefore, due to the potential for one special-status species to occur on the project site, impacts would be potentially significant and mitigation would be required (Mitigation Measure [MM] BIO-1). With implementation of MM-BIO-1, impacts to burrowing owl would be less than significant.

MM-BIO-1 Focused Burrowing Owl Surveys: The project site contains potentially suitable habitat for burrowing owl and therefore a presence/absence survey should be conducted in accordance with the California Department of Fish and Wildlife's 2012 Staff Report on Burrowing Owl Mitigation. The burrowing owl presence/absence survey requires four crepuscular surveys, with a 500-foot buffer as legally able, using 7–20 meter transects. Four survey passes must be conducted with at least one site visit between February 15 and April 15, and a minimum of three survey visits, spaced at least 3 weeks apart, between April 15 and July 15, with at least one visit after June 15. If the project timeline does not allow for the breeding season

surveys to occur, then four surveys spread evenly through the non-breeding season (October 1 through February 1) should be conducted using the same methodology. A pre-construction survey of the project site for the burrowing owl shall also be conducted by a qualified biologist within 30 days of ground-disturbing activities, regardless of the results of the focused surveys, Surveys should be conducted in all portions of the project site and the 500-foot buffer that contain suitable habitat for the species, where legally accessible. If burrowing owl or diagnostic sign of the species (burrows with pellets, feathers, and whitewash) are observed during focused or pre-construction surveys, the applicant shall consult with CDFW to determine whether an ITP under the California Endangered Species Act is required. In the event an ITP is needed, mitigation for direct impacts to burrowing owl shall be fulfilled through compensatory mitigation at a minimum 1:1 habitat replacement of equal or better functions and values to those impacted by the project, or as otherwise determined through the ITP process. Mitigation shall be accomplished either through off-site conservation or through a CDFW-approved mitigation bank. If mitigation is not purchased through a mitigation bank, and lands are conserved separately, a coast estimate shall be prepared to estimate the initial start-up costs and ongoing annual costs of management activities for the management of the conservation easement area(s) in perpetuity. The funding source shall be in the form of an endowment to help the qualified natural lands management entity that is ultimately selected to hold the conservation easement(s). The endowment amount shall be established following the completion of a project-specific Property Analysis Record to calculate the costs of in-perpetuity land management. The Property Analysis Record shall take into account all management activities required in the ITP to fulfill the requirements of the conservation easement(s), which are currently in review and development. Alternatively, instead of conducting focused surveys, the project may also choose to assume presence of the species and prepare a burrowing owl translocation plan that would be implemented if burrowing owl are detected on the project site during the pre-construction survey.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less-than-Significant Impact. There are no jurisdictional aquatic resources or connectivity to any aquatic habitat within the project site. However, a flood control channel (City Creek Bypass) is located directly to the east of the project site. While construction and operational activities will not directly impact this channel, there is a potential for indirect impacts to occur to aquatic resources.

The project applicant would be required to obtain coverage under the Construction General Permit issued by the State Water Resources Control Board (SWRCB) prior to the start of construction within the project site. Specifically, the Construction General Permit requires that a stormwater pollution prevention plan (SWPPP) be enforced on site at all times. The SWPPP requires the construction contractor to implement water quality best management practices (BMPs) to ensure that water quality standards are met and that stormwater runoff from the construction work areas does not cause degradation of water quality in receiving water bodies. The SWPPP must describe the type, location, and function of stormwater BMPs to be implemented and must demonstrate that the combination of BMPs selected is adequate to meet the discharge prohibitions, effluent standards, and receiving water limitations contained in the Construction General Permit. Therefore, with implementation of the required SWPPP, impacts would be less than significant.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less-than-Significant Impact. A formal delineation of aquatic resources was not conducted as part of the survey effort. There are no jurisdictional aquatic resources or connectivity to any aquatic habitat within the project site. However, a flood control channel (City Creek Bypass) is located directly to the east of the project site. While construction and operational activities will not directly impact this channel, there is a potential for indirect impacts to occur to aquatic resources. As previously stated, the project applicant would be required to prepare a SWPPP, which requires the construction contractor to implement water quality BMPs to ensure that water quality standards are met and that stormwater runoff from the construction work areas does not cause degradation of water quality in receiving water bodies. Therefore, with implementation of the required SWPPP, impacts would be less than significant.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less-than-Significant Impact with Mitigation Incorporated. Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Corridors can also be aquatic resources that provide passage for fish. Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation; they may be continuous habitat or discrete habitat islands that function as steppingstones for wildlife dispersal.

On a regional level, the study area does not occur within any designated wildlife corridors or habitat linkages identified in the South Coast Missing Linkages analysis conducted by South Coast Wildlands (2008). The study area is not mapped as an area of essential habitat connectivity in California Department of Fish and Wildlife's California Essential Habitat Connectivity Project and is identified as an area with Limited Connectivity. Though no essential habitat occurs at the vicinity level, the study area is located 2.8 miles south of the foothills of the San Bernadino National Forest, which is mapped as an Essential Connectivity Area and Irreplaceable and Essential Corridors. The project site is surrounded by developed areas consisting of buildings, parking lots, and paved/asphalt roads. Due to the disturbed and developed nature of the project site and surrounding area, project activities are not expected to have any negative impacts on wildlife movement.

The study area lacks aquatic habitat and is isolated from streams that do support habitat. Therefore, the study area does not support fish or their movement. Three trees occur within the project site; however they are isolated from one another; therefore, it is unlikely for the project site to support large wildlife nursery sites. Nonetheless, the study area contains some vegetation that could provide nesting habitat for birds protected under the Migratory Bird Treaty Act and California Fish and Game Code Sections 3503, 3503.5, and 351. To avoid potential direct impacts to all nesting birds, the proposed project would implement MM-BIO-2. With implementation of MM-BIO-2, impacts to nesting birds from construction-related activities would be less than significant.

MM-BIO-2 Pre-Construction Nesting Bird Survey. Trees within the project site may provide nesting habitat for native migratory birds protected by the federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Sections 3500 and 3513. Project construction should

be conducted in compliance with the conditions set forth in the MBTA and California Fish and Game Code to protect active bird/raptor nests. To the maximum extent feasible, construction of the warehouse facility and disturbance to the project site should occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the project requires that work be initiated during the breeding season for nesting birds (March 1–September 30) and nesting raptors (February 1–June 30), in order to avoid direct impacts on active nests, a pre-construction survey should be conducted in the study area by qualified Biologists (someone who has more than three years of experience of conducting nesting bird surveys in the project region) for nesting birds and/or raptors within three days prior to project activities. If the Biologist does not find any active nests within or immediately adjacent to the impact areas, the vegetation clearing/construction work should be allowed to proceed.

If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist should delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. At the discretion of the biologist, a no-work buffer zone shall be established suitable to the particular bird species and location of the nest until the nest is vacated and juveniles have fledged, and there is no evidence of a second attempt at nesting. Limits of construction to avoid an active nest shall be established in the field with flagging, fencing, or other appropriate barriers, and construction personnel shall be instructed on the sensitivity of nest areas. The results of the surveys, showing the locations of any active nests detected, and documentation of any avoidance measures taken, shall be submitted to the City of Highland to document compliance with applicable state and federal laws.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less-than-Significant Impact. The City's Municipal Code, Section 16.64.040, addresses the preservation of heritage trees and specifies required conditions and permits necessary for removal of heritage trees (City of Highland 2022). Section 16.06.080 defines heritage trees as any live tree, shrub, or plant that meets at least one for the following criteria: (1) A woody plant in excess of 15 feet in height and having a single trunk circumference of 24 inches or more, as measured 4.5 feet above ground level; (2) a multi-trunk tree having a total circumference of 30 inches or more, as measured 4.5 feet from the ground; (3) a stand of trees, the nature of which makes each dependent upon the others for survival; or (4) any other tree as may be deemed historically or culturally significant by the Community Development Director or designee because of size, condition, location, or aesthetic value (Title 16, Chapter 16 of the City's Municipal Code). Removal of heritage trees requires a permit application and approval by the City's Community Development Director. Any heritage tree removal subject to a tree removal permit shall require replacement at a ratio of 2:1, with size and species to be determined by the Community Development Director. Three trees potentially meeting this definition are located throughout the project site and are proposed to be removed as part of the project. None of these trees have been designated as historical landmarks. With the implementation of proper permitting and Municipal Code Section 16.06.080, when needed, the project would not conflict with any local policies or

ordinances protecting biological resources such as a tree preservation policy or ordinance. Therefore, impacts would be less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The project site is not located within a habitat conservation plan, natural community conservation plan, or similar plan. The site is not located within or proximate to any Significant Ecological Area, Land Trust, or Conservation Plan. As such, no impact resulting from a conflict with an adopted conservation plan would occur.

3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

The following analysis is based, in part, on the Cultural Resources Survey and the Built Environment Survey prepared by Dudek in January 2023 and December 2022, respectively, included as Appendix C and Appendix D, respectively.

a) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Less-than-Significant Impact. As defined by the CEQA Guidelines, a "historical resource" is considered to be a resource that is listed in or eligible for listing in the National Register of Historic Places (NRHP) or California Register of Historic Resources (CRHR), has been identified as significant in a historical resource survey, or is listed on a local register of historical resources.

Prior to the demolition of abandoned structures onsite due to unsafe, substandard conditions, a built environment intensive-level survey was conducted by Dudek in December 2022. The intensive-level survey involved visiting each property and recording all buildings and structures with notes and photographs. Properties surveyed were fell into three categories: vacant and undeveloped, historic-age built environment resources, and non-historic-age built environment properties. Three properties, Parcel 1: 26530 3rd Street (APN 1192-551-04), Parcel 2: 26540 3rd Street (APN 1192-551-05), and Parcel 3: 26562 3rd Street (APN

1192-551-07), are developed with built environment resources over 45 years old and were identified as requiring recordation and evaluation for historical significance.

The property significance evaluation was prepared by architectural historians meeting the Secretary of the Interior's Professional Qualification Standards for architectural history. The evaluation considers NRHP, CRHR, and City of Highland significance criteria and integrity requirements. As defined by the CEQA Guidelines (14 CCR 15000 et seq.), a historical resource is considered to be a resource if it is listed in or eligible for listing in the NRHP or CRHR, has been identified as significant in a historical resource survey, or is listed on a local register of historical resources.

The criteria for listing resources in the CRHR were developed in accordance with previously established criteria developed for listing in the NRHP. Thus, the following criteria are expressed in accordance with the NRHP criteria. According to California Public Resources Code, Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

1. Is associated with events that have made a significant contribution to the broad pattern of our history
2. Is associated with the lives of persons important in our past
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values
4. Has yielded, or may be likely to yield, information important in prehistory or history

The City of Highland Cultural Resource Designation Criteria are listed under the Historic and Cultural Preservation Ordinance, adopted in 2021. An improvement, natural feature, or site may be nominated as a cultural resource by the historic and cultural preservation board pursuant to Municipal Code Section 16.32.060 if it meets the criteria for listing on the NRHP or the following:

A. It exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, architectural, or natural history;
B. It is identified with persons or events significant in local, state, or national history;
C. It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship;
D. It is representative of the work of a notable builder, designer, or architect;
E. It contributes to the significance of an historic area, being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development;
F. It has a unique location or singular physical characteristics or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city of Highland;
G. It embodies elements of architectural design, detail, materials, or craftsmanship that represent a significant structural or architectural achievement or innovation;
H. It is similar to other distinctive properties, sites, areas, or objects based on a historic, cultural, or architectural motif.
I. It reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of park or community planning.

J. It is one of the few remaining examples in the city, region, state, or nation possessing distinguishing characteristics of an architectural or historical type of specimen. (Ord. 171 § 8.50, 1994)

Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code, Section 21084.1; 14 CCR 15064.5[b]). If a site is listed or eligible for listing in the CRHR, included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code, Section 5024.1[q]), it is a "historical resource" and is presumed to be historically or culturally significant for the purposes of CEQA (California Public Resources Code, Section 21084.1; 14 CCR 15064.5[a]).

In compliance with CEQA, the following properties containing built-environment resources were evaluated under the four CRHR criteria previously outlined, as well as local landmark criteria to determine eligibility for listing in the CRHR or NRHP, and accordingly, their historical significance:

- **APN (1192-551-04):** One residential building constructed circa 1948. The building was utilitarian, with no architectural style and a flat roof with a combination of materials, including a hipped roof projection with red clay tiles on the west and south elevations. Its exterior walls were clad in stucco.
- **APN (1192-551-05):** One commercial building constructed circa 1948 (formerly Las Potrillas Bar/Cantina and Nightclub. L-shaped building, one story in height. The building was utilitarian, with no architectural style, with a flat roof at the south half and a shed roof at the north half of the building. The building's exterior walls were clad in stucco. The building's main (south) elevation displayed a raised, flat parapet lined with red clay tiles. The building lacked window fenestration openings. The east elevation displayed a replacement door under an addition of a shingled awning.
- **APN (1192-551-07):** One residential building and two ancillary buildings constructed circa 1940. The residence had an irregular plan with a side-gabled roof and exterior walls clad in stucco. The residence was utilitarian, with no architectural style. Fenestration included an irregular arrangement of aluminum sliding windows on all elevations and replacement doors on the primary and rear elevations. An addition of a metal awning extended out from the side (west) elevation.

  East of the residence was a partially destroyed garage with a hipped roof and stucco cladding. The building had a square plan and an irregular arrangement of two garage door openings and one window opening on the primary (south) elevation. Fenestration openings were covered with plywood. East of the garage was a front-gabled, partially destroyed shed with corrugated metal cladding and no fenestration openings present; only structural beams were visible. The shed appeared to have been partially destroyed by fire. East of the shed, a rectangular concrete foundation and corrugated metal pieces appeared to be remnants of buildings destroyed by fire in 2022.

None of the properties appeared eligible for listing in the NRHP, CRHR, or City of Highland designation due to a lack of important historical associations, lack of architectural merit, and lack of integrity, nor did they appear eligible as contributors to an historic district. As such, the properties were not considered historical resources for the purposes of CEQA. These resources were assigned a California Historical Resource Status Code of 6Z (found ineligible for the NRHP, CRHR, or local designation through survey evaluation). A demolition permit was issued by the City due to unsafe, substandard conditions. The buildings have since been demolished.

No historical resources were identified within the project site as a result extensive archival research, field survey, and property significance evaluation. Therefore, impacts associated with historical resources would be less than significant.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less-than-Significant Impact with Mitigation Incorporated**.** A CHRIS database records search, Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search, background research, including a review of a geotechnical report, and an archaeological pedestrian survey were conducted as part of an Archaeological Resources Assessment that was prepared for the proposed project (Appendix C).

The SLF record is maintained at a Public Land Survey System (PLSS) Section level meaning the negative or positive result is respective of a general area covering approximately one-square mile (640 acres) rather than the exact study area. Therefore, as part of the process of identifying cultural resources within or near the proposed project, Dudek referenced the results of an SLF search that was previously completed for another project within approximately 765 feet to the northwest of the present proposed project site (completed April 14, 2021). The NAHC's SLF search result was positive, however, as previously stated, the SLF record is maintained at a PLSS Section level, which indicates a recorded sacred site could be anywhere within this one square mile (640 acre) area and therefore, does not necessarily equate to the existence of resources within the specific area occupied by the proposed project site. A review of the CHRIS records search (completed May 10, 2022) indicates that seven (7) cultural resource studies have been conducted within the records search area of the proposed project site between 1984 and 2011. Of these studies, four (4) studies overlap the proposed project site and two (2) studies are adjacent. Less than 10 percent of the proposed project site has been subjected to previous archaeological investigations, including pedestrian surveys prior to the placement of fill soils or development of the proposed project site. South Central Coastal Information Center (SCCIC) records also indicate that 15 cultural resources, all of which are historic built environment resources, have been previously recorded within 0.5 miles of the proposed project site, none of which overlap or are adjacent to the proposed Project site. No record of previously recorded historic-period or prehistoric archaeological resources are on file with the SCCIC as being present within proposed project site.

A review of aerial photographs for all available years indicates that in general, the proposed project site has been subjected to consistent ground disturbance, shifting from undeveloped land in the late 1930s and transforming steadily to include the development and removal of buildings/structures between the late 1950s to the early 2010s. By 2020, the proposed Project site is shown to be consistent with the present site conditions.

The proposed project site is routinely subjected to disking for weed abatement. No cultural materials were observed within the proposed project site as a result of the pedestrian survey (completed September 22, 2022). However, of note, review of the geotechnical report (Appendix E) prepared for the proposed project site revealed that the proposed project site is predominately covered in fill soils at all locations investigated, from surface to between 2 inches and 3 feet below from surface to between 2 inches and 3 feet, although the origin of the soils was not mentioned. The presence of fill soils demonstrates that native soils within which cultural deposits might exist in context could not have been observed during the survey; this fact demonstrates that the survey findings are less than reliable. As such, any exposed soils observed during

the survey were likely fill soils and not a good representation of the native soils present prior to development/ground disturbing activities.

Current project design indicates that the minimum depth of ground disturbance is between 3 to 4 feet below the existing ground surface with a maximum depth of 16 feet below the existing ground surface for the installation of the infiltration basin within the western portion of the proposed project site.

In consideration of all these factors, the potential to encounter intact deposits containing archaeological resources within soils from the current grade and between 2 inches and 3 feet below existing ground surface is unlikely. However, the potential for intact cultural deposits to exist within native soils (below between 2 inches and 3 feet below existing ground surface) to the depths of proposed ground disturbance is unknown. For these reasons, the proposed project site should be treated as potentially sensitive for archaeological resources. In the event that unanticipated archaeological resources are encountered during project implementation, impacts to these resources would be potentially significant.

Thus, mitigation is required to address impacts related to the inadvertent discovery of archaeological resources during construction, as outlined in MM-CUL-1, MM-CUL-2, and MM-CUL-3. MM-CUL-1 requires that all project construction personnel participate in a Workers Environmental Awareness Program training for the proper identification and treatment of inadvertent discoveries. MM-CUL-2 requires the retention of an on-call qualified archaeologist and a survey of the proposed project site after the removal of fill soils. MM-CUL-3 requires construction work occurring within 100 feet of a cultural resource discovery and 100 feet of a human remains discovery be immediately halted until the qualified archaeologist, meeting the Secretary of Interior's Professional Qualification Standards for Archaeology, can assess and evaluate the discovery pursuant to CEQA. Additionally, MM-CUL-3 requires the inadvertent discovery clause be included on all construction plans. With implementation of MM-CUL-1, MM-CUL-2, and MM-CUL-3, potentially significant impacts to unknown archaeological resources would be reduced to less than significant with mitigation incorporated.

MM-CUL-1 Workers Environmental Awareness Program - Prior to the start of construction activities, all construction personnel and monitors shall be trained regarding identification and treatment protocol for inadvertent discoveries of cultural resources (archaeological and tribal) and human remains. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries of cultural resources and human remains. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of materials that may be identified during ground disturbing activities and explain the importance of and legal basis for the protection of human remains and significant cultural resources. Each worker shall also be trained in the proper procedures to follow in the event that cultural resources or human remains are uncovered during ground disturbing activities. These procedures include but are not limited to work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitoring staff.

MM-CUL-2 Retention of an On-Call Qualified Archaeologist – A qualified archaeologist shall be retained and on-call to respond and address any inadvertent discoveries identified project implementation. Additionally, in consideration of the potential to encounter intact cultural deposits beneath fill soils, the qualified archaeologist shall survey the Project site once fill soils have been removed to ensure no cultural deposits underly the fill layer. If is determined, based

on the aforementioned survey, that cultural resources are present or may be present and may be impacted during Project construction, monitoring may be warranted. Additionally, any identified cultural resources shall be assessed and evaluated pursuant to CEQA. If it is determined that monitoring is warranted, a qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, shall oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor will be responsible for maintaining daily monitoring logs.

MM-CUL-3 Inadvertent Discovery Clause - In the event that cultural resources are discovered during project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the other portions of the project outside of the buffered area may continue during this assessment period. Additionally, the Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed within TCR-1, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment.

If significant pre-contact and/or historic-era cultural resources, as defined by CEQA (as amended, 2015), are discovered and avoidance cannot be ensured, the archaeologist shall develop a Monitoring and Treatment Plan, the drafts of which shall be provided to YSMN for review and comment, as detailed within TCR-1. The archaeologist shall monitor the remainder of the project and implement the Plan accordingly.

If human remains or funerary objects are encountered during any activities associated with the project, work in the immediate vicinity (within a 100-foot buffer of the find) shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5 and that code enforced for the duration of the project.

c) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Less-than-Significant Impact. No prehistoric or historic period burials, including those interred outside of formal cemeteries, were identified within the proposed project site as a result of the CHRIS records search or pedestrian survey. In the event that human remains are inadvertently encountered during ground disturbing activities, they shall be treated consistent with state and local regulations including California Health and Safety Code Section 7050.5, California Public Resources Code Section 5097.98, and the California Code of Regulations Section 15064.5(e). In accordance with these regulations, if human remains are found, the County Coroner must be immediately notified of the discovery. No further excavation or disturbance of the project site or any nearby (no less than 100 feet) area reasonably suspected to overlie adjacent remains can occur until the County Coroner has determined if the remains are potentially human in origin. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she is required to notify the NAHC that shall notify those persons believed to be the most likely descendant. The most likely descendant shall determine, in consultation with the property owner, the disposition of the human remains. Compliance with these regulations would ensure that impacts to human remains resulting from the proposed project would be less than significant.

3.6 Energy

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less-than-Significant Impact. The electricity and natural gas used for construction of the proposed project would be temporary, would be substantially less than that required for project operation, and would have a negligible contribution to the project's overall energy consumption. Although the project would see an increase in petroleum use during construction and operation, vehicles would use less petroleum due to advances in fuel economy and potential reduction in vehicle miles traveled (VMT) over time.

Construction

Electricity

Temporary electric power for as-necessary lighting and electronic equipment (such as computers inside temporary construction trailers) would be provided by Southern California Edison. The electricity used for such activities would be temporary, would be substantially less than that required for project operation, and would have a negligible contribution to the project's overall energy consumption.

Natural Gas

Natural gas is not anticipated to be required during construction of the project. Fuels used for construction would primarily consist of diesel and gasoline, which are discussed below under the Petroleum subsection. Any minor amounts of natural gas that may be consumed as a result of project construction would be substantially less than that required for project operation and would have a negligible contribution to the project's overall energy consumption.

Petroleum

Heavy-duty construction equipment associated with construction activities would rely on diesel fuel. Construction workers would travel to and from the project site throughout the duration of construction. It is assumed in this analysis that construction workers would travel to and from the site in gasoline-powered passenger vehicles.

Heavy-duty construction equipment of various types would be used during each phase of project construction. Appendix A lists the assumed equipment usage for each phase of construction.

Fuel consumption from construction equipment was estimated by converting the total carbon dioxide (CO_2) emissions from each construction phase to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. Construction is estimated to occur in 2023 based on the construction phasing schedule. The conversion factor for gasoline is 8.78 kilograms per metric ton CO_2 per gallon, and the conversion factor for diesel is 10.21 kilograms per metric ton CO_2 per gallon (The Climate Registry 2020). The estimated diesel fuel usage from construction equipment is shown in Table 13.

Table 13. Construction Equipment Diesel Demand

Phase	Pieces of Equipment	Equipment CO_2 (MT)	kg/CO_2/Gallon	Gallons
Demolition	6	31.10	10.21	3,046
Site Preparation	7	24.00	10.21	2,351
Grading	6	40.30	10.21	3,947
Building Construction	9	91.30	10.21	8,942
Paving	6	13.70	10.21	1,342
Architectural Coating	1	1.21	10.21	119
			Total	**19,746**

Sources: Pieces of equipment and equipment CO_2 (Appendix A); kg/CO_2/Gallon (The Climate Registry 2020).
Notes: CO_2 = carbon dioxide; MT = metric ton; kg = kilogram.

Fuel consumption from worker and vendor trips is estimated by converting the total CO_2 emissions from each construction phase to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. Worker vehicles are assumed to be gasoline and vendor vehicles are assumed to be diesel. The project also includes haul truck trips for the export of demolition waste and import of earthwork materials. Calculations for total worker, vendor truck and haul truck fuel consumption are provided in Table 14.

Table 14. Construction Worker and Vendor Gasoline and Diesel Demand

Phase	No. of One-Way Trips per Day	Vehicle MT CO_2	kg/CO_2/Gallon	Gallons
Worker (Gasoline)				
Demolition	16	1.98	8.78	226
Site Preparation	18	1.11	8.78	126

			Total	15,256

Sources: Trips and vehicle CO2 (Appendix A); kg/CO2/Gallon (The Climate Registry 2020).
Notes: MT = metric ton; CO2 = carbon dioxide; kg = kilogram.

In summary, construction of the project is anticipated to consume 5,513 gallons of gasoline and 29,488 gallons of diesel over the course of 9 months. The project will be subject to CARB's In-Use Off-Road Diesel Vehicle Regulation that applies to certain off-road diesel engines, vehicles, or equipment greater than 25 horsepower. The regulation (1) imposes limits on idling, requires a written idling policy, and requires a disclosure when selling vehicles; (2) requires all vehicles to be reported to CARB (using the Diesel Off-Road Online Reporting System) and labeled; (3) restricts the adding of older vehicles into fleets starting on January 1, 2014; and (4) requires fleets to reduce their emissions by retiring, replacing, or repowering older engines, or installing Verified Diesel Emission Control Strategies (i.e., exhaust retrofits). The fleet must either show that its fleet average index was less than or equal to the calculated fleet average target rate, or that the fleet has met the Best Achievable Control Technology requirements. The project is also located in an urban area and worker, vendor, and haul truck trip lengths would be shorter compared to a suburban project location, resulting in less energy use. Therefore, impacts to energy resources during construction would be less than significant.

Operation

Electricity

The operation of the project would require electricity for multiple purposes, including cooling, lighting, appliances, and powering various equipment, such as electric forklifts. Additionally, the supply, conveyance, treatment, and distribution of water would indirectly result in electricity usage. Electricity consumption associated with project operation is based on the CalEEMod outputs and spreadsheet calculations for water, wastewater, and electric forklifts presented in Appendix A.

CalEEMod default values for energy consumption for each land use were applied for the project analysis. The energy use from non-residential land uses is calculated in CalEEMod based on the California Commercial End-Use Survey database. Energy use in buildings (both natural gas and electricity) is divided by the program into end use categories subject to Title 24 requirements (end uses associated with the building envelope, such as the heating, ventilation, and air conditioning [HVAC] system; water heating system; and integrated lighting) and those not subject to Title 24 requirements (such as appliances, electronics, and miscellaneous "plug-in" uses).

Title 24 of the California Code of Regulations serves to enhance and regulate California's building standards. The most recent amendments to Title 24, Part 6, referred to as the 2019 standards, became effective on January 1, 2020. According to these estimations, the project would consume approximately 987,255 kilowatt-hours per year during operation (Appendix A).

Natural Gas

The operation would require natural gas for various purposes, including water heating and natural gas appliances and natural gas forklifts. Natural gas consumption associated with operation is based on the CalEEMod outputs in Appendix A.

CalEEMod default values for energy consumption for each land use were applied for the project analysis. The energy use from non-residential land uses is calculated in CalEEMod based on the California Commercial End-Use Survey database. Energy use in buildings (both natural gas and electricity) is divided by the program into end use categories subject to Title 24 requirements (end uses associated with the building envelope, such as the HVAC system, water heating system, and integrated lighting) and those not subject to Title 24 requirements (such as appliances, electronics, and miscellaneous "plug-in" uses).

Title 24 of the California Code of Regulations serves to enhance and regulate California's building standards. The most recent amendments to Title 24, Part 6, referred to as the 2019 standards, became effective on January 1, 2020. According to these estimations, the project would consume approximately 3,347,134 thousand British thermal units per year.

Petroleum

During operations, the majority of fuel consumption resulting from the project would involve the use of forklifts and motor vehicles traveling to and from the project site.

Petroleum fuel consumption associated with motor vehicles traveling to and from the project site is a function of the VMT as a result of project operation. As shown in Appendix A (calculation spreadsheets) and as discussed in Section 3.3 and Section 3.8, the annual VMT attributable to the project is expected to be 1,342,566 miles for passenger vehicles and 1,211,800 miles for trucks. Similar to the construction worker and vendor trips, fuel consumption from worker and truck trips are estimated by converting the total CO_2 emissions from operation of the project to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. Mobile source emissions were estimated using CalEEMod. Calculations for annual mobile source fuel consumption are provided in Table 15.

Table 15. Operational Annual Mobile Source Petroleum Demand

Fuel	Source	Vehicle MT CO_2	kg/CO_2/Gallon	Gallons
Gasoline	Vehicles	615.82	8.78	70,138.91
Diesel	Vehicles	1,412.20	10.21	138,315.35
Diesel	Forklifts	278	10.21	2,838.38
			Total	**211,292.64**

Sources: Trips and vehicle CO_2 (Appendix A); kg/CO_2/Gallon (The Climate Registry 2020).
Notes: MT = metric ton; CO_2 = carbon dioxide; kg = kilogram

As shown in Table 15, total petroleum consumption for the project annually is estimated to be 211,292.64 gallons.[15]

Summary

In summary, although natural gas and electricity usage would increase due to the implementation of the project, the project would be subject to the State Building Energy Efficiency Standards. Although the project would see an increase in petroleum use during construction and operation, vehicles would use less petroleum due to advances in fuel economy and potential reduction in VMT over time. Therefore, impacts to energy resources during operation would be less than significant.

Over the lifetime of the project, the fuel efficiency of the vehicles being used by the visitors and employees of the project is expected to increase. As such, the amount of gasoline consumed as a result of vehicular trips to and from the project site during operation would decrease over time. There are numerous regulations in place that require and encourage increased fuel efficiency. For example, CARB has adopted a new approach to passenger vehicles by combining the control of smog-causing pollutants and GHG emissions into a single coordinated package of standards. The new approach also includes efforts to support and accelerate the number of plug-in hybrids and zero-emission vehicles in California (CARB 2017). Additionally, in response to SB 375, CARB has adopted the goal of reducing per-capita GHG emissions from 2005 levels by 8% by the year 2020 and 13% by the year 2035 for light-duty passenger vehicles in the SCAG planning area. This reduction would occur by reducing VMT through the integration of land use planning and transportation. As such, operation of the project is expected to use decreasing amounts of petroleum over time, due to advances in fuel economy.

The project would create additional electricity and natural gas demand by adding warehouse facilities. New facilities associated with the proposed project would be subject to the State Building Energy Efficiency Standards, embodied in Title 24 of the California Code of Regulations. The efficiency standards apply to new construction of non-residential buildings and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting.

In summary, implementation of the project would increase the demand for electricity and natural gas at the project site and petroleum consumption in the region during construction and operation. However, as the project would be consistent with current regulations and policies, the project would not be wasteful, inefficient, and would not result in unnecessary energy resource consumption. The project's energy consumption demands during construction and operation would conform to the State's Title 24 standards such that the

[15] For context, California is expected to consume approximately 18.5 billion gallons of petroleum per year by 2024 (CARB 2021). Countywide total petroleum use by vehicles is expected to be 1220.99 million gallons per year by 2024 (CARB 2021).

project would not be expected to wastefully use gas and electricity. Since the proposed project would comply with Title 24 conservation standards, the proposed project would not directly require the construction of new energy generation or supply facilities or result in wasteful, inefficient, or unnecessary consumption of energy. Moreover, vehicle usage associated with the project would use less petroleum due to advances in fuel economy and potential reduction in VMT over time. Therefore, impacts would be less than significant.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less-than-Significant Impact. The project would be subject to and would comply with, at a minimum, the California Building Energy Efficiency Standards (24 CCR, Part 6). Part 6 of Title 24 establishes energy efficiency standards for non-residential buildings constructed in California to reduce energy demand and consumption. As such, the project would comply with the California code requirements for energy efficiency.

Part 11 of Title 24 sets forth voluntary and mandatory energy measures that are applicable to the project under the California Green Building Standards. The California Green Building Standards institute mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential, high-rise residential, state-owned buildings, schools, and hospitals, as well as certain residential and non-residential additions and alterations. On this basis, the project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, impacts would be less than significant.

3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
i) ii) Strong seismic ground shaking?	☐	☐	☒	☐

iii) iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. The Alquist-Priolo Zones Special Studies Act defines active faults as those that have experienced surface displacement or movement during the last 11,000 years. As shown in Figure 6-2 of the General Plan, the City of Highland is traversed by the San Andreas Fault System (City of Highland 2006). The Alquist-Priolo Earthquake Fault Zone, as identified in the General Plan, is located 3.2 miles east of the project site (City of Highland 2006). The proposed development lies outside of any Alquist Priolo Special Studies Zone and the potential for damage due to direct fault rupture is considered unlikely (Appendix E, Geotechnical Investigation). Additionally, based on a review of the California Department of Conservation regulatory maps, the project site is not located in a designated Fault Hazard Zone (CDOC 2021). Therefore, no impacts associated with fault rupture would occur.

ii) Strong seismic ground shaking?

Less-than-Significant Impact. Similar to other areas located in the seismically active Southern California region, the City is susceptible to strong ground shaking during an earthquake. However, as previously addressed in Section 3.7(a)(i), the project site is located approximately 3.2 miles west of the San Andreas Fault Zone which is capable of producing a 7.4 magnitude earthquake. Pursuant to Title 15, Buildings and Construction, of the Highland Municipal Code, the project would incorporate

the design recommendations included in its geotechnical report, which will be subject to review and approval by City staff prior to issuance of a grading permit. The project's geotechnical report provides specific design recommendations to ensure the structural integrity of the project in the event that seismic ground shaking is experienced at the project site. These recommendations include performing remedial grading, over-excavating existing soils, and recompacting these soils with structured fill, among other technical design recommendations (Appendix E). Additionally, the project's structures would be designed consistent with the most recent version of the California Building Code, which includes universal standards relating to seismic load requirements. With implementation of the recommendations of the project's geotechnical report, impacts associated with strong seismic ground shaking would be less than significant.

iii) Seismic-related ground failure, including liquefaction?

Less-than-Significant Impact. Liquefaction occurs when partially saturated soil loses its effective stress and enters a liquid state, which can result in the soil's inability to support structures above. Liquefaction can be induced by ground-shaking events and is dependent on soil saturation conditions. As shown in Figure 6-3 of the General Plan, the project site is not within a High Liquefaction Susceptibility Area (City of Highland 2006). In addition, as stated in Appendix E, based on review of local groundwater maps, the depth to groundwater is in excess of 100 feet.

The project would involve the installation of an underground water quality infiltration basin to capture, treat, and infiltrate stormwater flows on the site. Based on the characteristics of soils on site, the site is suitable for stormwater infiltration without increasing the potential for settlement of proposed structures. Therefore, impacts associated with seismic-related ground failure, including liquefaction, would be less than significant.

iv) Landslides?

No Impact. The project site is relatively flat and is not within an area susceptible to landslides as shown in General Plan Figure 6-3 (City of Highland 2006). Therefore, no impact associated with landslides would occur on the project site.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Short-Term Construction Impacts

Less-than-Significant Impact. Ground surfaces that would be temporarily exposed during construction could result in erosion or loss of soil during storm events. Construction projects that involve the disturbance of 1 or more acres of soil, including clearing, grading, and disturbances to the ground such as stockpiling or excavation, are required to obtain coverage under the SWRCB General Permit for Discharges of Stormwater Associated with Construction Activity (Construction General Permit). The Construction General Permit requires the development and implementation of a SWPP (SWRCB 2021). Implementation of a Construction General Permit, including preparation of a SWPPP and installation of BMPs, would reduce the potential for both stormwater runoff and soil erosion impacts. Therefore, short-term construction impacts associated with soil erosion would be less than significant.

Long-Term Operational Impacts

Less-than-Significant Impact. Following construction of the project, ground surfaces would be covered by the proposed warehouse building or otherwise stabilized with landscaping and paving. The stormwater generated on site, along with any sediments contained within the stormwater, will be directed into an on-site corrugated metal pipe infiltration system to be treated on site. Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less-than-Significant Impact. The site is underlain by alluvium generally composed of gravels, cobbles and boulders in a silty sand matrix. As previously discussed, the potential for the project to result in or be affected by landslides and liquefaction is low, and these issues are not anticipated at the project site. The project would be designed consistent with the specific design recommendations of the project's geotechnical report, which provides recommendations to perform remedial grading, over-excavate existing soils, and recompact these soils with structured fill, among other technical design recommendations (Appendix E). Implementation of these recommendations would address these potentially hazardous conditions and ensure structural integrity in the event that seismic-related issues are experienced at the project site. With implementation of the recommendations of the project's geotechnical report, impacts would be less than significant.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less-than-Significant Impact. Expansive soils are characterized by their potential shrink/swell behavior. Shrink/swell is the change in volume (expansion and contraction) that occurs in certain fine-grained clay sediments from the cycle of wetting and drying. Much of the damage to building foundations, roads, and other structures can be caused by the swelling and shrinking of soils as a result of wetting and drying. The upper soils at the project site are very low (Expansion Index = 0–20) in expansion potential (Appendix E). Further, compliance with California Building Code requirements would reduce the potential risk to people and structures due to unstable and expansive soils. Therefore, impacts associated with expansive soils would be less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The proposed project would connect directly to the municipal sanitary sewer system and would not require septic tanks or any other alternative wastewater disposal system. Therefore, no impacts associated with the ability of soils to support septic tanks would occur.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less-than-Significant Impact with Mitigation Incorporated. The geologic units underlying the project site as primarily fill soils encountered at the ground surface. The fill soils generally consist of silty sand with

some gravel, rocks, and minor debris. Native soils generally consisting of silty sand with some gravel and occasional cobbles were encountered beneath the upper fill soils (Appendix E). As is the case with most development projects that involve earthwork activity, there is always a possibility that subsurface construction activity could unearth a potentially significant paleontological resource. MM-GEO-1 would be required to ensure that subsurface construction activity complies with the standard procedures for treatment of unanticipated discovered of paleontological resources; therefore, with incorporation of mitigation, impacts associated with paleontological resources would be less than significant.

MM-GEO-1 Discovery of Paleontological Resources. In the event that paleontological resources (i.e., fossil remains) are exposed during construction activities for the project, all construction work occurring within 50 feet of the find shall immediately stop until a qualitied paleontologist, as defined by the Society of Vertebrate Paleontology's guidelines, can assess the nature and importance of the find. Depending on the significance of the find, the qualified paleontologist may record the find and allow work to continue or may recommend salvage and recovery of the resource. All recommendations shall be made in accordance with the Society of Vertebrate Paleontology's guidelines and shall be subject to review and approval by the City of Highland. Work in the area of the find may only resume upon approval of a qualified paleontologist.

3.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less-than-Significant Impact. Climate change refers to any significant change in measures of climate (e.g., temperature, precipitation, or wind patterns) lasting for an extended period of time (i.e., decades or longer). The Earth's temperature depends on the balance between energy entering and leaving the planet's system, and many factors (natural and human) can cause changes in Earth's energy balance. The greenhouse effect is the trapping and buildup of heat in the atmosphere near the Earth's surface (the troposphere). The greenhouse effect is a natural process that contributes to regulating the Earth's temperature, and it creates a livable environment on Earth. Human activities that emit additional GHGs to the atmosphere increase the amount of infrared radiation that gets absorbed before escaping into space,

thus enhancing the greenhouse effect and causing the Earth's surface temperature to rise. Global climate change is a cumulative impact; a project contributes to this impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. Thus, GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008).

A GHG is any gas that absorbs infrared radiation in the atmosphere; in other words, GHGs trap heat in the atmosphere. As defined in California Health and Safety Code Section 38505(g) for purposes of administering many of the state's primary GHG emissions reduction programs, GHGs include CO_2, methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride (see also CEQA Guidelines Section 15364.5).[16]

The Intergovernmental Panel on Climate Change developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The reference gas used is CO_2; therefore, GWP-weighted emissions are measured in metric tons (MT) of CO_2 equivalent (CO_2e). Consistent with CalEEMod Version 2022, this GHG emissions analysis assumed the GWP for CH_4 is 25 (i.e., emissions of 1 MT of CH_4 are equivalent to emissions of 25 MT of CO_2), and the GWP for N_2O is 298, based on the Intergovernmental Panel on Climate Change's Fourth Assessment Report (IPCC 2007).

As discussed in Section 3.3, the project is located within SCAQMD jurisdictional boundaries. In October 2008, the SCAQMD proposed recommended numeric CEQA significance thresholds for GHG emissions for lead agencies to use in assessing GHG impacts of residential and commercial development projects as presented in its Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold (SCAQMD 2008b). This guidance document, which builds on the previous guidance prepared by the California Air Pollution Control Officers Association, explored various approaches for establishing a significance threshold for GHG emissions. The draft interim CEQA thresholds guidance document was not adopted or approved by the Governing Board. However, in December 2008, the SCAQMD adopted an interim 10,000 MT CO_2e per-year screening level threshold for stationary source/industrial projects[17] for which the SCAQMD is the lead agency (see SCAQMD Resolution No. 08-35).

The SCAQMD formed a GHG CEQA Significance Threshold Working Group to work with SCAQMD staff on developing GHG CEQA significance thresholds until statewide significance thresholds or guidelines are established. From December 2008 to September 2010, the SCAQMD hosted working group meetings and revised the draft threshold proposal several times, although it did not officially provide these proposals in a subsequent document. The SCAQMD has continued to consider adoption of significance thresholds for residential and general land use development projects. The most recent proposal, issued in September 2010, uses the following tiered approach to evaluate potential GHG impacts from various uses (SCAQMD 2010):

Tier 1 Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.

16 Climate-forcing substances include GHGs and other substances such as black carbon and aerosols. This discussion focuses on the seven GHGs identified in the California Health and Safety Code Section 38505; impacts associated with other climate-forcing substances are not evaluated herein.

17 The SCAQMD 10,000 MT CO_2e screening threshold is intended to apply to land use categories that typically contain large stationary source equipment whose emissions are largely permitted or regulated by the SCAQMD. (SCAQMD 2008b).

Tier 2 Consider whether or not the proposed project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, etc. If not, move to Tier 3.

Tier 3 Consider whether the project generates GHG emissions in excess of screening thresholds for individual land uses. The 10,000 MT CO2e per year threshold for industrial uses would be recommended for use by all lead agencies. Under option 1, separate screening thresholds are proposed for residential projects (3,500 MT CO2e per year), commercial projects (1,400 MT CO2e per year), and mixed-use projects (3,000 MT CO2e per year).18 Under option 2, a single numerical screening threshold of 3,000 MT CO2e per year would be used for all non-industrial projects. If the project generates emissions in excess of the applicable screening threshold, move to Tier 4.

Tier 4 Consider whether the project generates GHG emissions in excess of applicable performance standards for the project service population (population plus employment). The efficiency targets were established based on the goal of AB 32 to reduce statewide GHG emissions to 1990 levels by 2020. The 2020 efficiency targets are 4.8 MT CO2e per service population per year (MT CO2e/SP/year) for project level analyses and 6.6 MT CO_2e/SP/year for plan level analyses. The 2035 efficiency targets are 3.0 MT CO_2e/SP/year for project level analyses and 4.1 MT CO_2e/SP/year for plan level analyses. If the project generates emissions in excess of the applicable efficiency targets, move to Tier 5.

Tier 5 Consider the implementation of CEQA mitigation (including the purchase of GHG offsets) to reduce the project efficiency target to Tier 4 levels.

To determine the project's potential to generate GHG emissions that would have a significant impact on the environment, the project's GHG emissions were estimated and then compared to the project quantitative threshold of 3,000 MT CO_2e per year under Tier 3, Option 1. Per the SCAQMD guidance, construction emissions should be amortized over the operational life of the project, which is assumed to be 30 years (SCAQMD 2008).

Construction Greenhouse Gas Emissions

Construction of the project would result in GHG emissions, which are primarily associated with the use of off-road construction equipment, on-road haul and vendor trucks, and worker vehicles. The SCAQMD Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold (SCAQMD 2008b) recommends that "construction emissions be amortized over a 30-year project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies." Thus, the total construction GHG emissions were calculated, amortized over 30 years, and added to the total operational emissions for comparison with the GHG significance threshold of 10,000 MT CO_2e per year. The determination of significance, therefore, is addressed in the operational emissions discussion following the estimated construction emissions.

CalEEMod was used to calculate the annual GHG emissions based on the construction scenario described in Section 3.3. Construction of the project is anticipated to commence in February 2023, lasting a total of

[18] The SCAQMD found that the 3,000 MT CO2e screening threshold would implement the SCAQMD's policy objective of capturing 90% of all GHG emissions in the region. Therefore, staff recommends that this value be used by lead agencies for residential and commercial developments, including industrial parks, warehouses, etc. (SCAQMD 2008b)

9 months and reaching completion in October 2023. On-site sources of GHG emissions include off-road equipment and off-site sources include haul trucks, vendor trucks, and worker vehicles. Table 16 presents construction GHG emissions for the project from on-site and off-site emission sources.

Table 16. Estimated Annual Construction Greenhouse Gas Emissions

Year	CO_2	CH_4	N_2O	R	CO_2e
	Metric Tons per Year				
2022	350	0.02	0.02	0.20	356
				Total	356
				Amortized Emissions (over 30 years)	12

Source: Appendix A.
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; R = refrigerants, CO_2e = carbon dioxide equivalent.

As shown in Table 16, the estimated total GHG emissions during construction of the project would be approximately 356 MT CO_2e. Estimated project-generated construction emissions amortized over 30 years would be approximately 12 MT CO_2e per year. As with project-generated construction air quality pollutant emissions, GHG emissions generated during construction of the project would be short-term in nature, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions. Because there is no separate GHG threshold for construction, the evaluation of significance is discussed in the operational emissions analysis in the following text.

Operational Greenhouse Gas Emissions

CalEEMod Version 2022 was used to estimate potential project-generated operational GHG emissions from mobile, area sources (landscape maintenance), natural gas combustion, electrical generation, water supply and wastewater treatment, solid waste, and off-road equipment (forklifts). Emissions from each category—mobile, area sources, energy sources, mobile sources, solid waste, water supply and wastewater treatment, and off-road equipment—are discussed in the following text with respect to the project. For additional details, see Section 3.3 for a discussion of operational emission calculation methodology and assumptions, specifically for area, energy (natural gas), and mobile sources. Operational year 2024 was assumed to be the first full year of operation following completion of construction.

Area Sources

CalEEMod was used to estimate GHG emissions from the project's area sources, including operation of gasoline-powered landscape maintenance equipment, which produce minimal GHG emissions. It was assumed that 100% of the landscaping equipment would be gasoline powered. Consumer product use and architectural coatings result in VOC emissions, which are analyzed in air quality analysis only, and low to no GHG emissions.

Energy Sources

The estimation of operational energy emissions was based on CalEEMod land use defaults and square footage of the project's land uses. For non-residential buildings, CalEEMod energy intensity value (electricity or natural gas usage per square foot per year) assumptions were based on the California Commercial End-Use Survey database. Emissions are calculated by multiplying the energy use by the utility carbon intensity

(pounds of GHGs per kilowatt-hour for electricity or 1,000 British thermal units for natural gas) for CO_2 and other GHGs.

The current Title 24, Part 6 standards, referred to as the 2019 Title 24 Building Energy Efficiency Standards, became effective on January 1, 2020. The current version of CalEEMod assumes compliance with the 2019 Title 24 Building Energy Efficiency Standards (CAPCOA 2021).

The CalEEMod default energy intensity factor (CO_2, CH_4, and N_2O mass emissions per kilowatt-hour) for Southern California Edison is based on the value for Southern California Edison's energy mix projected for 2024 as reported in CalEEMod Appendix G, Table G-3. SB X1 2 established a target of 33% from renewable energy sources for all electricity providers in California by December 31, 2020, and SB 100 calls for further development of renewable energy, with a target of 44% by December 31, 2024; 52% by December 31, 2027; and 60% by December 31, 2030. As such, GHG emissions associated with project electricity demand would continue to decrease over time.

Mobile Sources

All details for criteria air pollutants discussed in Section 3.3 are also applicable for the estimation of operational mobile source GHG emissions. It was assumed that the warehouse would operate 7 days per week; therefore, 365 days of vehicle emissions were assumed. Regulatory measures related to mobile sources include Assembly Bill (AB) 1493 (Pavley) and related federal standards. AB 1493 required that CARB establish GHG emission standards for automobiles, light-duty trucks, and other vehicles determined by CARB to be vehicles that are primarily used for noncommercial personal transportation in the state. In addition, the National Highway Traffic Safety Administration and EPA have established corporate fuel economy standards and GHG emission standards, respectively, for automobiles and light-, medium-, and heavy-duty vehicles. Implementation of these standards and fleet turnover (replacement of older vehicles with newer ones) will gradually reduce emissions from the project's motor vehicles. The effectiveness of fuel economy improvements was evaluated to the extent it was captured in CalEEMod emission factors for motor vehicles in 2024.

The Advanced Clean Trucks Regulation was approved by CARB in 2020. The purpose of the Advanced Clean Trucks Regulation is to accelerate the market for zero-emission vehicles in the medium- and heavy-duty truck sector and to reduce air pollutant emissions generated from on-road mobile sources (CARB 2020). The regulation has two components including a (1) manufacturer sales requirement and (2) a reporting requirement:

1. Zero-emission truck sales: Manufacturers who certify Class 2b-8 chassis or complete vehicles with combustion engines will be required to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. By 2035, zero-emission truck/chassis sales would need to be 55% of Class 2b – 3 truck sales, 75% of Class 4 – 8 straight truck sales, and 40% of truck tractor sales.
2. Company and fleet reporting: Large employers including retailers, manufacturers, brokers and others will be required to report information about shipments and shuttle services. Fleet owners, with 50 or more trucks, will be required to report about their existing fleet operations. This information will help identify future strategies to ensure that fleets purchase available zero-emission trucks and place them in service where suitable to meet their needs.

Solid Waste

The project would generate solid waste and therefore would result in CO_2e emissions associated with landfill off-gassing. CalEEMod default values for solid waste generation were used to estimate GHG emissions associated with solid waste.

Water and Wastewater

Supply, conveyance, treatment, and distribution of water for the project require the use of electricity, which would result in associated indirect GHG emissions. Similarly, wastewater generated by the project requires the use of electricity for conveyance and treatment, along with GHG emissions generated during wastewater treatment. Water consumption estimates for both indoor and outdoor water use and associated electricity consumption from water use and wastewater generation were estimated using CalEEMod default values.

Refrigerants

Refrigerants are substances used in equipment for air conditioning and refrigeration. Most of the refrigerants used today are HFCs or blends thereof, which can have high GWP values. All equipment that uses refrigerants has a charge size (i.e., quantity of refrigerant the equipment contains), and an operational refrigerant leak rate, and each refrigerant has a GWP that is specific to that refrigerant. CalEEMod quantifies refrigerant emissions from leaks during regular operation and routine servicing over the equipment lifetime, and then derives average annual emissions from the lifetime estimate. The CalEEMod default values for the land use were used.

Off-Road Equipment

The SCAQMD published a summary of operational survey results from 34 operating high-cube warehouses (SCAQMD 2014). The SCAQMD survey reported an average of 0.12 forklifts/pallet jacks per 1,000 square feet of building area, which was applied to the project. Note that this estimate is for total forklifts and pallet jacks. Pallet jacks are small as they are primarily used to lift small loads in tight quarters (and are electric or manual); therefore, assuming all pieces of equipment are forklifts is conservative. For the project, a total of 22 forklifts were assumed. Of the total 22 forklifts, 11 of the forklifts were modeled as diesel powered with Tier 4 Interim compliant engines. The remaining 11 forklifts are assumed to be electric-operated. All 22 forklifts are assumed to operate 8 hours per day and 7 days per week at the project site. CalEEMod was used to estimate emissions from forklifts.

The estimated operational (year 2024) project-generated GHG emissions from area sources, energy usage, motor vehicles, solid waste generation, water usage and wastewater generation, and off-road equipment are shown in Table 17.

Table 17. Estimated Annual Operational Greenhouse Gas Emissions

Emission Source	CO_2	CH_4	N_2O	R	CO_2e
	metric tons per year				
Area	3.57	<0.005	<0.005	—	3.58
Energy	373	0.03	<0.005	—	374
Mobile	2,027	0.14	0.25	2.78	2,108
Solid waste	14.8	1.48	0.00	—	51.7

Table 17. Estimated Annual Operational Greenhouse Gas Emissions

Emission Source	CO_2	CH_4	N_2O	R	CO_2e
		metric tons per year			
Water supply and wastewater	57.4	1.33	0.03	—	100
Off-road equipment (Forklifts)	278	0.01	<0.005	—	279
				Project Total	**2,916**
				Amortized Construction Emissions	*12*
				Operation + Amortized Construction Total	**2,928**

Source: Appendix A.
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; R= refrigerants, CO_2e = carbon dioxide equivalent.

As shown in Table 17, estimated annual generated GHG emissions would be approximately 2,916 MT CO_2e per year as a result of project operation. Estimated annual project-generated operational emissions in 2024 and amortized project construction emissions of approximately 12 MT CO_2e per year would be approximately 2,928 MT CO_2e per year. Annual operational GHG emissions with amortized construction emissions would not exceed the SCAQMD recommended threshold of 3,000 MT CO_2e per year.

b) Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less-than-Significant Impact. The project would result in less-than-significant impacts related to conflicts with GHG emission reduction plans, for the reasons described as follows.

Potential to Conflict with the San Bernardino County Regional GHG Reduction Plan

The San Bernardino Council of Governments adopted a Regional GHG Reduction Plan in March 2021 (SBCOG 2021). The GHG Reduction Plan compiled an inventory of GHG emissions and developed reduction measures that could be adopted by the 21 partnership cities of San Bernardino County. The regional GHG Reduction Plan serves as the basis for cities in the County to develop a more detailed community or local level climate action plan. As discussed in the GHG Reduction Plan, the City selected a goal to reduce its community GHG emissions to a level that is 40% below its 2016 emissions by 2030. The City will meet and exceed this goal subject to reduction measures that are technologically feasible and cost-effective through a combination of state (approximately 70%) and local (approximately 30%) efforts. The Pavley vehicle standards, the state's low carbon fuel standard, the renewable portfolio standard, and other state measures will reduce GHG emissions in the City's on-road, solid waste, and building energy sectors in 2030. However, the City has not adopted a local climate action plan. Nonetheless, the project would comply with or not prevent the City from pursuing the relevant GHG reduction measures and regulations outlined in the Regional GHG reduction Plan, including compliance with applicable Title 24 building standards, and compliance with the City's off-road equipment idling ordinance. The Regional GHG Reduction Plan is not a qualified GHG reduction plan under CEQA Guidelines Section 15183.5. Therefore, this discussion is for informational purposes only and is not determinative of significance

Potential to Conflict with the State Reduction Targets and CARB's Scoping Plan

The Climate Change Scoping Plan, approved by CARB in 2008 and updated in 2014, 2017, and most recently 2022 provides a framework for actions to reduce California's GHG emissions and requires CARB and other

state agencies to adopt regulations and other initiatives to reduce GHGs. While the Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations, it is the official framework for the measures and regulations that will be implemented to reduce California's GHG emissions in alignment with the adopted targets. Therefore, a project would be found to not conflict with the statutes if it would meet the Scoping Plan policies and would not impede attainment of the goals therein.

Under the Scoping Plan, however, several state regulatory measures aim to identify and reduce GHG emissions. CARB and other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area-source emissions (e.g., energy usage and high-GWP GHGs in consumer products) and changes to the vehicle fleet (e.g., hybrid, electric, and more fuel-efficient vehicles) and associated fuels, among others. Nonetheless, the project would comply with various GHG emission reduction regulations to the extent they apply to the project's emissions sources including CARB's tractor-trailer GHG regulations and Heavy-Duty Greenhouse Gas Standards for New Vehicle and Engines.

The 2045 carbon neutrality goal required CARB to expand proposed actions in the Third Update to include those that capture and store carbon in addition to those that reduce only anthropogenic sources of GHG emissions. The proposed project would support the state's carbon neutrality goals, as implementation includes addition of urban-tree and native plantings throughout the project site, which represent opportunities for potential carbon removal and sequestration over the project life-time. However, the Third Update emphasizes that reliance on carbon sequestration in the state's natural and working lands will not be sufficient to address residual GHG emissions, and achieving carbon neutrality will require research, development, and deployment of additional methods to capture atmospheric GHG emissions (e.g., mechanical direct air capture). Given that the specific path to neutrality will require development of technologies and programs that are not currently known or available, the project's role in supporting the statewide goal would be speculative and cannot be wholly identified at this time.

Potential to Conflict with the Southern California Association of Governments 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy

The SCAG 2020–2045 RTP/SCS (Connect SoCal) is a regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. In addition to demonstrating the Region's ability to attain the GHG emission-reduction targets set forth by CARB, the 2020-2045 RTP/SCS outlines a series of actions and strategies for integrating the transportation network with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. Thus, successful implementation of the 2020-2045 RTP/SCS would result in more complete communities with various transportation and housing choices while reducing automobile use.

The following strategies are intended to be supportive of implementing the 2020-2045 RTP/SCS and reducing GHGs: focus growth near destinations and mobility options; promote diverse housing choices; leverage technology innovations; support implementation of sustainability policies; and promote a green region (SCAG 2020). The strategies that pertain to residential development and SCAG's support of local jurisdiction sustainability efforts would not apply to the project. The project's potential to conflict with the remaining applicable strategies is presented in the following text.

Focus Growth Near Destinations and Mobility Options. One of the strategies within the 2020–2045 RPT/SCS focuses on growth near existing transit and implementation of first/last mile strategies. The

project would not conflict with this strategy of the 2020–2045 RTP/SCS as the project is located within 4.6 miles to the San Bernardino Transit Center. Omnitrans provides public transportation throughout the San Bernardino Valley and would serve as the nearest transit service to the project site. The nearest Omnitrans bus stop serves Route 15, located approximately 0.51 miles north of the project site at the intersection of Victoria Avenue/9th Street. Route 15 operates between the Fontana Metrolink Transit Center and the City of Redlands via the Cities of Rialto, San Bernardino, and Highland, with a peak service frequency of 60 minutes throughout the week.

Leverage Technology Innovations. One of the technology innovations identified in the 2020–2045 RTP/SCS that would apply to the project is the promotion and support of low emission technologies for transportation, such as alternative fueled vehicles to reduce per capita GHG emissions. The project would not conflict with SCAG's ability to implement this strategy.

Promote a Green Region. The third applicable strategy within the 2020–2045 RTP/SCS, for individual developments, such as the project, involves promoting a green region through efforts such as supporting local policies for renewable energy production and promoting more resource efficient development (e.g., reducing energy consumption) to reduce GHG emissions. The project would support this measure by complying with the 2019 title 24 building standards.

Based on the analysis above, the project would be consistent with the SCAG 2020–2045 RTP/SCS.

3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Short-Term Construction Impacts

Less-than-Significant Impact. Potentially hazardous materials would likely be handled on the project site as part of project construction. These materials would include gasoline, diesel fuel, lubricants, and other petroleum-based products required to operate and maintain construction equipment. Handling of these potentially hazardous materials would be temporary and would coincide with the short-term construction phase of the project.

Although these materials would likely be stored on the project site, storage would be required to comply with the guidelines set forth by each product's manufacturer and with all applicable federal, state, and local regulations pertaining to the storage of hazardous materials. Consistent with federal, state, and local requirements, the transport of hazardous materials to and from the project site would be conducted by a licensed contractor. Any handling, transport, use, or disposal of hazardous materials would comply with all relevant federal, state, and local agencies and regulations, including EPA, the California Department of Toxic Substances Control, Occupational Safety and Health Administration, the California Department of Transportation, the Resource Conservation and Recovery Act, and the SCAQMD. Therefore, with compliance with applicable regulations, short-term construction impacts related to the transport, use or disposal of hazardous materials would be less than significant.

Long-Term Operational Impacts

Less-than-Significant Impact. Potentially hazardous materials associated with project operations would include materials used during typical cleaning and maintenance activities. Although these potentially hazardous materials would vary, they would generally include household cleaning products, paints, fertilizers, and herbicides and pesticides. Many of these materials are considered household hazardous

wastes, common wastes, and/or universal wastes by EPA, which considers these types of wastes to be common to businesses and households and to pose a lower risk to people and the environment than other hazardous wastes when properly handled, transported, used, and disposed of (EPA 2021). Federal, state, and local regulations typically allow these types of wastes to be handled and disposed of with less stringent standards than other hazardous wastes, and many of these wastes do not have to be managed as hazardous waste. Additionally, any potentially hazardous material handled on the project site would be limited in both quantity and concentrations, consistent with other similar industrial uses located in the City, and any handling, transport, use, and disposal would comply with applicable federal, state, and local agencies and regulations. Further, as mandated by the Occupational Safety and Health Administration (OSHA n.d.), all hazardous materials stored on the project site would be accompanied by a Material Safety Data Sheet, which would inform employees and first responders as to the necessary remediation procedures in the case of accidental release. Therefore, long-term operational impacts associated with hazardous materials would be less than significant.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less-than-Significant Impact. Refer to response provided in Section 3.9(a).

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The nearest school to the project site is Cypress Elementary School (26825 Cypress St.), which is located 0.9 miles northeast of the project site. Therefore, no impacts associated with emitting or handling hazardous materials within 0.25 miles of a school would occur.

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. The project site is not included on any hazardous waste site lists, including the California Department of Toxic Substances Control's EnviroStor database, the State Water Resources Control Board's GeoTracker site, the Cortese List, or other lists compiled pursuant to Section 65962.5 of the Government Code (CalEPA 2021; DTSC 2023; SWRCB 2023). The closest hazardous site to the project site is the former landfill at the Norton Air Force Base, which is designated as a Military Cleanup Site (DTSC Case No. CA4570024345). It accepted general refuse, demolition debris, and industrial waste. It encompassed 35 acres in the northeastern corner of the former base. The landfill was operated as a trench and fill type landfill and received an estimated 1,000,000 cubic yards of waste (SWRCB 2024). In May 2017 an Air Force contractor sampled groundwater to determine the presence or absence of PFAS. PFOA and PFOS were detected in groundwater sample at concentrations below USEPA Health Advisory of 70 parts per trillion. Following construction, the project site would contain landscape areas and other pervious surfaces that would allow for water to percolate into the subsurface soils. The project would include a detention/infiltration basin on the west side of the property to capture and infiltrate runoff. The WQMP's Infiltration BMP Feasibility section concludes that the proposed project, including the infiltration/detention basin, would not pose a significant risk for groundwater and/or increase the risk of geologic hazards. In addition, infiltration on the project site would not negatively affect the hazardous materials cleanup site located at the Norton Air Force Base. Therefore, no impacts associated with hazardous materials sites would occur.

e) ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?***

Less-than-Significant Impact**.** The SBIA is located immediately south of the project site. The SBIA includes two distinct components: (1) the airport portions (and related facilities) of the former Norton Air Force Base and (2) the Trade Center, which encompasses the non-airport related portions of the former base. The project site is located within the Airport Influence Area (General Plan Figure 6-7) outlined in the City's General Plan (City of Highland 2006). As required by state law for real estate transactions within the Airport Influence Area, notification/disclosure statements are required to alert potential buyers and tenants of the presence of and potential impacts from the SBIA. The San Bernardino Airport Land Use Plan is currently being drafted and was not available at the time of this report. Nonetheless, the Federal Aviation Administration Regulations Title 14 Part 77 determines restrictions to obstructions and height limitations for structures taller than 200 feet or within 20,000 feet of an airport. The proposed project would be consistent with the general land use of the area. Therefore, a less-than-significant impact would occur.

f) ***Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?***

Less-than-Significant Impact. The City has an Emergency Operations Plan to ensure the most effective and economical allocation of resources for the maximum benefit and protection of the City in times of emergency. No revisions to this plan would occur as a result of the project. The project does not propose any changes to the geometry of evacuation route roadways to the extent that these roadways' ability to serve as emergency evacuation routes would be compromised. As a result, the project would not significantly affect emergency response or evacuation activities. Therefore, impacts would be less than significant.

g) ***Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?***

No Impact. The City's General Plan does not designate the project site as an area that would be at risk from wildland fires. Although there are currently some isolated vacant lots in the vicinity of the project site, the area surrounding the project site is largely developed and would not likely aid the spread of wildfire. Therefore, no direct or indirect impacts due to wildfire would occur.

3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b)	Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
	i) result in substantial erosion or siltation on or off site;	☐	☐	☒	☐
	ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;	☐	☐	☒	☐
	iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
	iv) impede or redirect flood flows?	☐	☐	☐	☒
d)	In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e)	Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Short-Term Construction Impacts

Less-than-Significant Impact. Construction of the project would include earthwork activities that could potentially result in erosion and sedimentation, which could subsequently degrade downstream receiving waters and violate water quality standards. Stormwater runoff during the construction phase may contain silt and debris, resulting in a short-term increase in the sediment load of the municipal storm drain system. Substances such as oils, fuels, paints, and solvents may be inadvertently spilled on the project site and subsequently conveyed via stormwater to nearby drainages, watersheds, and groundwater.

For stormwater discharges associated with construction activity in the State of California, the SWRCB has adopted the General Permit for Storm Water Discharges Associated with Construction and Land

Disturbance Activities (Construction General Permit) to avoid and minimize water quality impacts attributable to such activities. The Construction General Permit applies to all projects in which construction activity disturbs more than one acre or more of soil. Construction activity subject to this permit includes clearing, grading, and disturbances to the ground, such as stockpiling and excavation. The Construction General Permit requires the development and implementation of a SWPPP, which would include and specify water quality BMPs designed to prevent pollutants from contacting stormwater and keep all products of erosion from moving off site into receiving waters (in this case, the City Creek Bypass Channel, the Santa Ana River, and its discharge into the Pacific Ocean). Routine inspection of all BMPs is required under the provisions of the Construction General Permit, and the SWPPP must be prepared and implemented by qualified individuals as defined by the SWRCB (SWRCB 2021).

The City is a co-permittee under San Bernardino County's National Pollution Discharge Elimination System (NPDES) Permit (No. CAS618036), and as such is required to adhere to the County-wide NPDES permit requirements. Because land disturbance for project construction activities would exceed 1 acre, the project Applicant would be required to obtain coverage under the Construction General Permit issues by the SWRCB prior to the start of construction within the project site. Specifically, the Construction General Permit requires that the following be kept on site at all times: (1) a copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity; (2) a waste discharge identification number issues by the SWRCB; (3) a SWPPP and Monitoring Program Plan for the construction activity requiring the construction permit; and (4) records of all inspections, compliance and non-compliance reports, evidence of self-inspection, and good housekeeping practices.

The SWPPP requires the construction contractor to implement water quality BMPs to ensure that water quality standards are met, and that stormwater runoff from the construction work areas does not cause degradation of water quality in receiving water bodies. The SWPPP must describe the type, location, and function of stormwater BMPs to be implemented and must demonstrate that the combination of BMPs selected is adequate to meet the discharge prohibitions, effluent standards, and receiving water limitations contained in the Construction General Permit. Therefore, short-term construction impacts associated with water quality, stormwater drainage, and stormwater runoff would be less than significant.

It should be noted, that due to the proximity of the San Bernardino County Flood Control District's facility (City Creek Bypass Channel) and right-of-way, in the event encroachments would be necessary for grading access, utility crossings, fence removal/installation, a permit would be required from the San Bernardino County Flood Control District.

Long-Term Operational Impacts

Less-than-Significant Impact. The project would be subject to the municipal stormwater permit, the Municipal Separate Storm Sewer System (MS4) Permit, issued to San Bernardino County and incorporated cities within the County by the Santa Ana Regional Water Quality Control Board. The MS4 Permit requires implementation of low impact development BMPs to prevent pollutants from being discharged off site by mimicking pre-development site hydrology and feasible source control. The Low Impact Development Ordinance is designed to reduce runoff from impervious surfaces, including new development, through landscape design that promotes water retention, permeable surface design, natural drainage systems, and on-site retention where feasible (RWQCB 2010). These project-specific designs would reduce impacts to water quality associated with redevelopment.

As required by the San Bernardino County MS4 NPDES Permit, a preliminary Water Quality Management Plan (WQMP) was prepared for the project in November 2022 (Appendix F). The WQMP is a post-construction management program that outlines implementation measures to ensure water quality standards are met, including implementation of source control and operational BMPs such as designing landscape to minimize irrigation and runoff, utilizing covered and leak proof trash dumpsters, and sweeping and litter control of loading areas in order to prevent pollutants from entering runoff. The WQMP would be implemented prior to the issuance of grading/building permits as required by the San Bernardino County MS4 NPDES Permit. The project would not violate any water quality standards or waste discharge requirements during long-term operation through compliance with the WQMP. Therefore, long-term operational impacts associated with water quality, stormwater drainage, and stormwater runoff would be less than significant.

In summary, project grading and construction would be completed in accordance with an NPDES-mandated SWPPP, which would include standard BMPs to reduce potential off-site water quality impacts related to erosion and incidental spills of petroleum products and hazardous substances from equipment. Surface water runoff during project operations would be managed through the use of a proposed underground infiltration/detention system on the west side of the project site. Therefore, the project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality and water quality impacts would be less than significant.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Groundwater Supplies

Less-than-Significant Impact. The project site is located within the service area of the EVWD. EVWD's main water supply is from the Bunker Hill Basin, which has the capacity to provide 70,000 acre-feet per year from groundwater and surface water resources. A new 2-inch water line would be installed on the western side of the project site to connect to the existing 6-inch water line within the public ROW along Victoria Avenue to provide domestic and irrigation water service to the site. The proposed project also includes the construction of an on-site underground infiltration/detention basin on the west side of the project site for treatment. During a 100-year storm event, the underground system would be able to capture 100% of the storm event (Appendix G, Preliminary Drainage Report).

Additionally, according to the geotechnical investigation (Appendix E), groundwater was not encountered during test excavations. As such, the project's subsurface construction activities, which would only extend a few feet below grade, are highly unlikely to encounter groundwater, and dewatering activities are not anticipated to be necessary. Therefore, impacts associated with groundwater supplies would be less than significant.

Groundwater Recharge

Less-than-Significant Impact**.** While not fully developed, the project site is highly disturbed and does not contain a groundwater recharge basin or other facilities that promote groundwater recharge. Thus, under the existing condition, the project site is not considered an important location for groundwater recharge.

Following construction, the project site would contain landscape areas and other pervious surfaces that would allow for water to percolate into the subsurface soils. The project would include a detention/infiltration basin on the west side of the property to capture and infiltrate runoff. The WQMP's Infiltration BMP Feasibility section concludes that the proposed project, including the infiltration/detention basin, would not pose a significant risk for groundwater and/or increase the risk of geologic hazards. In addition, infiltration on the site would not negatively affect the hazardous materials (soils/water) contamination located at the Norton Air Force Base to the southeast of this site. Therefore, impacts associated with groundwater recharge would be less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) result in substantial erosion or siltation on or off site;

Less-than-Significant Impact. Under the existing conditions, the project site consists of vacant land. The project would construct new paved surfaces, a warehouse building, and landscape areas.

The project would also include a new engineered storm drainage system that would feature structural BMPs, including an infiltration/detention system to treat and manage on-site stormwater flows. The proposed infiltration/detention system would be designed to capture 100% of a 100-year storm event and would minimize the potential for siltation or erosion on or off site. The project's proposed storm drain system would be designed to conform with all applicable federal, state and local requirements related to drainage, hydrology, and water quality, including the current MS4 Permit adopted by the Santa Ana Regional Water Quality Control Board. Strom drains would also be subject to the San Bernardino County Flood Control District's Comprehensive Storm Drain Plan No. 6 (August 2001). Additionally, the project's structural BMPs would be designed such any potential sediments collected on site are captured in retention facilities so that they would not be conveyed to downstream waters and result in siltation.

As such, altering the on-site drainage pattern would be conducted in a manner consistent with all applicable standards related to the collection and treatment of stormwater, such that they would not result in substantial erosion or siltation on or off site. Therefore, impacts associated with altering the existing drainage pattern of the project site would be less than significant.

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;

Less-than-Significant Impact. The project would increase the amount of impervious surfaces on the project site. The project site slopes down by approximately 0.7% from the northwest corner to the southwest corner and has about 6 feet of fall from upstream to downstream. Existing runoff sheet flows in a southwesterly direction onto the 3rd Street and Victoria Avenue intersection where it is intercepted by existing catch basins. The collected flow discharges to the 3rd Street storm drain system, followed by the City Creek Bypass Channel, Santa Ana River, and finally enters the Prado Basin (Figure 8).

The project would involve the construction of a new engineered storm drain system to collect and treat on-site stormwater runoff. Strom drains would be subject to the San Bernardino County Flood Control District's Comprehensive Storm Drain Plan No. 6 (August 2001). The existing drainage pattern would be preserved in post-developed conditions (Figure 9). On-site stormwater will be collected via a series of roof drains, curbs, gutters, and catch basins before being conveyed to an on-site underground infiltration/detention basin located in the western portion of the site. The infiltration/detention basin would be designed to allow for stormwater flows to infiltrate into the soils. The infiltration basin would be sized to capture and infiltrate flows for a 100-year design storm, consistent with the San Bernardino County Hydraulics Manual. However, if the proposed underground infiltration/retention chamber system reaches capacity, overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system.

The development of the existing site into the proposed project would not create any adverse impacts downstream for storm events up to the 100-year storm. There would not be an increase in the existing discharge from the site in both the 10-year and 100-year events due to the proposed infiltration basin that would be sized to capture and infiltrate the 100-year rainfall event. Discharge from the site would greatly decrease from the existing condition. As such, the proposed project would not increase the amount of surface runoff and impacts would be less than significant.

iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

Less-than-Significant Impact. The project would increase the amount of impervious surfaces on the project site; however, runoff would be routed to the proposed underground infiltration/detention system on the western side of the project site through a combination of roof drains, storm drains, curbs, and gutters.

The proposed on-site underground infiltration/detention system was designed to infiltrate 100% of the 100-year storm event. However, if the proposed underground infiltration/retention chamber system reaches capacity, overflow from the infiltration system would be directed through a proposed 24-inch outlet connecting to the back of the existing catch basin on Victoria Avenue, which discharges to the 3rd Street storm drain system. According to the Preliminary Drainage Report (Appendix G) prepared for the project, the underground infiltration/detention system has the capacity to retain 27,766 cubic feet of stormwater before any stormwater is allowed to discharge from the project site, which is large enough to accommodate a 100-year storm event. The analysis concluded that the drainage and storm drain facilities are adequately sized to handle a 100-year design storm event, consistent with the methodology outlined in the San Bernardino County Flood Control District Hydrology Manual. Therefore, impacts associated with the project creating or contributing runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff would be less than significant.

iv) impede or redirect flood flows?

No Impact**.** According to the Federal Emergency Management Agency Flood Insurance Rate Map No. 06071C8701J (FEMA 2016), a majority of the project site is located in Zone X, which is

located outside of the 0.2% Annual Chance Flood Hazard Zone (500-year floodplain). However, there is a portion of the site (less than 3% of the overall site) at the southeast corner that is located in Zone AE, which is a Special Flood Hazard Area subject to inundation by the 1% annual chance flood. The building footprint would be located outside the limits of the AE Zone. Uses within the AE Zone would be parking and driveway access and would be kept free of structure encroachments. In additional, the adjacent grade near the floodplain will be 2-ft lower than the building finish floor. The project's on-site storm drain systems would adequately provide flood protection for the 100-year storm event and there would not be a substantial increase in flood heights. Implementation of the project would not substantially impede or redirect flood flows. Therefore, no impacts associated with flooding would occur.

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

Less-than-Significant Impact. The project site is located approximately 70 miles east of the Pacific Ocean. Because of the project site's inland location, the project would not be subject to tsunami. Additionally, due to the lack of a larger adjacent perennial waterbody such as a reservoir or lake, the project site would not be susceptible to seiche. Further, the project site's relatively flat topography and lack of nearby hillside would eliminate any impact-related mudflow. However, the project site, along with most of the City, is within the limit of flooded area with that would result from dam failure of the Seven Oaks Dam and/or a 500-year flood (City of Highland 2006). The Seven Oaks Dam has been designed to resist an earthquake measuring 8.0 on the Richter scale and is designed to provide flood protection during 350-year storm events. Based on these design characteristics and ongoing maintenance of the dam's structural integrity, it is highly unlikely that the project site would be subject to inundation due to a failure of the Seven Oaks Dam. Therefore, due to the low likelihood that the Seven Oaks Dam would be subject to failure and because the project would not involve the uncontained storage of pollutants outside of the proposed building, the project would not risk release of pollutants due to inundation associated with these natural phenomena, and impacts would be less than significant.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less-than-Significant Impact. Refer to responses provided in Section 3.10(a) and 3.10(b). The project would comply with regional and local regulations requiring preparation of a SWPPP and would not obstruct existing water quality control plans or groundwater sustainable management plans. In addition, the project applicant would comply with the project specific WQMP during operation activities. The proposed project would provide an on-site infiltration/detention basin, which would help the City sustainably manage groundwater levels. Therefore, impacts associated with conflict with a water quality control plan or sustainable groundwater management plan would be less than significant.

3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

a) Would the project physically divide an established community?

No Impact. The physical division of an established community is typically associated with the construction of a linear feature, such as a major highway or railroad tracks, or removal of a means of access, such as a local road or bridge, which would impair mobility within an existing community or between a community and an outlying area. Currently, the project site is located within an area of the City that is primarily zoned for business park uses, and thus, is not used as a connection between two established communities.

Instead, connectivity in the surrounding project area is facilitated via local roadways and pedestrian facilities. Despite the nearby scattered residential uses, the project would not impede movement between these residences within the project area, within an established community, or from one established community to another. Therefore, no impacts associated with division of an existing community would occur.

Additionally, the proposed annexation will create a more cohesive community by taking an outlier parcel from the City of San Bernardino, which is currently in an island of Highland properties, and bringing it into the corporate boundaries. This will make cohesive development attainable. The entire project can be achieved without carving out small portions that are within the City of San Bernardino.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Less-than-Significant Impact. The City's Zoning Map designates the project site as BP, with the exception of parcel 1192-551-01 within the City of San Bernardino which is zoned Commercial General 1. Parcel 1192-551-01 would be annexed into the City of Highland as part of the proposed project and would be Pre-Zoned BP through Zone Change Application (ZC 23-001). According to Section 16.24.020(A), the primary purpose of the BP district is to provide appropriate regulations and suitable locations for light industrial, research and development, and office-based firms seeking pleasant and attractive working environments, as well as for business support services and commercial uses requiring large parcels (City of Highland 2021). The City's Municipal Code identifies Warehousing and Wholesaling as permitted, subject to a conditional use permit application (City of Highland 2021). As part of the City's site-plan review process,

the City would thoroughly review all plans for the proposed project to ensure compliance with all applicable development standards set forth in the Municipal Code and other relevant land use plans, policies, and regulations. As part of the City's site-plan review process, the City has determined that the project would be consistent with all development standards required for the BP zone, with the exception of Section 16.24.040. Employment District Development Standards, of the City's Municipal Code, which states that building heights are not to exceed 35 feet within the BP district. The project proposes a building height of 45 feet. However, the procedures outlined in Section 16.08.870 states that the City may permit such modification of the height regulations as are necessary to secure an appropriate improvement on a lot. As such, upon approval of Variance No. 22-006, the project's height could be allowed within in the BP district.

The City's General Plan Land Use Map designates the project site as BP within the Victoria Avenue Corridor (City of Highland 2006). Parcel 1192-551-01 within the City of San Bernardino has a General Plan land use of Commercial General 1. Parcel 1192-551-01 would be annexed into the City of Highland as part of the proposed project and would the land use designation would be revised to BP through General Plan Amendment (GPA 23-001). The BP land use permits a variety of light industrial, research and development, and office uses. The maximum floor area ratio permitted within the BP designation is 0.6 (City of Highland 2006). The proposed project would include construction of an industrial warehouse with a floor area ratio of 0.56. As such, the proposed project is consistent with the permitted land use and maximum density permitted by the City.

To entitle the project as proposed, the City of San Bernardino parcel must be annexed into the City of Highland. This process will include a Sphere of Influence adjustment by LAFCO followed by an Annexation by City of Highland and a detachment by City of San Bernardino. The project's entitlements include applications to Pre-Zone and amend the General Plan land use designation of the site to ensure conformance with the surrounding properties as it transitions between jurisdictions.

The Victoria Avenue Corridor is located along Victoria Avenue from Highland Avenue to 3rd Street. The purpose of the Victoria Avenue Corridor is to establish new land use patterns to take advantage of future commercial opportunities, improve traffic, and provide future development opportunities along Victoria Avenue (City of Highland 2006). Development of a light industrial warehouse would introduce additional processing and distribution opportunities in close proximity to the SBIA.

As such, the project would be consistent with local plans, policies, and regulations governing land use decisions. Therefore, impacts associated with applicable land use plans, policies, and regulations would be less than significant.

3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☒	☐

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Less-than-Significant Impact. According to the City's General Plan, the project site is within an MRZ-2, meaning significant mineral deposits or likelihood of significant mineral deposits exist; however, the significance of the deposit is undetermined.

The project site is located in an urbanized portion of the City and is bound by existing residential, commercial, and industrial development in all directions. Mineral resource mining is not a compatible use with these land uses. The project site is not large enough to effectively extract mineral resources. Considering the existing surrounding land uses and the incompatibility of mineral resource extraction activities in the project area, potential significant mineral resources within the project area are considered unavailable for extraction. Therefore, impacts associated with mineral resources would be less than significant.

b) Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Less-than-Significant Impact. Refer to the response provided in Section 3.11(a).

3.13 Noise

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

Noise is defined as unwanted sound. Sound may be described in terms of level or amplitude (measured in decibels [dB]), frequency or pitch (measured in hertz or cycles per second), and duration (measured in seconds or minutes). The standard unit of measurement of the amplitude of sound is the decibel. Because the human ear is not equally sensitive to sound at all frequencies, a special frequency-dependent rating scale is used to relate noise to human sensitivity. The A-weighted decibel (dBA) scale performs this compensation by discriminating against low and very high frequencies in a manner approximating the sensitivity of the human ear. Several descriptors of noise (noise metrics) exist to help predict average community reactions to the adverse effects of environmental noise, including traffic-generated noise, on a community. These descriptors include the equivalent noise level over a given period (L_{eq}), the statistical sound level, the day–night average noise level (L_{dn}), and the Community Noise Equivalent Level (CNEL). Each of these descriptors uses units of dBA. Table 18 provides examples of A-weighted noise levels from common sounds. In general, human sound perception is such that a change in sound level of 3 dBA is barely noticeable, a change of 5 dBA is clearly noticeable, and a change of 10 dBA is perceived as doubling or halving the sound level.

Table 18. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
—	110	Rock band
Jet flyover at 300 meters (1,000 feet)	100	—
Gas lawn mower at 1 meter (3 feet)	90	—
Diesel truck at 15 meters (50 feet), at 80 kilometers per hour (50 mph)	80	Food blender at 1 meter (3 feet) Garbage disposal at 1 meter (3 feet)
Noisy urban area, daytime gas lawn mower at 30 meters (100 feet)	70	Vacuum cleaner at 3 meters (10 feet)
Commercial area Heavy traffic at 90 meters (300 feet)	60	Normal speech at 1 meter (3 feet)
Quiet urban daytime	50	Large business office Dishwasher, next room
Quiet urban nighttime	40	Theater, large conference room (background)
Quiet suburban nighttime	30	Library
Quiet rural night time	20	Bedroom at night, concert hall (background)
—	10	Broadcast/recording studio

Table 18. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
Lowest threshold of human hearing	0	Lowest threshold of human hearing

Source: Caltrans 2013.
Note: dBA = A-weighted decibel.

L_{eq} is a sound energy level averaged over a specified period (typically no less than 15 minutes for environmental studies). L_{eq} is a single numerical value that represents the amount of variable sound energy received by a receptor during a time interval. For example, a 1-hour L_{eq} measurement would represent the average amount of energy contained in all the noise that occurred in that hour. L_{eq} is an effective noise descriptor because of its ability to assess the total time-varying effects of noise on sensitive receptors.

Unlike the L_{eq} metrics, L_{dn} and CNEL metrics always represent 24-hour periods, usually on an annualized basis. L_{dn} and CNEL also differ from L_{eq} because they apply a time-weighted factor designed to emphasize noise events that occur during the evening and nighttime hours (when speech and sleep disturbance is of more concern). "Time weighted" refers to the fact that L_{dn} and CNEL penalize noise that occurs during certain sensitive periods. In the case of CNEL, noise occurring during the daytime (7:00 a.m.–7:00 p.m.) receives no penalty. Noise during the evening (7:00 p.m.–10:00 p.m.) is penalized by adding 5 dB, while nighttime (10:00 p.m.–7:00 a.m.) noise is penalized by adding 10 dB. L_{dn} differs from CNEL in that the daytime period is defined as 7:00 a.m.–10:00 p.m., thus eliminating the evening period. L_{dn} and CNEL are the predominant criteria used to measure roadway noise affecting residential receptors. These two metrics generally differ from one another by no more than 0.5 dB to 1 dB and, as such, are often treated as equivalent to one another.

Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some common sources of vibration are trains, buses on rough roads, and construction activities, such as blasting, pile driving, and heavy earthmoving equipment.

Several different methods are used to quantify vibration. Peak particle velocity is defined as the maximum instantaneous peak of the vibration signal. Peak particle velocity is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second. The root mean square amplitude is most frequently used to describe the effect of vibration on the human body and is defined as the average of the squared amplitude of the signal. Decibel notation is commonly used to measure root mean square. The decibel notation acts to compress the range of numbers required to describe vibration.

High levels of vibration may cause physical personal injury or damage to buildings. However, vibration levels rarely affect human health. Instead, most people consider vibration to be an annoyance that can affect concentration or disturb sleep. In addition, high levels of vibration can damage fragile buildings or interfere with equipment that is highly sensitive to vibration (e.g., electron microscopes). Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or slamming of doors. Typical outdoor sources of perceptible vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If the roadway is smooth, the vibration from traffic is rarely perceptible.

Sensitive Receptors

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would be considered noise and vibration sensitive and may warrant unique measures for protection from intruding noise. Sensitive receptors in the vicinity of the project site consist of legal non-conforming residential uses (i.e., non-residentially zoned) located to the north of the project site. These sensitive receptors represent the nearest sensitive land uses with the potential to be impacted by construction and/or operation of the project.

Existing Noise Conditions

Noise measurements were conducted in the vicinity of the project site on September 27, 2022, to characterize the existing noise levels. Table 19 provides the locations, dates, and times the noise measurements were taken. The noise measurements were taken using a Soft dB Piccolo sound level meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The sound level meter meets the current American National Standards Institute standard for a Type 2 (General Use) sound level meter. The accuracy of the sound level meter was verified using a field calibrator before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Table 19. Measured Noise Levels

Receptor	Location	Date	Time	L_{eq} (dBA)	L_{max} (dBA)
ST1	Adjacent to the single-family residence at 7977 Victoria Ave.	09/27/2022	12:49 p.m.–1:04 p.m.	66.8	79.5
ST2	Adjacent to the multi-family residences at 26604 W. 5th St.	09/27/2022	12:34 p.m.–12:49 p.m.	64.7	80.3
ST3	Adjacent to the single-family residence at 26811 W. 5th St.	09/27/2022	12:16 p.m.–12:31 p.m.	71.2	93.7

Source: Appendix H.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; L_{max} = maximum sound level during the measurement interval.

Three short-term noise measurement locations (ST1–ST3) were conducted in the vicinity of the project site. The measured L_{eq} and maximum noise levels are provided in Table 19. The field noise measurement data sheets are provided in Appendix H, Noise Modeling. The primary noise sources at the sites identified in Table 19 consisted of traffic on local roadways; other, secondary noise sources included traffic, distant traffic, birdsong, sirens, HVAC noise, rustling leaves, distant aircraft, and distant barking dogs. As shown in Table 19, the measured sound levels ranged from approximately 65 dBA L_{eq} at ST2 to approximately 71 dBA L_{eq} at ST3.

Regulatory Setting

Federal

There are no federal noise standards that would directly regulate environmental noise during construction and operation of the project. The following is provided because guidance summarized herein is used or pertains to the analysis.

Federal Transit Administration

In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although this FTA guidance is not a binding regulation, it is provided here for comparison purposes in the absence of such limits at the state and local jurisdictional levels.

Federal Interagency Committee on Noise

Some guidance regarding the determination of a substantial permanent increase in ambient noise levels in the project vicinity above existing levels is provided by the 1992 findings of the Federal Interagency Committee on Noise (FICON) (FICON 1992), which assessed the annoyance effects of changes in ambient noise levels resulting from aircraft operations. The FICON recommendations are based upon studies that relate aircraft and traffic noise levels to the percentage of persons highly annoyed by the noise. Annoyance is a qualitative measure of the adverse reaction of people to noise that generates speech interference, sleep disturbance, or interference with the desire for a tranquil environment.

The rationale for the FICON recommendations is that it is possible to consistently describe the annoyance of people exposed to transportation noise in terms of L_{dn}. The changes in noise exposure that are shown in Table 20 are expected to result in equal changes in annoyance at sensitive land uses. Although the FICON recommendations were specifically developed to address aircraft noise impacts, they are used in this analysis to define a substantial increase in community noise levels related to all transportation noise sources and permanent non-transportation noise sources.

Table 20. Measures of Substantial Increase for Community Noise Sources

Ambient Noise Level Without Project (L_{dn})	Significant Impact Assumed to Occur if the Project Increases Ambient Noise Levels by:
<60 dBA	+ 5 dBA or more
60–65 dBA	+ 3 dBA or more
>65 dBA	+ 2 dBA or more

Source: FICON 1992.
Notes: L_{dn} = day–night average noise level; dBA = decibels.

State

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 dBA CNEL and "conditionally acceptable" up to 70 dBA CNEL.[19] Multiple-

[19] A "conditionally acceptable" designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a "normally acceptable" designation indicates that standard construction can occur with no special noise reduction requirements.

family residential uses are “normally acceptable” up to dBA 65 CNEL and “conditionally acceptable” up to dBA 70 CNEL. Schools, libraries, and places of worship are “normally acceptable” up to 70 dBA CNEL, as are office buildings and business, commercial, and professional uses.

Local

City of Highland Municipal Code

Operational Noise Standards

Pursuant to Chapter 8.50 (Noise Control) of the Highland Municipal Code, allowable daytime (between the hours of 7:00 a.m. and 10:00 p.m.) and nighttime (between the hours of 10:00 p.m. and 7:00 a.m.) noise levels are as follows:

- Residential – 60 dBA daytime, 55 dBA nighttime
- Commercial – 70 dBA daytime, 65 dBA nighttime
- Industrial Zone – 75 dBA at any time

Construction Noise Standards

Pursuant to Section 8.50.060 (Exemptions), noise associated with “construction, repair, or excavation work performed pursuant to a valid written agreement with the city or any of its political subdivisions, which agreement provides for noise mitigation measures,” is exempt. Because the proposed project does not include a Development Agreement or other agreement with the City or any of its political subdivisions, it is not exempt from performing a construction noise analysis and providing adequate mitigation measures. The following includes an analysis of the project’s construction noise impacts. In addition to General Plan policy, Building & Safety Division policy limits construction hours from 7:00 am to 7:00 pm.

City of Highland General Plan

The City’s General Plan Noise Element (City of Highland 2006) references the Municipal Code’s noise standards as guidelines to evaluate the acceptability of noise impacts. These standards are used to assess long-term noise impacts on land uses. The Noise Element identifies noise problems in the community, quantifies existing and projected noise levels, addresses excessive noise exposure, and provides regulations to control noise. The General Plan Noise Element contains the following goals and policies that address noise and are applicable to the project:

Goal 7.1. Protect sensitive land uses and the citizens of Highland from annoying and excessive noise through diligent planning and regulation.

Policy 1. Enforce the City’s Noise Control Ordinance consistent with health and quality of life goals and employ effective techniques of noise abatement through such means as a noise ordinance, building codes and subdivision and zoning regulations.

Policy 2. Encourage the use of site planning and architectural techniques such as alternative building orientation and walls combined with landscaping to mitigate noise to levels consistent with interior and exterior noise standards.

Policy 3. Require mitigation where sensitive uses are to be placed along transportation routes to ensure compliance with interior and exterior noise standards.

Policy 4. Consider the compatibility of proposed land uses with the noise environment when preparing, revising or reviewing development proposals.

Policy 7. Require that site-specific noise studies be conducted by a qualified acoustic consultant utilizing acceptable methodologies while reviewing the development of sensitive land uses or development that has the potential to impact sensitive land uses. Also require a site-specific noise study if the proposed development could potentially violate the noise provisions of the General Plan or City ordinance.

Action 3. When site and architectural design features cannot sufficiently reduce adverse noise levels, or cannot be economically provided, require the provision of noise barriers/berms, provided that noise barriers:

- are sufficiently massive to prevent significant noise transmission and high enough to shield receiver from noise source;
- noise barriers exhibit a minimum acceptable density of four pounds per square foot (equivalent to 3/4-inch plywood);
- contain no cracks or openings; and
- minimize the effect of flanking by bending the barrier back from the noise source at the end of the barrier.

Action 4. Require landscaping treatment to be provided in conjunction with noise barriers to provide visual relief and to reduce aesthetic impacts.

Action 6. Maintain a noise complaint file to document areas of excessive noise in the City.

Goal 7.3. Protect residents from the effects of “spill over” or nuisance noise.

Policy 1. Enforce the City’s Noise Control Ordinance so that new projects located in commercial or entertainment areas do not exceed stationary-source noise standards at the property line of proximate residential or commercial uses, as appropriate.

Policy 2. Prohibit new industrial uses from exceeding commercial or residential stationary-source noise standards at the most proximate land uses, as appropriate. (Industrial noise may spill over to proximate industrial uses so long as the combined noise does not exceed the appropriate industrial standards.)

Policy 3. Require that construction activities employ feasible and practical techniques to minimize noise impacts on adjacent uses. Particular emphasis shall be placed on the restriction of hours in which work other than emergency work may occur.

Policy 4. Require that the hours of truck deliveries to commercial properties abutting residential uses be limited unless there is no feasible alternative or there are overriding transportation benefits by scheduling deliveries at another hour.

Policy 5. Ensure that buildings are constructed to prevent adverse noise transmission between differing uses located in the same structure and individual residences in multi-family buildings.

Action 1. As a condition of approval, limit non-emergency construction activities adjacent to existing noise-sensitive uses to daylight hours between 7:00 a.m. and 6:00 p.m. Monday through Saturday unless otherwise approved by the Building Official on an emergency basis.

Action 2. Ensure that the design and placement of air conditioning units and pool equipment within residential areas is accomplished in a manner that does not intrude upon the peace and quiet of adjacent noise-sensitive uses.

Action 3. Encourage the use of portable noise barriers for heavy equipment operations performed within 100 feet of existing residences or make applicant provide evidence as to why the use of such barriers is infeasible.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction Noise

Less-than-Significant Impact**.** Construction noise is considered a short-term impact and would be considered significant if construction activities were to exceed the allowable hours of operation, as permitted by the City. Noise-sensitive land uses in the vicinity of the project include residences to the north (within approximately 75 feet of the construction boundary). The construction noise assessment focused on noise levels that would occur at the nearest residences; construction noise levels at greater distances from the site would be lower. Modeling assumptions and output calculations are provided in Appendix H.

Project-generated construction noise will vary depending on the construction process, the type of equipment involved, the location of the construction site with respect to sensitive receptors, the schedule proposed to carry out each task (e.g., hours and days of the week), and the duration of the construction work. A likely worst-case construction noise scenario using information provided by the project applicant and equipment identified by CalEEMod (see Section 3.3) for this type and size of project was calculated using the Federal Highway Administration's Roadway Construction Noise Model (FHWA 2008). Table 5 in Section 3.3 presents the equipment list used for the construction noise analysis.

Using the provided construction information, the Roadway Construction Noise Model was used to predict noise from on-site construction activities. The results are summarized in Table 21 (see Appendix H for model results). Table 21 provides construction noise estimates for both a "typical worst-case" 1-hour average scenario in which construction equipment may be operating in proximity to any one receiver for extended periods, as well as an 8-hour average workday in which it is assumed that typically the equipment would be in motion and working both near and far from any one receiver, equating to approximately twice as far compared to the 1-hour scenario. The resulting 8-hour levels are thus 6 decibels lower than the 1-hour levels, based upon a noise attenuation rate of 6 decibels per doubling of distance.

As shown, the highest noise levels from construction are predicted to range from approximately 76 dBA $L_{eq\ 1\text{-}hour}$ (during the architectural coating phase) to 87 dBA $L_{eq\ 1\text{-}hour}$ (during demolition) at the nearest receivers. These maximum noise levels are considered to be a peak exposure, applicable to not more than 10%–15%

of the total construction period, only while the construction activity is taking place along the property boundary closest to these nearest off-site receivers. In terms of a typical 8-hour workday, the highest noise levels from construction are predicted to range from approximately 67 dBA $L_{eq\ 8\text{-}hour}$ (during the architectural coating phase) to 78 dBA $L_{eq\ 8\text{-}hour}$ (during demolition) at the nearest receivers.

The average construction noise levels (for construction taking place at a range of locations on site and modeled at the acoustical center for analysis purposes) range from approximately 58 dBA $L_{eq\ 1\text{-}hour}$ (during architectural coating) to approximately 72 dBA $L_{eq\ 1\text{-}hour}$ (during grading and site preparation) at the closest residences, as shown in Table 21. The average noise levels (based upon the acoustic center)[20] are considered a better representation of the overall noise exposure experience for adjacent receivers over the duration of each construction phase.

Noise levels, while relatively high when equipment is operating near the project boundaries, would not exceed the FTA's 80 dBA $L_{eq\ 8\text{-}hour}$ threshold.

Table 21. Construction Noise Summary of Results (dBA $L_{eq\ 1\text{-}hour}$/dBA $L_{eq\ 8\text{-}hour}$)

Receiver Location (Distance)/ Description	Zoning Designation	Construction Noise Level by Construction Phase[1]					
		Demo.	Site Prep.	Grading	Building Const.	Paving	Arch. Coating
North Neighbor (75 feet)/Legal Non-Conforming Residence	Residential	87/78	84/75	86/77	84/75	82/73	76/67
Acoustic Center North Neighbor (425 feet)/ Legal Non-Conforming Residence	Residential	72/63	73/64	73/64	71/62	69/60	58/49

Source: Appendix H.
Notes: dBA = A-weighted decibels; $L_{eq\ 1\text{-}hour}$ = equivalent continuous sound level (time-averaged sound level) during a 1-hour period near the project boundary; $L_{eq\ 8\text{-}hour}$ = equivalent continuous sound level (time-averaged sound level) during an 8-hour construction workday; Demo. = Demolition; Site Prep. = Site Preparation; Building Const. = Building Construction; Arch. Coating = Architectural Coating.
1 See Section 3.3.

Based on the Roadway Construction Noise Model analysis (FHWA 2008; Appendix H), average noise levels from construction activities are calculated to create noise levels at sensitive residential receivers that would equal but would not exceed the FTA construction noise threshold of 80 dBA $L_{eq\ 8\text{-}hour}$ at nearby sensitive receiver locations. The project would be required to adhere to City of Highland General Plan limitations on construction noise through restrictions on allowable construction hours (City of Highland 2006, Goal 7.3, Action 1):

> As a condition of approval, limit non-emergency construction activities adjacent to existing noise-sensitive uses to daylight hours between 7:00 a.m. and 6:00 p.m. Monday through Saturday unless otherwise approved by the Building Official on an emergency basis.

20 The acoustic center is the combination of all construction work occurring on site, near and far, and is considered to be equivalent to the geometric center, for the purposes of this analysis.

Thus, with incorporation of the City's standard conditions, impacts associated with short-term construction noise would be less than significant and no mitigation measures would be required.

Long-Term Operational Noise

Less-than-Significant Impact. Operation of the project would result in the generation of noise both on and off site. Consistent with similar warehouse and light industrial uses, business operations supported by the project would primarily be conducted within the enclosed buildings, except for traffic movement, parking, and loading and unloading of trucks at designated loading bays. As such, on-site operational noise sources are expected to include roof-top air conditioning units, parking lot activity, and truck loading dock activity. Off-site noise could be generated by vehicles, including heavy trucks, accessing the project site and contributing to vehicular roadway noise. As detailed below, these operational project activities would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies.

On-Site Operational Noise

Implementation of the project would result in changes to existing noise levels on and around the project site by developing new stationary sources of noise, including introduction of outdoor HVAC equipment. These sources may affect noise-sensitive vicinity land uses off the project site.

The proposed warehouse space overall would not be served by heating or air conditioning equipment. However, the floor plan includes an office with an associated mezzanine space at the northwest building corner and at the southeast building corner. For the analysis of noise from HVAC equipment operation, a York Model ZF-048 package HVAC unit was used as a reference. Based upon the square footage of the office and mezzanine spaces (12,000 square feet total), it was assumed that two such units would be required for each of the office/mezzanine locations. The York Model ZF-048 package HVAC unit has a sound power rating of 80 dBA (Johnson Controls 2015). Based on the warehouse roof design provided, there will be a 2.8-foot-high parapet extending along the perimeter of the roof, which would minimize sound from the HVAC unit at nearby noise-sensitive land uses.

The aggregate noise emission from these outdoor-exposed HVAC sound sources has been predicted with the Datakustik CadnaA sound propagation program. CadnaA is a commercially available software program for the calculation, presentation, assessment, and prediction of environmental noise based on algorithms and reference data per International Organization of Standardization Standard 9613-2, Attenuation of Sound During Propagation Outdoors, Part 2: General Method of Calculation. The CadnaA computer software allows one to position sources of sound emission in a simulated three-dimensional space atop rendered "blocks" of project building masses having heights and footprints consistent with project architectural plans and elevations. In addition to the above-mentioned sound source inputs and building-block structures that define the three-dimensional sound propagation model space, the following assumptions and parameters are included in this CadnaA-supported stationary noise source assessment:

- Ground effect acoustical absorption coefficient equal to 0.5, which intends to represent an average or blending of ground covers that are characterized largely by hard reflective pavements and existing building surfaces across the project site and the surroundings;

- Reflection order of 1, which allows for a single reflection of sound paths on encountered structural surfaces such as the modeled building masses;
- Off-site residential structures and the commercial buildings have not been rendered in the model;
- Calm meteorological conditions (i.e., no wind) with 68 degrees Fahrenheit and 50% relative humidity; and
- For purposes of impact assessment as evaluated herein, all of the modeled HVAC equipment are operating concurrently and continuously for a minimum period of 1 hour.

The maximum hourly noise level for all the HVAC equipment operating at each examined point along the property would range from 23 to 31 dBA $L_{eq,}$ which is well below the City's noise standard for both commercial zoning (70 dBA L_{eq} daytime, 65 dBA L_{eq} nighttime) and residences (60 dBA L_{eq} daytime, 55 dBA L_{eq} nighttime). The noise level results are tabulated in Table 22.

Table 22. Mechanical Equipment Operation Noise Summary of Results

Equipment	Noise Level at Property Boundary	
	Receiver Location	Average Noise Level (dBA L_{eq})
HVAC	N1 (northern property boundary)	31
HVAC	W1 (western property boundary)	31
HVAC	E1 (eastern property boundary)	22
HVAC	S1 (southern property boundary)	27

Note: dBA = A-weighted decibels; L_{eq} = equivalent continuous sound level (time-averaged sound level); HVAC = heating, ventilation, and air conditioning.

[1] Assumes 8:00 a.m. to 5:00 p.m. operation of HVAC unit for office occupancy.

The results of the mechanical equipment operations noise analysis indicate that the project would comply with City and State of California noise standards.

Parking Lot Activity

A comprehensive study of noise levels associated with surface parking lots was published in the Journal of Environmental Engineering and Landscape Management (Baltrënas et al. 2004). The study found that average noise levels during the peak period of use of the parking lot (generally in the morning with arrival of commuters and in the evening with the departure of commuters) were 47 dBA at 1 meter (3.3 feet) from the outside boundary of the parking lot. The parking area would function as a point source for noise, which means that noise would attenuate at a rate of 6 dBA with each doubling of distance. The employee parking lots are proposed to be situated on the northeast, southeast, and west sides of the warehouse, no closer than 33 feet from the property line of the project site (from center of drive-aisle to fence) on the western side. At a distance of 33 feet, parking lot noise levels would be approximately 37 dBA L_{eq} at the western property boundary. At a distance of 40 feet, parking lot noise levels would be approximately 36 dBA L_{eq} at the eastern property boundary. At a distance of 45 feet, parking lot noise levels would be approximately 36 dBA L_{eq} at the northern property boundary. At a distance of 60 feet, parking lot noise levels would be approximately 34 dBA L_{eq} at the southern property boundary. This noise level is slightly higher than the noise levels from the HVAC equipment operation along the northern and western property boundaries (approximately 31 dBA L_{eq}). Adding together the parking lot noise (37 dBA L_{eq}) and HVAC equipment noise levels (31 dBA L_{eq}), the combined noise level would be approximately 38 dBA $L_{eq,}$ at the boundary to the west of the project site, which is still well below the

City's noise standards for both commercial and residential land uses. Parking lot activity noise levels are summarized in Table 23.

Truck Loading Dock Activity

The parking lot study (Baltrënas et al. 2004) also examined noise levels associated with cargo truck delivery activity, including noise produced by backup alarms and forklift/yard hostler operations. The study concluded that average noise levels from truck loading/unloading areas was 96 dBA at 1 meter (3.3 feet) from the boundary of the truck activity area. The truck loading dock area (i.e., the truck court) would be located on the eastern side of the proposed warehouse building. The loading docks would be located approximately 100 feet from the northern property line and over 185 feet from the eastern property line. At the southern property line, the noise and view of the loading docks would be entirely obstructed by the warehouse building and would be more than 160 feet away. At the western property line, the noise and view of the loading docks would similarly be obstructed by the warehouse building and would be more than 415 feet away.

Using the outdoor attenuation rate of 6 dBA with each doubling of distance, truck loading activity along the northern property line would produce noise levels of approximately 66 dBA L_{eq}, noise levels along the eastern property boundary would average approximately 61 dBA L_{eq}, noise levels along the western property boundary would average approximately 54 dBA L_{eq}, and noise levels along the southern boundary would average approximately 62 dBA L_{eq} not accounting for the shielding effects from the proposed warehouse building for the northern, southern, and western boundaries and an 8-foot-tall shielding wall on the eastern boundary. Accounting for this acoustical shielding, the truck loading dock noise at the northern property line is estimated to be 54 dBA L_{eq} at the eastern property boundary, 51 dBA L_{eq} at the northern property boundary, 47 dBA L_{eq} at the southern property boundary, and 39 dBA L_{eq} at the western property boundary. Truck loading dock activity noise levels are summarized in Table 23, along with the other on-site noise sources.

Table 23. Combined On-Site Noise Summary of Results – Noise Levels (dBA L_{eq}) at Property Boundaries

Receiver Location	Zoning/Use	Applicable Noise Standard - Daytime/ Nighttime	HVAC	Parking Lot Activity	Truck Loading Dock Activity	Combined HVAC, Parking Lot and Truck Loading Dock Activities Noise	Applicable Noise Standard Exceeded?
N1 (northern property boundary)	Residential	60/55	31	36	51	51	No
W1 (western property boundary)	Business Park	70/65	31	37	39	42	No
E1 (eastern property boundary)	Business Park	70/65	22	36	54	54	No

Table 23. Combined On-Site Noise Summary of Results – Noise Levels (dBA L_{eq}) at Property Boundaries

Receiver Location	Zoning/Use	Applicable Noise Standard - Daytime/ Nighttime	HVAC	Parking Lot Activity	Truck Loading Dock Activity	Combined HVAC, Parking Lot and Truck Loading Dock Activities Noise	Applicable Noise Standard Exceeded?
S1 (southern property boundary)	Business Park	70/65	27	34	47	47	No

As shown in Table 23, on-site noise sources associated with the proposed project would not exceed applicable noise standards. Thus, on-site operational noise would be less than significant.

Project-Generated Off-Site Traffic Noise

The project is expected to generate 416 daily trips to the roadway system; in terms of passenger car equivalent (PCE), which accounts for truck percentages, the project would generate 582 daily trips. The project would not result in a doubling of trips on any particular road segment, per existing (Year 2023) and future (Year 2040) traffic data provided by the project's transportation engineers (Appendix H). Typically, a doubling of the energy of a noise source, such as a doubling of traffic volume, would increase noise levels by 3 dBA.[21] Given that it would result in only a modest increase in traffic on local and regional roadways, the project is not expected to result in an increase of 3 dBA or greater on roadways in the study area. The change in noise level due to the project would not be audible. Therefore, impacts associated with off-site project-generated traffic noise would be less than significant.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less-than-Significant Impact. The main concern associated with groundborne vibration is annoyance; however, in extreme cases, vibration can cause damage to buildings, particularly those that are old or otherwise fragile. Some common sources of groundborne vibration are trains and construction activities such as blasting, pile-driving, and heavy earth-moving equipment. The primary source of groundborne vibration occurring as part of the proposed project is construction activity.

Groundborne vibration information related to construction/heavy equipment activities has been collected by California Department of Transportation. Information from California Department of Transportation indicates that transient vibrations (such as from construction activity) with approximately 0.035 inches per second peak particle velocity (PPV) may be characterized as barely perceptible, and vibration levels of 0.24 inches per second PPV may be characterized as distinctly perceptible (Caltrans 2020). The heavier pieces of construction equipment, such as large bulldozers or hoe rams, would register up to approximately 0.089

[21] Under normal circumstances (i.e., outside of a controlled setting such as a listening laboratory), a 3 dBA increase in noise levels is considered to be the smallest increase that is audible to the human ear; whereas a less than 3 dBA increase in noise levels is considered to be a barely or non-audible increase.

inches per second PPV at a distance of 25 feet, and a clam shovel drop would measure up to approximately 0.202 inches per second PPV at a distance of 25 feet (FTA 2018).

Groundborne vibration is typically attenuated over relatively short distances. At the nearest existing noise/vibration-sensitive use, distance to the nearest construction area (approximately 75 feet) and with the anticipated construction equipment, the vibration level would be approximately 0.017 inches per second PPV. This vibration level would be below the threshold of "distinctly perceptible" of 0.24 inches per second PPV.

Therefore, the major concern with construction vibration is related to building damage. Construction vibration as a result of the proposed project would not result in structural building damage, which typically occurs at vibration levels of 0.5 inches per second PPV or greater for buildings of reinforced-concrete, steel, or timber construction. There would be no impacts related to groundborne vibration.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Less-than-Significant Impact No private airstrips are located in the project vicinity. The SBIA is located approximately 1.3 miles south of the project site. The project site is located within the Airport Influence Area (General Plan Figure 6-7) outlined in the City's General Plan (City of Highland 2006). As required by state law for real estate transactions within the Airport Influence Area, notification/disclosure statements are required to alert potential buyers and tenants of the presence of and potential impacts from the SBIA. According to Exhibit 4H (Existing and Ultimate Noise Contours) of the Airport Layout Plan Narrative Report for SBIA (San Bernardino International Airport Authority 2010), the SBIA's 65 dBA CNEL ultimate noise contour would be located more than 0.3 miles south of the project site.

Policy 1 of Goal 11.1 (Reduce exposure of people to aircraft noise and overflights, and ensure adequate public notification through buyer awareness measures) within the City's General Plan (City of Highland 2006) states: "Limit the development of sensitive land uses located within the 65 decibel (dB) Community Noise Equivalent Level (CNEL)." The City considers residential dwellings and institutional uses such as hospitals, convalescent homes and churches to be sensitive noise receptors, while retail and office uses are considered to be relatively insensitive land uses. Other land use types, including industrial and manufacturing, are considered to be least impacted by noise. Because the proposed project is not noise-sensitive, and because the project site is located well outside the 65 dBA CNEL noise contour, the proposed project would not expose people residing or working in the project area to excessive noise levels. Thus, aircraft and airport-related noise would be less than significant.

3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☒	☐

a) Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less-than-Significant Impact. The project would require a temporary construction workforce and a permanent operational workforce, both of which could potentially induce population growth in the project area. The temporary workforce would be needed to construct the proposed warehouse building and associated improvements. The number of construction workers needed during any given period would largely depend on the specific stage of construction but would likely average a few dozen workers at any given time throughout the workday. These short-term positions are anticipated to be filled primarily by workers who reside in the project area vicinity. Therefore, construction of the project would not generate a permanent increase in population within the project area.

In terms of operational employees, because the future tenant is not yet known, the number of jobs that the project would generate cannot be precisely determined, but it can be estimated. For purposes of analysis, employment estimates are calculated using average employment density factors reported by SCAG. SCAG reports that for every 1,195 square feet of warehouse space in San Bernardino County, the average numbers of jobs supported is one (SCAG 2001). The proposed warehouse would be 173,976square feet, and as such, the estimated number of employees required for operation would be approximately 147 people.

According to the SCAG Demographics and Growth Forecast, employment in the City is anticipated to grow from 6,900 employees in 2016 to 11,100 employees in 2045 (SCAG 2020). The project-related increase in employment would be minimal in comparison to the anticipated increase in the SCAG Demographics and Growth Forecast.

Additionally, as of July 2022, the California Employment Development Department found that the unemployment rate for Riverside-San Bernardino-Ontario Metropolitan Statistical Area, including the City of Highland, is at 3.9%, which is the same as the state average (3.9%) and higher than the national average

(3.5%) for the same period (EDD 2022). Therefore, the project's temporary and permanent employment requirements could likely be met by the City's existing labor force without the need for people to relocate to the project region. The project would not stimulate population growth or a population concentration above what is assumed in local and regional land use plans. Therefore, impacts associated with population growth would be less than significant.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Less-than-Significant Impact. The southern portion of the project site contained three single-family residences demolished in 2023 due to unsafe, substandard conditions. The remainder of the project site consisted of commercial and industrial uses also demolished in 2023.. Although it is speculative where the previous on-site residents would have ultimately relocated, assuming that they would be relocated in the project area, vacant housing opportunities are available within the City. The City has approximately 16,845 housing units with a vacancy rate of 5.7% (DOF 2020). As such, there are approximately 959 vacant housing units in the City. Therefore, impacts associated with displacement of housing would be less than significant.

3.15 Public Services

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
iv) Fire protection?	☐	☐	☒	☐
v) Police protection?	☐	☐	☒	☐
vi) Schools?	☐	☐	☐	☒
vii) Parks?	☐	☐	☐	☒
viii) Other public facilities?	☐	☐	☐	☒

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire protection?

Less-than-Significant Impact**.** The California Department of Forestry and Fire Protection (CAL FIRE) provides fire protection and emergency medical services to the City, including the project site, through a cooperative agreement that provides for CAL FIRE employees to staff City-owned facilities and apparatus (City of Highland 2006). The City also has available fire protection services from other area agencies such as the Cities of

Redlands and Yucaipa and the U.S. Forest Service (City of Highland 2022). The City also participates in the Statewide Master Mutual Aid Agreement, which provides additional assistance from San Bernardino City and County Fire Departments and the San Manuel Fire Department (City of Highland2022).

The closest fire station to the project is Highland Fire Department Station No. 543 (7649 Sterling Ave), located approximately 1.1 miles northwest of the project site. Considering the proximity of the project site to Station No. 543, and given the fact that the project site is already located within CAL FIRE's service area, the project could be adequately served by the various fire departments without adversely effecting personnel-to-resident ratios, response times, or other performance objectives.

In addition, the project would not directly or indirectly induce population growth in the City. Although the project could potentially result in a slight, incremental increase in calls for service to the project site in comparison to the existing conditions, this increase is expected to be nominal and would not result in the need for new CAL FIRE facilities. Nonetheless, similar to other development projects in the City, the project applicant would still be required to pay their fair share of development impact fees to help offset incremental impacts to fire protection services. Payment of the fees would comply with the California Fire Code for industrial development. The City will be responsible for the operations and maintenance costs through the General Fund to provide fire and emergency services to the project site, including the annexation area (0.56 acre). Therefore, impacts associated with CAL FIRE facilities and response times would be less than significant.

The project's LAFCO Fiscal Analysis Report notes that, "The subject Analysis identifies the project's valuation and taxable income in addition to costs related to the General Fund, police services, fire services and special districts. The Analysis shows that the annexation will result in nominal fees and costs to the City of Highland given its small size and ultimate industrial build out." The corresponding Plan for Service identifies the proposed public facility improvements and services related to roads, fire and emergency medical services, police, libraries, domestic water, wastewater, storm drainage, parks and open space, public utilities, schools, and solid waste management. The Plan shows how public facilities and infrastructure improvements will be implemented following the annexation. (see Appendices K1 and K2)

Police protection?

Less-than-Significant Impact. The City contracts with the San Bernardino County Sheriff's Department (SBSD) to provide police protection to the City, including the project site (City of Highland 2022). The SBSD has one patrol station in the City, located at 26985 East Base Line Street, approximately 1.1 miles northeast of the site.

The project would not directly or indirectly induce population growth in the City. While the project would potentially result in a slight, incremental increase in calls to the SBSD for service to the project site in comparison to the existing conditions, this increase is expected to be nominal and would not result in the need for new SBSD facilities. In addition, the project site is already located within SBSD's service area and would not require an expansion of service area, which could otherwise result in longer response time. Overall, it is anticipated that the project would be adequately served by existing SBSD facilities, equipment, and personnel. Nonetheless, similar to other development projects in the City, the project applicant would still be required to pay their fair share of development impact fees to help offset incremental impacts to police protection services. Therefore, impacts associated with SBSD facilities and response times would be less than significant. In addition, the applicant will be required to follow the City's Development Impact Fee Ordinance. The Fee Ordinance requires

the applicant submit a fee payable to the City that will apply to the funding of public facilities, including law enforcement facilities. The City will provide the operations and maintenance costs to provide service to the project site and annexation area (0.56 acre) through its General Fund. Therefore, impacts to police protection resources resulting from the proposed project would be less than significant.

Schools?

No Impact. The project site is located within the San Bernardino City Unified School District. It is not anticipated that people would relocate to the City as a result of the project, and an increase in school-age children requiring public education is not expected to occur as a result of the project. Nonetheless, all residential and non-residential development projects are subject to SB 50, which requires payment of mandatory impact fees to offset any impact to school services or facilities. The provisions of SB 50 are deemed to provide full and complete mitigation of school facilities impacts, notwithstanding any contrary provisions in CEQA or other state or local laws (Government Code Section 65996). These impact fees are required of most residential, commercial, and industrial development projects in the City. Therefore, no impacts associated with school facilities would occur.

Parks?

No Impact. Given the lack of population growth as a result of the project, neither construction nor operation of the project would generate new residents to the extent that new or expanded park facilities would be required. Therefore, no impacts associated with park facilities would occur.

Other public facilities?

No Impact. The project would not directly or indirectly induce substantial population growth in the City. As such, it is unlikely that the project would increase the use of other public facilities such as libraries. Therefore, no impacts associated with libraries and other public facilities would occur

.3.16 Recreation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact. The project would construct a new warehouse building and associated improvements. The project does not propose any residential uses and would not directly or indirectly result in a substantial and unplanned increase in population growth within the project area. As such, the project would not increase the use of existing neighborhood parks or regional parks in the City and surrounding area. Therefore, no impacts associated with the use of existing residential facilities would occur.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact. The project would construct a new warehouse building and associated improvements. The project does not propose any recreational facilities. As an industrial use, the project would not require the construction or expansion of recreational facilities. Therefore, no impacts associated with the construction of new or expansion of existing recreational facilities would occur.

3.17 Transportation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

The following analysis prepared consistent with the requirements of the City of Highland Public Works Policies, Procedures and Standards for traffic studies (Traffic Study Guidelines) (September 2016), as well as SB 743 and the current CEQA Guidelines for potential impacts to VMT. Appendix I includes the project's Traffic Scoping Form and Appendix J1 includes the 5th Street Vehicle Miles Traveled Analysis, prepared by Urban Crossroads Inc. (September 30, 2022). Appendix J2 includes the Parking Study (Dudek 2023).

Trip Generation Analysis

Trip generation estimates for the project are based on daily and AM and PM peak hour trip generation rates obtained from the Institute of Transportation Engineers Trip Generation Handbook, 11th Edition (ITE 2021), using the warehousing land use (ITE Code 150). No trip credits for the existing land uses have been assumed in this analysis; therefore, the project's trip generation estimates are conservative.

PCE factors were also applied to the trip generation estimates to account for truck traffic. The City indicates that projects with high truck percentages should convert project trips to PCE. A 1.5 PCE factor was applied to 2-axle trucks, a 2.0 PCE was applied for 3-axle trucks, and a 3.0 PCE factor was applied to 4-axle trucks per the San Bernardino County CMP. Table 24 presents the project's daily, AM, and PM peak hour trip generation estimates.

Table 24. Project Trip Generation Summary

Land Use		Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
Trip Rates[1]								
Warehousing (ITE Code 150)		1.71	0.13	0.04	0.17	0.05	0.13	0.18
Trip Generation	**Thousand Square Feet**	**Daily**	**AM Peak Hour**			**PM Peak Hour**		
			In	Out	Total	In	Out	Total
5th and Victoria Avenue Warehouse (ITE Code 150)	176.066[4]	301	23	7	30	9	23	32
Trip Generation (PCE Adjustments)	**Percent Vehicle Mix 2**	**Daily**	**AM Peak Hour**			**PM Peak Hour**		
			In	Out	Total	In	Out	Total
Warehousing Vehicle Mix[2]								
Passenger Vehicles	72.5%	218	17	5	22	6	17	23
2-Axle Trucks	4.6%	14	1	0	1	0	1	1
3-Axle Trucks	5.7%	17	1	1	2	1	1	2
4+-Axle Trucks	17.2%	52	4	1	5	2	4	6
Project Trip Generation (Non-PCE)	**PCE Factor3**	**Daily**	**AM Peak Hour**			**PM Peak Hour**		
			In	Out		In	Out	
Passenger Vehicles	1.0	218	17	5	22	6	17	23
2-Axle Trucks	1.5	21	2	0	2	0	2	2
3-Axle Trucks	2.0	34	2	2	4	2	2	4
4+-Axle Trucks	3.0	156	12	3	15	6	12	18
Project Trip Generation (PCE)		**429**	**33**	**10**	**43**	**14**	**33**	**47**

Notes: TSF = Thousand Square Feet; PCE = Passenger Car Equivalent

1 Trip rates from ITE 2021.

2 Vehicle Mix and Percent from SCAQMD, Warehouse Truck Trip Study Data Results and Usage, July 2014.

3 Passenger Car Equivalent (PCE) factors per the San Bernardino County Congestion Management Program (CMP), 2016.

4 During preparation of this MND, the square footage of the building was reduced to 173,976 square-feet; however, calculations were not revised, thus results provided herein are more conservative than what would actually occur.

As detailed above, the project would generate 301 daily trips, 30 AM peak hour trips (23 inbound and 7 outbound), and 32 PM peak hour trips (9 inbound and 23 outbound). Applying PCE factors for truck traffic, the project would

generate 429 daily trips, 43 AM peak hour trips (33 inbound and 10 outbound), and 47 PM peak hour trips (14 inbound and 33 outbound).

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Less-than-Significant Impact**.** As detailed in the following text, the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

Roadway Facilities

The project is located within the jurisdiction of the City of Highland; therefore, the following consistency requirements would apply.

San Bernardino Associated Governments Congestion Management Plan

The City is located in San Bernardino County and therefore, the San Bernardino County Transportation Authority (SBCTA) CMP applies to the City. To address the increasing public concern that traffic congestion is impacting the quality of life and economic vitality of the State of California, Proposition 111 created the CMP in 1990. The intent of the CMP is to provide the analytical basis for transportation decisions through the State Transportation Improvement Program process. In 1990, the San Bernardino Associated Governments was designated the Congestion Management Agency for San Bernardino County. Although implementation of the CMP was made voluntary by the passage of AB 2419 (Bowler 1996), the CMP requirement has been retained in San Bernardino County.

The LOS at each CMP location is monitored by local jurisdictions in order to implement the statutory requirements of the CMP. If LOS standards deteriorate, then local jurisdictions must prepare a deficiency plan to meet conformance standards outlined by the countywide plan. The local CMP requires that a TIA report be prepared when a project's trip generation exceeds 250 two-way peak hour trips and expects to add at least 50 two-way peak hour trips to a state highway facility. For the CMP roadway system, the LOS standard shall be E for all segments and intersections except those designated LOS F, as listed in Table 2-1 of the CMP (SANBAG 2016). The nearest CMP facility is the intersection of Victoria Avenue and 5th Street.

Based on the project's trip generation estimates as described above, development of the proposed project would not be likely to result in degradation of the nearby CMP facilities due to the low volume of vehicular traffic (less than 250 peak hour trips, and less than 50 peak hour trips to a State highway facility, per the CMP). Therefore, impacts associated with project-related traffic on both the local and regional circulation system would be less than significant.

City of Highland

Traffic Study Guidelines

The City of Highland Traffic Study Guidelines are included in Chapter 9 of the City's Public Works Policies, Procedures and Standards Manual. Although changes in CEQA regarding SB 743 implementation shifts the primary metric for traffic analyses from LOS to VMT, the City has not yet adopted updated guidelines or thresholds related to VMT. As such, the City continues to require a traffic report to analyze the surrounding

transportation network to evaluate the project's effect on the City's transportation infrastructure and identify improvements required to maintain consistency with the City's LOS standards. Per the Traffic Study Guidelines, a traffic report would be required if a project exceeds the CMP thresholds (250 two-way peak hour trips) or generates more than 1,000 new two-way daily trips or 100 two-way peak hour trips. Additionally, the City may require a traffic report if there are concerns regarding access, roadway structural impacts or level of service on intersection or roadway segments adjacent to the project. Trip generation estimates for the project are summarized above.

Based on the project's trip generation estimates as described above, development of the proposed project would likely not result in degradation of the nearest intersection of Victoria Avenue and 5th Street or other nearby intersections due to the low volume of vehicular traffic (less than 100 peak hour trips). However, the scoping of a focused traffic report is in progress with the City and is subject to review and approval by the City prior to project approval. By proceeding with scoping of a traffic report, the project complies with and would not conflict with the City's Traffic Study Guidelines. Therefore, impacts would be less than significant.

General Plan Circulation Element

The City adopted its most recent version of the General Plan in March 2006. The General Plan Circulation Element takes into consideration transit, bicycle, pedestrian, and other multimodal uses. The Circulation Element primarily utilizes volume-to-capacity LOS as a measurement in the rating of the performance of streets. The Circulation Element establishes the following LOS criteria:

- LOS D or better for major intersections in the City.
- LOS D is considered acceptable for peak operating periods.
- Any City of Highland intersection operating at LOS E or F is considered deficient.

As the proposed project is forecast to generate 43 AM peak hour trips and 47 PM peak hour trips (PCE-adjusted), the proposed project would not exceed the 250 two-way peak hour trip threshold for requiring the preparation of a TIA per the CMP or the 100 two-way peak hour trip threshold for requiring preparation of a traffic report per the City's Traffic Study Guidelines. Therefore, a TIA and further LOS analysis would not be required, unless requested by the City for a focused analysis of specific facilities as noted above.

Additionally, the project site is bordered by 3rd Street to the south, Victoria Avenue to the west, and 5th Street to the north. 3rd Street, Victoria Avenue, and 5th Street are all designated as Major Highways. The project would not conflict with the ROW along any of the streets it borders.

Per the Circulation Element, a Major Highway is generally designed as a four-lane roadway intended to provide nonlocal through trips and limited local access, with an 88-foot curb-to-curb width (with a 12-foot median), within a 104-foot ROW. Although Victoria Avenue is not currently built out to its ultimate ROW and does not include a 12-foot center median, the Circulation Element notes that Victoria Avenue is designated as a Major Highway to preserve adequate ROW for entry to the SBIA and to accommodate future traffic. Additionally, the Circulation Element notes the potential for a new interchange for I-210 at Victoria Avenue to the north, as Victoria Avenue is identified as the "major entryway into the San Bernardino International Airport and [serves] as a linkage between the Airport and San Manuel Indian Casino and Bingo facility." The project would provide the required 52-foot half-width required to satisfy the ultimate ROW and would not conflict with future build-out of the roadway. Therefore, impacts related to project consistency with the General Plan Circulation Element would be less than significant.

Pedestrian and Bicycle Facilities

Although the General Plan Circulation Element includes several bicycle classifications, the City of Highland Active Transportation Plan, adopted February 2021, provides a more comprehensive and updated overview of the City's current and future recommendations to enhance multi-modal facilities:

Class I Shared-Use Paths are paths completely separated from motor vehicle traffic used by people for walking and biking. These paths are typically located immediately adjacent and parallel to a roadway or in its own independent ROW, such as within a park or along a body of water.

Class II Bicycle Lanes are dedicated lanes for bicycle travel adjacent to traffic. A painted white line separates the bicycle lane from motor vehicle traffic.

Class IIB Buffered Bicycle Lane are dedicated lanes for bicycle travel separated from vehicle traffic by a painted buffer. The buffer provides additional comfort for users by providing space from motor vehicles or parked cars.

Class III Bicycle Routes are signed bike routes that people biking share with motor vehicles, which can include pavement markings.

Class IIIB Bicycle Boulevards are calm, local streets where bicycles have priority but share roadway space with motor vehicles. These boulevards include shared roadway bicycle markings on the pavement as well as traffic calming features such as speed humps and traffic diverters to keep these streets more comfortable for bicycles.

There are existing Class II bicycle lanes adjacent to the project site along 5th Street and 3rd Street. Proposed facilities would include a Class II bicycle lane along Victoria Avenue, extending from 5th Street to Sparks Street, and a Class II bicycle lane along 3rd Street, which extends throughout the entire length of the City. The proposed project would provide the frontage required of the ultimate classification of Victoria Avenue, designated as a Major Highway in the Circulation Element. The Major Highway roadway cross section allocates 8 feet to bike lanes on both sides of the roadway. As such, the project would not conflict with existing or proposed bicycle facilities, and impacts would be less than significant.

Site analysis of the project area does not indicate existing sidewalk and pedestrian facilities along the full extents of Victoria Avenue and 5th Street in the vicinity of the project site. There is sidewalk on project frontage along 3rd Street. The project would be responsible for constructing frontage improvements, including sidewalks along Victoria Avenue, and 5th Street. As such, development of the project would improve the existing pedestrian facilities and impacts would be less than significant.

Transit Facilities

Omnitrans provides public transportation throughout the San Bernardino Valley and would serve as the nearest transit service to the project site. The nearest Omnitrans bus stop serves Route 15, located approximately 0.50 miles north of the project site at the intersections of Central Avenue and 5th Street and Victoria Avenue and 9th Street. Route 15 operates between the Fontana Metrolink Transit Center and the City of Redlands via the Cities of Rialto, San Bernardino, and Highland, with a peak service frequency of 60

minutes throughout the week. Development of the proposed project would not conflict with the existing bus routes or bus stops. Therefore, impacts to transit would be less than significant.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less-than-Significant Impact. As shown in the analysis below, based on City's recommended thresholds, the project generated VMT and the project's effect on VMT would result in a less than significant impact.

On September 27, 2013, SB 743 was signed into law, which created a process to change the way that transportation impacts are analyzed under CEQA. SB 743 required the Governor's Office of Planning and Research to amend the CEQA Guidelines to provide an alternative to LOS for evaluating transportation impacts. Under the transportation guidelines, LOS, or vehicle delay, will no longer be considered an environmental impact under CEQA. The updates to the CEQA Guidelines required under SB 743 were approved on December 28, 2018. These guidelines identify VMT as the most appropriate measure of transportation impacts under CEQA as of July 1, 2020.

VMT Screening

The following screening criteria were analyzed per the SBCTA Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment, per direction from the City in lieu of formally adopted City VMT guidelines. Any one of the following criteria would need to be satisfied in order to screen out of significant VMT impacts:

- **Projects generating less than 110 daily trips:** The proposed project is the construction and development of 173,976 square feet of warehousing buildings, estimated to generate 301 average daily trips as shown in Table 24. Therefore, the project would not fall under the threshold for projects generating less than 110 average daily trips.
- **Local serving retail less than 50,000 SF:** The proposed project does not include retail components. Therefore, the project is not considered a local serving retail project and cannot be screened out from further VMT analysis using this criterion.
- **Local Serving Projects:** The proposed project would not be categorized as a local serving land use. Therefore, the project cannot be screened out from further VMT analysis using this criterion.
- **Affordable Housing (100% of units): The** proposed project does not include affordable housing units. Therefore, the project cannot be screened out from further VMT analysis using this criterion.
- **Transit Priority Area Screening:** The proposed project is not located within a Transit Priority Area[22] as determined by the most recent RTP/SCS. Therefore, it cannot be screened out using this criterion.
- **Low VMT Area Screening:** Per the SBCTA Guidelines, "Residential and office projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate

[22] Per California Public Resources Code, Section 21099(a)(7), a Transit Priority Area means an area within 0.5 miles of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations. For purposes of SB 743, a transit priority area also includes major transit stops that are scheduled to be completed within the planning horizon of the RTP/SCS.

> VMT per resident, per worker, or per service population (SP) that is similar to the existing land uses in the low VMT area."
>
> The SBCTA VMT Screening Tool was used to determine whether the proposed project would be in a low VMT-generating area. The City's recommend guidance defines a low VMT generating area as one in which the proposed project is located within a Traffic Analysis Zone where the VMT per SP is lower than City of Highland future buildout VMT per SP. Traffic Analysis Zones are geographic polygons similar to census block groups used to represent areas of homogenous travel behavior. Based on the Screening Tool results included in Traffic Scoping Form (Appendix I), the project is not located within a low VMT generating zone as compared to the City recommended threshold.

As the proposed project would not meet the City's recommended screening criteria, a project level detailed VMT analysis is required.

VMT Analysis

The City requires the evaluation of project generated VMT and the project's effect on VMT to be analyzed in detail for projects that do not meet any of their screening criteria. The calculation of VMT for land use projects is based on the total number of trips generated and the average trip length of each vehicle. The SBCTA Guidelines identify the San Bernardino Transportation Analysis Model (SBTAM) as the appropriate tool to conduct a detailed VMT analysis for land use projects. The technical memorandum describing the SBTAM model run for VMT by sub-consultant Urban Crossroads is included in Appendix J.

Project VMT

The SBTAM is trip-based regional travel demand model that considers interaction between different land uses based on socio-economic data such as population, households, and employment. Project VMT has been calculated using the most current version of SBTAM. Adjustments in socio-economic data (i.e., employment) were made to the appropriate Traffic Analysis Zone within the SBTAM model to reflect the project's proposed warehousing land use. The project's socio-economic data are consistent with the employment density factors for San Bernardino County from the SCAG Employment Density Survey (2001). Based on number of employees estimated using Table II-B of the SCAG study (1 employee per 1,195 square feet), the project was coded with 147 employees.

The project generated VMT is defined as the VMT attributed to vehicle trips to and from the project zone or zones. Based on the City's recommended thresholds, if a project generated VMT per SP exceeds the City's future buildout VMT per SP, the project would create a significant impact under CEQA.

Project generated VMT is extracted from the SBTAM model using the production attraction trip matrices. The production attraction matrices are then multiplied by the final assignment (distance) skims. Project generated baseline VMT was calculated from the baseline travel forecasting model, which was also used to establish the City's VMT threshold. Additionally, the project generated VMT was calculated in the cumulative travel forecasting model to estimate VMT in cumulative conditions. Project VMT was then normalized by dividing by the project's SP (i.e., estimated number of employees for industrial type uses) for their respective baseline and cumulative conditions. This calculation changes the raw VMT value into an efficiency metric for ease of comparison. As the project does not contain residential land uses, the SP consists entirely of the project's employment. Project generated VMT was calculated for baseline (2022) and cumulative year model (2040) and is summarized in Table 25.

Table 25. Summary of Project VMT per Service Population

	Baseline (2022)	Cumulative (2040)
Service Population	147	147
VMT	2,865	2,589
VMT/Service Population	19.45	17.57
City's VMT Baseline and Threshold	22.54	22.54
Below City's Threshold/(%)	Yes/(−13.71%)	Yes/(−22.05%)
Potentially Significant?	No	No

Note: VMT = vehicle miles traveled
Source: SBTAM Model Results; Appendix J.

VMT Impact Determination

As noted above, the City has not adopted VMT-specific guidelines or thresholds as of June 2021. In lieu of available guidelines, City staff have identified the following recommended threshold for findings of less than significant:

- The baseline project-generated VMT per SP is below future buildout City of Highland VMT per SP, or
- The cumulative project-generated VMT per SP is below future buildout City of Highland VMT per SP

As shown in Table 25 above, the City average VMT is 22.54 VMT/SP under future buildout (Year 2040) conditions. As shown, the project's VMT per SP would be 13.71% below the City's impact threshold for baseline conditions and 22.05% below the City's impact threshold for cumulative conditions. Because the project generated VMT per SP would not exceed the future buildout City of Highland VMT per SP in either the baseline or cumulative conditions, the project generated VMT impact would be less than significant.

While the project's VMT impacts would be less than significant, several regulatory requirements, project design features, and existing conditions would further facilitate a reduction in project VMT. First, the project would provide bicycle facilities (i.e., permanently anchored bike racks) on the project site and along Victoria Avenue (i.e., dedication of land for the future construction of an 8-foot bike lane) to facilitate bike travel to and from the project site in lieu of single-passenger automobile trips. The project would also facilitate carpooling and vanpooling by providing parking spaces designated for low-emitting, fuel-efficient, and carpool/van pool vehicles, as required by Title 24 of the California Code of Regulations. Additionally, the project site is located along Omnitrans Route 15. Together, these measures would provide future employees of the project several alternative modes to using single-passenger vehicles to access the project site.

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less-than-Significant Impact**.** Access to the project site would be provided by four driveways: two driveways on the western portion of the site on Victoria Avenue, one driveway on the northern portion of the site on 5th street Avenue, and one driveway on the southern portion of the site on 3rd Street. The driveways along 3rd Street and 5th Street would be full-access and allow for both passenger car and truck access. The two driveways along Victoria Avenue would allow passenger vehicle access only and were assumed to provide right-in/right-out only access due to their proximity to the Victoria Avenue/3rd Street intersection and future plans for a center median along Victoria Avenue.

As discussed previously, Victoria Avenue is not yet built to its ultimate ROW and does not have an existing 12-foot center median along the project frontage.

The project would construct frontage improvements of existing segments of 5th Street, 3rd Street, Victoria Avenue, and new driveways for project access.

During site plan review, the internal roadway and driveway widths and curb radii to facilitate passenger car and truck turning and movement would be reviewed, designed, and constructed per City standards and applicable street design requirements.

For on-site construction and any improvements required within the public ROW, the proposed project would be required to comply with standards set forth by the City to ensure that the project does not introduce an incompatible design feature that would impede traffic flow on roadway facilities. There would be no incompatible or hazardous uses associated with the proposed project and impacts would be less than significant.

d) Would the project result in inadequate emergency access?

Less-than-Significant Impact**.** Access to the project site would be provided by four driveways: two driveways (right-in and -out only) on the western portion of the site on Victoria Avenue, one driveway (full-access) on the northern portion of the site on 5th street Avenue, and one driveway (full-access) on the southern portion of the site on 3rdStreet. Emergency vehicle access will be available at all driveways and facilitated within the entirety of the project site. The project site would be accessible to emergency responders during construction and operation of the project. Therefore, impacts associated with an emergency response plan or emergency evacuation plan would be less than significant.

3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☒	☐	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	☐	☒	☐	☐

The evaluation of potential impacts to Tribal Cultural Resources is based on the findings resulting from tribal consultation conducted by the City, as the lead agency, as well as the findings of the Cultural Resources Survey conducted by Dudek in 2022 (Appendix C). Background research conducted to inform this analyses and provide data upon request of interested Native American representatives included a NAHC SLF search, ethnographic research, archival research and CHRIS database records search all of which are briefly provided in this section.

Existing Setting – Ethnohistoric

The history of the Native American communities prior to the mid-1700s has largely been reconstructed through later mission-period and early ethnographic accounts. The first records of the Native American inhabitants of the region come predominantly from European merchants, missionaries, military personnel, and explorers. These brief, and generally peripheral, accounts were prepared with the intent of furthering respective colonial and economic aims and were combined with observations of the landscape. They were not intended to be unbiased accounts regarding the cultural structures and community practices of the newly encountered cultural groups. The establishment of the missions in the region brought more extensive documentation of Native American communities, though these groups did not become the focus of formal and in-depth ethnographic study until the early twentieth century. The principal intent of these researchers was to record the precontact and culturally specific practices, ideologies, and languages that had survived the destabilizing effects of missionization and colonialism. This research, often understood as "salvage ethnography," was driven by the understanding that traditional knowledge was being lost due to the impacts of modernization and cultural assimilation. Alfred Kroeber applied his "memory culture" approach by recording languages and oral histories within the region. Ethnographic research by Dubois, Kroeber, Harrington, Spier, and others during the early twentieth century seemed to indicate that traditional cultural practices and beliefs survived among local Native American communities.

It is important to note that even though there were many informants for these early ethnographies who were able to provide information from personal experiences about native life before the Europeans, a significantly large proportion of these informants were born after 1850; therefore, the documentation of precontact, aboriginal culture was being increasingly supplied by individuals born in California after considerable contact with Europeans. This is an important issue to note when examining these ethnographies, since considerable culture change had undoubtedly occurred by 1850 among the Native American survivors of California.

Based on ethnographic information, it is believed that at least 88 different languages were spoken from Baja California Sur to the southern Oregon state border at the time of Spanish contact. The distribution of recorded Native American languages has been dispersed as a geographic mosaic across California through six primary language families.

Golla contended that one can interpret the amount of variability within specific language groups as being associated with the relative "time depth" of the speaking populations. A large amount of variation within the language of a group represents a greater time depth than a group's language with less internal diversity. One method that he has employed is by drawing comparisons with historically documented changes in Germanic and Romantic language groups. Golla observed that the "absolute chronology of the internal diversification within a language family" can be correlated with archaeological dates. This type of interpretation is modeled on concepts of genetic drift and gene flows that are associated with migration and population isolation in the biological sciences.

The tribes of this area have traditionally spoken Takic languages that may be assigned to the larger Uto–Aztecan family. These groups include the Gabrielino, Cahuilla, and Serrano. Golla interpreted the amount of internal diversity within these language-speaking communities to reflect a time depth of approximately 2,000 years. Other researchers have contended that Takic may have diverged from Uto–Aztecan ca. 2600 BC–AD 1, which was later followed by the diversification within the Takic speaking tribes, occurring approximately 1500 BC–AD 1000 (Appendix C).

Serrano

Traditionally, the Serrano lived in an area east of the Gabrielino and north of the Cahuilla, near present-day western San Bernardino County and northeastern Los Angeles County. The Serrano occupied an area in and around the San Bernardino Mountains between approximately 1,500 and 11,000 feet above mean sea level. Their territory extended west along the northern slope of the San Gabriel Mountains, east as far as Twentynine Palms, north along the Mojave River, and south to the San Jacinto area. Kroeber (1925) divided the Serrano into four distinct groups within the western Mojave Desert: the Kitanemuk, Tataviam, Serrano, and Vanyume. Each group held a distinct territory within the region (Kroeber 1925). According to Bean and Smith (1978a, p. 570), "the Serrano resided in an area that extended east of the Cajon Pass, located in the San Bernardino Mountains, to Twenty-nine Palms, the north foothills of the San Bernardino Mountains and south to include portions of the Yucaipa Valley."

Serrano social organization was based on patrilineal and patrilocal lineages. Exogamy rules required that a man could not marry a woman related to them within five generations. Women moved to their husband's village, but kept their identity as a member of their natal lineage. The Serrano were mainly hunters and gatherers who occasionally fished. Game hunted included mountain sheep, deer, antelope, rabbits, small rodents, and various birds, particularly quail. Vegetable staples consisted of acorns, piñon nuts, bulbs and tubers, shoots and roots, berries, mesquite, barrel cacti, and Joshua tree. A variety of materials was used for hunting, gathering, and processing food, as well as for shelter, clothing, and luxury items. Shells, wood, bone, stone, plant materials, and animal skins and feathers were used for making baskets, pottery, blankets, mats, nets, bags and pouches, cordage, awls, bows, arrows, drills, stone pipes, musical instruments, and clothing.

The majority of the Serrano lived in small villages, close to sources of fresh water. Houses and ramadas were round, dome-shaped, and constructed of poles covered with bark and tule mats. The Serrano also had sweat houses and ceremonial houses for religious activities. Further, according to Benedict (1924), a typical Serrano settlement was a village with multiple small satellite camps surrounding it. Most Serrano villages also had a ceremonial house used as a religious center. Other structures within the village might include granaries and sweathouses. According to

DeBarros (2004), one of the more prominent Serrano villages was called Guapiabit, and it was located in Summit Valley (Appendix C).

Gabrielino/Tongva

The archaeological record indicates that the Gabrielino arrived in the Los Angeles Basin around 500 B.C. Surrounding native groups included the Chumash and Tataviam to the northwest, the Serrano and Cahuilla to the northeast, and the Juaneño and Luiseño to the southeast.

The names by which Native Americans identified themselves have, for the most part, been lost and replaced by those derived by the Spanish people administering the local Missions. These names were not necessarily representative of a specific ethnic or tribal group, and traditional tribal names are unknown in the post-Contact period. The name "Gabrielino" or "Gabrieleno" was first established by the Spanish from the San Gabriel Mission and included people from the established Gabrielino area as well as other social groups. Many contemporary Gabrielino identify themselves as descendants of the indigenous people living across the plains of the Los Angeles Basin and refer to themselves as the Tongva. This term is used in the remainder of this section to refer to the precontact inhabitants of the Los Angeles Basin and their descendants.

The Tongva established large, permanent villages along rivers and streams, and lived in sheltered areas along the coast. Tongva lands included the greater Los Angeles Basin and three Channel Islands—San Clemente, San Nicolas, and Santa Catalina—and stretched from the foothills of the San Gabriel Mountains to the Pacific Ocean. Archaeological sites composed of villages with various sized structures have been identified through the Los Angeles Basin. A total tribal population has been estimated of at least 5,000, but recent ethnohistoric work suggests a number approaching 10,000 seems more likely (O'Neil 2002). At least one Tongva village was located near Glendora: Ashuukshanga (also Azucsagna), located near the mouth of the San Gabriel River in present-day Azusa. Within the permanent village sites, the Tongva constructed large, circular, domed houses made of willow poles thatched with tule, each of which could hold upwards of 50 people. Other structures constructed throughout the villages probably served as sweathouses, menstrual huts, ceremonial enclosures, and communal granaries. Cleared fields for races and games, such as lacrosse and pole throwing, were created adjacent to Tongva villages.

The Tongva subsistence economy was centered on gathering and hunting. The surrounding environment was rich and varied, and the tribe exploited mountains, foothills, valleys, and deserts as well as riparian, estuarine, and open and rocky coastal eco-niches. Like most native Californians, acorns were the staple food (an established industry by the time of the early Intermediate Horizon). Acorns were supplemented by the roots, leaves, seeds, and fruits of a variety of flora (e.g., islay, cactus, yucca, sages, and agave). Freshwater and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed.

The Tongva participated in an extensive exchange network, trading coastal goods for inland resources. They exported Santa Catalina Island steatite products, roots, seal and otter skins, fish and shellfish, red ochre, and lead ore to neighboring tribes, as well as to people as far away as the Colorado River. In exchange, they received ceramic goods, deerskin shirts, obsidian, acorns, and other items. This burgeoning trade was facilitated by the use of craft specialists, a standard medium of exchange (Olivella bead currency), and the regular destruction of valuables in ceremonies, which maintained a high demand for these goods (Appendix C).

Assembly Bill 52

AB 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that tribal cultural resources must be considered under CEQA and also provided for additional Native American consultation requirements for the lead agency. PRC Section 21074 describes a tribal cultural resource as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe. A tribal cultural resource (TCR) is either:

- On the CRHR or a local historic register;
- Eligible for the CRHR or a local historic register; or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1.

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the project area, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report by contacting those tribal groups who have previously provided formal written request for notification of projects under the agency's jurisdiction.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to TCRs, the consultation shall include those topics (PRC Section 21080.3.2[a]). Finally, the environmental document, for which the tribal consultation is focused, and the mitigation monitoring and reporting program (where applicable), developed in consideration of information provided by tribes during the formal consultation process, shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

Assembly Bill 52 Consultation

The project is subject to compliance with AB 52 (PRC 21074), which requires consideration of impacts to TCRs as part of the CEQA process, and that the lead agency notify California Native American Tribal representatives (that have requested notification) who are traditionally or culturally affiliated with the geographic area of the proposed project. All NAHC-listed California Native American Tribal representatives that have requested project notification pursuant to AB 52 were sent letters by the City on January 18, 2023, via United States Postal Service mail and email. The notification letters contained a project description, outline of AB 52 timing, an invitation to consult, a Project site plan, and contact information for the appropriate lead agency representative. Table 26 summarizes the results of the AB 52 process for the project.

Table 26. Assembly Bill 52 Native American Heritage Commission-Listed Native American Contacts

Native American Tribal Representatives	Response Received
Andrew Salas, Chairman Gabrieleno Band of Mission Indians – Kizh Nation	No response received.
Joseph Ontiveros, Cultural Resources Director Soboba Band of Luiseno Indians	No response received.
Ryan Nordness, Cultural Resources Management Department Yuhaaviatam San Manuel Nation (YSMN) (formerly known as the San Manuel Band of Mission Indians)	Comments were provided on January 31, 2023. The comments indicated that the project site is within the Serrano ancestral territory and is of interest to the Tribe. However, due to the nature and location of the project, and given the Tribes present state of knowledge, YSMN does not have any concerns with the project's implementation, as planned. YSMN requested inclusion of mitigation measures which have been incorporated herein (MM-CUL-3 and MM-TCR-1).

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

As stated above in Section 3.5(a), none of the properties onsite appear eligible for listing in the NRHP, CRHR, or City of Highland designation due to a lack of important historical associations, lack of architectural merit, and lack of integrity, nor do they appear eligible as contributors to an historic district. As such, these properties are not considered historical resources for the purposes of CEQA. These resources have been assigned a California Historical Resource Status Code of 6Z (found ineligible for the NRHP, CRHR, or local designation through survey evaluation). No historical resources were identified within the project site as a result extensive archival research, field survey, and property significance evaluation.

All NAHC-listed California Native American Tribal representatives that have requested project notification pursuant to AB 52 were sent letters by the City on January 18, 2023, via United States Postal Service mail and e-mail. One tribe responded and provided commentary on the project. The responding tribe was the Yuhaaviatam San Manuel Nation (YSMN) (formerly known as the San Manuel Band of Mission Indians). As stated in Table 26, the Tribe indicated that the project site is within the Serrano ancestral territory and is of interest to the Tribe. However, due to the nature and location of the project, and given the Tribes present state of knowledge, YSMN does not have any concerns with the project's implementation, as planned. YSMN

requested inclusion of mitigation measures which have been incorporated herein (MM-CUL-3 and MM-TCR-1). With implementation of MM-CUL-3 and MM-TCR-1, impacts would be less than significant.

MM-TCR-1 Discovery of Tribal Cultural Resources**.** The Yuhaaviatam of San Manuel Nation Cultural Resources Department (YSMN) shall be contacted, as detailed in CR-1, of any pre-contact and/or historic-era cultural resources discovered during project implementation, and be provided information regarding the nature of the find, so as to provide Tribal input with regards to significance and treatment. Should the find be deemed significant, as defined by CEQA (as amended, 2015), a cultural resources Monitoring and Treatment Plan shall be created by the archaeologist, in coordination with YSMN, and all subsequent finds shall be subject to this Plan. This Plan shall allow for a monitor to be present that represents YSMN for the remainder of the project, should YSMN elect to place a monitor on-site. Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to YSMN. The Lead Agency and/or applicant shall, in good faith, consult with YSMN throughout the life of the project.

3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

a) Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less-than-Significant Impact. The proposed project involves the construction of a warehouse building, as well as paved parking areas and landscape areas. The project site currently consists of single-family residences, industrial uses, and vacant land. As such, the proposed project would increase demand for water supply compared to existing land uses.

As part of the project, utility service lines, including those for water, wastewater, stormwater drainage, electric power, natural gas, and telecommunications services, would be extended from their current locations in the public ROW surrounding the project site for operation of the proposed warehouse building. The project developer would coordinate with the applicable agency regarding the location of existing utility lines and hookups in order to finalize improvement plans. Funding of the regional utility facilities is provided to the project by the individual utility company. The developer is responsible for the costs of extending utilities from the backbone facilities to the project site. Funding for the operation and maintenance for specific utilities is the responsibility of the individual utility through user charges. There are no financial cost impacts to the City's General Fund for these utility services.

The proposed project would include the addition of a 2-inch domestic water line and a 6-inch sewer line connecting to existing utility lines within Victoria Avenue, as well as various underground pipes to convey stormwater to the underground infiltration/detention system. EVWD will provide for the necessary operations and maintenance of the water systems needed to serve the project area. EVWD collects no property tax revenues. The operations and maintenance costs are covered primarily through monthly service charges that will be paid by future users within the project development.

Given that the activity of connecting utilities from their current locations within the public ROW would require ground disturbance and the use of heavy machinery associated with trenching, the connection of these utility services to the proposed warehouse building could potentially result in environmental effects. However, the extension of these utility lines is part of the proposed project analyzed herein. As such, any potential environmental impacts related to these components of the project are already accounted for in this IS/MND as part of the impact assessment conducted for the entirety of the project. No adverse physical effects beyond those already disclosed in this IS/MND would occur as a result of implementation of the project's utility system connections.

Additionally, the project would constitute a nominal increase in utility usage, which has already been accounted for in growth projections for the City and by each utility provider. No modifications to utility

infrastructure would be necessary outside of the immediate project area. As such, impacts associated with the construction or expansion of utility line connections would be less than significant.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Less-than-Significant Impact. Domestic water would be provided to the project site by EVWD. EVWD provides domestic water for the City and for portions of both the City of San Bernardino and San Bernardino County. The primary water source for EVWD is groundwater from the Bunker Hill Basin. The Bunker Hill Basin has the capacity to provide 70,000 acre-feet per year of water from groundwater and surface water sources (City of San Bernardino 2005). The San Bernardino Valley Regional Urban Water Management Plan contains existing and projected water supplies for the region, including EVWD. Table 27 shows projected water supplies during single- and multiple-dry year conditions, which represents "worst-case" conditions during extended periods of drought when supplies would be reduced.

Table 27. Projected Multiple Dry Year Supply and Demand Comparison (Acre-Feet)

Multiple Dry Year Scenario	2020	2025	2030	2035	2040
First Year					
Supply Totals	37,270	42,050	42,050	42,050	42,050
Demand Totals	25,060	27,006	29,000	29,616	29,900
Difference (supply minus demand)	12,210	15,044	13,050	12,434	12,150
Second Year					
Supply Totals	37,270	42,050	42,050	42,050	42,050
Demand Totals	25,060	27,006	29,000	29,616	29,900
Difference (supply minus demand)	12,210	15,044	13,050	12,434	12,150
Third Year					
Supply Totals	37,270	42,050	42,050	42,050	42,050
Demand Totals	25,060	27,006	29,000	29,616	29,900
Difference (supply minus demand)	12,210	15,044	13,050	12,434	12,150

Source: SBVMWD 2017.

Table 27 demonstrates that EVWD anticipates adequate supplies for years 2020 to 2040 under multiple-dry year conditions based on current land use projections. However, in the unlikely event of a drought, natural disaster such as earthquake, or a regional power outage, the San Bernardino Valley Municipal Water District has prepared a water shortage contingency plan for the region (SBVMWD 2017). This plan provides specific actions that should be taken to ensure critical water needs of the region are met during a period in which water supplies are cut by 50%. Based on the future and existing capacity and water management measures, it is anticipated there are sufficient water supplies to serve the proposed project. Therefore, impacts associated with water supplies would be less than significant.

c) Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less-than-Significant Impact. Highland's sewer system is maintained by EVWD, which has joint powers with the City of San Bernardino to accept all sewage generated within EVWD's boundaries. The project would coordinate with EVWD to meet sewer requirements established by the Department of Health Services to ensure the continued sewer services in Highland, which has the potential to be impacted with continued growth within the City. However, water recycling programs, such as the project's corrugated metal pipe infiltration system, assist in reducing the amount of wastewater conveyed to the sewage system. The sewage from Highland is treated at the San Bernardino WRP, operated by the San Bernardino City Municipal Water District (City of Highland 2006). The WRP treats residential and industrial wastewater generated in the City of San Bernardino, the City of Loma Linda, and EVWD (City of San Bernardino 2005). The WRP processes an average sewage flow of approximately 26 to 27 million gallons per day and has a total sewage capacity of 33 million gallons per day (City of Highland 2006). Table 28 shows existing and anticipated wastewater collection and treatment at the WRP.

Table 28. Current and Projected Wastewater Collection and Treatment

Facility	2010	2015	2020	2025	2030	2035	Disposal Method	Treatment Level
San Bernardino WRP (AFY)	29,000	30,294	31,645	32,793	33,983	35,216	Flow to RIX	Secondary
RIX Facility (AFY)	33,000	34,472	36,010	37,316	38,670	40,073	Discharge to Santa Ana River	Tertiary

Source: SBVMWD 2017.
Notes: WRP = Wastewater Reclamation Plant; AFY = acre-feet per year; RIX = Rapid Infiltration Extraction

SBVMWD forecasts adequate capacity to treat wastewater in the upcoming years. As noted above in Section 3.19(a), the proposed project is consistent with the existing zoning designation established by the City. As such, anticipated wastewater generation for an industrial use has already been accounted for in growth projections for the City. Existing infrastructure is adequate to convey wastewater without requiring the expansion of the facilities. In addition, the project applicant would pay applicable connection fees and monthly charges which offset the need for incremental wastewater conveyance and treatment. Therefore, impacts associated with wastewater capacities would be less than significant.

A of January 16, 2024, EVWD has been operating at the Sterling Natural Resource Center (SNRC) that will recycle up to 8 million gallons of wastewater per day that will replenish the local ground water basin which is a source of waste for 650,000 people. According to EVWD, the sewer system has adequate capacity to serve the development and the annexation area (0.56 acre; Appendix K1, LAFCO Plan for Service). Impacts would be less than significant.

d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less-than-Significant Impact. Solid waste generated in the City is collected and transported by the City's contract waste hauler, Burrtec Waste Industries (City of Highland 2018). Solid waste from demolition and

construction would be collected and sent to the East Valley Transfer and Recycling Materials Recovery Facility, located at 1150 and 1250 S. Tippecanoe Ave, San Bernardino, California 92408, where it is separated from recyclable materials. Solid waste is then shipped to the Mid-Valley Sanitary Landfill at 2390 . Adler Avenue in the City of Rialto. The California Department of Resources Recycling and Recovery (CalRecycle) publishes solid waste generation rates based on land use types. According to CalRecycle, manufacturing/warehouse uses generate 1.42 pounds per 100 square feet per day (CalRecycle n.d.). Based on these generation rates, construction of the proposed 173,976-square-foot warehouse building could generate solid waste at a rate of approximately 1.24 tons of solid waste per day.[23]

The Mid-Valley Sanitary Landfill currently has a daily permitted throughput of 7,500 tons a day and a remaining capacity of 61,219,377 cubic yards (CalRecycle 2019). As a result, solid waste generated by the proposed project would represent a nominal percentage of the collective maximum daily throughput permitted for this landfill. Therefore, impacts associated with permitted landfill capacity would be less than significant.

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less-than-Significant Impact. All collection, transportation, and disposal of solid waste generated by the project would comply with all applicable federal, state, and local statutes and regulations. The City contracts Burrtec Waste Industries for the residential and commercial refuse collection program, which is designed to efficiently collect trash, recyclables, and green waste, and to assist the City in meeting mandated diversion goals established by the State of California. Solid waste is disposed of at the Colton, Mid-Valley, and San Timoteo Landfills (City of Highland 2006).

Waste from construction activities, including demolition and construction, would comply with the City's requirement to submit and obtain an approved construction waste diversion plan to help divert construction and demolition waste from landfills, as outlined in Section 8.12.285 of the City's Municipal Code, and also to comply with mandates of CalRecycle. The City diversion requirement, as outlined in Section 16.40.400 of the City's Municipal Code, is 50%, which means that projects that involve construction and demolition (such as the proposed project), are required to divert 50% of the construction and demolition waste tonnage at a project site from landfills.

Burrtec Waste Industries operated five material recovery facilities in Southern California, which sort and process recyclables; the remaining waste is then taken to the nearby Mid-Valley Sanitary Landfill (Burrtec n.d.). As of the most recent capacity inspection completed in 2019, Mid-Valley Sanitary Landfill currently has a maximum permitted throughput of 7,500 tons per day and a remaining capacity of 61,219,377 cubic yards (CalRecycle 2019).

As required by existing regulations, any hazardous materials collected on the project site during demolition, construction, or operational activities would be transported and disposed of by a permitted and licensed hazardous materials service provider at a facility permitted to accept such hazardous materials. Therefore, impacts associated with permitted landfill capacity and solid waste statutes and regulations would be less than significant.

[23] This estimate does not account for diversion of recyclables from the solid waste stream and, thus, should be considered a conservative projection.

3.20 Wildfire

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

a) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

No Impact. The project is not located within a Fire Hazard Severity Zone or a Very High Hazard Severity Zone according to the Local Responsibility and State Responsibility Area maps by CAL FIRE (CAL FIRE 2007, 2008). In addition, the project site is currently comprised of vacant and developed land and is located in a developed portion of the City. The City's General Plan outlines major evacuation routes within the San Bernardino Valley as I-10, I-15, and I-215, and State Highways 30, 31, 60, 66, and 71 (City of Highland 2022). In the case of an emergency, 5th Street and Victoria Avenue may be used as evacuation routes, but these roads are not explicitly outlined as evacuation routes by the City. As discussed in Section 3.9, Hazards and Hazardous Materials, the project would not significantly affect emergency response or evaluation activities. Therefore, no impacts associated with an emergency response or evacuation plan would occur.

b) Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. The project site is not located within a Fire Hazard Severity Zone or a Very High Fire Hazard Severity Zone according to the Local Responsibility and State Responsibility Area maps by CAL FIRE (CAL

FIRE 2007, 2008). In addition, the project site is currently partially developed and located within a developed portion of the City. Further, the project site is relatively flat and contains only limited amounts of ornamental vegetation associated with existing landscaping and does not contain extensive amounts of vegetation or wildfire fuel. Therefore, it is not anticipated that the project, due to slope, prevailing winds, and other factors, would exacerbate wildfire risks or expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Thus, the project would not expose people or structures to significant risk involving wildfires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts associated with wildfire would occur.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No Impact. The project site is not located within a Fire Hazard Severity Zone or a Very High Fire Hazard Severity Zone according to the Local Responsibility and State Responsibility Area maps by CAL FIRE (CAL FIRE 2007, 2008). In addition, the project site is currently developed and located within a developed portion of the City that is not prone to wind hazard (City of San Bernardino 2005). The project would construct surface parking lots, new internal circulation roadways, and infrastructure for the proposed development. It is not anticipated that installation or maintenance of internal driveways would exacerbate fire risk, as the driveways would be surrounded by developed land. Further, the project site is in a predominately developed area and would connect to existing utilities. The project would not require installation or maintenance of other associated infrastructure such as fuel breaks, power lines, or other utilities that would exacerbate fire risk. As such, the project would not expose people or structures to significant risk involving wildland fires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts associated with wildfire would occur.

d) Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. The project site is not located within a Fire Hazard Severity Zone or a Very High Fire Hazard Severity Zone according to the Local Responsibility and State Responsibility Area maps by CAL FIRE (CAL FIRE 2007, 2008). As discussed in Section 3.7, Geology and Soils, and Section 3.10, Hydrology and Water Quality, the project would not result in significant risks associated with flooding, landslides, runoff, or drainage changes, and the project does not propose the use of fire (such as for a controlled vegetation burn) that would result in post-fire instability. Further, the project site is located within a developed portion of the City that is not susceptible to wildland fires, given its considerable distance from open, natural areas. Thus, the project would not expose people or structures to significant risk involving wildland fires, exacerbate wildfire risks, or otherwise result in wildfire-related impacts. Therefore, no impacts with wildfire would occur.

3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?***

Less-than-Significant Impact with Mitigation Incorporated. As described throughout this IS/MND, with the incorporation of the identified mitigation measures, the project would not degrade the quality of the environment, substantially reduce the habitats of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal, or eliminate important examples of major periods of California history or prehistory. Therefore, impacts would be less than significant with mitigation incorporated.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less-than-Significant Impact with Mitigation Incorporated. When evaluating cumulative impacts, it is important to remain consistent with Section 15064(h) of the CEQA Guidelines, which states that an EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

Alternatively, a lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable through mitigation measures set forth in an MND or if the project will comply with the requirements in a previously approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located.

The proposed project would potentially result in project related biological, cultural and tribal cultural, and geological impacts that could be potentially significant without the incorporation of mitigation. Thus, when coupled with biological, cultural and tribal cultural, and geological impacts related to the implementation of other related projects throughout the broader project area, the project would potentially result in cumulative-level impacts if these significant impacts are left unmitigated.

However, with the incorporation of mitigation identified herein, the project's impacts to biological resources, cultural and tribal cultural resources, and geological resources would be reduced to less-than-significant levels and would not considerably contribute to cumulative impacts in the greater project region. In addition, these other related projects would presumably be bound by their applicable lead agency to (1) comply with all applicable federal, state, and local regulatory requirements and (2) incorporate all feasible mitigation measures, consistent with CEQA, to further ensure that their potentially cumulative impacts would be reduced to less-than-significant levels.

Although cumulative impacts are always possible, the project, by incorporating all mitigation measures outlined herein, would reduce its contribution to any such cumulative impacts to less than cumulatively considerable; therefore, the project would result in individually limited, but not cumulatively considerable, less-than-significant impacts with mitigation incorporated.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less-than-Significant Impact with Mitigation Incorporated. As evaluated throughout this IS/MND, with incorporation of mitigation identified herein, all environmental impacts associated with the project would be reduced to less-than-significant levels. Thus, the project would not directly or indirectly cause substantial adverse effects on human beings. Impacts would be less than significant with mitigation incorporated.

Appendix A

Air Quality, Greenhouse Gas Emission, and Energy Emissions Modeling Inputs and Outputs

A-1: CalEEMod Results

5th&Victoria Unmitigated Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2023) - Unmitigated

3.2. Demolition (2023) - Mitigated

3.3. Site Preparation (2023) - Unmitigated

3.4. Site Preparation (2023) - Mitigated

3.5. Grading (2023) - Unmitigated

3.6. Grading (2023) - Mitigated

3.7. Building Construction (2023) - Unmitigated

3.8. Building Construction (2023) - Mitigated

3.9. Paving (2023) - Unmitigated

3.10. Paving (2023) - Mitigated

3.11. Architectural Coating (2023) - Unmitigated

3.12. Architectural Coating (2023) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.3.1. Mitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.4.1. Mitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.5.1. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	5th&Victoria Unmitigated
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.50
Precipitation (days)	11.2
Location	34.1077227817881, -117.22516318655505
County	San Bernardino-South Coast
City	Highland
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5173
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	176	1000sqft	5.19	176,066	49,982	0.00	—	—
Parking Lot	118	Space	0.70	0.00	0.00	0.00	—	—

Other Asphalt Surfaces	53.6	1000sqft	1.24	0.00	0.00	0.00	—	—
Other Non-Asphalt Surfaces	4.50	1000sqft	0.10	0.00	0.00	0.00	—	—
User Defined Industrial	1.00	User Defined Unit	0.00	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction
Area Sources	AS-2	Use Low-VOC Paints

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	3.10	42.3	25.4	24.1	0.05	0.99	11.2	12.2	0.92	4.06	4.98	—	7,352	7,352	0.61	0.69	9.65	7,583

Unrefrigerated Warehouse-No Rail	166	0.00
Parking Lot	0.00	0.00
Other Asphalt Surfaces	0.00	0.00
Other Non-Asphalt Surfaces	0.00	0.00
User Defined Industrial	0.00	0.00

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced

5.14.2. Mitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Forklifts	Electric	Average	11.0	8.00	82.0	0.20
Forklifts	Diesel	Tier 4 Interim	11.0	8.00	82.0	0.20

5.15.2. Mitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Forklifts	Electric	Average	11.0	8.00	82.0	0.20
Forklifts	Diesel	Tier 4 Interim	11.0	8.00	82.0	0.20

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor

5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)

5.17. User Defined

Equipment Type	Fuel Type
—	—

8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage includes landscape area. Total acreage = 7.23 User defined industrial set for HD trucks
Construction: Construction Phases	Applicant provided schedule - Feb 2023 through October 2023
Operations: Vehicle Data	Trip rate under warehouse for passenger vehicles only. User defined industrial trip rate for trucks.
Operations: Fleet Mix	Fleet mix adjusted for passenger vehicles for workers at warehouse and for truck trips at warehouse.
Operations: Off-Road Equipment	Assumed every day use

Construction: Trips and VMT	Assumed even number of one-way trips. Assumed on-site water truck that waters 2x per day.
Construction: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	No cold storage

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	5th&Victoria LST Unmitigated
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.50
Precipitation (days)	11.2
Location	34.1077227817881, -117.22516318655505
County	San Bernardino-South Coast
City	Highland
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5173
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	176	1000sqft	5.19	176,066	49,982	0.00	—	—
Parking Lot	118	Space	0.70	0.00	0.00	0.00	—	—

Other Asphalt Surfaces	53.6	1000sqft	1.24	0.00	0.00	0.00	—	—
Other Non-Asphalt Surfaces	4.50	1000sqft	0.10	0.00	0.00	0.00	—	—
User Defined Industrial	1.00	User Defined Unit	0.00	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-2*	Limit Heavy-Duty Diesel Vehicle Idling
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-13	Use Low-VOC Paints for Construction
Area Sources	AS-2	Use Low-VOC Paints

* Qualitative or supporting measure. Emission reductions not included in the mitigated emissions results.

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage includes landscape area. Total acreage = 7.23 User defined industrial set for HD trucks
Construction: Construction Phases	Applicant provided schedule - Feb 2023 through October 2023
Operations: Vehicle Data	Trip rate under warehouse for passenger vehicles only. User defined industrial trip rate for trucks. Trip length reduced to 0.25 for LST assessment.
Operations: Fleet Mix	Fleet mix adjusted for passenger vehicles for workers at warehouse and for truck trips at warehouse.
Operations: Off-Road Equipment	Assumed every day use

Construction: Trips and VMT	Assumed even number of one-way trips. Assumed on-site water truck that waters 2x per day. Trip length reduced to 0.25 for LST assessment. On-site truck trip length kept the same.
Construction: Architectural Coatings	SCAQMD rule compliance
Operations: Refrigerants	No cold storage

A-2: HRA Modeling Results

 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   214 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
```

```
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:    214 Source(s);       1 Source Group(s); and    1299
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    214 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   245.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3
```

TIER 2 SETTINGS

Tier2 adjustments were used in this assessment. Please see the input file for details.
Tier2 - What was changed: ED or start age changed|
Calculating cancer risk
Cancer risk breakdown by pollutant and receptor saved to:
C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicCancerCStudentCancerRisk.csv
Cancer risk total by receptor saved to: C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicCancerCStudentCancerRiskSumByRec.csv
HRA ran successfully

*HARP - HRACalc v22118 1/9/2023 10:14:41 AM - Cancer Risk - Input File: C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicCancerCStudentHRAInput.hra

HARP2 - HRACalc (dated 22118) 1/9/2023 10:09:52 AM - Output Log

GLCs loaded successfully
Pollutants loaded successfully
Pathway receptors loaded successfully
****
RISK SCENARIO SETTINGS

Receptor Type: Resident
Scenario: NCChronic
Calculation Method: Derived

****
EXPOSURE DURATION PARAMETERS FOR CANCER
Exposure duration are only adjusted for cancer assessments

****
PATHWAYS ENABLED

NOTE: Inhalation is always enabled and used for all assessments. The remaining pathways are only used for cancer and noncancer chronic assessments.

Inhalation: True
Soil: True
Dermal: True
Mother's milk: True
Water: False
Fish: False
Homegrown crops: True
Beef: False
Dairy: False
Pig: False
Chicken: False
Egg: False

****
INHALATION

Daily breathing rate: LongTerm24HR

Worker Adjustment Factors
Worker adjustment factors enabled: NO

Fraction at time at home
NOTE: Exposure duration (i.e., start age, end age, ED, & FAH) are only adjusted for cancer assessments.

****
SOIL & DERMAL PATHWAY SETTINGS

Deposition rate (m/s): 0.02
Soil mixing depth (m): 0.01
Dermal climate: Warm

****
HOMEGROWN CROP PATHWAY SETTINGS

Household type: HouseholdsthatGarden
Fraction leafy: 0.137
Fraction exposed: 0.137
Fraction protected: 0.137
Fraction root: 0.137

****
TIER 2 SETTINGS

Tier2 adjustments were used in this assessment. Please see the input file for details.
Tier2 - What was changed: ED or start age changed
Calculating chronic risk
Chronic risk breakdown by pollutant and receptor saved to:
C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicChonicConstNCChronicRisk.csv
Chronic risk total by receptor saved to: C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicChonicConstNCChronicRiskSumByRec.csv
HRA ran successfully

*HARP - HRACalc v22118 1/9/2023 10:09:52 AM - Chronic Risk - Input File: C:\Users\dlarocca\Desktop\Air Quality Work\HARP2\5THVICTORIACONST\hra\5thVicChonicConstHRAInput.hra

                                            ***     MODEL SETUP OPTIONS SUMMARY
 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   402 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
```

```
 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
        TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages

 **This Run Includes:    402 Source(s);       6 Source Group(s); and    1506
Receptor(s)

               with:      0 POINT(s), including
                          0 POINTCAP(s) and      0 POINTHOR(s)
                and:    402 VOLUME source(s)
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours
```

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 245.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.2 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: 5thVictoriaOp.err

**File for Summary of Results: 5thVictoriaOp.sum
